During the 3rd century, the pressures of hellenization posed new threats to the Jewish community. Against the threats of assimilation, fidelity to the Torah came to be upheld as a norm. The Torah came to be viewed as the eternal manifestation of the divine order of the universe, aided by its identification with wisdom. Increasingly, the Torah scribes came to be viewed as the community leaders. The last two centuries before the common era witnessed the rise of diverse notions of community, represented by the rise of such rival groups as the Sadducees, Pharisees, and Essenes. An understanding of these is important for studying how the biblical notion of community was further developed with the early Christian movement.

Hanson turns next to an examination of the notion of community in the teaching of Jesus as reflected in the Synoptic Gospels. He is careful to delineate both elements of continuity and discontinuity in the message of Jesus against its Jewish background. Jesus' teaching began with the heart of classical Yahwism as expressed in the Shema and Isaiah's call to trust in God. Jesus' own life of prayer and worship exhibited continuity with his Jewish upbringing, as did his respect and love for the Torah tradition of his people. He treasured the commandments as a trustworthy guide to God's will. But his view of Torah was less systematic and philosophical and more historical. It involved attention to both the original setting and present setting of any law, as exemplified by his views on the divorce law. More important than the mere keeping of any precept was a person's present relationship with God (see his dialogue with the rich young man). Jesus also redefined community membership in a more inclusive way by removing it from normal social conventions and placing it directly within the eschatological context of divine initiative and human response. The kingdom of God for him was not an object of apocalyptic speculation but a present reality in the lives of those responding to God's call; wherever acts of justice and mercy are performed from a grateful and loving heart, there the kingdom is present. Indivisibly related to his teaching was the way in which he manifested the presence of the kingdom in his own life. His whole

life was one of undivided worship of his Father in heaven; righteousness and compassion lay at the very center of it. Finding the Yahwistic triad of worship, righteousness, and compassion in the gospel narrative further corroborates the notion that it constitutes the heart of the biblical notion of community.

The subsequent history of this notion is then briefly traced by Hanson through the first three Christian generations as reflected in the rest of the NT. The early disciples understood their mission to be an extension of that of their master, that is, to preach the kingdom of God. In the post-Easter period, their focus came to rest increasingly on Jesus as the Messiah of the kingdom. As the Torah represented God's presence to the Pharisees, so Christ came to represent God's presence to the disciples. The basis for Paul's message was his eschatological belief that Jesus the Messiah had inaugurated the new age of reconciliation. The notion of community was broadened to include the gentiles, though without voiding God's election of Israel. Finally, in the period after 70 C.E., and in the face of rising tensions with gnosticizing tendencies, alienation from the Jewish community, and Roman persecution, Church order and true doctrine came to be increasingly stressed. The intense eschatology of the primitive Church gave way to a more pragmatic posture of viewing the Church as one institution among many others in the world.

In a final chapter, Hanson engages in some concluding reflections on the contemporary implications of the biblical notion of community. He believes that it has abiding validity and that it can offer a reliable guide both in providing a life-sustaining fellowship and in reaching out beyond that fellowship to bring healing to a broken world. That basic thesis is elucidated with reference to three typical problems posed for the communities which continue to look to the Bible for guidance: community structure, relations with civil authorities, and Jewish-Christian relations.

A brief comparison between Hanson's and Terrien's biblical theology may be instructive at this point. Their understanding of the nature of the discipline shows a large measure of agreement. While both works are rooted in detailed description, their authors affirm and practice the normative dimensions of their task. Both range over the entire Christian canon of OT and NT. In sharp contrast to biblical theology as practiced by most Christian theologians, the OT is not slighted in favor of the NT, but given its full due as a worthy partner in the theological dialogue between the two. Hanson perhaps does a little better job in delineating the elements which unite and differentiate Christians and Jews in a common theological bond. Both make a conscious effort to include in their biblical theologies previously neglected parts of the OT, such as priestly, sapiential, and apocalyptic traditions. In this respect, Hanson is stronger in his treatment of priestly and apocalyptic materials, and Terrien in his handling of sapiential ones.

Methodologically, both use a combination of conceptual and historical methods, whereby Hanson's treatment of the subject is more pronouncedly historical and genetic than Terrien's. Terrien does a magnificent job of amassing and critically sifting a vast amount of secondary literature; whereas Hanson's documentation is perhaps a bit more eclectic and not as comprehensive. Both have a center for their biblical theology in the form of an overarching theme. The fact that both are able to digest a vast amount of biblical data under centers which differ, yet which each author considers as in some sense central to biblical theology, is further evidence for the contention that the quest for a "center" in OT theology is not as significant or crucial as recent discussion would lead us to believe (contra Hasel 1982: 117). As a matter of fact, we consider the search for a center to be largely immaterial and misleading, irrespective of whether one understands by "center" either a principle of organization or a normative category in the sense of referring to the abiding truth and validity of Scripture. To be sure, the most pervasive reality of the OT is Yahweh God, and in this very limited sense, one could speak of Yahweh as the dynamic unifying center of the OT. How useful or functional, however, is such a general and abstract statement? The OT does not contemplate God in isolation or in God's essential being, but only in relation to and interaction with other entities, such as human and angelic beings, history, or the world in which we live. Therefore, as soon as one goes on to ask such questions as, what kind of God is it to whom the OT bears witness? or, what is God like and how is God known? one is immediately involved with a chorus of many voices and answers which the OT documents provide.

The search for a center becomes even more futile when by it we mean a single organizing principle under which all the materials of the OT can be effectively subsumed. The multiplicity of so-called centers advanced in the history of the discipline, to say nothing of the many dialectal or multiple "centers" which have become popular in recent years, should be ample evidence to persuade us of the futility of such a quest. Each center has a limited usefulness in that it provides a particular angle of vision from which the biblical data may be viewed. Some may even be broader and more comprehensive than others, allowing us to see a wider spectrum of the Bible. Others may be too narrow, screening out too many important data. But even the best and most comprehensive still distort or leave out dimensions better seen from other angles, or they may become so broad and abstract as to obscure the sharpness and specificity of the biblical presentation of ultimate reality. For these reasons, we consider undue preoccupation with a center for OT theology to be a wasted effort. Several angles of vision are better than one. Eichrodt's covenant concept, Terrien's "Elusive Presence," Hanson's "Triadic Notion of Community," just to mention a few, are all angles of vision which allow us to see some things more clearly than others. None are inherently superior. Among all of them, there is a considerable amount of overlap. All taken together give us a more adequate, though still not perfect and complete, grasp of the reality to which they point. The quest for a unified and logically coherent system is perhaps more germane to systematic than to OT and biblical theology. Inordinate attention to it may even suggest that we are in danger of confusing the two disciplines again. The historically specific and concrete theological message of the OT must not be overly systematized and abstracted.

m. Summary. In concluding this section on methodology in OT theology, it may be helpful to summarize succinctly what we have learned from this survey of recent OT theologies. First of all, as regards the dialectal tension between descriptive and normative dimensions of the discipline, some scholars, like Zimmerli, Westermann, and McKenzie, continue to emphasize the descriptive dimension of OT theology. The majority of OT theologians surveyed, however, have become much more overtly normative than either Eichrodt or von Rad. By and large they have achieved this, however, without falling prey to the confusion between these two dimensions which characterized some of the biblical theology of the 1950s. Stendahl's differentiation seems to have made a lasting impact, even if his counsel for a purely descriptive approach is no longer heeded.

As regards methodological principles of organization, the issues today are no longer as sharply drawn as they were between Eichrodt and von Rad. Nearly all OT theologies today combine conceptual and systematic with historical and tradition-historical approaches to the subject. Some, like Vriezen, McKenzie, Clements, Childs, and Terrien, favor the conceptual approach. Others, like Zimmerli, Kaiser, and Hanson, clearly prefer historical and tradition-historical principles of organization. A few, like Fohrer and Westermann, exhibit a more nearly equal balance between the two.

Some of the works surveyed continue to favor some parts of the OT canon over others. The German scholars on the whole continue to give preference to the historical and prophetic traditions, downplaying or ignoring priestly and sapiental traditions. Westermann's distinction between the saving and blessing activity of God, however, appears to be a significant modification of a one-sidedly salvation-historical approach to the subject. While many English-speaking scholars are guilty of a similar preference for a "canon within the canon," some important correctives can be discerned in recent British and American OT theologies. Clements, for instance, seeks to redress the imbalance with respect to the Torah and legal traditions of the OT. McKenzie emphasizes the importance of the cult, and Terrien gives adequate recognition to the importance of sapiential and cultic traditions. Hanson's coverage of apocalyptic traditions is quite thorough. Legal and cultic traditions are also given their due by Hanson and Childs. While more could yet be done on this score, all in all there appears to be a greater degree of respect for the theological witness of the entire canon of the OT, rather than just selected segments thereof.

3. Revelation through History, Tradition, and Story. Another issue in OT theology is the problem of revelation through history, which has received considerable attention since the appearance of von Rad's work (see esp. Albrektson 1967; Barr in *IDBSup*, 746–49; Herberg 1976; Pannenberg 1968; Roberts 1976). At the core of biblical religion, whether in its Jewish or Christian manifestation, stands the belief

that God has acted for the benefit of the human race and the world through specific and concrete events in the history of a particular people called Israel. Both the OT and the NT attest to this fundamental conviction. How that divine activity is to be visualized and understood constitutes one of the fundamental problems of OT and biblical theology. The older Protestant orthodoxy had understood revelation as consisting chiefly of inspired utterances of a propositional and dogmatic nature. But already during the 17th century, a more historically oriented understanding of revelation came to the fore in the writings of "federal" theologians like Cocceius. Increasingly, revelation came to be understood in terms of God's redemptive activity in history, and the Bible was viewed as the written record thereof. This notion reached its fullest development in the various salvation-historical perspectives of the 19th and 20th centuries. The 19th-century revolution in historical thinking aided this development greatly, at the same time as in some circles it also tended to undercut the notion of God's activity in history. In the religiohistorical perspectives of the late 19th and early 20th centuries, the biblical idea of revelation came to be replaced with notions of human progress and the evolutionary development of religion. But following the revival of OT theology during the mid–20th century, the notion of revelation through history gained greater currency again, especially during the era of the so-called biblical theology movement. Against both the fundamentalist notion of revelation as propositional truth and the liberal notion of revelation as human progress and religious evolution, it became fashionable to locate revelation in the actual events of biblical history, many of which were strikingly illumined by spectacular discoveries in biblical archaeology (Wright 1952). During the 1960s, however, the concept of revelation through history came increasingly under attack from several quarters. Today it has fallen on hard times, and while not without its defenders, it has been abandoned by some and become dysfunctional for many others.

As one surveys recent literature on this issue (see Lemke 1982: 34–46), it becomes apparent that the notion of revelation through history has become problematical chiefly on two grounds: it was construed too one-sidedly and burdened with too many unresolved ambiguities. A one-sided emphasis on God's mighty acts in history tended to ignore or overlook other important dimensions of God's self-disclosure. The Bible also speaks of God's self-disclosure in the realm of nature, in the proclamation of laws and commandments, in the high moments of communal worship or the quiet meditations of the human heart, in the reflections of the wise, and in the musings of poets and storytellers. Furthermore, the Bible does not differentiate as sharply as modern theologians have between *facta* and *dicta,* the God who acts and the God who speaks, or the objective historical event and its subjective appropriation by human beings. If God is revealed at all, God is revealed in all of these manifold ways. Thus, for example, God's communication with Moses, the actual events at the sea, Miriam's song about it, and the cultic anamnesis of all of these are part of God's revelatory act which we call the Exodus.

Among the unresolved ambiguities which have beset the notion of revelation through history are the following. To begin with, there is a problem of definition. What do we mean by "history" or "revelation"? If history is defined in terms of a closed system of finite causality and revelation is defined in terms of God's self-disclosure, then obviously there is no room for divine activity in history and it is pointless to speak of revelation through history.

Unexamined or confused philosophical and theological assumptions have been another major source of ambiguity in the discussion about revelation through history (Blaikie 1970). What, for instance, is our understanding of God? Is God a personal agent or an impersonal process? What is our understanding of divine and human causality, the nature and possibility of miracle, or the meaning of providence? Lack of clarity on such questions as these will lead to confusion and equivocation in one's understanding of revelation through history.

A third source of ambiguity which has contributed to the dysfunctionality of the concept of revelation through history lies in the recourse to purely historical and descriptive language when theological and normative language is called for. Statements like "the Hebrews believed that God had clogged the chariot wheels of the Egyptians" or "Moses felt himself to be in the presence of the Holy when he encountered what appeared to be a burning bush at Horeb" render the concept of revelation through history

problematical, for they tell us nothing about what exactly God was doing in those events, how God was revealed, or whether God was doing or saying anything at all.

Finally, a fourth source of ambiguity which has rendered the concept of revelation through history problematical is the bifurcation between "actual" and "confessed" history brought about by modern historical-critical approaches to the Bible. If the events of Israelite history as reconstructed by critical historiography are not identical with those narrated or confessed by the biblical writers, then what happens to the notion of revelation through history? Where is the locus of divine revelation, in the *actual* or in the *confessed* history? Which set of events is the proper object of OT theology? There are those like von Rad who clearly opt for Israel's confessional history as the only proper object for OT theology and the real locus of revelation. That, however, poses some real problems for the concept of revelation through history, for if the events through which God was alleged to have been revealed did not happen, or happened in a manner other than remembered by the biblical authors, then what happens to God's mighty acts in history? Do they simply evaporate into thin air? For those who, like F. Hesse (1971), would answer this question affirmatively, the only recourse is to ignore the confessional history and to place the locus of revelation in the events as reconstructed by critical historiography alone. Neither course of action has proven satisfactory or adequate; nor are these the only options available to us. For one, the dichotomy between actual and confessed history is not as radical as it has often been made out to be. There is a considerable degree of confluence between the two, if not in every detail, at least in regard to the broad outlines of biblical history. Secondly, even where these two histories diverge in significant details, the confessional history is at the same time another datum of Israelite history and therefore a legitimate object of both historical inquiry and theological reflection. The locus of revelation then becomes more complex. God's activity cannot simply be located in the *bruta facta* of the one, nor in the confessional *dicta* of the other, but in the complex interface between the two. A. Weiser (1961) already saw this quite clearly; more recently the issue has also been addressed by P. Hanson (1978).

The limitations and ambiguities inherent in the notion of revelation through history have elicited a number of responses by systematic and biblical theologians. There are those who have sought to expand the notion by making all of history the locus of revelation (Pannenberg 1968; Rendtorff 1961; Kaufmann 1960). Revelation, in other words, *is* history. That is, God's purpose and activity is revealed in the totality of history, and consequently not until its final consummation. From the vantage point of biblical or OT theology, such a "resolution" of the problem is not satisfactory. For one, it is too global and universal to be historically useful. Furthermore, it goes beyond what the Bible asserts. In Scripture, God's activity is neither confined to, nor wholly identified with, the historical process as such.

Another recent attempt to come to terms with the notion of revelation through history is to abandon it in favor of a notion of revelation through story or narrative theology. This approach has gained many adherents in recent years and has certain advantages, at least on the surface. For one, it recognizes that much of the biblical narrative comes to us in the form of story or tradition, some of which may be historylike, but which is far removed from history writing as commonly understood today. Secondly, it associates revelation with the word, which is a time-honored and biblically based notion. And thirdly, it relieves us of the burden of having to decide whether events actually happened the way they were remembered and told.

In spite of its current popularity and appeal, it is doubtful that this flight into "revelation through story" will prove to be a satisfactory solution to the problem. While it can provide a necessary corrective to the imbalances and excesses of the revelation-through-history approach, it fails to address the deeper underlying and abiding issues which the latter was designed to engage. Granted that not all biblical narratives can or should be read as history, many of them must and will continue to be read this way. The reasons for this are partly determined by the Bible and partly by our own cultural givens. Once modern critical historical consciousness has arisen in us, we cannot very well revert to a precritical stance. In some fashion or form, people will continue to ask questions of what *really* happened in history and what relevance that has for them today. Of even greater significance is the fact that biblical religion is *essentially* historical in character. As long as some biblical documents make claims about God's presence

and activity in human affairs and among a particular historical people, we will necessarily continue to address the issue of God's revelation through history. Any theological approach to Scripture which ignores this problem or pretends that it does not exist will have no lasting impact upon the discipline of OT theology.

4. Is OT Theology an Exclusively Christian Enterprise? The final issue which we seek to address is posed by both the actual history of the discipline and by the explicit way recent practitioners of it have chosen to define it (see Lemke 1989; Levenson 1987). If one looks at the history of the discipline, it would appear that OT theology is indeed an exclusively Christian enterprise. OT theology had its roots in the Protestant Reformation, and for most of its history it was practiced by Christian scholars working, either explicitly or implicitly, from Christian theological assumptions. The noticeable absence of Jewish biblical scholars from the discipline in the past may in part be attributed to the specifically Christian polemic context in which biblical and OT theology arose. However, there were other historical circumstances which converged to keep Jewish scholars from entering the field of OT theology. Goshen-Gottstein (1975: 69–88) has shown that just as the treasures of Jewish exegesis were made available to Christian Hebraists during the late 15th and 16th centuries, Jewish biblical scholarship entered a period of protracted stagnation brought about by a combination of external circumstances and spiritual forces within Judaism. According to him, it is only the belated entry of Jews into 20th-century biblical scholarship that has prevented until now the development of Jewish biblical theology. From a purely historical perspective, therefore, one would have to concede that OT theology in the past has been an exclusively Christian (and until recently, a mostly Protestant) enterprise. This historical fact, however, does not settle the question of whether OT theology of necessity, or in its essential character, is an exclusively Christian enterprise. While a great majority of its practitioners continue to define it that way (see, for instance, Childs 1985: 7), we would argue that there is no compelling reason to continue to do so, and that the discipline would be immensely enriched by the inclusion of Jewish scholarship. To a limited degree this is already happening, but it should become even more extensive and self-conscious in the future. Since this judgment is not shared by most of the OT theologies which we have surveyed, we propose to submit to closer scrutiny some of the main arguments for and against our thesis.

First of all, the fact that OT theology arose as a Christian theological discipline and that most of its practitioners during the last 400 years have been Christians (nominally at least) does not mean that this necessarily defines the discipline in perpetuity. A look at its own history is instructive here. Biblical theology began in a polemic context: it was directed first against Roman Catholic dogma and then against the orthodox doctrines of Protestant scholasticism. Yet today, both Protestants and Roman Catholics are engaged in a fruitful dialogue and in the production of significant works in biblical theology. There is no reason why a similar development cannot take place between Christians and Jews. It has already happened in many areas of biblical studies, such as history, archaeology, philology, and exegesis; there is no compelling reason why the theological dimensions of our common scriptural tradition cannot be made the subject of fruitful and mutual dialogue.

Secondly, on the basis of the fact that the very name "Old Testament" is a Christian designation which points to the existence of a "New Testament," it has been suggested that OT theology must therefore be construed as a Christian discipline; and that the question of the relationship of the testaments is part of the essential purpose and task of OT theology. Such an argument, however, is not irresistibly persuasive. To be sure, the question of the relationship between the testaments is a valid and legitimate theological question, at least for Christians, but probably also for Jews. However, it belongs more appropriately to a Christian *biblical* theology than to OT theology as such. Furthermore, the designation "Old Testament" need not imply pejorative connotations or theological value judgments. Today it is widely used in a purely neutral sense of designating the documents of the Jewish canon of scriptures (Tsevat 1986: 33–50). The fact that these documents also happen to be part of the Christian canon does in no way necessitate the assumption that their theological witness cannot be ascertained in its own right, but must only be heard in the context of the theological witness of the NT. As a matter of record, when NT contexts and perspectives are emphasized too much, the independent theological witness of the OT becomes muted or

obscured, as amply illustrated by the history of the discipline. A further point of clarification should be made. When we are saying that OT theology is not of necessity a Christian theological discipline, we do not wish to deny that the theological perspectives of subsequent faith communities have a significant role to play in the theological interpretation of the OT. They clearly do. All we are claiming is that they need not be confined to the Christian faith community. The Jewish faith community surely also has legitimate insights and perspectives to contribute to this quest. It can provide a much-needed corrective, or a more variedly nuanced perspective, to a one-sidedly Christian theological reading of the OT, from which Christians would benefit in the construction of their own theology.

Thirdly, Jewish scholarship itself has been reluctant to participate in the production of OT theologies. There may be various reasons for this. For instance, it has frequently been asserted that Judaism is less theologically oriented, right conduct and observance being more important than right thinking. There is some truth in that objection, but it is not a compelling argument against Jewish OT theology. Jews also study the Bible and reflect on its theological content. This is evidenced by much recent Jewish biblical scholarship, even when it does not overtly label what it produces as OT theology. Kaufmann's well-known treatment of Israelite religion (1960), while following essentially a historical and descriptive methodology, also has recourse to more conceptual presentations of Israelite religious phenomena and is at points highly constructive and normative in its historical reflections. It requires little imagination to see that Kaufmann might equally well have written an OT theology. The work of the late Abraham Heschel clearly falls within the understanding of OT theology presented in this essay. It is hard to imagine a theologically more perceptive and finely nuanced treatment of the life and message of Israel's prophets than that of Heschel (1962). Limitations of space do not permit us to mention others by name, but contemporary Jewish scholarship abounds with examples of first-rate theological treatments of various facets of the OT. It is only a question of time before a full-length and major OT theology will be produced by a Jewish scholar. Perhaps it will be called Tanakh theology (Goshen-Gottstein 1987: 617–44) or a theology of the Hebrew Bible, or the like, but whatever its name, it will be a significant contribution to OT theology. Such a theology will bring fresh nuances and perspectives, especially on those portions of the Hebrew canon which have often been ignored or slighted in Christian OT theologies. Jon Levenson's recent treatment of the Sinai, Zion, and creation traditions of the OT (1985; 1988) may be viewed as signposts on the way to a Jewish OT theology. One can only hope that the renewed interest in biblical theology by Jewish scholarship will not stop with the OT, but will also issue in fresh theological readings of the NT. There is no doubt in our mind that not only biblical and OT but NT theology as well could be greatly enriched through a Jewish theological reading of the NT documents.

But we must return to the question with which we began this section. By now it should be apparent that we can see no compelling or valid reasons for viewing OT theology as an exclusively Christian enterprise. The absence of Jewish scholarship from the field of OT theology is more the result of historical accident than logical or theological necessity. Both Christian and Jewish scholars can and should be engaged in doing OT theology. The discipline would be greatly enriched and strengthened by such truly ecumenical dialogue.

If one wonders why it has taken us so long to come to this realization, the Church and Christian theology must surely assume a major share of the blame because of their long-standing devaluation and subordination of the OT to the NT. A concise summary of traditional Christian attitudes toward the OT will make this clear. For the first century of the existence of the Church, the OT was the only Bible the Christians had. Both Jesus and the apostles recognized the documents of the OT as their sacred Scripture. The central problem for the early Christians was not whether the OT was to be their sacred Scripture, but whether and how Jesus could be understood as another mighty act of the God whom they already knew through their Scriptures (Sanders 1976: 531–60). Not until the 2d century, or as Christianity became increasingly a Gentile movement, did the status of the OT become problematical for some Christians. Marcion tried unsuccessfully to remove the OT, along with a good part of the NT, from its status as sacred Scripture. But while the Church officially adopted the OT as part of its canon of sacred Scripture, the ghost of Marcion continued to haunt the Church throughout its subsequent history. The varying

attitudes which Christians have assumed toward the OT may for convenience' sake be grouped into five basic categories.

(1) *An Abrogation or Negative Valuation of the OT.* This attitude may range from an outright rejection of the OT from the Christian canon (Marcion, Schleiermacher, von Harnack, F. Delitzsch) to a radically qualified acceptance of it for purposes of negative contrast with the NT and the Christian gospel (Bultmann, Baumgärtel). All of them have no positive theological use for the OT, which is variously characterized as inferior, superseded, or on a par with the other non-Christian religions. In short, the OT is simply the dark foil against which the light of the gospel shines all the more brightly. Regrettably, many Christians through the long history of the Church have adopted this attitude, even though it is wholly unbiblical and unworthy of their allegiance. It is potentially very harmful and has been responsible in part for gross outbursts of anti-Judaism throughout the history of the Church. If consistently held, it would lead to the eventual destruction and disappearance of Christianity.

(2) *The OT as a Necessary Historical Presupposition.* Because of Christianity's origin in a specifically Jewish milieu, an understanding of the OT is essential for a proper understanding of the NT and of the gospel. The history of the early Church is incomprehensible apart from its Jewish antecedents, and the literature of the NT presupposes knowledge of the language and thought-world of the OT. While correct as far as it goes, this position is inadequate, because it confines itself to a purely historical and descriptive level. Historical and cultural connections alone are not sufficient grounds for canonization; if they were, one could argue with equal validity for the inclusion of the Enuma Elish in the Jewish canon, and some of the intertestamental literature in the Christian canon.

(3) *The "Christianization" of the OT.* This was the prevailing attitude toward the OT in the Church for at least a millennium, or from the early Church Fathers to the Reformation. This position accepts the OT as a theologically relevant part of the Christian canon. However, its voice as an independent theological witness was muted by the superimposition of Christian meanings on the OT. Allegory and typology were the prevailing exegetical techniques in earlier centuries. More recently, subtler ways of doing this have been devised. Usually this takes the form of some hermeneutical key, such as the "law/gospel" or "promise/fulfillment" dialectic, by means of which the theological meaning of the OT is to be discerned. The problem with these unitary hermeneutical keys is that they are too one-sided and simplistic, obscuring both real continuities and obliterating finer nuances and distinctions. Proponents of these usually also fail to see that whatever dialectics may be legitimately present in Scripture, they cannot be divided up between the testaments but are operative throughout the entire Christian canon, inclusive of the NT. Such a one-sided Christian reading of the OT gives lip service to the theological relevance of the OT, but in actuality does not really permit it to speak in its own right.

(4) *The OT Has Direct Literal and Prescriptive Theological Validity.* While this position has never had a wide following among Christians, it has enjoyed some favor among certain groups. Essentially it holds that since Christians have become heirs to God's covenant with Israel, they also must assume all of its obligations. Apart from 1st-century Jewish Christians, this attitude was also embraced by some Anabaptists of the radical Reformation, as well as by some modern sectarians.

While this attitude is commendable in its theological consistency, it is too literalistic and fails to take sufficient cognizance of the fact that even biblical religion is a living organism which underwent significant changes and adaptations, to say nothing of the gulf that separates modern people from the cultural world of the Bible.

(5) *The OT as Theologically Significant and Indispensable Norm for Christian Faith.* This position involves a positive theological valuation of the OT. It rejects all notions of a unilaterally evolutionary or supersessive nature. The God of Jesus is the same as the God of Abraham, Moses, and Deborah. The OT continues to function for Christians as a source of revelation and valid apprehension of God's character and relationship to humanity and the world. The theological meaning of the OT must be ascertained through objective critical scholarship, in which both Christian and Jewish scholars can participate. And while the subsequent adaptations of the theological content of the OT by Jewish and Christian faith communities may provide valuable insights into the fundamental structure of biblical faith, they must not

be granted normative value in the sense of dictating in advance how the theological message of the OT is to be heard. Allowances must be made for both continuities and discontinuities in theological perspective between the OT and the two faith communities to which it gave rise. Neither the NT nor the Talmud should be allowed to define OT theology in any normative sense.

It is this fifth and final position which holds the greatest promise today for the doing of OT theology in a truly ecumenical context in which both Christians and Jews may participate with integrity and to the mutual benefit and enrichment of the respective faith communities for whom the OT is sacred Scripture.

C. Conclusion

At the beginning of this article we defined OT theology as "the exposition of the theological content of the OT writings." In the light of our historical survey and our analysis of key issues in the evolution and current practice of the discipline, we are now in a position, perhaps, to give a little more specificity and precision to that definition. OT theology may be defined as *an exegetical and theological discipline which seeks to describe in a coherent and comprehensive manner the OT understanding of God in relationship to humanity and the world.* A few comments on key elements in this definition may be in order. By defining it as *an exegetical and theological discipline,* we wish to underscore that OT theology must be rooted in the careful exegesis of the actual texts and documents of the OT, but that this must be done in such a manner that the theological dimensions of the text are not ignored or obscured, but given due prominence. The phrase *to describe … the OT understanding* seeks to safeguard the descriptive aspects of our task, so that we hear what the OT itself has to say rather than superimposing theological and philosophical systems on it from the outside. This is not to say that legitimately constructive and normative dimensions of theology can or should be ignored. They clearly have a place in any OT theology worthy of the name. But the constructive and normative dimensions must always be closely related to, and dependent upon, the descriptive dimension. OT theologians must not confuse these two dimensions, but as much as possible should be clear about when they function in one or the other mode of operation. Furthermore, this description of the theological content of the OT must be reasonably *coherent and comprehensive.* That is, it should deal with the essential faith structure of the OT, not with every phenomenological detail of Israelite religion but in sufficiently comprehensive fashion so that no important element (like wisdom, the cult, creation theology, or legal and priestly traditions) is slighted or ignored. Finally, the phrase *God in relationship to humanity and the world* points to the proper object and parameters of the discipline. It is not the God of philosophical abstraction or theological speculation that is the object of our inquiry, but Yahweh God who is revealed not only in creation but in the historical experiences of a particular people called Israel. OT theology thus defined and understood is in no crisis or quandary, but in the midst of a highly productive and creative period, the full extent of which remains yet to be seen and assessed.

WERNER E. LEMKE

NEW TESTAMENT

New Testament theology (NTT), now sometimes called "the theology of the New Testament" but in 1800 "the biblical theology of the New Testament," is a product of the 19th-century division of "biblical theology" into Old and New Testament sections. See THEOLOGY (BIBLICAL), HISTORY OF. This was later reinforced by the growing sense of historical development and by increasing specialization within university theological faculties, but the roots of NTT in the older, precritical biblical theology hold the key to its nature and purpose. It arose out of Protestantism's aim to preserve and demonstrate its biblical credentials, and so its truth. These theological origins and aims were partly obscured in later biblical scholarship, and have been eroded by further secularization in recent years. But the religious and

rational implications of the name "theology" were recovered in the mid-20th-century flowering of the discipline and provide a criterion for the proper use of the phrase today.

A. Nature and Purpose

"Theology" implies a relationship to religious faith, and NTT an orientation to the canon as a source and norm of Christian doctrine. How this biblical discipline is related to contemporary Christian faith and theology became a problem with its use of historical methods not designed to communicate religious faith. A systematic presentation of the biblical material must be important to a Christianity that appeals to the Bible. But historical reconstruction of these early witnesses provides neither a single nor a modern account of Christianity. The move from ancient history to modern theology is not straightforward, and may be possible only in reverse or through a fusion of horizons.

Though rooted in the Reformers' determination to make Christian theology accord with the Bible (as they claimed late medieval scholasticism did not), the discipline derives more directly from subsequent theological developments in Protestant orthodoxy. The Reformation churches, having rejected the Roman magisterium and subordinated tradition to Scripture, needed to demonstrate that their theology corresponded to the content of the Bible. They did so by "collections" of *dicta probantia* or proof texts, such as S. Schmidt's *Collegium Biblicum* of 1671. The earliest works entitled *Teutsche Biblische Theologie* (W. J. Christmann, 1629) and *Theologia Biblica* (Henrius a Diest, 1643) were similar defenses of Protestant doctrine.

To count as Christian, any theology has to demonstrate some continuity with Scripture and tradition. Quoting texts is a shorthand for that. But the need for probative arguments in controversy, coupled with assumptions about the infallibility of Scripture, led to a belief that proof texts demonstrate the truth of doctrinal statements. The argument is circular and the belief false, because as in modern fundamentalism the texts are theologically meaningful only in relation to the system that governs their selection and interpretation. This kind of biblical theology was only a small part of Protestantism's theological engagement with the Bible, and has never been a serious contender to replace dogmatic theology. But in the context of pietist hostility to the dogmatics of Protestant scholasticism and the memory of the Reformers' call for a more biblical theology, these systematically organized collections of texts gained enough independence to allow them a critical role with respect to the dogmatics they were originally designed to support.

In his *Pia Desideria* (1675) Spener attacked the return in Protestant theology of the Aristotelianism which Luther had ejected, and demanded a biblically based theology and reform of ministerial education. C. Haymann's *Biblische Theologie* (1708) and A. F. Büschings *Gendanken von der Beschaffenbeit und dem Vorzug der biblisch-dogmatischen Theologie vor der alten und neuen scholastischen* (1756) reflect this pietist demand for biblical simplicity. Later salvation-history theologies and the 20th-century "biblical theology movement" reflect the same hostility to philosophy and systematic theology. They bear witness to the essential simplicity of the gospel, but bypass the answerability of theology at the bar of

reason. Biblical and NT theology could be understood as an alternative to systematic theology only where claims to religious truth were based on a biblicist view of revelation which excluded the rest of human knowledge from Christian accounts of God and the world. That antirational strand in Christian thought became even less credible when the Bible itself was subjected to critical questioning, but it has remained a subordinate strand in biblical and NT theology.

The future of biblical and NT theology lay not with this pietist undercurrent, but in German and Swiss theological faculties. Here it has not usually been a shortcut to bypass complications, but one expression of the theologically committed biblical scholar's task to clarify what the Bible says, and so contribute to the professional education of Protestant clergy whose main activity would be preaching.

This orientation to contemporary religious needs has remained a feature of the modern critical discipline, which also has flourished in confessional theological faculties and seminaries, but rarely elsewhere. Its strongly emphasized independence of dogmatics did not until quite recently mean any loss of theological interests; and where that has happened the name "theology" has usually been dropped.

The religious aims and assumptions of NTT have affected the actual presentations. Where interpreters have been convinced that there is no real difference between the Bible and their own Christianity, a summary of its contents has seemed sufficient. But in the Enlightenment some theologians saw that only part of the Bible corresponded to their own understandings of Christian truth, and later more historically conscious theologians reflected on the differences between ancient and modern views of the world and God. A bridging operation was necessary to relate the Scriptures to modern theology, and NTT contributed to this. Some NTTs remained summaries of exegetical conclusions, but the more advanced ones contained hermeneutical proposals within their summaries of biblical ideas. How the modern interpreters understood the Christian revelation affected the form of their presentations. These became part of the strategy for relating the results of biblical study to modern understandings of the Christian revelation.

Christian accounts of revelation point to the biblical texts, the history behind them, and the corporate and individual mind of those who hear the message. Different theories emphasize different elements, and the NTTs reflecting a theory of revelation exhibit corresponding combinations of the three elements. They may be more or less biblicist, more or less historicist, and more or less hermeneutical. These three points of reference allow us to map the field and provide the basis for a typology of all work done in it. Insofar as it is possible to judge between better and worse theories of revelation they also provide a criterion for evaluating different conceptions of NTT, though not for judging how well these have been carried out. That depends on their exegetical success. But in NTT the theory is as important as the practice—and relatively neglected.

1. The *biblicist* element in Christian accounts of revelation and in NTT is the tendency (more or less extreme) to attach greater weight to these writings than would be rational for non-Christians. It is necessary because Scripture is indispensable for knowing God in Jesus Christ, and that is central to Christianity. Associating revelation closely with Scripture is axiomatic because Christian revelation centers on Jesus, the Messiah of Israel. But actually identifying Scripture with revelation is irrational biblicism. It bears witness to this "givenness" of revelation, its capacity to challenge the interpreter, and its "offense" to human wisdom, but hardens that witness into a false objectivism.

2. Because Christians find the revelation of God in a historical figure, the *historical* element in a Christian doctrine of revelation and in NTT cannot be evaded by appeals to the text alone, or to text plus preaching. Orthodox Christianity resists any tendency to treat the NT as fiction, despite its fictional and mythical dimensions. But in a secular culture the historical dimension can if absolutized lead to a historicism which destroys all talk of God and revelation, and so destroys NTT.

3. The *hermeneutical* element in the doctrine of revelation and in the NTT recognizes the distance between the past event of God in Jesus and its present appropriation, but bridges it in the act of interpretation, whether by word or action. If emphasized at the expense of the other two necessary emphases this can dissolve into a subjectivism which loses the otherness and givenness of revelation. But it is possible to preserve the two horizons in a dovetail joint which connects them.

The roots of NTT lie deep in a brittle biblicism that was broken and transformed under the impact of modern historical questioning. Both the historical and the hermeneutical emphases made their historically disciplined understandings of the texts fruitful for the modern interpreters' own rather different understandings of Christianity. The difference between them is that the historicist keeps historical-exegetical work separate from personal appropriation, whereas the "hermeneutical" type (to borrow a 20th-century theological use of that word) tries to combine the two steps in a single act of interpretation. The biblicist still thinks there is only one step.

The problem for the historicist is how to get from the first to the second step; there is no obvious connection. Most Christian reading of Scripture, whether biblicist or hermeneutical, combines the two steps. There are dangers of modernizing distortion, but these are met by allowing other exegetes and historians to challenge all theological interpretations. The argument is then engaged on the public exegetical field. There is no appeal to private experience in exegesis.

The dangers of distortion are strongest where biblicists want a close correspondence between the Bible and their own convictions. The historicist has a low regard for this—and consequently risks losing contact with the revelation attested by Scripture. The hermeneutical middle way is to insist that Christian interpreters can disagree with a text by engaging in a theological criticism which justifies this disagreement, taking the rejected text with due seriousness but refusing to absolutize it. Theological criticism *(Sachkritik)* is therefore essential in hermeneutical NTT. It offends historicist sensibilities because it appeals to nonhistorical factors (the theological interpreter's own understanding of the gospel), and it offends biblicism for "urging Christ against Scripture" (Luther). It hovers on the brink of subjectivism, especially when the individual interpreter fails to take due account of the corporate judgment of the Christian community.

Prior beliefs can be challenged by reflection on a text, and possibly even changed. Or they may be confirmed at the cost of giving reasons, based on other scripture, tradition, reason, and experience, for rejecting a passage. This interaction cannot long be suspended where theologians are wanting to communicate the truth of the biblical message. Personal beliefs can to a large extent be held in suspension while performing the more straightforward historical tasks that are a large element in NTT. But if these are made the goal of NTT a transition has been made from theology to ancient history. The dangers of this happening are considerable because most biblical specialists are by training linguists and historians, not theologians.

Many NTTs have made use of doctrinal categories drawn from the subsequent tradition to summarize the biblical material. Such grids drawn from modern dogmatics are likely to introduce anachronisms and historical distortion, though they may also allow a deeper penetration of the text's meaning, since these analytical tools arose out of past attempts to fathom the biblical message. But their main value is that as formalizations of the interpreters' own tradition and belief or empathy, they make possible an implicit affirmation of the Christian reality and truth of the material being communicated. Instead of repeating the contents of the Bible and then affirming their agreement (on whatever grounds), such theological interpreters combine exegesis and confession in a single move which correspond more closely to how Christians actually read their Scriptures. They combine description and advocacy, fidelity to the texts and an implicit claim that what the Bible says corresponds to the reality that Christians acknowledge today.

The justification for this kind of NTT, like any theology, lies in the needs of the religious community that develops it. Modern Western Christianity has required interpretations of the NT which do justice both to the rational study of these texts and to its fluctuating understandings of its revelation of God in Jesus Christ. Where the boundaries of the religious community are blurred and the texts are public property, all kinds of interpretation are possible. The justification for nonbelievers engaging in theological interpretation is then their honest concern to offer interpretation commensurate with the authors' understanding of their subject matter. The case for admitting the interpreters' own real or assumed theological beliefs into their presentations is that only in this mirror can be religious content of the text be acknowledged and communicated. This can remain a rational procedure so long as exegetical controls are also admitted, and modernizing distortions criticized. Historical exegesis provides a necessary control in

NTT, checking that what is presented accurately represents the ancient documents, and providing the rational rules for debating this. But it does not determine what Christians believe today. Even if the NT provided a uniform doctrinal system (which it does not), contemporary belief could not simply repeat it because belief in a God who relates to the world invokes (in principle) all human experience and knowledge, and that varies from age to age. Biblicism denies this problem and positivistic historicism ignores the question of God. Christian theology has to solve the hermeneutical question because biblical components are central to Christian belief. NTT addresses it while engaging in biblical scholarship. These biblical ingredients in Christianity are difficult even to define precisely because they are affected by the culture in which the Bible is read. The necessary historical study draws nonbiblical material into the discussion and that affects the inter- pretation and evaluation of some biblical texts. It also raises questions quite foreign to the biblical authors, such as the "historical" (as contrasted with the "earthly") Jesus. The contexts of both text and interpreter so complicate the question of the contemporary theological meaning of the Bible that biblical scholars can be pardoned for retreating to their own specialist tasks and leaving theology to the theologians. But the history of NTT confirms that its origins and continuing vitality stem from Christian theological needs. This history discloses theological commitment expressed in a passion for truth, but also compromises, errors, problems, and future possibilities.

B. History and Analysis

The Reformers' and their successors' demands for a theology that was in accord with the Bible went hand in hand with a determination to expose its theological content. The tasks were closely related but not necessarily combined. Calvin's commentaries did not make his *Institutes* superfluous. Not even the new genre called "biblical theology" was designed to replace systematic theology, only to make it more biblical. That idea was widely shared by orthodox, pietist, and rationalist theologians, but it proved to have two unforeseen consequences. First, as Luther had seen, Scripture has a nose of wax and can be made to support many different theologies. Secondly, when historical study sharpened the differences between ancient and modern thought, a gulf between the Bible and modern theology became visible. That posed a bridging problem. Most biblical theologians have thought this their responsibility, but by the late 19th century the discipline was being defined in historicist terms which virtually excluded such hermeneutical endeavors.

The modern exegetical methods of Locke, Turrentini, and Ernesti had rational teeth which could strengthen the criticism of contemporary dogmatics and so fulfill an essential element in the Reformers' use of Scripture. G. T. Zachariae's *Biblische Theologie oder Untersuchung des biblischen Grundes der vornehmsten theologischen Lehren* (4 vols., 1771–75), which took Protestant orthodoxy's proof-texting method to an exegetically responsible climax, remained within the bounds of the doctrine of inspiration while allowing the biblical materials to challenge dogmatics, as the subtitle implies ("Investigation of the Biblical Basis of the Main Theological Doctrines"). But the criticism of dogmatics by rational exegetical methods could be taken much further than Ernesti or Zachariae envisaged. It was soon detached from the doctrine of inspiration, and in the hands of rationalist theologians exegetically responsible proof-texting could support different forms of Christianity. In the biblical theologies of Hufnagel (1785 and 1789) and Ammon (1792, 1801–22) the moral teaching of Jesus became central, in accordance with Enlightenment preferences.

Biblical theology did not lend itself as readily to modern ideas as the new historical study of the gospels, and even Ammon saw himself as relatively conservative, mediating between the older Protestant beliefs and a new outlook. This was a time of transition; the disagreements between the orthodox and biblical theologians more strongly influenced by the Enlightenment show that these theologically motivated attempts to present the content of the Bible were guided by the interpreter's own understanding of the gospel. The same effect can be seen in the Fathers' and Reformers' theological interpretation of Scripture, and is justified by the element of subjectivity present in all talk of God. This was later obscured by the equally legitimate demand for greater objectivity in historical presentations of NTT.

By the end of the 18th century many theologians were aware not only of the gulf between the NT and orthodox dogmatics, but also of that between both of these and modern religious convictions, and between the biblical texts and historical reality. One way of bridging the gap between Jesus (or the NT writers) and contemporary thought was to suggest that Jesus (or the Holy Spirit) had "accommodated" himself to the thought-forms of the day. This solution could not survive a more historically sensitive approach to the NT, but it provides further evidence of the part played in all theological interpretation by the interpreter's own convictions. It was Enlightenment sensibilities which told Semler what Jesus and the apostles "really" believed.

The same prior convictions about what was true in religion and morals lay behind J. P. Gabler's proposals for sifting a "pure" distillate of religious ideas from the biblical materials systematically arranged by the biblical theologian. Gabler's suggestions were not pursued, mainly because his rationalist account of revelation as true ideas was overtaken by romantic conceptions of religion and revelation. But in the course of his earliest sketch, his Altdorf inaugural lecture in 1787, Gabler advanced the discussion beyond Zachariae in ways which have led most analysts to see the beginnings of the modern discipline in this *Oratio de iusto discrimine theologiae biblicae et dogmaticae regudnisque recte utriusque finibus* ("On the Proper Distinction between Biblical and Dogmatic Theology and the Specific Objectives of Each") (see ET in *SJT* 3: 133–58).

Gabler's aim as an Enlightenment theologian was to suggest how the Bible could still inform Christian faith, even though much of it was open to moral and historical criticism. He prepared to sift the wheat from the chaff by distinguishing between the historical task of analyzing the content, and the doctrinal and philosophical task of expressing Christianity in one's own language. It was this preliminary distinction that proved epoch-making because it allowed biblical specialists to present the material in whatever ways seemed historically appropriate, instead of being bound by their doctrinal aims. Those could be satisfied at the next stage of the process by which Gabler, like his predecessors, hoped to make Protestant theology accord better with its scriptural basis. The stage was thus set for historicist biblical scholars to limit themselves to the first step and leave the second to doctrinal theologians and popularizers. Biblicist NTTs could continue to identify them, but critical biblical theologians with a Christian view of Scripture would have to find alternative ways of combining the recognition of historical distance with their contemporary appropriation of the biblical witness.

Gabler's proposals for biblical theology as a historical, not a dogmatic, discipline were confused, because his final step was more theological and less historical than he recognized. But that was in any case not followed. What was accepted was his distinguishing the first historical step, and this led at once to G. L. Bauer's division of biblical theology into OT and NT sections, as required by the historical and material distance between them. Bauer published his *Theologie des alten Testaments oder Abriss der religiösen Begriffe der alten Hebräer* in 1796, and his unfinished *Biblische Theologie des Neuen Testaments* (4 vols.) in 1800–2. The latter NTT distinguished discrete historical entities within the NT itself: the religion of Jesus from that of the apostles, and the different NT witnesses from one another. The sharper historical perspective of late-18th-century biblical criticism was thus drawn into biblical theology, though as Bauer's procedure and title make clear, the new subdiscipline still employed these independent historical methods and insights in the service of theological claims.

The same combination of historical methods and theological interest is evident in the title and structure of W. M. L. de Wette's "Biblical Dogmatics" (1813) which described the religion of the Hebrews, of Judaism, and of early Christianity *(Lehrbuch der christlichen Dogmatik in ihrer historischen Entwicklung dargestellt. Erster Teil. Die biblische Dogmatik, enthaltend Biblische Dogmatik Alten und Neuen Testaments. Oder kritischer Darstellung der Religionslehre des Hebraismus, des Judenthums, und Urchristenthums).* The teaching of Jesus is distinguished from its interpretation by the NT writers, and here the NT books are grouped according to their (presumed) (1) Jewish-Christian, (2) Alexandrian or Hellenistic, or (3) Pauline character.

Although these two interpreters present the material in a historical way, they are not writing ancient history. Their theological aims are clear when they draw critical theological conclusions from their

historical judgments. If the aim of biblical and NT theology is to unite historical study of the Bible with a modern theological perspective, then Gabler's pupil de Wette may be judged the greatest biblical theologian of the century. He had drawn from Schleiermacher and Fries a theory of religion which could contain his critical studies and so allow the Bible, studied by the best rational methods available, to inform his faith and theology. Gabler's insistence on the historical character of biblical theology had in principle made it possible for biblical theology to assimilate the more progressive biblical criticism of Semler and Michaelis. But the discipline's character and aims place it on the conservative end of the theological spectrum, assisting Christian use of the Bible, and apart from de Wette there was little progress between G. L. Bauer and F. C. Baur. Von Cölln's posthumous "purely historical" work (1836) advances the historicist option of clearly separating biblical and doctrinal theology, but the earlier biblical theologies of Kaiser (1817) and Baumgarten-Crusius (1829) are unimportant.

Not until the 1830s and 1840s, when historical criticism of the NT made its decisive advances, was the discipline finally forced to face the changed situation which biblical criticism had been brewing for over 150 years, since Spinoza and Simon. After Strauss'*Life of Jesus* (1835) and Bauer's criticism of the Pauline Epistles (1831–45), Acts (1845), and the Gospels (1844–47), the older assumptions concerning the proximity of the NT witness to modern Protestantism were rendered obsolete, however slowly most theologians came to recognize this. A new account of the unity of the NT, by definition a central issue in NTT, was needed, along with an account of the relationship between the NT and modern theology which took into consideration the new critical historical perceptions of these documents. Baur answered both these needs with his account of the historical development of Christianity and a Hegelian metaphysics which allowed him to speak of God as spirit moving through the entire development. It could not stop with the NT, which was only the first chapter of the history of dogma, but this integration of a historical reconstruction in a modern philosophical theology allow Baur's "purely historical" NTT to be classified as a "hermeneutical" type, a theological interpretation of the NT. It was genuine theology because it aimed to satisfy both faith and reason, unlike the biblicist type which satisfies historical reason at the expense of faith. Baur thought his strong sense of "objective" historical reality also protected insights that had been lost in the more subjective NTT of the Enlightenment, later to be repeated in liberal Protestantism. But the way he understood revelation in history was so dependent on his own philosophy that this could not be challenged without destroying the whole basis on which he read these texts as revelatory. One point of the biblicist strand in Christian views of revelation is that it allows the text to challenge the interpreter. A critical theologian may overrule this challenge on appeal to the gospel to which it bears witness *(Sachkritik)* but even this takes the texts more seriously as religious witness than Baur's radical historicism, which refuses to treat them as more than information about the past.

The achievement of Baur in NTT was rounded off in 1864 by the posthumous publication of his *Vorlesungen über Neutestamentlichen Theologie.* He had in the 1840s pioneered the developmental historical form which was to remain a characteristic of the discipline. Three generations of impressive historical scholarship followed, including a series of textbook summaries of the content of early Christian thought, culminating in H. J. Holtzmann's *Lehrbuch der Neutestamentlichen Theologie* (1897, 1911). They were variously written from different theological standpoints, corresponding approximately to the spectrum of critical historical judgments. Holtzmann represents liberal scholarship at its best, and B. Weiss provided (1868, 1903, Eng trans., 2 vols., 1882–83) an influential conservative statement.

Despite the range of critical judgments it is striking how similar most of these presentations appear, at least in outward form. W. Alexander's is based entirely on dogmatic loci, but the rest offer a more or less historical presentation, with even the most conservative scholars doing some justice to the diversity of the NT witness. Following A. Neander, B. Weiss contrasted this historical, and so variegated, biblical and NT theology with the unitary system of a "biblical dogmatics." They all (except Alexander) provide an account of Jesus, sometimes extending to half the work, though the aims and presuppositions of these accounts vary. Apart from the liberals Weinel and Kaftan, who were influenced by the history-of-religions school, the more substantial works made use of the categories of dogmatics. The textbook format is

distinctive, but the more historically sensitive they are the less there is to distinguish them in content from the NTT contained in lives of Jesus and histories of the "apostolic age."

The similarity between NTT, now a historical task using historical methods, and partial or total histories of early Christianity, which were very largely histories of religious thought, raised the question whether NTT had any right to exist as a separate discipline. This was answered most sharply by W. Wrede in 1897 (ET 1973), largely in the form of a critique of Holtzmann's monumental work, which had recently appeared and summed up a generation of liberal Protestant historical and exegetical research. Taking the historical tasks and methods of the discipline for granted, Wrede argued that the canon could not determine its boundaries (so too G. Krüger *Das Dogma vom Neuen Testament*, 1896), that doctrinal categories did less than justice to the historical material, and that treating each little book separately was absurd, since they provided insufficient data for reconstructing their authors' theologies.

As an account of what he rightly preferred to call "the history of early Christian religion and theology," Wrede's essay remains unsurpassed. That he could reduce the theological component in NTT to the history of religious ideas and think he was only carrying out consistently principles that were generally accepted is explained by the extent to which the hermeneutical aims of NTT had either been compromised by association with conservative critical judgments or relatively neglected by the better historians, both conservative and liberal. Wrede simply rejected the hermeneutical task of bridging historical scholarship and theological reflection and restricted NTT to the former. His proposal leads "beyond NTT" (H. Räisänen 1990), i.e., to the dissolution of that theological discipline in the interests of a history of religions untainted by the scholar's own commitments. This ideal enjoys widespread support today among biblical scholars who see their specialism as primarily descriptive-historical, and among theologians reacting against a "biblical theology" unschooled in philosophy and systematics. The best expression of both these reservations is found in the program of K. Stendahl (*IDB* 1: 418–32). The background to Wrede's essay and the various responses it elicited will therefore throw light on the present situation.

NTT was agreed by many conservatives as well as liberals to be a descriptive historical discipline, establishing what was once believed. Having accepted its historical character, they could be criticized for failures in this regard. Those who inclined to the biblicist identification of their historical and exegetical conclusions with their contemporary theological views could not allow contradictions between the biblical witnesses and were vulnerable to Wrede's charge that their association of NTT with dogmatics was corrupting their historical work. However, this was caused not by the mere association with dogmatics but by the biblicist identification, which forced the history into a procrustean bed. The liberals, by contrast, were under no such pressure to harmonize the biblical witnesses and could with less difficulty correct failures in their historical reconstructions. Only in their accounts of the historical Jesus were they subject to similar pressures. Holtzmann's orientation of NTT to the biblical documents and the use of doctrinal categories was residually guided by his theological interests, and this resulted in historical defects, but he could in principle have taken account of Wrede's points in a revised historical presentation, as Bultmann later did. There was no need for the theological interests guiding the presentation to weaken the history. Theological interests pose a threat to historical objectivity, and that requires vigilance. It does not require their denial or suppression, or even (necessarily) their suspension. Historians have interests; what matters is that they do not pervert historical judgment.

Holtzmann's second edition (1911) could acknowledge Wrede's arguments and welcome his program, while also briefly defending the right of NTT to be guided by the position of the canon in contemporary Christianity. His purely pragmatic defense of his canonical orientation was not grounded in his view of revelation. It was also unconvincing because it contradicted his own historical structure, which began with a chapter on the Jewish context. But it correctly reflected the connection of NTT with Christian use of the Bible. It could have recovered more of the biblicist and hermeneutical elements in NTT by suggesting that revelation takes place partly in the present, through texts being interpreted and heard. But the liberal Holtzmann shared Wrede's historicist view of revelation lying behind the text, rather than the later (and earlier) kerygmatic view of it occurring "in front of" the text, in the act of reading, or through its reception. The conservatives B. Weiss and W. Beyschlag had a stronger sense of the textual or biblicist

element in the doctrine of revelation, and so in NTT. Wrede dismissed their comments because they were compromised by their association with defective history. But his brief arguments (in his footnote 4; see Morgan 1973) against Beyschlag's badly stated and Weiss' inadequate hermeneutics miss their valid point that biblical theology has always presupposed a Christian account to what the Bible is about, and has sought to elucidate that. Because they did not argue their case, and because B. Weiss adhered to a biblicism that was not far removed from the discredited doctrine of inspiration, Wrede rejected out of hand what sounded to him like mere assertion.

But his argument against Weiss is revealing. Unlike Overbeck, whose secularizing program for a "profane" Church history and exclusion of all theological interpretation from the scholarly realm was close to his own, Wrede allowed himself to be drawn on the question of revelation, and showed how his scholarship was guided by positivistic assumptions. Revelation, he said, was "no concern of biblical theology," but a matter for dogmatics to debate after the biblical scholar has identified the "something" which may or may not be revelation. Such a value judgment on the results of historical research is rather distant from any views of revelation implied in the Church's use of the Bible. NTT which aimed to serve that would require a more textual orientation. Historical research has its own integrity and autonomy. It also has much to offer theology and exegesis. But in a discipline that is concerned with the Church's use of the Bible it is an auxiliary science. It can discredit implausible readings, but only when bolstered by philosophical theory (as it was by Baur, and more weakly by his successors) could it make theological claims.

Neither Holtzmann's failure to satisfy the historical and hermeneutical ideals of NTT nor Wrede's radical dissolution of the discipline signaled the bankruptcy of liberal NTT. Much of its effort was invested in the so-called "historical Jesus" quest, which received far more serious blows from J. Weiss in 1892 and Wrede himself in 1901, and from the theological critique of Kähler (1892). But liberal Protestantism's historicist option of finding something behind the texts with which it could identify was not limited to the Ritschlians' historical Jesus. It was equally possible to see historical research as a means to understanding religion, and to find the revelation of the divine in that rather than in the moral personality of Jesus. For Harnack, the interests in religion, Christianity, and Jesus coincided, and Wellhausen could similarly identify with the prophetic religion he uncovered as a historian. But some members of the history-of-religions school could sit more lightly to christology and find God in the religion they interpreted with the help of a romantic theory of religion. They criticized their great liberal predecessors for being too oriented to doctrines and documents, and illuminated "the beginnings of our religion" (Wernle) with parallel material and the study of preliterary traditions and motifs. Wernle's title admits the personal interest characteristic of NTT, and Bousset's *Kyrios Christos* makes plain its author's personal standpoint. A hermeneutical bridge was thus being constructed as the Bible became a source for understanding religion, and Jesus and Paul valued as religious personalities. This was therefore still NTT, even though the biblicist component had been abandoned and the "religion hermeneutic" did not fit into the traditional doctrinal and systematic format. Diessmann's polemic against the "dogmatized" Paul, for example, was theologically as well as historically motivated.

The liberals' hermeneutics were underdeveloped, because with the exception of Troeltsch most of these great historians were not great theorists. Their position was also unstable because their emphasis on the historical component in revelation made their theology vulnerable to their own further research. J. Weiss and especially A. Schweitzer thought the eschatology of Jesus and early Christianity out of tune with their own religion, and Heitmüller saw a similar problem in Paul's sacramentalism. But despite this, the "religion hermeneutic" survived because the liberals did not claim to believe the whole NT. Theological criticism of its untenable aspects had long been taken for granted. Their casual elimination of parts of the biblical witness was at odds with the Church's use of its Scripture, but some connection between the NT and this modern liberal theological interpretation was maintained.

This form of NTT was further weakened by the changes in cultural climate around 1914, and was eclipsed for some 60 years, at least in the German and Swiss Protestant homelands of NTT. Karl Barth's *Römerbrief* (1919, 1921) provided the catalyst for a reemergence of the biblicist type of NTT which had

been dampened by the intellectual victory of liberal Protestantism in historical research. More importantly, it stimulated a new combination of critical research and strong theological interests, in Bultmann's hermeneutical type of NTT.

Barth had some considerable sympathy for the biblicist strand in 19th-century theology and NTT, represented by J. T. Beck. But his strand formed a very wide spectrum, and included such outstanding historical scholarship as that of Lightfoot and Zahn. The main importance of Barth's reaction lay in its relativizing of the historical research which had dominated the discipline, and restoring the emphasis to the text and its interpretation. The theology of the word influenced the terminology of F. Büchsel (1935, 1937), who subtitled his NTT "A History of the Word of God in the New Testament," but failed to distinguish between this and the doctrinal concepts in which it found expression. A few years later M. Albertz published *Die Botschaft des Neuen Testaments* (4 vols. 1947–57), which was shaped by form criticism. Although it avoided the word "theology," it is a NTT influenced by the new movement. The so-called biblical theology movement which took various forms in Britain in the 1930s and North America in the 1940s and 1950s was only partially influenced by Barth. E. C. Hoskyns owed much to the *Römerbrief,* which he translated, but the *Church Dogmatics* had little impact in England. In Scotland and North America, where Calvinism was more pervasive, Barth was taken more seriously, though only a few biblical theologians could be called remotely Barthian. The most celebrated NTT from this wide and disparate movement may be seen in the "salvation history" theology of O. Cullmann. The popular writings of A. Richardson, culminating in *An Introduction to the Theology of the New Testament* (1957), and some early work of A. M. Ramsey also belong here. But the new theological interest in the Bible after World War I had many sources and took many forms, including Kittel's *Theological Dictionary of the New Testament* (1933–74; ET 1964–76), which was dedicated to Schlatter.

The ambiguity of Barth's relationship to his liberal teachers became visible in his debate with Bultmann in 1922 over what Bultmann saw as the necessity of *Sachkritik,* i.e.i.e., theological criticism of the text in the light of the gospel it intends to articulate. Barth's unwillingness to admit this emphasized the biblicist component in NTT in contrast to the hermeneutical emphasis in Bultmann's kerygmatic theology. Barth had persuaded Bultmann to abandon the liberal religion apologetic he had learned from Herrmann and refined in debate with Schleiermacher, Troeltsch, and Otto in favor of a greater emphasis upon "theological exegesis," i.e., interpretation of the biblical texts. But Bultmann was determined to maintain the liberal heritage of historical criticism and built his historical research into an existentialist theological interpretation of the NT which drew on Dilthey's existentialist philosophy of history and Heidegger's phenomenology. With this new theological framework he was also able to appreciate Schlatter's hermeneutics, which had similarly held together thinking and writing.

Bultmann's *Jesus* (1926) is an impressive theological interpretation of the earliest strata of the synoptic tradition, and may therefore be classified as NTT, but the distinctive shape of his achievement is clearer in other articles from the same period, and monumentally in *The Gospel of John* (1941, ET 1971) and the *Theology of the New Testament* (1948–53; ET 1952–55). These great syntheses of theological interpretation were solidly based in the most advanced of German biblical scholarship and dominated NTT for most of the present century. Bultmann retained the historical outline of early Christian thought, following Wrede's recommendation. But inside this outline, his NTT proper is contained in daring theological interpretations of Paul and John which go well beyond historical reconstruction. These interpretive ventures presuppose Bultmann's own understanding of revelation and God-talk, seeking to explicate faith's understanding of God, the world, and human existence, as found in these texts.

This existential theological interpretation was bound to be rejected by theologians with a more biblicist or historicist view of revelation, but the most cogent criticisms were those which argued that it failed to do justice to aspects of the NT itself. The Synoptic Gospels evidently attach theological importance to the ministry and teaching of Jesus, and Paul and even (arguably) John are more positive about the world and history (past and future) than Bultmann's concentration on the "historicity" of human existence can allow.

Those who rejected that account of revelation taking place in the act of proclamation, with theology articulating the resulting self-understanding, gave accounts of NTT which reflected their own more

historicist (Jeremias) or biblicist positions. Both these alternative types combine some talk of the word proclaimed with greater prominence to history. But their concepts of history are as elusive as Bultmann's when related to revelation. Theories of salvation history are not easily reconciled with early Christian eschatology, and they stand in a curious relationship to the critical study of history. But they echo the historical dimensions of the biblical witnesses, especially the OT, and some popular NTT has claimed this label, including E. Stauffer's *Theology of the New Testament* (1941; ET 1955). A more serious claimant to continuity with von Hoffmann and others, perhaps the most impressive textbook since Bultmann's, is L. Goppelt's posthumous *Theology of the New Testament* (2 vols., 1975–82; ET 1981–82).

A more rationalistic account of revelation in history was developed by W. Pannenberg, also in opposition to theologies of the word. It was partly inspired by von Rad and ultimately dependent on Hegel, but also built on some modern study of the apocalyptic. It influenced the thinking of some NT theologians (e.g., U. Wilckens) but did not result in any complete NTT.

Discussions of history and eschatology dominated the discipline in the 1950s and 1960s, with some of the most creative contributions stemming from Bultmann's own pupils and followers, and relating to the "historical Jesus." Bultmann's synthesis was challenged on all fronts and defended on some, but the crop of NTT textbooks which followed signaled a decline. H. Conzelmann wrote *An Outline of the Theology of the New Testament* (1968, 1987; ET 1969) to give greater prominence to the historical components in NTT and to supplement Bultmann with a section on the synoptic kerygma. His most surprising theological modification of Bultmann was to follow H. Schlier in seeing theology as the interpretation of early creedal formulations.

Other textbooks followed from outside the Bultmann school. They correct some of his weaknesses, but lack his hermeneutical penetration and retreat toward biblicism and historicism. J. Jeremias wrote only the first volume of his NTT, devoted entirely to "The Proclamation of Jesus" (1971, 1988; ET 1971). The summaries of W. G. Kümmel (1973; ET 1974), E. Lohse (1974), and G. Strecker (1988) provide basic information but do not advance the methodological discussion. J. D. G. Dunn's textbooks, especially *Unity and Diversity in the New Testament* (1977) and *Christology in the Making* (1980, rev. 1989) are more substantial, as are the textbooks by the evangelical scholars G. E. Ladd (1974), D. Guthrie (1981), and L. Morris (1986), which summarize the contents of the NT rather than interpret its essential content. Their biblicist standpoint and generally conservative historical judgments allow them to identify with what they find in the NT much as conservative NTTs did in the 19th century. Even in some mainstream biblical scholarship, the biblicist component in NTT has expanded to fill the vacuum left by the decline of hermeneutics within liberal and radical scholarship. As biblical scholarship has become more secularized, the religious interests that govern most people's reading of the NT have reasserted themselves, often fruitfully. The attention that Bultmann's hermeneutics are receiving from some conservative interpreters is impressive.

Within Roman Catholicism the revival of biblical studies since *Divino Afflante* (1943) has given rise to some sophisticated hermeneutical discussion and some outstanding biblical scholarship, much of it written with eyes open to theological questions. But the textbooks of M. Meinertz (2 vols., 1950) and J. Bonsirven (1951; ET 1963) no more advanced the discipline than the popular NTT of A. Lemmonyer (1928; ET 1930) and O. Kuss (1936). K. H. Schelkle (4 vols., 1968–76; ET 1971–78) reverted to a structure based on doctrinal concepts, but within each section the diversity of the witnesses is respected. This major work fulfills the discipline's aim to make the biblical material available for religious use, but it takes for granted the intelligibility of the traditional doctrinal structure. Some more original Roman Catholic NTT has been written by systematic theologians (notably E. Schillebeeckx and H. Küng) turning to biblical studies in order to loosen the dogmatic straitjackets.

The past few years have seen a variety of developments, some of which are religiously and theologically motivated and deserve the name NTT. Many of these have retained a strong base in biblical scholarship, but have seen this as a necessary control rather than setting strict limits to the interpretive task. Liberation theology has roots in an older biblical theology. It is not in the vanguard of historical scholarship, but is

opening up new perspectives in biblical interpretation which will surely be increasingly important for European and North American NTT.

Still working within the historical paradigm, E. Schüssler Fiorenza (1983) has also argued powerfully for a "committed" stance which rejects the ideal of historical objectivity. Interpreters' legitimate interests are best declared and scrutinized. The feminist challenge is evidently most important for the Western churches and demands the attention of any biblical study that asks about the meaning and truth of its message. This has traditionally been the underlying concern of biblical and NT theology, even though it has sometimes been suppressed by a positivistic historiography. In the past it was considered very largely within the parameters set by the doctrinal tradition. Today ethical issues are becoming a growth point in NTT and the discipline can be expected to take many new shapes. Both the application of social-scientific methods in biblical studies and the recent swing to more literary types of interpretation are full of potential for NTT. But these take us beyond history and analysis into a concluding summary of problems and possibilities.

C. Problems and Possibilities

1. Scope. The phrase "New Testament theology" is used in a general sense to embrace all theologically interested research on the NT, and more commonly in a narrower sense to refer to textbook summaries of its theological context. The history of the discipline reveals a series of historically informed attempts to present the ideational content of these writings in a coherent way. But the definition of that content as theological has usually led interpreters to relate the biblical witnesses to contemporary Christian belief and practice. This is because the belief that the canonical writings communicate the revelation of God implies a self-involvement on the part of the interpreter. This puts an unusual kind of pressure on the largely historical character of NTT, and has led to methodological problems.

The discipline originated and has survived in the service of the Church's use of Scripture. Its tensions, which some have thought amount to contradictions, stem from its combination of this religious interest with the rigorous use of the linguistic and historical methods that are agreed to be necessary for clarifying the meaning of ancient writings. NTT has insisted on using these rational methods of biblical scholarship to determine what, according to the linguistic conventions of their authors, these texts mean. But the results have not always corresponded to the ways the Bible is heard and understood in the wider contexts of religious communities sharing beliefs shaped partly by intervening history.

As a biblical discipline NTT gives priority to the witness of the texts, and this matches the wish of the community to be challenged and corrected by the witness of its Scripture. The discipline's dependence on the rational methods available at any given time reflects the general commitment of the Church and theology to human rationality. But in a secular culture these methods tend to exclude the presupposition on which Christian theology operates, the revelation of God in Jesus. So long as it remains a theological discipline NTT retains this assumption, and explicates it in ways that avoid conflict with the methods and results of the rational investigation of the Bible.

2. Unity and Diversity. The most serious point of conflict between faith and reason in the modern study of Scripture and the most visible problem for NTT concerns the unity of the Bible. This is implied by the notion of Scripture and assumed by Christianity, but challenged by historical investigation which has highlighted the diversity of the biblical witness. That destroyed traditional accounts of its unity which saw this in terms of a monolithic doctrinal structure. The unity of the two testaments has always been a problem for Christian theology, and biblical theology has tried to resolve it in ways that do justice to modern critical study. But within NTT it is the diversity of these explicitly Christian witnesses which raises questions about how Scripture should be read. F. C. Baur's ambitious attempt to integrate his radical historical criticism in a dialectical account of the unity of the development was falsified by subsequent research, but his combination of critical and hermeneutical perspectives remains suggestive. Bultmann's location of the unity in the nonobjectifiable kerygma seemed to evade the problem by removing it from history and texts to an event which eludes definitive formulations. But this is vacuous until it is specified by reference to the theological, i.e., doctrinal language in which faith's self-understanding is expressed, and then disagreement breaks out, as the discussion of H. Braun's essays

(1957, ET 1968; 1961, ET 1965) illustrated. It emerged from the hermeneutical debates of the 1960s that most theological interpreters are dissatisfied with Bultmann's near contentless christology and want to point in more specific ways to the person in whom Christians find the decisive revelation of God. They recognize the diversity of christological statement in the NT, but find the unity of Scripture and the criterion of its diverse formulations in the historical, exalted, and expected Jesus to whom these formulations bear more or less adequate witness. Since the person and place of Jesus Christ cannot be explicated without drawing out his soteriological meaning, some general anthropological and ecclesiological statements are also included in most accounts of the unity of Scripture.

3. The Relationship to Contemporary Theology. Behind any theological interpreter's construal of the unity of the biblical witnesses stands some particular understanding of the saving revelation of God in Jesus, i.e., a contemporary understanding of Christianity, which is related (often silently or implicitly) to the understanding of Scripture uncovered by history and exegesis. The three elements in a Christian account of this revelation (history, text, contemporary actualization) are differently defined and differently accented in different NTTs. The liberals' sometimes positivistic emphasis upon the history at worst reduced the texts to sources and failed to hear them as religious witnesses. In fact most of the older liberals had a sensitive ear for religious utterances and could relate in a personal way to the history they uncovered or constructed. But their focus on the religion "behind" the texts did less than full justice to the ways the Church actually used its Scripture. The various modern theologies of the word have reacted by undervaluing the historical element in Christianity, provoking further reactions in renewed emphases on salvation-history or universal-history frameworks for speaking of God and revelation. These disputes have come to no clear conclusions. NTT today is beginning to develop the liberals' "religion" option in ways that take the texts as more than historical sources. C. Geertz's cultural-linguistic theory of religion opens new doors for theological interpretation, as W. Meeks has appreciated in *The First Urban Christians* (1981) and L. Johnson in *The Writings of the New Testament: An Interpretation* (1986). Alternatively, Bultmann's model can be developed to take account of the new emphasis upon liberation and praxis, as is clear from D. Tracy's *The Analogical Imagination* (1981), a work deeply suggestive for NTT.

4. Literature and History. The shape of NTT is determined by the biblical data and the interpreter's understanding of revelation. The hegemony of historical research in biblical scholarship since Baur has tugged NTT away from its more natural orientation to the exegesis and interpretation of the biblical literature. This would ultimately have dissolved NTT into the history of early Christianity, had not Barth instigated a renewal of attention to the text and its interpretation. Like Barth in his *Römerbrief* Bultmann is primarily a theological interpreter of certain biblical texts, but in his textbook Bultmann maintained the historical paradigm preferred by biblical scholarship and included his existential interpretations of Paul and John within that outline, commenting only briefly that for him the historical outline stands in the service of the primary task, which is interpretation of texts. Despite his followers' even stronger historical emphasis, it is possible to develop a more literary model for NTT out of his legacy. This need not and should not involve any devaluation of historical scholarship. The Christian Church's emphasis upon the historical elements in its founding revelation forbids any exclusion of the historical interest, even though some forms of historical apologetic have lost their cogency for a critical age. The importance of historical exegesis in the study of literature varies with different theories, but only a literary theory which insists on textual determinacy (to which historical research makes a major contribution) is likely to meet the needs of NTT, because without that, Scripture could mean anything and would lose its capacity to challenge and perhaps redirect the interpreter and the Church.

5. The Canon. Discussion of the appropriate interpretation of Scripture points NTT in a literary direction, whereas most biblical scholarship since Semler has (partly for good theological reasons) preferred a historical paradigm. The notion of a canon is applicable to a collection of literature, but as Wrede memorably insisted, it has no place in historical research. Its theological function of excluding what does not correspond to its critical norm is also uncongenial to liberal Christianity and in any case only workable in a very loose sense today. Now that theories of inspiration and revelation which make

these writings different in kind (as opposed to having a special use) have disappeared from critical theology, the question of "canon" is important only in discussion of the boundaries of Scripture, and that is scarcely a live issue today. Michaelis suggested that nonapostolic writings would have to be excluded. This entanglement of theological with historical judgment is intelligible in view of the argument from apostolicity used in the formation of the canon, and it gained weight from some accounts of inspiration. Such false supports are exposed by historical criticism. But the Church's reception and use of the Bible today has only the loosest connection with these arguments. Any of its statements can be challenged, but Scripture is not a "given" for the Church, its shape and content vindicated by centuries of experience. The "theological problem of the canon," which has haunted the historical study of the Bible from its inception, is really the problem of Scripture, i.e., having a collection of writings which are treated with more respect than can be rationally justified outside the Christian interpretative community. This biblicist strand in Christianity and NTT stands in some tension with a historically dominated biblical scholarship but only falls into contradiction with historicist views of revelation and NTT.

B. S. Childs has since 1979 appealed to the canon in opposition to the hegemony of history in biblical interpretation. His canonical criticism recalls NTT to its ecclesial and theological context, and his angle of vision adds a dimension to the task of scriptural interpretation and remains interpreters to balance historical with literary perspectives. But the data for NTT are the multilayered Scriptures in all their many-sidedness. Theological interpretation cannot be constrained by the final form of the text or final shape of the collection, least of all when this involves denying or neutralizing historical insights. The final form is important because that is what the Church reads as Scripture, but the final editors are not all-important for a Christian view of revelation. This depends on a dialectic between Scripture and the gospel, which is hindered as much by constricting the possibilities for scriptural interpretation as by cutting loose of theological assumptions. The plasticity of a multilayered Scripture enlarges the possibilities for theological interpretation expressing the freedom and truth of the gospel. Scripture is the indispensable source and resource of Christian witness. It also functions as a norm by being constantly used by the religious community. But to strengthen its normative role by hardening its canonical arteries would lead at best to a sterile orthodoxy and at worst to a precritical bibliolatry.

6. The Historical Jesus. The difficulty of maintaining a correct balance between on the one hand the historical founding events of Christianity, and on the other hand the texts and their interpretation, is particularly clear in the argument concerning the place of the (so-called) "historical Jesus" in NTT. The phrase is ambiguous, but both meanings are important. NTT can scarcely ignore the earthly ministry and teaching of Jesus, which are plainly important for some if not all the NT writers. Neither can it ignore the distinctively modern question of the Jesus reconstructed by modern historical research. This is important for many Christians' understanding of their faith, and rightly so, granted the identity of the Lord of faith with the man from Nazareth. Nevertheless, it is far from clear that this legitimate interest is best satisfied by speculative reconstructions based on inadequate evidence. Even the so-called New Quest of the historical Jesus in the 1950s and 1960s was theologically vitiated by the historians' proper contrast between the Jesus of history and the Christ of faith being made constitutive for christology, and the early Bultmann's tendentious comments that "how the proclaimer became the proclaimed" is the central question for NTT was similarly a remnant of the Enlightenment's prejudice against doctrine. A more literary approach to NTT could do justice to the importance of the history of Jesus for Christianity by saying what can be said about this history in the course of interpreting each of the gospels. A critical theological interpretation can justly appeal to all that can be known about Jesus in the course of unfolding and assessing the witness of each evangelist. Historical insights can question the evangelists' interpretations at particular points (e.g., over Matthew's account of Jesus' attitude to the Pharisees, or John's account of his attitude to "the Jews"), but without placing these points in a framework that systematically exaggerates the discontinuities and tries to structure christology on them.

7. Old and New Testaments. The relationship of the testaments was no more satisfactorily handled in historicist NTTs than other aspects of the problem of the canon. Biblical historians could not justify neglecting the intertestamental material, but they found it hard to do it justice in the context of biblical

theology. More biblicist NTTs and biblical theologies, and Christian theologies of the OT, have paid particular attention to this question, but their answers are too exclusively dependent on their textual data to satisfy theologians whose view of revelation pays more attention to the present-day actualization of the text.

The biblicist theological emphasis on the texts themselves is reinforced by biblical scholarship which likewise focuses attention on the texts. This alliance of biblicism and sound scholarship is present in the recent German discussion of "biblical theology" led by H. Gese and P. Stuhlmacher, and continued in the *Jahrbuch für Biblische Theologie* (1986–). But a critical NTT and even a critical Christian biblical theology must take its bearings from a more satisfactory view of revelation. Since the Christian revelation of God focuses on Jesus Christ, crucified and risen, rather than on the texts that bear witness to him, a Christian biblical theology or reading of the Bible is almost bound, in a historically conscious context, to be a NTT. The OT witness has to be interpreted in the light of that, placing such a strain on the historically trained conscience that one may question the very possibility of a Christian OT theology which does justice to faith and reason. But there is nothing unreasonable about a Christian biblical theology which selects OT material and interprets it in the light of the event to which Christians believe it ultimately bears witness. This is permissible if the texts are not distorted and made to say what exegesis refutes. That restriction will exclude from a Christian biblical theology much of the valuable substance of OT scholarship. But these writings have continued to be read as Scripture and there are many possible interpretative strategies by which the insights of the older covenant can be preserved in the new. Some of the best recent biblical theology has focused on particular theological themes as found in both testaments, without trying to provide an overview of everything, e.g., D. Senior and C. Stuhlmueller's *The Biblical Foundations for Mission* (1983) and P. D. Hanson's *The People Called: The Growth of Community in the Bible* (1986).

8. Christianity and Judaism. The Hebrew Bible is shared by two complex religious communities who claim to worship the same God, but understand God's revelation, and so the shared Scriptures, quite differently. This question of the relationship between Judaism and Christianity has not until recently been much discussed in NTT. But recent history has placed it firmly on the Christian theological agenda, and the historical circumstances of Christian origins mean that the NT has much to say to it. The arrival of this theme in NTT is signaled by F. Mussner's *Tractate on the Jews* (1979; ET 1984).

9. The Future. Increased specialization even within NT scholarship has rendered the old textbook format of NTT questionable. It has become less likely that one scholar's summary of his or her exegetical conclusions will excite the interest that Holtzmann's did. But the textbook form has value at the introductory level. NTT has always had a popular appeal, and many of the older and modern presentations are popularizations rather than scholarly *summae*, e.g., A. M. Hunter, 1943, 1944, 1958 and F. C. Grant, 1950. But the conclusion to be drawn from the present discussion is that the particular tasks of NTT within biblical studies and on its borders with systematic, doctrinal, or philosophical theology center on understanding the NT in ways that do justice to the best insights of historical and exegetical research, while also relating (perhaps critically, but always constructively) to the expectations and needs of the Christian community. This may be done by an "interpretation" of the writings of the NT (L. Johnson), or a *Theological Introduction to the NT* (E. Schweizer, 1989). It is more likely to be oriented to the biblical literature than to early Christian history, but unlikely to follow B. S. Childs' narrowing the discipline to a study of "the NT as canon" (1984)—a proposal which was discredited when it set the canonical Paul against the historical Paul. History and exegesis retain critical controls over what is said in NTT, even though theological interpretation and criticism (*Sachexegese* and *Sachkritik*) go outside the realm of historical discourse. This literary orientation is in the first place a reflection of the fact that the NT is a collection of literature, whereas it merely provides material for historical reconstruction. But secondly, it respects the extent to which most theology is oriented to texts. However, a modern liberal theology is likely to be oriented to the empirical phenomenon of religion, and doing justice to early Christian religion for the sake of NTT involves historical and social-scientific as well as literary perspectives.

The theological orientation of NTT as a theological as well as a biblical discipline means that it is largely concerned with theory. But unlike a *Hermeneutik,* which discusses the principles of interpretation (e.g., H. Weder, 1986), NTT illustrates them in the process of interpreting these writings. However, unlike a commentary, NTT needs to make clear the way in which it combines exegesis and theology in a theological interpretation. That is the special task of a theologically and historically responsible presentation of biblical *Sache* or "content" that is believed by Christians to mediate the decisive saving revelation of God.

Bibliography

Discussions of the conceptual content of the NT amount to a large portion of NT scholarship and cannot be selectively included. The items listed below therefore have been included primarily because of their focus on methodological issues. Most New Testament Theologies contain a section on the aims and task of the discipline. Standard theological/biblical encyclopedias also contain relevant articles, notably *RGG* [2] 1: 1091–94 (ET in Pelikan 1970: 27–31); *IDB* 1: 418–32; *IDBSup*, 104–11; *RE* [3] 3: 192–200; *LTK* 2: 444–49; *Sacramentum Mundi* 4: 216–20. THEOLOGY (BIBLICAL), HISTORY OF. The following article gives an overview of more than two centuries of research in the fields of biblical theology. It begins in the period before historical criticism became dominant in the understanding of the Bible in the wake of the Enlightenment. Before Gabler, who "discovered" the field, the dogmatic approach was dominant. It saw the whole Bible on one level and tried to found dogmatic sentences on the evidence of verses taken from all parts of Scripture without any regard for historical developments. Every word was taken as inspired and equally God's own word. Gabler reserved this task for "dogmatic theology," while assigning the historical task of describing what the biblical writers said to "biblical theology." Subsequently, the "history of religions" approach fixed its attention exclusively on the development of Israel's religion. The different writings, sources, and layers in the Bible were seen as products of time-bound circumstances, correlated to one another by a

development leading from the earliest and most primitive to the most recent periods. Dialectical theology brought an end to this approach, stressing again that the Bible is God's word speaking to the Christian believer today through the voices of the biblical witnesses. The most recent "biblical theology movement" was the concerted effort of Anglo-American scholars to carry through this approach in a scholarly world still dominated by liberal views. Many ways of tracing a biblical theology have been explored since then. The result is that neither an overarching structure, nor a single term (as "center" of the Bible or one of the Testaments), nor a historical development as such can suffice as a unifying principle for the whole Bible. Therefore the ongoing task of biblical theology must be a careful listening to the different voices of the biblical witnesses living in different times and circumstances, and the quest for the inner unity that comprises the Bible as proclaiming the same God, the God of Israel and the father of Jesus Christ.

A. Developments before Gabler

Although the principle of *sola scriptura* (Scripture alone) had accorded the Bible a central position for faith and theology in the Reformation, the Reformers themselves failed to develop a critically considered biblical theology. Luther straightforwardly understood Scripture to be the preached Word of God. His yardstick for assigning a work to the center or periphery of Scripture—an undertaking he took so seriously as to exclude whole books from consideration—was dogmatic ("was Christum treibet": "[that] which urges to Christ").

The dogmatic approach of the medieval period continued to dominate in the period of Protestant Orthodoxy (17th century). Indeed, the doctrine of the Holy Scripture considered as the Word of God led to such a thoroughgoing identification of the two that every single word in the Bible was reckoned to be inspired (so, e.g., by Johann Gerhard), as was the very Masoretic vocalization of the Hebrew text (so Johann Buxtorf). The need to support dogmatic positions with corresponding statements from Scripture led, under Orthodoxy, to the formation of a concept of "biblical theology," which was above all defined by Abraham Calov as an ancillary discipline of dogmatics. The task of this "exegetical theology" was held to be the coordination of biblical passages (*dicta probantia* or *collegia biblica*) with the various appropriate doctrines (*loci*). In the best known work of this sort (Schmidt 1671), the supportive passages from the OT and NT were listed separately, although no differentiated evaluation of either part of the Bible was intended by this. At this point—as in modern-day fundamentalism—all of Scripture was regarded to be on one and the same plane, regardless of the times when the various texts themselves originated.

Even Pietism, which had criticized the scholastic system of Orthodoxy and had sought to replace it with a biblically founded theology (as in the works of Heymann [1708] and Wiedner[1722]), did not transcend

the understanding biblical theology as an ancillary discipline of dogmatics. Pietistic works, too, merely organized supportive passages for dogmatic purposes. However, Pietism did manage to call renewed attention to the biblical basis of theology and the role of the Bible for evangelical piety.

This fundamentally ahistorical view of the Bible was not even surpassed by the early theologians of the English Enlightenment (the so-called Deists), in spite of their opposition to the orthodox ecclesiastical position. This is most clearly the case in the work of Matthew Tindal (*Christianity as Old as the Creation* [1730]), which was probably the most representative of Enlightenment efforts. Here, too, the Bible was evaluated according to an absolute and imposed system; although this system was not the teaching of the Church, but a "natural religion" (or, more precisely, a rational and self-evident morality for all men). The only biblical statements regarded as valid were those that could satisfy the demands of this morality (provided, however, that those statements derived from morally unobjectionable biblical authors). Most of the recipients of revelation in the Bible failed to satisfy the latter criterion. Tindal thought it possible to discern his "religion of nature" in the gospels. Hermann Samuel Reimarus (1694–1768) was far more consistent. On the basis of similar views about a purely morally conceived religion (determined by the rational supernaturalism of his teacher, Wolff), Reimarus perspicaciously recognized the time-bound features in the Bible, penetrating all the way to the heart of Jesus' message. From this point of departure he developed what was surely the most radical criticism of Scripture of his day (see Reimarus 1972).

The decisive fundamentals of a historical criticism of the Bible had already been formulated by B. Spinoza (1670). However, as Spinoza was regarded as something of a maverick, his views were only acknowledged a century later. Spinoza noted that the biblical writings derive from different epochs and thus could not be held to lie on the same plane. There was furthermore the question of the original intentions of the author of a given biblical work. Finally, he maintained that one's knowledge of the contents of the biblical works ought to be won from the Bible itself, and should not be based on dogmatic premises imposed from without. Spinoza developed his own pantheistic philosophical system entirely apart from the Bible; he assigned reason to the realm of truth, and theology to the realm of piety and obedience.

Among the theologians of the Enlightenment, A. F. Busching was the first who possessed sufficient independence to develop a theology based on the Bible alone, in contrast to the scholastic teaching methods; he presented this theology in his lectures at Göttingen, as well as in numerous works. He also attempted provisionally to organize the OT and NT statements with respect to their appropriate historical periods. But it was J. S. Semler who first developed the theoretical fundamentals of a historical-critical biblical exegesis which opened a pathway for a new understanding of biblical theology (Semler 1771–75; and other works) Semler emphasized the importance of distinguishing between the "Word" and "Scripture," and held that the latter should be seen as a product of human effort to be understood purely historically according to the dates its various sections were composed, a position that undermined the traditional teaching about verbal inspiration. Although Semler himself published two volumes of biblical *dicta probantia* for dogmatics (1764–68), he had nonetheless prepared the methodological ground for a new understanding of the task of a biblical theology.

One perhaps ought to mention the work of G. T. Zachariä, which was influential in its own time (1771–75). Zachariä sought to develop a new arrangement of the theological doctrines corresponding to a systematization which follows the order of the material in the writings of the OT and NT. However, since Zachariä held to the notion of verbal inspiration, and since he considered a writing's date of composition to be unrelated to its theological value, the dogmatic doctrinal system was merely replaced by Zachariä's own biblicistic one.

B. From Gabler through World War I

1. The Program of J. P. Gabler. A fundamentally new understanding of the goal of a biblical theology was presented by Gabler in his now famous accessionary lecture delivered to the faculty of theology in Altdorf in 1787 (see Sandys-Wunsch and Eldredge 1980 for translation and discussion of this address). Basic to Gabler's thought was the distinction between "Biblical Theology," which is of a historical nature (*genere historico*), and Dogmatic Theology, the nature of which is didactic (*genero didactico*). According

to Gabler, biblical theology, "passes on to us what the holy authors thought about divine things." In contrast, dogmatic theology presents us with conclusions about divine things arrived at by a theologian whose thought will have been conditioned by the particularities of his time, his origins, and the school to which he belonged. Since dogmatic theology is subject to the continuous transformations of history, it is crucial that those "pure concepts" which are valid for all times should be derived from the Bible and analyzed so as to distinguish divine from human wisdom. To this end a precise historical organization of the biblical works according to their respective times of origin is necessary, enabling us to recognize the time-bound concepts (the *true theology*), as well as to collect the sacred ideas (*notiones sacrae*) through comparative study, thus gaining the "pure theology."Since the "sacred ideas" are "constant," dogmatic theology at any time-determined stage may appeal to them to support its statements.

Gabler's emphasis on the historical character of biblical theology deserves special stress. The consequence of this idea is that the biblical writings are to be studied with the same methods as apply to secular works. A further consequence of the chronological distinction of writings (in connection with which the apocryphal writings proved to be important) is that the OT recedes in importance with respect to the NT, the distinctions between various canons become clearer, and the dogmatic unity of Scripture breaks down. However, Gabler's assumption that it is possible to extract from the Bible *dicta classica* (that is, timeless universal truths agreeing with reason; i.e., a "biblical theology, narrowly construed"), which might form a solid foundation for the didactic mission of (more subjective and time-bound) dogmatic theology, was itself a product of Enlightenment thought. Gabler did not see that historical knowledge itself is based on various time-bound presuppositions, and that it, too, therefore remains subjective.

2. The Partition into OT and NT Theologies. Gabler himself never attempted to realize his program. The work of C. F. von Ammon (1792) once again interpreted the whole of Scripture on a single plane, albeit a plane based on Kant's moral teachings. Wherever Gabler's work was taken seriously, his historical program speedily led to a partition into OT and NT theologies, as first occurred in the work of his colleague at Altdorf, G. L. Bauer. Bauer accepted only Gabler's first methodological step, namely the historical investigation of the sources. In the process, Bauer emphasized powerfully the pre-Christian and sub-Christian elements (except for monotheism) in the OT. His basic idea was that religious ideas evolved progressively, and in keeping with that idea he studied the development of the concepts. He also sought rationalistic explanations for biblical myths and miracles, and considered the decisive climax to be the advent of Jesus, whom he designated "the greatest teacher in the world."

Also in the subsequent period we find an unequal balance between historical interpretation of the sources and the desire to derive universal truths from them, so that the reconstruction *(comparatio)* alternated between these extremes. Additionally, the historical approach created an abyss separating the Testaments. F. C. Baur objected that the works of W. M. L. de Wette (1813) and G. P. Kaiser (1813–21; see below) were not sufficiently historical. De Wette described "the moral idea of a god, liberated from all myth, as a holy will" as the objective principle of Hebrew religion. This "ideal universalism" (conceived as the idea actually intended by Moses) was symbolized by theocratic particularism. De Wette summarized Hebrew religion and Judaism as "the religion of the Old Testament," Judaism being for him "the unfortunate reconstruction of Hebrew religion." "The teachings of Jesus" and "the teachings of the apostles" were the "religion of the New Testament and of Christianity." For De Wette, "only that which according to philosophical principles belongs to religion" should be part of the presentation, which is systematically constructed according to the doctrines of God, man, and the Messiah (soteriology). After the second edition, de Wette prefaced each subsequent section with a "doctrine of revelation," which showed Hebrew religion to be a history of revelation from the Creation until the latest period.

D. G. C. von Cölln attempted to carry out Gabler's program in a work published posthumously (1836). The OT and NT were treated separately, and the various epochs (such as "Hebrew religion" and "Judaism") were distinguished according to "historical principles." The rationalizing and systematic tendency was, however, dominant in the work: Von Cölln's goal was to make manifest the "universal religious concepts or religious universalism" which he distinguished from the concrete temporal features

(expressed either mythic-symbolically or mythic-nonsymbolically), which he labeled "theocratic concepts of religion or religious particularism." It is noteworthy that historical development was scarcely discernible in this work.

A new approach more explicitly concerned with the historical development of Israelite religion came with the work of W. Vatke (1835). Influenced by Hegelian philosophy, Vatke understood the chain of events in history as the self-manifestation of the "absolute Spirit" in revelation. In this view, "the various evolutionary stages of religion were equivalent to just as many stages in the development of consciousness" (p. 100). The goal of this evolutionary development of consciousness is absolute religion, in which "the concept of religion becomes completely realized as idea" (p. 101), which Vatke saw as occurring in Christianity. Hegel's historical dialectic led to a periodization of the religious history of Israel, according to which the Law followed the prophets, the Chronicler's History was dated very late, and the Psalms and Wisdom materials, too, were dated later than the prophets. Hegel's student B. Bauer also published a similar type of history-of-religions investigation (1838–39).

In his review of volume 1 of G. P. Kaiser's biblical theology, F. C. Baur earlier (1818) had already demanded such a thoroughgoing, historically conceived, and independent scholarly investigation of biblical theology which would bring Jewish and Christian religion into comprehensive historical perspective. Step by step, the historical-critical investigation of the NT sources permitted the reconstruction of the history of early Christianity (by distinguishing between authentic and deutero-Pauline epistles, the Synoptics and the gospel of John, etc.), a reconstruction that was later summarized by Baur himself (1853). From this effort, Baur's (posthumously published) lectures emerged (1864). At the outset he formulated the following principle: "Unlike dogmatics … biblical theology ought to be a purely historical discipline." Due to the historical difference between the two Testaments, he insisted that this discipline should yield separate theologies of the OT and NT (1864: 1, 10). On the basis of Hegel's dialectic and the understanding of history as the self-manifestation of the human spirit (which over time participates more and more in the absolute spirit), three NT periods arose out of the conflict and conjunction of doctrinal concepts: (1) the period of the four Pillar Epistles of Paul and the antithesis provided by Revelation; (2) the period of Hebrews, the deutero-Pauline epistles, 1–2 Peter, James, the Synoptics, and Acts; and (3) the period of the Pastoral Epistles and the Johannine writings, since, according to Baur (p. 351) "New Testament theology achieves its highest stage and most complete form" in the Johannine didactic concept. In addition to this, the teaching of Jesus constituted the "primeval period," which, however, "escapes precise historical observation" (p. 122), since it has been transmitted by tradition. (Against this, G. L. Bauer held that the teachings of Jesus themselves belonged constitutively to NT theology. The disagreement on this point is still noticeable even in the most recent studies, and is, indeed, one of the abiding problems of NT theology.)

Among the other notable publications of the 19th century was the *Christologie* (1829–35) of E. W. Hengstenberg, a conservative attempt to demonstrate the unity of the two testaments as revelation utilizing Messianism as a unifying theme. But despite Hengstenberg's ecclesiological influence, the future belonged to the historical approach. The *Vorlesungen* ("Lectures") of J. C. Steudel (1840) presuppose an understanding of the step-by-step, continuous developmental path of OT religion from the very simplest forms, even though these lectures were structured systematically. According to Steudel, Christianity is, "in virtue of its historical connection with Judaism, both the continuation and the perfection of Judaism (or, more rightly put, of the OT revelation)" (1840: 542). Steudel's student, G. F. Oehler (1873–74), also wanted to derive the step-by-step, progressive revelation of NT faith historically and genetically from the OT witnesses. His subdivisions were Mosaism, prophetism, and OT Wisdom. We should note that Oehler assigned the whole of the Law, including Deuteronomy, to Mosaism, and did not accept Vatke's assignment of it to the period following the prophets. The post-positioning of Wisdom had no chronological intent; rather, it points to the special role played by this literature, which Oehler understood as satisfying man's drive for knowledge.

H. Ewald's theology (1888), presupposing his *Geschichte Israels*, stresses in a similar way the historical "stages of revelation." These, however, he found to correspond to one another in the main and to have

their common reference point in Christ. Thus the two Testaments were once more understood from the same point of view. This work was, however, scarcely noted in the following period.

3. From Biblical Theology to History of Religion. a. From OT Theology to the History of Israelite Religion. In the last quarter of the 19th century, the discussion raged even within the field of OT theology for and against the Graf-Kuenen-Wellhausen hypothesis, according to which prophecy was held to have preceded the Law. While the history-of-ideas oriented account of F. Hitzig (1880), student of H. Ewald, and the conservatively minded A. Dillmann (1895) either did not refer to the debate (thus Hitzig) or rejected the Wellhausen hypothesis (thus Dillmann), the popular *Theologie* of Hermann Schultz (1892), which ran to five editions, represented a transition to a mixed position. Here the history of Israelite-Jewish religion enjoyed the place of honor, while the systematic-theological treatments of the "Congregational Consciousness of Salvation in the Second Temple" and the "Religious Understanding of the World" were presented at the end of the work. Thus, Hitzig, Dillmann, and also E. Riehm, in a posthumously published work (1889), present introductory sections on "The Nature of Israelite Religion," followed by sections devoted to historical matters.

The future was to belong to the purely historical studies, such as those of A. Kuenen (1869–70), J. Wellhausen *(WGI*), and K. Budde (1912). The change also manifested itself in A. Kayser's *Theologie* (1886), the title of which was changed to *Geschichte der israelitischen Religion* in the edition revised by K. Marti in 1897. When B. Stade, a comrade-in-arms of Wellhausen, named the first volume of his 1905 work "The Religion of Israel and the Origins of Judaism," and yet retained as series title the misleading *Biblische Theologie des Alten Testaments* (1905), the latter was plainly an anachronism. Matters were similar in the posthumously published work of E. Kautzsch (1911), since his was a purely history-of-religions approach. In a well-known speech (1893), Stade described the task of the discipline as a purely historical one and rejected all connection to dogmatics. The elder Rudolf Smend (1851–1913) wrote a *Lehrbuch der alttestamentlichen Religionsgeschichte* ("Textbook of the History of Old Testament Religion," 1893) from the point of view of the Wellhausen School, and so brought this development to a climax. Other works of this type were published by G. Hölscher (1922), and by W. Oesterley and T. H. Robinson (1930).

An interesting note was brought into the discussion by the so-called history-of-religions school, the main representative of which in OT study was H. Gunkel. The members of this school shared with their contemporaries the rejection of the old style of biblical theology; their twin battle cries were "religion" and "history" (Gunkel 1914: 386–87; cf. also W. Klatt 1969: 25–26). The intention, "to grasp *the religion itself* in all its depth and breadth," that is, the "history of *biblical religion*" (Gunkel 1922: 66; cf. Klatt 1969: 27), entailed the separation of OT study from dogma and canon, but also from constrictive literary criticism. Additionally, and this is especially noteworthy, Gunkel held that OT and NT religion ought to be understood in all their "historically conditioned connections with other religions" (1922: 66).

b. From NT Theology to the History of the Early Church. Similar developments characterized the field of NT theology. Already E. Reuss declared: "Biblical theology is essentially a historical discipline. It does not demonstrate; rather, it relates. It is the first chapter of a history of Christian doctrine" (1852: 11). The beginning of this history of Christian doctrine was the appearance of the person and message of Jesus, both of which had to be included in any investigation.

Even a work which proceeded on the basis of a fundamentally conservative attitude, such as B. Weiss' popular *Lehrbuch* (1868) could not escape the results of the historical-critical study of the NT writings. Weiss' work presupposed the results of this research with respect to authors and dates of composition, so that after arranging the writings historically it would be possible "to regard them as sources for a particular concept of doctrine" (1868: 8). Weiss defined the real task of biblical theology as "historical-descriptive." He also distinguished between biblical theology and "biblical dogmatics," the latter attempting to derive a unified system of doctrine from scripture's manifold teachings. He held that the presence of such a unified doctrine guarantees the authenticity of the NT writings as documents of the perfect revelation which took place in Christ. Since this position did not really take the various historical contexts seriously, it ultimately proved to be unsatisfactory. The *Theologie* (1891) of W. Beyschlag was a

thorough presentation of the teachings of Jesus (one after the other, but harmonically) according to the Synoptics and John, interpreted along the lines of liberal theology; in other respects it followed B. Weiss. Beyschlag found the concept of a biblical theology actually inappropriate, since the Bible does not contain anything like a scholarly theology, but rather religion, or even religio-moral teachings (1891: 1.1–2).

A further step in the direction of a consistent religio-historical study was soon taken. A. Deissmann demanded an "account of the collective consciousness of early Christianity" which went beyond the borders of the canon (1893: 137–38). G. Krüger (1896) demanded that the biblical theology of the NT be replaced by a history of the religion and literature of early Christianity. In the program of the history-of-religions school W. Wrede supported the following approach: the study of early Christian literature would be liberated from the rule of dogmatics only if one abandoned the "method of doctrinal concepts" and looked beyond the borders of the Canon (1975: 85–135 passim). The task was then to depict the living early Christian religion in its development and self-manifestation (Wrede 1975: 115, 123–32).

However, Wrede's program was never consistently followed in any later comprehensive study. H. Weinel attempted to develop, with Wrede, a "history of the religion of the earliest Christianity" instead of a NT theology (1911: 3). However, in so doing Weinel proposed a "religion of Jesus and of early Christianity" as a "moral religion of redemption" (p. 130) in an absolutely liberal-theological sense. Similar to this was J. Kaftan's work (1927). The religio-historical approach was more consistently carried out in 1913 by W. Bousset (1967), who depicted the religion of early Christianity as "the history of faith in Christ from the beginning of Christianity until Irenaeus." P. Feine's *Theologie* (1910; cf. also 1921) is an ambiguous work in that it broadly adopts the results of historical-critical research, but then presents—in the traditional sequence—the teachings of Jesus according to the Synoptics, of early Christianity, of Paul, and of the rest of the NT writings, each separately listed; in the process Feine inserted numerous subjective and confessional evaluations of faith. Decidedly conservative was T. Zahn's *Grundriss* ("Outline") (1928). A. Schlatter went entirely his own way (1909–10); according to him, the historical "awareness" postulates a theological interpretation which defends the ecclesiastical tradition materially as well as harmonizes contradictions.

C. New Beginnings at the End of World War I

1. The Understanding of Scripture according to Dialectical Theology. According to the principles of historical inquiry (which formed the hermeneutical basis of the religio-historical approach), the twin bases of historical knowledge are objectivity and relativism. In this connection, the yardstick for evaluating events as really having happened is inner-historical analogy, which presupposes the "similarity in principle of all historical occurrences" (Troeltsch 1898). However, this presupposition also reduces the events of salvation history (themselves derived from the Bible by historical-critical methods) to the level of mundane historical events. K. Barth was merely one of many young pastors who discerned a painful discrepancy between the results of this historical-critical exegesis and the Bible-based piety of the congregation, and who thus found themselves left alone by the exegetes with the duty of preaching from biblical texts. Thus the appearance of Barth's 1919 commentary on the epistle to the Romans (1933) had the effect of a call to arms. The new hermeneutical approach which Barth had only hinted at in the preface he explained in the preface to the second edition in more detail: Barth emphasized that while he acknowledged historical criticism, he could not consider himself satisfied with the text "as it stands." Rather, he felt compelled to press on to actual *Verstehen* ("understanding") and *Erklären* ("explanation"). As he said, "Kritischer mussten mir die Historisch-Kritischen sein!" ("The critical historian needs to be more critical" [1933: 8, although the authorized translation does not quite do justice to the original German!]). Following the model of the Reformers, Barth held that it was essential that one should strive for a dialogue between the inner dialectic of the matter behind the text and the reader. Barth subsequently developed this position (esp. 1925). His point of departure for understanding Scripture was, however, the dogmatic contention that "the Bible is the Word of God" (1925: 217), and, while men may have spoken in it, it was, "[though] refracted through the prism of their words, God himself" who spoke (p. 220). The self-evidence of this truth is the work of the Holy Spirit (p. 243). However, he insisted on "the historical conditionality of the Biblical witness" (pp. 226–27) if only in the Reformers' sense of the "in, with, and

under" of God's word in human words. In response to those who sought historical information beyond the canon, Barth insisted that the canon was an "absolute datum" (p. 221), and, although differences were admitted between its various parts, as between the OT and NT, these were merely relative with respect to the unity of revelation behind both (pp. 222–23). Thus the theme of "biblical theology" was posed anew, understood now as a question about the unity of the testaments.

In addition to this, Barth's Christological approach must be considered. His remarks about "history and primeval history" (1927: 230–54) were especially influential. According to Barth, only the revelation which took place in Jesus Christ was a "primeval history" (p. 230). Normal history, as such, is not revelation; revelation, however, is discoverable in history, but only when it is heard as God's personal address to people who look for him (p. 234). Thus, it is only in the light of the "primeval history" (i.e., the revelation in Christ) that history becomes revelation—i.e., a context interpreted through the Word of God. The demand levied by dialectical theology that the hearer (reader) immediately encounter the Word of God provoked a lively discussion. Taken together with the simultaneous Luther renaissance, the result was a harkening back to the Reformation understanding of Scripture, together with the claim of complete integration with the knowledge and methods of historical-critical research. However, dialectical theology was also in danger of repeating the hermeneutical weaknesses of the Reformation by insufficiently considering the relationship between exegesis and dogmatics.

A strongly Christocentric exegesis of the OT as the Word of God which also acknowledged the historical character of the Word was propounded by W. Vischer (1934–42). First he examined the Pentateuch ("the Law"), then the historical books ("the Former Prophets") with the aim of disclosing their hidden Christological significance, though in the process he frequently resorted to allegory.

2. New Efforts in OT Theology. Renewed interest in the theological aims of the study of the OT was not stimulated by dialectical theology, but rather by exegetes more closely aligned with the religio-historical school. R. Kittel, the old master of the historical research on the OT, proclaimed that the decipherment of the specifically religious content of OT religion had been neglected (1921: 95). He further emphasized that it was important to press on from the merely religio-historical and psychological characterization to describe the nature and nucleus of the religion, and its truth in terms of systematics, that is, the philosophy of religion, or dogmatics. Because of the purity of the OT conception of God and of personality, and because of its universalism, OT religion was viewed as the "summit of all ancient religions" (1921: 96; similarly also Porter 1921). C. Steuernagel (1925) also espoused the history-of-religions position, although he suggested that it was important to include a systematic and thematically ordered characterization alongside the genetic account of the general development of Israelite religion. However, as he stated, "Both disciplines have the same object: Israelite religion …; the same sources … and the same method: historical" (1925: 272). The descriptive-dogmatic method of OT theology was thereby established. In this task (as Steuernagel saw it) of providing a "philosophy of religion" perspective on OT materials, a pre-Gabler form of the old task of "biblical theology" was revived. Steuernagel objected only to its lack of evolutionary perspective and its overarching dogmatic scheme (p. 267).

Indeed, we find in numerous works of this period a return to the 19th-century ambivalence mentioned above. A historical and evolutionary account of the history of Israelite-Jewish religion was now accompanied by a systematic account. This was the case, for example, in E. Sellin's two-volume *Theologie* (1933). In this book, the traditional tripartite division recurs: (1) God and his relationship to the world; (2) man and man's sin; and (3) divine justice and salvation. This systematic account was, however, intended to reproduce the faith and doctrine in the OT, "only insofar as they have acknowledged Jesus Christ and his apostles as the presupposition and foundation of their Gospel, as the revelation of the God they had proclaimed" (1933: 1). It was this "prophetic-moral-universalistic-eschatological religion" that continually wrestled with the "national cult-religion" throughout the OT period, the latter being preserved within the various currents in Judaism.

O. Procksch's posthumous *Theologie* contains, in addition to the insistence that the history of religion should be subordinated to OT theology (since the self-sacrifice of God is encompassed by history; 1950:

17), an extensive section on "the historical world" before the systematic main section on "the world of thought." L. Koehler's *Theology* (1958; original German 1936) is programmatic and descriptive: "One may give a book the title *Old Testament Theology* if it manages to bring together and relate those ideas, thoughts and concepts of the Old Testament which are or can be theologically significant, justified by their content and in their right context" (1958: 7). The total organization of this work is traditionally dogmatic: (1) the doctrine of God; (2) the doctrine of man; and (3) the doctrine of divine judgment and salvation (eschatology). Here, too, we find Protestant cultural premises: a section entitled "The self-redemption of man: the cult" can only be assigned to (2) (as a mere human enterprise)! But Procksch was the first scholar to develop new ideas about organizing the material in better accord with the contents of the OT. In the systematic main section of his work, he used for the first time such relational concepts as "God and world," "God and nation," and "God and man," concepts which were later adopted by W. Eichrodt (on the basis of Procksch's lectures). However, a gap separated the descriptive form of Procksch's account of the contents of the OT from his theological aims ("All theology is Christology" [p. 1]; the OT points to Christ; in his historicity he may only be apprehended through the OT [pp. 7–12]).

W. Eichrodt's 3-volume work published in the 1930s (cf. the 2-volume English translation, 1961–67) expressed in classical form the presentation of OT theology in terms derived from the OT itself. In the preface to the edition, Eichrodt defined the goal of his work as *"to present the religion of which the records are to be found in the Old Testament as a self-contained entity, exhibiting ... a constant basic tendency and character"* (1961–67: 1.17). By the same token, Eichrodt also intended "to understand the realm of OT belief … and … by examining on the one hand its religious environment and on the other its essential coherence with the NT, to illuminate its profoundest meaning" (p. 1.31). The overall structural arrangement—(1) God and people; (2) God and world; and (3) God and man—apparently follows Procksch (with conscious emphasis on "God and people" as the relationship which was most central to OT thought), although the historical development is thematically integrated in the work.

Eichrodt chose the idea of the covenant as his organizing principle, around which he grouped the entire theological content of the OT. In the first part (vol. 1) the headings are accordingly grouped under the key word "covenant," even though not all of the material fits well in this context. In parts II and III (vol. 2) the word has been dropped from the headings, and the connections are also much looser. In the 5th German edition of vol. 1, Eichrodt noted that from a historical perspective, the movement from the OT to the NT reveals itself as the breakthrough and triumph of the royal reign of God. Conversely, he noted a reverse "movement of life" *(Lebensbewegung)* passing from the NT to the OT, by means of which the world of OT thought will finally be completed (p. 2).

However, against the objections of Baumgärtel (1951), Eichrodt insisted on the strictly historical, nonnormative task of OT theology (1961–67: 1.13). After Eichrodt, the dogmatic scheme established itself more often in most of the thematically ordered studies. This applies to some Roman Catholic works, such as that by P. Heinisch (1950), which was divided into five main sections (God, Creation, Way of Life, the Hereafter, and Redemption), and that by P. van Imschoot, of whose originally planned three volumes only two appeared (1965), focusing respectively on God and Man. But an organization based on dogmatic *topoi* was also exemplified in the works of Baab (1949), Vriezen (see below), and Garcia Cordero (1970).

3. The Situation in NT Theology. Unlike the creative theological efforts in the field of OT theology, the situation of NT theology between the world wars was characterized by comparative stagnation. The new theological impetus which had been initiated by dialectical theology did not lead to the appearance of new general presentations. Instead, the old standard works of Feine, Weinel, and Schlatter were repeatedly reprinted. Of course, theological work was conducted in several individual areas of NT study. This applies particularly to Pauline studies, which not only discussed the questions of the Hellenistic or Jewish origins of the apostle's thought (following the lead of the religio-historical school), but also inquired as to the contents of his proclamation. The theological understanding of the gospel of John was summarized in Bultmann's commentary (1941). Form criticism offered the study of the Synoptics new

possibilities to work out the theology of the (early Hellenistic) congregation which was reflected in the short units in those works.

It is remarkable that R. Bultmann, who belonged originally to the religio-historical school, had conceived his sharply existential approach by 1925, immediately after his encounter with Martin Heidegger. For Bultmann it was essential that "the text makes its claim on the reader, i.e., it does not let itself be observed, but instead attempts to determine the reader in his existence" (1975: 252). However, since the text is a historical witness, "the decisive question is: whether we approach the narrative in such a way that we acknowledge its claim upon us, that it has something new to say. If we surrender our neutrality with respect to the text, this means that the question of truth dominates our exegesis" (p. 253). Instead of the contemporary-historical question "What does it say?" the important thing is the question "What does it mean?" (p. 254); it is in such a way "that we then inquire as to the possibilities for our existence which emerge from our encounter with the narrative" (p. 265). However, since Bultmann held that the only correct questioning of the NT "is that of belief," that is, "[an approach] which is founded in obedience to the authority of the Scriptures" (p. 271), such questioning in effect becomes fundamentally impossible, as does theology in general. Interpretation of self and of text are inseparable and "since … the self-interpretation of the individual as historical individual can only be carried out in the interpretation of history, theology and exegesis or systematic and historical theology fundamentally coincide" (p. 272). In biblical theology, "the existential encounter with the reality of this history is carried out" (p. 273).

In practice, however, systematic and historical theology *are* separable, since systematics has the task of "conceptual explication of man's existence as determined by God," while the aim of historical theology is "to describe the interpretation of the individual which is given in the text" (p. 273). In its capacity as conceptual-scientific thought, exegetical theology understands the NT as the Word of God only indirectly; the revelation is veiled in human words. The duty to elevate its intelligibility into the intelligibility of the present (Bultmann's later famous key word for this was "demythologizing" [*Entmythologisierung*]) reveals the *necessity for expert criticism* (p. 274). Bultmann's entire program was thereby already implied.

At this time, F. Büchsel completed a work (1937) which was, however, both inadequate and conservative-apologetical. The work by E. Stauffer (1941) was likewise unsatisfactory, since in its major section (which focuses on "Salvation History") it avoids making an adequate differentiation of the NT writings; indeed, the section ranges beyond the limits of the canon. The work also promulgates a unifying "Christocentric NT theology of history."

D. Developments since World War II

1. The "Biblical Theology Movement." There soon emerged in Great Britain and America a renewed religious interest in the Bible. A movement which began in Great Britain shortly before (and which continued during) World War II strove to bring about an obligatory approach of faith to the Bible, including the OT, so that the questions of its theological meaning and its relation to the NT attained wider significance. First popular revivalistic writings, and subsequently also critical scholars, demanded a return to the authority of Holy Scripture (including the OT) as essential to Christian faith. Above all in America (and Scotland), the consequences of dialectical theology now showed themselves, while England to a large degree went its own way. A number of scholarly journals (*Theology Today,* 1944; *Interpretation,* 1947; *Scottish Journal of Theology*, 1948) were founded to provide a forum for the new movement. The views which appeared differed in points of detail, although much of it derived from the prior developments in the German-language sphere. Thus, for example, Hebert (1941; cf. also 1947a; 1947b; 1950) interpreted the OT on the basis of its fulfillment in Christ, a Christological interpretation reminiscent of W. Vischer. For Pythian-Adams (esp. 1942; cf. also 1944), the "presence" of God was the central concept in the OT; he held that the relationship of this presence to the fulfillment in Christ was the foundation of the unity of the salvation history. The NT scholar P. Minear demanded an immediate relation of faith to the Bible: "The Bible calls for witnesses, not for teachers. It is written from faith to faith" (1949: 3).

Against views which were not infrequently fundamentalistic, H. H. Rowley expressly emphasized the necessity of the historical-critical method for the understanding of the OT. Rowley further held that the use of this method offered no obstacles to the spiritual understanding of the word (1944). For Rowley, the Bible was not revelation itself, but merely the account of the revelation; consequently it must be read with the aid of critical reason (1963: 3–34). Rowley remained convinced of the importance of the OT for Christian faith (cf. also 1946), and saw the relationship of both testaments as one of promise and fulfillment (1953). However, diversity is visible within this unity (1953: 1–29); as Rowley said, "Each Testament is to be read first and foremost in terms of itself … before they are related to one another" (p. 20).

After World War II, a lively discussion broke out in America (in short form already in *JBR* 8 [1940]) concerning the need for a biblical theology. On one hand were proponents of the view that a purely historical understanding of the Bible must accommodate the more immediate demands of faith. Thus already in 1946 G. Ernest Wright advocated a view which distanced itself from the compulsion for "objectivity," insisting instead that Bible readers adopt for themselves the confessional viewpoint of the biblical narrator (1946; similarly also Ferre 1952; 1959). B. Childs objected to a merely "objective" description of the religious contents of the Bible, advocating a reformatory understanding of the Bible, on the assumption that the Reformers read the OT in order to hear the Word of God (1964: 437). For this, Childs maintained, faith is necessary. Against the objection that this would be an unscientific form of biblical interpretation, Childs (like other advocates of the "confessionalistic" method) stressed that the task of description was implicitly part of the theological task. All critical methods are to be employed, since the OT is the witness of a historical people, a fact that the exegesis of the Reformers did not sufficiently respect.

On the other side there were, above all, the proponents of the old liberal exegesis, who, if they did not simply insist on a purely religio-historical interpretation, demanded for biblical theology in objective-descriptive manner of presentation. The spokesman for the latter position was K. Stendahl (cf. above all 1962; 1965). According to Stendahl, it is easy to distinguish between "what it meant" and "what it means." Adherents of this position emphasized repeatedly that biblical theology is a historical undertaking and so must be accomplished descriptively. They thus insisted on pursuing the course which Gabler had begun. From a methodological viewpoint they adhered to historicism, fearing that the "biblical theology movement" led to undue enthusiasm, arbitrariness, and loss of scientific objectivity.

It is important that we see the international background behind this "movement" and consider the interconnections with the theological ground-breaking which had taken place in European biblical study since World War I. Also the "crisis" of the movement, which was diagnosed by Childs at the beginning of the 1960s (1970; on the discussion, see Smart 1979: 18–30), had to do with changes in the general spiritual and theological climate in the Western world at this time. Insights and points of view from sociology and the humanities commanded more and more of the Church's attention, often at the expense of the Bible. However, the preponderant disregard of the Bible in the Church beginning in the 1960s (which Smart [1970] so very much regretted at the height of this "crisis") has more recently given way to a renewed interest in biblical theology (see below).

2. Main Problems in OT Theology. The much-discussed question whether an OT theology ought to proceed purely descriptively, or whether it ought in some way to make statements of faith, has been variously answered in the European debate as well. Whereas W. Eichrodt had stressed the descriptive-historical approach (1929: 89–91), O. Eissfeldt (1926: 1–12) placed historical and theological interpretation on two different planes, namely the plane of knowledge and the plane of faith. Although in this form Eissfeldt's suggestion remained a unique contribution, this dichotomy would in the future prove to be a fundamental problem of OT theology.

In the work of F. Baumgärtel an experiential piety in the tradition of the Erlangen Lutheran pietism revealed itself. For Baumgärtel, the question is whether the OT individual "being touched" by the "basic promise" ("I am the Lord, your God") is also our "being touched" by the Gospel (thus, in a subjective sense, "salvation history"), even though the concrete realization under the old covenant has been done

away with, and in the OT only the lack of prospects, that is, the failure, becomes visible (see Baumgärtel's major work: 1952; and esp. 1953; 1954).

a. Systematically Structured Works. In contrast to Eichrodt, T. C. Vriezen in 1949 saw the task of an OT theology as "a Christian theological science" (1970: 147). "As a theological branch of scholarship the theology of the Old Testament seeks particularly the element of revelation in the message of the Old Testament; it must work, therefore, with theological standards and must give its own evaluation of the Old Testament message on the ground of its Christian theological starting-point" (p. 148). Therefore Vriezen treats in the first main section of his Introduction above all "The Christian Church and the Old Testament" (pp. 11–21), and devotes a separate chapter (pp. 91–142) to the theme "The Old Testament as the Word of God, and Its Use in the Church." The concept of revelation is central to Vriezen's thought, for it is here that we also find the connection to the NT. Vriezen says, "At the heart of the Old Testament message lies the expectation of the Kingdom of God, and it is the initial fulfilment of this expectation in Jesus of Nazareth … that underlies the message of the New Testament. The true heart of both Old and New Testaments is, therefore, the eschatological perspective" (p. 123). A second main section (pp. 153–461) then presents "The Content of Old Testament Theology." Here Vriezen makes the fundamental determination that in the OT the knowledge of God is the "intimate relationship between the Holy God and man" (p. 153). He treats revelation and the cult in a section entitled "The Intercourse between God and Man" (pp. 176–289); and has other sections devoted to "The Community of God" (where God as the God of community, the interpersonal community with its ethical standards, and the understanding of man all belong); and "The Prospect of the Community of God" (pp. 430–63) (covering the present rule of God and future hope).

Against this, E. Jacob (1958) argued for retaining the historical-descriptive character of OT theology. It is nevertheless not a question of *bruta facta;* in Jacob's view, interpretation is decisive for history, and for the Israelites this took place in their faith. Jacob's OT theology has unlimited scope: "faithful to its name, it deals solely with God and with his relations to man and the world." Thus Jacob's first main section deals with "Characteristic Aspects of the God of the Old Testament" (1958: 37–120); here he sees "the living God" as "the center of revelation and of faith," and as forming the point of departure. He subsequently goes on to describe God's names, manifestations, holiness, righteousness, faithfulness, love, wrath, and wisdom. In the second main part of the work we find "The Action of God according to the Old Testament" (pp. 121–275). First the spirit and the word are characterized as "means" of divine action; then descriptions follow of God as creator of the world, of nature and the destiny of man, of God as the lord of history, and of God in the various institutions (offices and places). The third main section is entitled "Opposition to and Final Triumph of God's Work" (pp. 281–342); here the traditional topos of eschatology has apparently provided the pattern. The subjects here are sin and redemption, death and future life, final struggle and messianic kingdom. One might ask whether the theme of "God" pure and simple is suitable to serve as the formal supraordinate category of OT theology as a whole.

However, the theme "God" does in fact serve in this capacity in the work of G. A. F. Knight (1959), the main sections of which are entitled "God," "God and Creation," "God and Israel," and "The Zeal of the Lord" (which is more in the nature of a rubric under which all sorts of different themes can be treated). In a certain sense, Knight seems intent on describing a theology of the entire Bible. Like Vriezen, he emphasizes "that the Church believes the Old Testament to be the Word of God"; thus his intention is to write a theology of the OT from an ecclesiastical perspective (1959: 7). In the various OT metaphors of the "divine family"; of God's name, face, and spirit; of Israel as the "sons of God"; and also in those metaphors expressing Israel's manifold hopes ("son of David," "branch," etc.), we find reflected some of the conceptual patterns which were adopted in the NT, and a somewhat loose collection of such metaphors assembles itself before the reader's eyes.

An independent (though for its author, characteristic) effort was chosen by G. Fohrer. Proceeding on the assumption that revelation is "personal experience" (1972: 49), Fohrer saw in the (antimagical and antilegalistic) existential attitude of the (individual) prophets the real high point of the OT (pp. 71–86).

The interwovenness of the lordship of God with the community with God forms a second focus in this connection (pp. 98–109; see further below).

J. L. McKenzie saw matters quite differently. He, too, understood the OT writings as "records of this people (Israel) with Yahweh" (1974: 31). However, he found the most normal and frequent site of this experience to be the cult. Revelation took place in the cult (in the laws of the Covenant and the prophets); history, nature, and wisdom were collected there, and (as not subsumable) political and social institutions and "the future of Israel" were generated there. One cannot help noting that McKenzie is a Roman Catholic scholar, and that consequently the varying organizations of the OT theologies described here apparently derive from quite different worldviews.

W. Zimmerli's account (1978) is relatively brief, but is nevertheless the result of many years of theological preoccupation with the OT. Zimmerli also adheres to a systematic presentation, one which proceeds from the revelation of the name of God (see below, D.2.b). This implicitly leads to a bipartite presentation, first on God (chaps. 1–3), then on Man (Chap. 4). A fifth chapter, "Crisis and Hope" (dealing with judgment and salvation), reveals the old *locus de novissimis.*

The work of C. Westermann (1982) is structurally intelligible only on the basis of the systematics developed by the author in numerous preparatory studies. Using a peculiar form of existential approach, the work is characterized by numerous interwoven polarities: (1) through the opposition between the saving and blessing activity of God (historical acts and acts of creation, respectively); (2) between God's justice and his mercy (prophecies of judgment and salvation; the apocalyptic); and (3) between the act (and word) of God and man's response. However, it is also necessary to evaluate Westermann's work in relation to the questions posed by G. von Rad (see below). Similar dialectics are the one of Terrien (1978) between "aesthetics" and "ethics" and the "cosmic-theological" one of Hanson (1978).

Judging by its framework chapters (chaps. 1–2 and 7–8), the work by R. E. Clements (1978) is a sort of prolegomena to an OT theology which contains discussions of the fundamental problems of the subject. The middle section (chaps. 3–6) contains a mixture of material *topoi* (God [Chap. 3]; the people [Chap. 4]) and dogmatic themes (the Law [Chap. 4]; the Promise [Chap. 5]). Some isolated authors still conducted historical-genetic studies. An example of this is the work of C. K. Lehman (1971). The subdivisions of Lehman's work correspond to those of the Masoretic canon itself (Pentateuch, Prophets, the Writings), and his assumption of a seamless and reliable historical tradition stretching from Adam to the postexilic period allow both event and interpretation to coincide. However, one should note that also a fundamentalist approach, such as the work of J. B. Payne (1971), may take the form of a dogmatically ordered presentation: God, man, faith, commitment (repentance, faith, ethics, cult), reconciliation.

b. The Problem of History. Working on the basis of the traditio-historical approach, G. von Rad produced his own account of OT theology. Already in 1952 von Rad had demanded "that the plan of an Old Testament theology be historical and not systematic" (p. 31). In so saying, von Rad had already laid the foundation for the bipartite division of his major work, which would be published within the decade (*Theology of the OT* [*ROTT*], ET 1962–65). As Sellin and Procksch had done previously, von Rad placed at the beginning of his study "A History of Jahwism and of the Sacral Institutions in Israel in Outline." In the following "Methodological Presuppositions" he insisted that the object of any theology of the OT be "simply Israel's own explicit assertions about Jahweh." It was essential to "deal directly with the evidence"; in the process the theologian must "in many cases … go back to school again and learn to interrogate each document, much more closely than has been done hitherto, as to its specific kerygmatic intention" (*ROTT* 1: 105–6). The use of the key word "kerygmatic" here illustrates von Rad's reliance upon dialectical theology. At the same time, however, he limited his field of study, since, as he said, the OT witnesses likewise "confine themselves to representing Jahweh's relationship to Israel and the world in one aspect only, namely as a continuing divine activity in history." He went on to affirm that "Israel's faith is grounded in a theology of history." However, the manifold nature of the OT witnesses means that there is no single appropriate systematic-theological approach to the theology of the OT; thus von Rad concluded that "re-telling remains the most legitimate form of theological discourse on the Old Testament" (*ROTT* 1: 121).

Accordingly, the main body of vol. 1 presents the theology of the Hexateuch according to the periods of saving history which are recounted there (*ROTT* 1: 129–305). The following section, "Israel's Anointed" (pp. 306–54), unites thematic organization with an exposition of the sources (the Deuteronomistic and Chronistic histories, and also the royal psalms). Extensive materials which von Rad found impossible to subsume under the heading of "historical traditions" (such as prayers, psalms, the Law, and, above all, Wisdom) are gathered under the heading "Israel before Jahweh (Israel's Response)."

Von Rad observed that prejudicial earlier scholarship had maintained that there was a "definite break between the message of the prophets and the ideas held by earlier Yahwism" (*ROTT* 2: 3). This led the author to divide his work into two volumes, of which the second is entitled "Theology of Israel's Prophetic Traditions." Here von Rad emphasized that at the heart of their message the prophets, too, had been dependent on ancient traditions (*ROTT* 2: 4). However, they also saw a new thing, namely an entirely new type of historical action by God, which was to replace what had gone before. Their new understanding signified an "eschatologizing of historical thought" (*ROTT* 2: 112–25).

The subsequent discussion was above all determined by the dilemma which von Rad himself had brought about when he spoke of the gap separating Israel's *actual* history from the understanding of history which Israel had conceived in relation to Yahweh and his actions. They are to a large extent irreconcilable (*ROTT* 1: 106). Nevertheless, according to von Rad it remains the task of an OT theology to reproduce Israel's picture of her history, as this self-understanding was itself a historical fact, and therefore theologically significant: "In the Old Testament it is thus this world made up of testimonies that is above all the subject of a theology of the Old Testament" (p. 111).

One of the first objections voiced against this was that von Rad's procedure loses the immediacy of faith; the presentation remains descriptive and avoids posing the question of truth (Keller 1958). Yet another criticism (affirmed by, above all, F. Hesse [1958; 1960]) maintains that it was not Israel's conceptions about her history but the actual course of that history, as revealed by historical-critical research, that is theologically important, since, if Yahweh really did act in history, only the facts could be of interest.

Von Rad responded to these criticisms in the preface to vol. 2 (*ROTT* 2: viff.) by referring to the presuppositions of modern historical research. Research, too, interprets history, but it does so on the basis of presuppositions which acknowledge only the material cause-and-effect actions of men, and not the actions of God. To consider the latter reality, we must perforce study the witness of ancient Israel.

A number of scholars took up an intermediate position with respect to this discussion; they held that it suffices if Israel's interpretation of history is only broadly correct, and that it is not a matter of the accurate reproduction of matters of detail.

By way of contrast, the fundamentalistic position rejects the above-characterized dualism, and severs the Gordian knot (and in doing so incidentally prevents satisfactory reflection about the hermeneutical difficulties) by claiming that the Word of God opens the objective reality of history.

More or less simultaneously with von Rad's preparatory thoughts about the possibility of an OT theology, G. Ernest Wright published his work *God Who Acts* (1952). The subtitle of the work, "Biblical Theology as Recital," prefigures its central hypothesis, which is that history is the actual plane on which God's revelation takes place. The external acts of God, which he effected through the mediation of the election of Israel (the confirmation of which was the making of the covenant on Sinai, while Christ was its goal), are decisive; theology, then, is practically nothing but the confessional recital of the acts of God in history. For von Rad, too, these confessions were themselves facts, but they came in the distinctively different form of tradition, that is, of a message about an event. Later, he was to distinguish (*ROTT* 2: 358) between the revelation by the *word* (ranging from oracles to God's direct address to the prophets) and that occurring in the *acts* of God, whereby only the latter are susceptible to contemporary new interpretation (p. 301). He held that the elements of "promise" and "fulfillment" describe a tension internal to the OT in the "periodization of history" (pp. 133–35; 168–75; 304) which progresses from promise to fulfillment.

The students of von Rad developed his understanding of history in two directions. One of these directions, promulgated in 1961 by the systematic theologian W. Pannenberg, has been characterized by the key word "revelation as history" (1968). According to Pannenberg, God's self-revelation did not take place directly, as, for example, in theophanies, but indirectly, in the historical acts of God. This revelation is visible to all and universal, but it will only first be fully apparent at the end of all history.

The second direction has been advocated by R. Rendtorff, who proposes to build a bridge over von Rad's "gap" between facts and the history which was affirmed by Israel's faith. Rendtorff maintains that history and tradition are namely one and the same (1960). In this view, "the tradition about the historical acts of God is itself history. It encompasses the facts, but is inseparable from them" (1960: 39). The *historical effect* of events often resides in the experiences and interpretations of them made by those implicated in them. External and internal history belong together.

Rendtorff additionally claimed, in his contribution to Pannenberg's volume (1968), that "the prophetic word may not itself be understood as revelation," since it is based on the self-demonstration of Yahweh in historical events made only previously or retrospectively. This was explicitly contested by W. Zimmerli (1962). For Zimmerli, the proclamation of the word was the central revelational event. This was already his position in his early work (1956), as well as in the preliminary works leading up to his commentary on Ezekiel (Hermeneia; 1979–83). Particularly, Zimmerli's contribution on the "word of (self-)manifestation" (German *Erweiswort*) links the announcement of the name of Yahweh as "means of revelation" to his demonstration of reality in the historical event itself (1982). Today many exegetes share this view that the interpreting and proclaiming Word of God as medium of revelation must be viewed along with the historical events themselves.

In this connection one should particularly take note of the position of H. W. Robinson as unfolded in his posthumously published work (1946). Robinson's main hypothesis was that the form of revelation in the faith of Israel was determined by two factors: by the means whereby God acted, and by the interpreting response of whoever received the revelation. "The divine revelation in Nature, Man and History is through acts, which need to be interpreted through human agency to make them words in our ordinary sense." A related view is P. D. Hanson's model of "dynamic transcendence" (1978). In Hanson's view, a multilayered socio-political-historical event can only be understood as divine activity through the tradition-forming perspective of the faith of a community in the reception of its confessional inheritance.

In the meantime, the traditio-historical approach had established itself as an important perspective of OT theology (Knight 1973; 1977). However, there were also certain caveats to be observed with respect to any identification of tradition with revelation. Thus, in his collection W. Zimmerli stressed the prophetic "no" which was pronounced upon the fossilized tradition of the people. (On H. Gese, see section d. below.)

The importance of history for OT faith has been much discussed. G. von Rad had once sweepingly declared, "The Old Testament is a history book" (1961: 181); later, however, even he found this view too one-sided (1966: 144). Massive criticism was voiced by James Barr against the use of the concept of history in OT theology. Barr pointed out that there are too many areas in the OT where the concept is inapplicable, for example, in connection with wisdom and creation, but above all also in conjunction with the verbal communication between God and man. Furthermore, the idea of an extensive historical continuity is foreign to the OT (thus 1966; also 1963). The younger R. Smend has since then also emphasized that history is only one aspect of the OT, albeit a very important one (1968: 4).

However, the view that the OT understandings of history differed significantly from those of all other ANE religions and cultures (as had been stressed by G. E. Wright [1968]) has at last expired. B. Albrektson (1967) particularly concluded that other ancient oriental religions were familiar with the notion of gods who act in history (see further H. Cancik 1976; Gese 1958a; Saggs 1978).

c. The "Center" of the OT. The attempt to find a concept which might serve as the basic idea, central concept, or "center" of the entire theological content of the OT is peculiar to the systematic-theological approach to OT theology. Among the many candidates have been the following: "the holiness of God" (Hanel 1931); "that God is the Lord who commands" (Koehler 1958: 30, 35); "the Kingdom of God"

(Klein 1970); "election" (Wildberger 1959: 77–78); "the Promise" (Kaiser 1978: 32–40); and "the community between God and man" (Vriezen 1970: 8, 15–16). For Eichrodt, who rejected all dogmatic schemes, the concept of "covenant" was nevertheless the self-inherent "center" of the OT (1961–67, 1:13; also Wright 1969: 62; Clements 1978: esp. 119).

The subsequent discussion as to how ancient the idea of "covenant" was in the OT (see COVENANT), or as to whether one might not more fittingly translate Hebrew *bĕrît* as "obligation" (Kutsch 1973), did not really touch upon the essential question: namely, whether it is at all possible to designate any concept as the "center" of the OT. There were also suggestions in favor of a bipolar definition of the "center," as, for example, that of G. Fohrer: "lordship of God and community with God" (1968; 1972), or the so-called "Covenantal formula" (R. Smend 1963), or "Yahweh, the God of Israel; Israel the people of Yahweh" (R. Smend 1970).

G. von Rad spoke out against the attempts to find a "center" of the OT. Speaking from a traditio-historical viewpoint, he stated that "the revelation of Jahweh in the Old Testament is divided up over a long series of separate acts of revelation which are different in content. It seems to be without a centre …" (*ROTT* 1: 115). Thus the OT offers ever new interpretations and actualizations of Israel's salvation-historical traditions. However, he admitted, all individual traditions do ultimately refer to a single greater "Israel"; but this Israel is an object of faith (p. 118), for which reason it cannot be chosen as the "center."

Von Rad's objection did not end the search for a "center" of the OT. Among recent suggestions, there are two which regard the "center" to be a literary quantity. W. H. Schmidt has held the first commandment of the Decalogue to be a *vade mecum* which leads us through the whole of the OT understanding of God (1970: 11). Similarly, W. Zimmerli first held the "I Yahweh" of Exod 20:2 to be a constant of the faith of Israel (1971 and later), and subsequently found Yahweh's name, at once both veiled and revealed in Exod 3:14, to be the "center" (*TRE* 6: 445ff.). On the other hand, S. Herrmann has proposed that we regard the Book of Deuteronomy to be the "center," since "the basic questions of Old Testament theology are concentrated there" (1971: 156). There also remains considerable skepticism as to whether the OT can be said to have a "center" at all (thus, among others, A. H. J. Gunneweg 1978: 140; M. Oeming 1987: 182–83). This skepticism then also applies to the suggestion which has won the most supporters in recent years, namely to regard the sovereignly acting, free God as the real "center" of the OT. However, the principle of the "center" should not be misunderstood. The self-same God is also important for any theology of the entire Bible (see below).

d. The OT Perspective on the World. (1) Creation Theology. In G. von Rad's salvation-historical theology, the theme of "creation" played only a subordinate role. In a 1936 essay, von Rad had advocated the hypothesis that in the OT a faith rooted in creation is subordinated to a faith rooted in salvation (1966: 131–43). According to his famous 1938 essay on the Hexateuch (1966: 1–78), the Yahwist's Primeval History is only a sort of prestructure to his salvation-historical account (p. 63). His intent, then, was to show that the ultimate goal of saving history with respect to Israel was the salvation of all people. To substantiate this subordination of creation-faith to salvation-faith, von Rad chose the example of Deutero-Isaiah. He points out that by hearkening back to the creation of Israel, the concept of creation is thereby incorporated into the concept of redemption (in a corresponding way, R. Rendtorff [1954] saw creation and redemption as closely connected in the writings of this prophet). In his theology, von Rad also regarded the position of creation to be marginal, particularly as a theme of later Wisdom Literature.

A considerable number of OT scholars and systematic theologians followed this view until the Bristol Faith and Order Conference in 1967 (the official position paper was *God in Nature and History*). Since then, however, the general opinion on the theme of creation has changed significantly. The saving action of God in history (the blessing), viewed as continual activity, was paired with creation by C. Westermann (1978; also 1982). He stressed the independence of the primeval event as a biblical category (1967; also *Genesis* BKAT, 1: 1–103; also Crüsemann 1981). Also of importance was Westermann's distinction between the topoi of world creation and human creation (Genesis 1: 31–34 et passim; cf. further Albertz 1974).

In terms of the history of religions, Canaanite religion has gained considerably in importance, particularly since the discoveries at Ras Shamra-Ugarit. Jerusalem seems to have played a major role in the adoption of Canaanite traditions, such as the idea of the kingship of God (cf. W. H. Schmidt 1966; Schreiner 1963), the motif of the chaos battle (O. Kaiser 1958; Stolz 1970: 12–71), and the notion of the mountain of God, which in Jerusalem was identified with Zion (Clifford 1972; O. Steck 1972). The concept of the mount of God as a dam holding back the primeval waters belongs, like the chaos battle, to the themes of creation, with the admixture of ideas originally associated with El and Baal.

Albertz (1974: 91–99) shows that the topic of the creation of the world has its place in hymns as a description of the majesty of God or of the *creatio continua,* that is, the preservation of the creation (esp. Ps 104:10–23). In Deutero-Isaiah the theme serves in the "disputation" to demonstrate Yahweh's superiority (Albertz 1974: 7–13).

(2) Wisdom. For a long time, Wisdom played virtually no role whatsoever in OT theology. It was repeatedly held to be a purely secular and utilitarian phenomenon (Zimmerli 1976; McKane 1965), or else only secondarily "Yahweh-ized" in late times (Fichtner 1933). The almost exclusive orientation among scholars toward the historical and prophetic traditions threatened to marginalize Wisdom. Von Rad supported the hypothesis of a "Solomonic enlightenment," that is, the theory that the early monarchic period, when Wisdom was cultivated at court, was a time of secularization as a result of enlightened intellectuality (1972: 59–61; also Brueggemann 1972; criticisms were voiced by Crenshaw 1976: 16–20). However, according to von Rad, even these enlightened wise men had recognized that the "limits of wisdom" (1972: 97ff.) were in the omnipotence of God. They, too, knew experiences of God (1972: 61ff.). In this late work, von Rad definitely emphasized the theological quality of Wisdom: "This wisdom is … at all events to be regarded as a form of Yahwism" (1972: 307). Also W. Zimmerli later (1978 para. 18; *TRE* 6: 450–51) admitted that the "fear of Yahweh" was of central importance for the old sententious Wisdom; in Job and Ecclesiastes he saw a clear orientation toward the "I am who I am." He was strongly attentive to the personification of Wisdom in such didactic poems as Proverbs 8, Job 28, and Sirach 28, understanding it in the sense of a self-revelation of the creation, which, alongside of the saving history, possessed its own quality as a sort of "primeval revelation" (1978: 175). He thus saw these to be genuinely Israelite conceptions. However, one might, with Crenshaw, be tempted to ask whether such a small section of Israel's artistic poetry (the dating of which is quite uncertain) can support such wide-reaching hypotheses.

Von Rad had pushed to one side the international character of OT Wisdom. Ultimately he saw the peculiarity of Israel to reside in the fact that she never pressed on to the understanding of a world entity governed by world order (1972: 71–72). Gese, however, who, in the course of a previous investigation of Egyptian Wisdom, had rejected its "eudaemonistic misinterpretation" (1958b: 7–11), as he emphasized the divine character of *maʿat* (world order) (pp. 11–21), had already shown that ancient Israelite Wisdom participated broadly in the ancient oriental concepts of order (pp. 33–45). For Gese, nevertheless, ideas in ancient Israelite Wisdom relating to the issue of act and consequence (cf. esp. Koch 1983) were limited by the emphasis on the sovereign freedom of Yahweh (1958b: 45–50). In the Job poem, in which the Comforters are adherents of this act-consequence doctrine, the freedom of the personal God, who is exalted above this order, is demonstrated to the righteous sufferer (in precise reversal of the Sumero-Akkadian paradigm where the deity is expected to listen to a complaint, the paradigm on which the act-consequence doctrine is based).

H. H. Schmid (1968) presented evidence that the Israelite concept of righteousness (Heb *ṣdq/ṣĕdaqâ*) has an extremely comprehensive semantic field (law; wisdom; nature; fertility; war/victory) which corresponds, like Egyptian *maʿat,* to the concept of world order (also parallel is *šalom,* "peace"). Later (1974), Schmid attempted to draw some consequences of this insight for OT theology. For Schmid, creation theology comprises the "total horizon of Biblical theology" (1974: 9–30). Not only wisdom but also state and law, prophecy, and even the historical traditions stand in a certain relation to this order. Schmid relaxed his picture of an inflexible order by depicting a hypothetical development in Israel's concepts of order (1974: 31–63). He held this development to have led to the formation of a theocentric

cast of thought which separated God and the world. Crenshaw (1976: 26) seized on Schmid's position and, with reference to H. Gunkel, maintained that the threat to world order posed by chaos was the background of the theology of creation.

There remain some unsolved problems concerning the relationship between Wisdom and OT historical thought, and also concerning the assignment of a place for Wisdom within OT theology.

3. Attempts at a NT Theology. a. Modern German Studies. (1) Protestant Studies. After World War II new developments in NT theology began in 1948 with the publication of R. Bultmann's *Theologie* (*BTNT*, 1951–55). Structurally, the book begins by focusing on what Jesus himself proclaimed (*BTNT* 1: 3–32); it "belongs among the presuppositions of a theology of the NT and is not part of it itself" (p. 3).

According to Bultmann, "theology" proper begins with Paul, who belonged completely to Hellenistic Christianity (pp. 187–89). This is so because the "kerygma of the primitive congregation" and above all the kerygma of the Hellenistic congregation lay between Jesus and Paul, since "already his [i.e., Paul's] theology presupposes a certain amount of development in primitive Christianity" (p. 63), namely the development of Hellenistic Christianity out of earlier Jewish and pagan forms. The theology of the gospel of John and the Johannine Epistles (which are quite independent of Paul) reflect even further development after Paul (*BTNT* 2: 3–92). Church order, doctrine, and ethics (pp. 119–54; 203–36) belong still later, attesting to the development of the ancient Church.

In Bultmann's view, the goal of a NT theology is that "the Christian faith makes sure of its object, its reasons, and its conclusions. But first there was a Christian faith; later on there was a Christian kerygma … which proclaimed Jesus Christ as God's eschatological saving act, namely that very Jesus Christ, the crucified and resurrected one" (*BTNT* 1: 3). Bultmann held that this development began with the kerygma of the primitive congregation, and that it is essential that we reconstruct this kerygma (pp. 33–62).

According to Bultmann's "Epilegomena" (*BTNT* 2: 237–51), theological ideas are explications of the believing self-understanding, that is, "ideas, in which the believing understanding of God, the world, and man unfolds" (p. 237). But since faith is "faith in the kerygma" (p. 239), the NT theology has to describe (or even reproduce) the kerygma. However, this is only possible in the form it is interpreted by the respective theological statements. Thus, alongside of reconstruction, we find interpretation to be the second pole of Bultmann's efforts. And this also accounts for the form of Bultmann's presentation: it unfolds the theological ideas of the individual works or groups of works in all their differences.

The following statement is decisive for Bultmann's account of the Pauline theology (one of the two foci of Bultmann's work): "Pauline theology (is) at the same time anthropology," since for Paul "Every statement about God is also a statement about man, and vice versa" (*BTNT* 1: 191). This entire section is determined by Bultmann's anthropological and theological concepts, which also influence its structure. In the section dealing with Johannine theology (the second focus), the discussion alternates between concepts whose main categories are dualism, judgment, and faith. By contrast, the sections which frame the two focal ones are more strongly influenced by the (historical-critical and history of religion) reconstruction. Reconstruction and interpretation are both necessary and interconnected, according to Bultmann; but interpretation takes place "on the presupposition that both have something to say to the present" (*BTNT* 2: 251). That means whenever "self-understanding," which has been "awakened" by the kerygma, "is understood as a possibility of human self-understanding, the hearer is called to decision" (p. 241).

As far as the respective descriptive and "theological" tasks of biblical theology are concerned, Bultmann saw both in a single perspective. It is obvious how much his anthropological approach narrowed the hermeneutical horizon. But even today Bultmann's theology has retained its exceptional position as a classic. H. Braun radicalized Bultmann's anthropological approach in single-minded fashion, pushing the anthropological approach to the extreme (1961). For Braun, theology is nearly identical with anthropology, because God can be encountered nowhere other than in interhuman relations. God, as one "existent by himself," is no longer intelligible; thus Braun defines God only as the "whereness of my being driven about" (Ger: *"Woher meines Umgetriebenseins"*), in the "I may" and "I must": "man in all his fellowman-ness implies God." "God would then be a certain kind of fellowman-ness" (1961: 341). H.

Conzelmann, however, developed Bultmann's approach further. The structure of his 1967 work is similar to Bultmann's: after a religio-historical survey, Conzelmann proceeds to investigate the kerygma of the primitive congregation and the Hellenistic congregation, then the Synoptic kerygma (in which the traditions about Jesus have been reworked), together with the theology of the Synoptic authors. Then follow the theology of Paul, the post-Pauline developments, the Johannine corpus. Whereas Conzelmann stubbornly maintained that "the 'historical Jesus' is not a theme of New Testament theology" (1967: 16), E. Käsemann represented the problem of the historical Jesus (1954) as so far unsolved. The identity of the risen and the earthly Lord is important, according to Käsemann, so that we cannot dismiss the question of historicity.

Unlike Bultmann and Conzelmann, W. G. Kümmel devoted the first chapter of his work (1969) to reconstructing the proclamation of Jesus. For Kümmel, "The Faith of the Primitive Congregation" (Chap. 2) was constituted by the Easter faith. In Chap. 3 ("The Theology of Paul"), the final section, entitled "Paul and Jesus," is noteworthy; here Kümmel on the one hand describes the historical connection between both figures, and the differences in their historical and salvation-historical situation on the other. The final section deals with the gospel of John and the Johannine Epistles. This, however, does not bring the entire canon into review.

J. Jeremias offered a lengthy reconstruction of the proclamation of Jesus (1971). He felt that it was possible to derive criteria which would enable a relatively certain reconstruction of the *ipsissima vox* of the historical Jesus within the "pre-Easter tradition." The effort had many gainsayers; further volumes did not appear.

E. Lohse incorporated the preaching of Jesus completely into the discussion of NT theology ("Since the Christian sermon relates to the beginning of the Gospel, the theology of the New Testament must illustrate the indissoluble dependence of the kerygma on the [with respect to itself] pre-existent history of Jesus [1974: 18]). Lohse's "postulate of nonderivability" (*Unableitbarkeitsthese:* Jesus' *ipsissima verba* being those which cannot be attributed to the early Church) permitted such a reconstruction (1974: 21, although this is now questioned). There then follow "The Kerygma of Earliest Christianity," the theology of Paul, the Synoptic Gospels, and the Johannine corpus (all arranged chronologically according to their times of origin as determined by modern criticism). A concluding chapter on "The Apostolic Teaching of the Church" reflects the situation as it was at the close of the 1st century A.D. The final section, entitled "The Unity of the New Testament," understands the NT canon to contain a variety of theological efforts, which, however, were all founded on the same kerygma of the crucified and risen Christ.

Goppelt's posthumously published *Theologie* understands itself to be breaking new ground, insisting that Bultmann's approach "has lost its historical and theological relevance in research" (1975–76: 38–39). The first volume (the programmatic superscription of which is "the theological significance of Jesus' activity") is based on the conviction that the tradition about the activity of the earthly Jesus in the gospels was drawn as a "substructure" into the kerygma (whereas the epistolary literature of the NT reflects the development of the kerygma within the situation of the congregation [pp. 57–58]). Thus the message of Jesus (about the arrival of the kingdom of God, the challenge to repent [Jesus' ethical instructions], and the idea that Repentance is a gift of the Kingdom of God [the new order of salvation]), his saving actions (the miracles), and his self-understanding (which, according to Goppelt, already entailed both messianic promise and the expectation of the Son of Man, if in veiled form), taken together with the Easter event and the Easter kerygma, are all components of the theology of the NT itself. A. Lindemann particularly protested against this, insisting that "Theology is the interpretation of the Easter confession, not interpretation or repetition of the teachings (and, as far as they are known, the actions) of Jesus" (1975: 56). This fundamental disagreement still obtains today. In his second volume, entitled "The Multiplicity and Unity of the Apostolic Witness to Christ," Goppelt dealt with the primitive congregation, and Paul and the post-Pauline writings, in the course of which he also includes other modern questions (the relationship to "society"; para. 43–44).

b. Roman Catholic Studies. With a few exceptions the special task of articulating NT theology was only acknowledged at a relatively late date by Roman Catholic scholars. The first sizable work, by M.

Meinertz (1950), thus dealt with the NT writings separately, and failed to take into consideration the impact of the development of primitive Christianity on the NT writings. Bonsirven likewise mainly took the task to be a dogmatic one: "to recover the revealed matters as understood by the authors, to attempt a hierarchical classification of these matters, so as to furnish a basis for Christian dogmatics" (1951: 9). Bonsirven nevertheless undertook to discuss historical development; in doing so, he dealt separately with Jesus (whose teachings, however, he reconstructed from the Synoptics and John), primitive Christianity, and Paul and the post-Pauline writings (the latter entitled "Works of Christian Maturity," reflecting the author's high estimation of these materials).

In his study of the history of NT criticism, Schnackenburg (1963) developed a new idea, namely that a chronological and theological account based on the history of primitive Christianity should be supplemented and deepened by thematically oriented diachronic sections. Schnackenburg proposed to deal first with the kerygma and theology of the primitive Church, then the "message and teachings of Jesus" according to the Synoptics, followed by a theology of the individual Synoptic Gospels, of Paul, John, and the rest of the writings, and finally some central problems in thematic sequence.

This diachronic system dominates the presentation by Schelkle (1968–76), who pursues, from the OT and Judaism through the NT writings (in continuous discussion with dogmatics), such main themes as "Creation, World-Time-History" (vol. 1), "Revelation" (vol. 2), "Redemption and Salvation" (in Christ, vol. 2), "Ethos" (vol. 3), "Completion" (vol. 4/1), "Disciple, Congregation and Church" (vol. 4/2). All Roman Catholic presentations approximate this one closely.

Related to Goppelt's approach is the methodology employed by Thusing (1981), which attempts to follow an outline of a theology of the NT. The basic idea is that the theological unity of the NT is held to reside in two categories of criteria: (1) the "structures of the message, activity, and life of Jesus of Nazareth" and (2) the "structures of christology and soteriology" based on the resurrection of Jesus (in the sense of a "post-Easter transformation of the Jesuanic"). The author's intention is to provide a total perspective which encompasses "the affirmation of God and the affirmation of man" as a field of tension.

c. Recent English Studies. With the exception of translations of German-language works, the first English-language work to appear in the postwar period dealing with the question of an appropriate methodology for NT theology was F. Grant's *An Introduction to NT Thought* (1950). Grant strongly emphasized the distinctions historical-critical research had observed between the various "theologies" contained in the NT, which may itself be characterized as a "theology in process" (1950: 60). As Grant saw it, the task is to discern the inherent unity within all this diversity. Since, however, the many differences make any reconstruction possible only to a limited extent, a historical interpretation is necessary which employs Christology as the "central tendency of the New Testament" (p. 61) as its general background. Certain themes ("Doctrine of God, Miracles, Doctrine of Man, Doctrine of Christ," etc.) are then synchronically treated throughout the NT.

The problems inherent in this effort became clearer in the influential work by A. Richardson (1958). The basic presupposition of this work was "that the apostolic Church possessed a common theology and that it can be reconstructed from the New Testament literature" (1958: 9). Richardson's goal was "the framing of an hypothesis concerning the content and character of the faith of the apostolic Church" (ibid.). This hypothesis maintained "that Jesus himself is the author of the brilliant re-interpretation of the Old Testament scheme of salvation … which is found in the New Testament, and that the events of the life, 'signs,' passion and resurrection of Jesus, as attested by the apostolic witness, can account for the 'data' of the New Testament better than any other hypothesis current today" (p. 12). Richardson consciously intended that his account not remain "within the limits of purely descriptive science" (ibid.), since "the principle of interpretation here employed is that of historic Christian faith" (p. 13). In matters of detail, then, the work offers a conservatively colored, systematic-theologically arranged account of such themes as "Faith and Hearing"; "Knowledge and Revelation"; "The Power of God unto Salvation"; "The Kingdom of God"; "The Holy Spirit"; etc. The disadvantage to this approach is the same as that which manifests itself in similarly constructed accounts of OT theology, namely that the individual biblical writers and their views do not come to expression. Furthermore, such important themes as creation,

anthropology, and the Law are lacking. Richardson nevertheless rightly points out that "there can be no history … which does not depend on a principle of interpretation, which the historian must necessarily bring to his study" (p. 9). However, the presupposition of the dogmatic unity of the New Testament ("historic Christian faith") allows a procedure which sees the goal of a NT theology to be already fulfilled in the systematic organization of the biblical statements.

Methodologically similar efforts have been offered by Stagg (1962) and Knudsen (1964). Also for Stagg the "unity in diversity" of the NT was the methodological point of departure of the work (1962: ixff.). Correspondingly, the subtitle of Knudsen's work, "A Basis for Christian Faith," shows that the author's intention was to provide an "interpretation" which in systematic-theological fashion opened the way for the NT witness for faith. Once again the views of the individual biblical authors were not satisfactorily differentiated.

Lehman (1974) provided a conservative presentation. Unlike him, however, G. E. Ladd (1975) offered a presentation which was ordered according to the NT works: the Synoptic Gospels, John, the primitive Church, Paul, the General Epistles, the Apocalypse. Ladd understood the goal of a NT theology to be descriptive, although the concept of God's actions in history (1975: 25) serves in the work as a *vade mecum* to the contents. The triad of God-man-sin is the presupposition of the ideas of revelation and redemption as fundamental biblical statements (p. 26). On the other hand, for S. Neill, "Every theology of the New Testament must be a theology of Jesus—or it is nothing at all" (1976: 10).

The work by Guthrie (1981) advances a conservative position. He insisted that the entire teaching of Christ is authentic in all of the gospels (including John [1981: 70f.]). The organization of the work is systematic ("God"; "Man and His World"; "Christology"; "The Mission of Christ"; "The Holy Spirit"; "The Christian Life"; "The Church"; "The Future"); a final section entitled "Scripture" deals with the use of the OT in the NT. The author's fundamentalistic approach allows him to integrate "the teaching of Christ" into all of the sections.

Among Roman Catholic works, it would be appropriate to mention that of J. L. McKenzie (1965). In spite of his acknowledgment of the plurality of biblical "theologies," McKenzie, too, sees the task as the production of a systematic-theological presentation (pp. 275–76), for which reason his work is thematically arranged.

4. The Theology of Both Testaments. After World War II, inspired by dialectical theology, a new desire arose for regaining a Christian theological significance also for the OT. Scholars tried to find a positive answer for the question concerning the relationship between both testaments. Thus the development which had taken place since Gabler, and which had led to a broad separation between OT and NT theologies, was reversed for the first time. In the process, earlier models were once more drawn into the discussion to describe the relationship in question.

a. The Salvation-Historical Model. The concept of salvation history *(Heilsgeschichte)* had been introduced into theology during the 19th century through the so-called Erlangen School. The main representative of the concept was J. C. K. von Hofmann (1841–44). Hofmann defined "salvation history" in terms of its ultimate goal: "Jesus is the end, and also the middle, of history; his appearance in the flesh is the beginning of the end" (1841–44: 1.58). All history which had taken place prior to the Christ-event was history and prediction at once—"history" insofar as it witnessed to ever progressing forms of the community between God and man; and "prediction," insofar as ever more definite references to the final form of the community of God and man began to appear (p. 1.40). For Hofmann, salvation history was a peculiar history, the understanding of whose witness took place subjectively, according to the *testimonium spiritus sancti internum* ("inner testimony of the Holy Spirit"). Thus its facticity was, to this extent, not subject to historical criticism; it unified at one and the same time individual pious experiences with the historical perspective.

This understanding of salvation history had two facets: (1) as the history of God's dealings with certain people throughout history, a history in which Christ was both the origin and the center; and (2) as the personal saving history of all people. These views recur in the work of K. Barth (1957), whereas F. Baumgärtel existentializes the concept as an exclusively internal happening (it is "the being-touched-by-

God of men in the Old Testament," which "is our own being-touched … under the Gospel" (1953: 14). Normally, however, "salvation history" was understood as a total context of external events which began in the history of Israel and which came together as simultaneous conclusion and pinnacle in the Christ-event. It was so understood by Dodd (1928), Pythian-Adams (1938), Löwith (1949), and others.

In connection with the NT, it was above all O. Cullmann (1951, 1967) who developed the concept of salvation history. Cullmann insists on the "linear understanding of time in the biblical history of revelation" (1951: 51), in contradistinction to the cyclical one which characterized Hellenism; within the saving history consisting of selected moments *(kairoi)* in the course of time (p. 131ff.), the Christ-event forms the center. Both the salvation-historical past and the future refer to it (pp. 131ff.; 139ff.). But it is salvation history "with respect to the carrying out of God's plans for salvation" (p. 39). "Because of sin and judgement it can also be a history of disaster" (1967: 21). Cullmann additionally stressed that he understood the concept not as a seamless context of demonstrable historical events, but rather as salvation-historical faith, that is, as "faith in a connection revealed only by God, resting upon a completely uncalculable selection of individual events" (p. 55). Therefore the concept of "history" should be placed in quotation marks, although there is an analogy between history and salvation history (p. 91).

Criticism of the concept of "salvation history" was above all launched by R. Bultmann and his school (esp. Bultmann 1956). According to Bultmann, "history" had come to an end with Christ; therefore the Church and its message are not "historical" but "eschatological" quantities (Bultmann 1957). For Bultmann, "historicity" (which has individual reference and is inaccessible) and "history" (objective and accessible) are opposites of one another.

Similar criticisms were offered by G. Klein (1970), K. G. Steck (1959), and F. Hesse (1971, with a rejoinder by Schmitt 1982). According to Hesse, Christ's resurrection and its significance for salvation are not verifiable within history (1971: 62–63). In reality, the saving event is merely a single point which the adherents of salvation history try to represent as a line (called "astigmatism" by Hesse 1971: 66).

In the work of G. von Rad, a peculiar understanding of "salvation history" played a role as a referent to a theology of the entire Bible. Von Rad carried his traditio-historical understanding of "Israel's historical traditions" through the OT and beyond. He also held salvation history to be the always new, always actualizing interpretation of history (*ROTT* 2: 320). Also in the NT this continual process of new interpretation is repristinated yet again, "starting from a completely new event" (*ROTT* 2: 340). Nothing violent occurs; rather, the NT fulfillment is already anticipated in the internal movement of the salvation-historical dialectic of the OT, in its progress from promise to fulfillment. However, von Rad also acknowledged that there was a strong impression of the "discontinuity of the divine revelation which Israel experienced" (this phrase did not appear in the 1975–82 Eng translation). Thus he found it impossible simply to accord with Hofmann's view of the divine plan for salvation which was supposed to embrace both Testaments, and instead attempted to connect the two parts of the Bible through the use of typology (see below).

A great number of other exegetes have also seen some form of salvation-historical connection between both Testaments. Thus, for example, S. Amsler (1960), following O. Cullmann, saw in the historical event of the person and work of Jesus Christ (in which God himself acted according to the NT understanding) the central event of a history which spanned from creation to the eschaton (1960: 105). All the historical and revelatory acts of God belong to this history (p. 106), and its goal is achieved in Christ (p. 107). Amsler further maintained that the goal of this history is already repeatedly attested in the OT, in which connection what is important is our view of a still open future which is prestructured by the saving events of the past (pp. 107–11; 114–16). In the NT, all the events of the OT are interpreted in the light of the fulfillment which has taken place in the breakthrough of the end in Jesus Christ (p. 119). From this perspective, vistas emerge of promise, fulfillment, and typology (see below). See also Wright (1952: 56–58).

We also find the model of a history of salvation culminating in Christ, often including the Church, in earlier Roman Catholic and Protestant publications. Against this, Pokorny (1981: 3–4) cautioned that "the Christ-event of the New Testament is not a direct continuation or further development of the events of the

Old Testament." It was the eyes of faith inspired by the experience of Christ which first saw the historical dimension of God's address in the OT witnesses.

b. Typology. Already in the 19th century, P. Fairbairn had written a major work on the subject of typology (1845–47). Fairbairn identified various "types" and saw in them the facts, persons, or events of which the biblical stories speak. These types were to be brought about by God within the framework of the divine economy of salvation. "Spiritual and divine truths," in order to be recognized when they would eventually occur incorporated into the person and work of Jesus, had to be prefigured in the earlier biblical stories.

Typology was brought to the attention of students of modern hermeneutics through the exegesis of the NT itself and through the study of the biblical exegesis of the early Church. In this connection the seminal work was *Typos,* by L. Goppelt (1982), which originally appeared in German in 1939. According to Goppelt, the typological interpretation of the OT in the NT is "the method of interpreting Scripture that is predominant in the NT and characteristic of it" (1982: 198). He holds that this form of interpretation is not exegetically passé; rather, it incorporates one of the most fundamental aims in the NT: "It is an excellent witness to the NT's consciousness of its own place in redemptive history. The NT knows itself to be in some way the fulfillment of the types found in the redemptive history of the OT and to be a prophecy in type concerning the future consummation" (1982: 205). Since Goppelt, however, intensive study of the exegetical methods of the NT has shown that the methodologies are in fact quite various, and that typology is more seldom employed than Goppelt supposed. Nevertheless, Goppelt's basic understanding of the theological function of the NT use of Scripture as a whole has been confirmed.

In the programmatic number of the journal *Evangelische Theologie,* which appeared under the auspices of the BKAT series, the editorial group presented their aims of connecting the historical-critical method with kerygmatic goals, in the hope of producing an interpretation of the OT which would be useful for the purposes of preaching. In this connection, typology received a major position, thanks to a contribution by von Rad, published in *Interpretation* 15 (1961). Von Rad dealt with the question of how God's saving acts on behalf of Israel (as witnessed in the OT) applied to the Church and to the individual Christian, concluding that the only possible reply must be in terms of typology: "Rather we see everywhere in this history brought to pass by God's word, in acts of judgment and in acts of redemption alike, the prefiguration of the Christ-event of the New Testament" (1961: 192). In von Rad's view, typology is based on the belief that it was the same God who had revealed himself in Christ who had already acted in OT history and had spoken to the fathers through the prophets. Typology allows the working out of salvation-historical structural analogies in both Testaments.

In his *Theologie,* von Rad once again showed that he understood typology as a linear series of saving acts which encompassed both Testaments, and which was characterized by the tension between promise and fulfillment (*ROTT* 2: 364ff.). Thus typology was able to reveal an observable structure also in the case of the OT. H. W. Wolff (1961; 1956) had a similar working hypothesis for the historical understanding of the (given) correspondences between both Testaments. The views of Lampe and Woolcombe (1957) and Foulkes (1958) were similar as well.

Roman Catholic circles especially accepted typology as an appropriate method of spiritual scriptural interpretation. Here, of course, patristic exegesis played an important part (Origen and Thomas Aquinas). See especially Jean Daniélou (1950), which deals with both Scripture and patristic exegesis in connection with a number of themes (e.g., Adam-Christ).

Criticism of the typological method was above all offered by F. Baumgärtel (1952: 124–27, 138–43, plus numerous articles), who felt that typology provides a purely theoretical construction which cannot affect faith (contra Eichrodt 1963). See also J. Barr (1966, Chap. 4).

c. Promise and Fulfillment. The scheme of "promise and fulfillment" can also be traced to the NT exegesis of the OT. However, the conceptual model of traditional theology with respect to the OT "messianic promises," which saw these as fulfilled in the NT in Jesus Christ, was no longer adhered to by critical exegetes (the last proponents were König 1923; Edelkoort 1941). However, after World War II, especially von Rad *(ROTT)* and W. Zimmerli (1961) attempted to show that the relationship of both

Testments at least in part consisted in the correspondence of "promise" to "fulfillment." For both scholars, this correspondence was an aspect of the OT salvation history itself, which they described variously as an "area of tension constituted by promise and fulfilment" (von Rad *ROTT* 2: 371) or as a "movement from promise toward fulfilment" (Zimmerli 1961: 329). Since, however, all the fulfillments in the OT are only provisional, the final fulfillment is no sooner attested than by the NT—insofar as believers are still awaiting its completion. See further Oxtoby 1966; Bruce 1978; Achtemeyer 1973: 77–115, 165–67, 172–81.

Baumgärtel criticized this model on the basis of his own particular understanding of the concept of promise (1952: 95–101, 106–27). He distinguishes between "promise" considered as God's assurance, and "prediction," that is, human predictions of future events. However, Baumgärtel's understanding of "promise" in the sense of a timelessly valid basic promise of God is untenable with respect to the OT. J. Barr (1966: 113) regards the concept of "promise" as nonderivable from the NT's conceptual realm, which he, incidentally, also regards as no longer useful.

d. The Traditio-Historical Approach. Tradition history, as a specific approach to a new biblical theology, is associated with H. Gese (1970; 1981a; 1981b). Gese proceeds on the basis of von Rad's understanding of tradition history, but nevertheless reckons with a continuous context of tradition from the OT to the NT, where it finds its conclusion: "The Old Testament originates in the New Testament; the New Testament is the completion of a process of tradition, which is essentially a unity, that is, a continuum" (1970: 420). Gese does not attempt to specify the contents of this process of tradition, but he does acknowledge a traditio-historical "nucleus" of the OT. It consists of the revelation on Sinai (1970: 427; 1981a: 25), plus the self-revelation of the "I am YHWH" (1981a: 25; 1981b: 65). Through the "Wisdomization" and "eschatologization" of the Torah in the late period, a second center was formed, namely Zion; therefore Gese distinguishes between a "Sinai Torah" and a "Zion Torah" (1981b: 80–81). For Gese, the tradition itself is the kerygma: "The traditio-historical process corresponds to a process in the history of revelation" (1981a: 18). Gese's position has been supported by, above all, P. Stuhlmacher, who defines biblical theology as "a New Testament theology which is open to the Old Testament, and which attempts to discover the traditional and interpretative context of both Old and New Testament traditions" (1973: 375).

In addition to criticisms of Gese's "ontological" terminology, scholars have suggested that he presupposes a (undemonstrable) linearity in the development of the OT traditions. Moreover, his approach has been labeled a kind of phenomenology (since Gese simply describes the religious-historical phenomena without evaluating them). Finally, Gese insisted that it is only possible to assume an unbroken context of tradition between the testaments if one abandons the decision of the Reformers to limit the OT canon to the borders of the Masoretic Bible (1977: 324, an illegitimate "reduction of the canon"). Gese himself sees the connection precisely in the so-called "apocryphal writings" (apocalyptic and late Wisdom); however, the Masoretic canon would presumably have been fully established by the middle of the first pre-Christian century.

e. Basic Connective Concepts. Confronted with the difficulties inherent in trying to combine the two Testaments with the aid of some single encompassing scheme, scholars recently have attempted to demonstrate a connection between them on the basis of some common fundamental concepts. For P. Stuhlmacher (1973), one such concept is the confession of the resurrection of Jesus with respect to the OT confession of the hope of resurrection. But Stuhlmacher also mentions as fundamental concepts such features as "reconciliation," (e.g., 1979a: para. 15; 1979b) and "law" (1978; cf. also Siegwalt 1971). Others have suggested "the covenant" (e.g., Campbell 1954), "election," "lordship of God" (Gray 1979), "promise" (W. C. Kaiser 1974; 1978), and the "people of God."

Others have attempted to discern the connection in question in a number of key concepts (Haag 1965). Thus Abbing (1983) has traced the triad of features consisting of revelation, history, and human responsibility throughout the entire Bible. Some exegetes conclude that it was Yahweh himself who raised Jesus from the dead. For S. Terrien (1978), the *deus absconditus atque praesens* forms the real middle of the Bible. Seebass (1982) recognizes as the middle of the Bible the new understanding of God

which came about in Jesus Christ (2 Cor 5:19, "God was in Christ"). Alongside of this insight he offers such factual themes as the resurrection, messianism, people of God and kingdom of God, creation, and trust in God. Wagner (1978: 794) insists on the "functional identity" of God in spite of all the differences in the tradition and redactional history of the Bible.

A special variant is the creation-theological approach of H. H. Schmid, which he attempts to make applicable to the entire Bible. He holds this concept to have been the conceptual presupposition also for fundamental theologoumena of the NT, such as Paul's doctrine of justification, the redemptive death of Jesus, and his mediative role in the creation (1973: 12–14). Using the same basic approach, U. Luck emphasizes more strongly the features of experience of the world and apprehension of reality (1976: 7–9, 13).

f. The Canonical Approach. B. Childs (1970: 99–107) initiated a discussion concerning a "canonical" biblical theology which has been especially lively in the United States. See CANONICAL CRITICISM. According to Childs, the crisis of biblical theology was to be ameliorated by a new approach based on the OT and NT as normative bases of the Church because of their divine authority. To this, J. A. Sanders (1972) added the demand for a "canonical criticism" which would have as its aim the derivation of a new perspective of critical exegesis by studying the origin and function of the canon (Sanders 1984; 1987). So saying, however, Sanders saw the real center of the OT canon to be the Torah (against this, Blenkinsopp [1977] emphasized the prophetic character of the canon); this reflects the earlier view in the U.S., promulgated above all by Wright (1969: 166–85), according to which there is unquestionably a "canon within the canon" or a "center" of the corpus (see above). In methodological terms, the choice of the canon of the Old (and New) Testament(s) as the referential framework of a biblical theology is dependent on the recent redaction-historical approach. Where scholars were previously interested in the respective earliest literary strata and traditions, now they had begun to concern themselves more with the "posthistory" and the "final form" of the biblical text. Thus scholars are increasingly tending to read the texts "holistically," that is, by taking the entire context of a given text into consideration and relating it to the perspective of the entire Bible (on these three indissoluble aspects of the "canonical" concept—earliest literary strata, "posthistory," "final form" of the text—see, critically, Barr 1983: 75–82). Childs has himself exercised his exegetical approach on a biblical book (*Exodus* OTL); furthermore he also used his "canonical principle" as the basis for introductions to both the OT and the NT (respectively 1979 and 1984). In his *Theology* (which follows the traditional organization), Childs describes the purpose of the canonical approach as "to describe the theology of the Old Testament according to the intertextuality of its canonical shaping and so seek to understand how this corpus of material was ordered and rendered within the context of scripture" (1985: 53). Childs also holds the theological understanding of the NT as the result of a "canonical process" to be of decisive importance (1984: 22–33).

Childs' "canonical program" has proved to be controversial (see *JSOT* 16 [1980], and *HBT* [1980]: 113–211). It has been argued that instead of attending to the unity of a writing within the context of both testaments, we should also observe the differences between individual writings (on the OT, see Hanson 1982; Goldingay 1987; on the NT, see Käsemann 1964; Dunn 1977). The demand to search for the "center" has also been levied in connection with the NT (Schrage 1976) and corresponds, as a definition of the "canon within the canon," to the tradition of the Reformers.

These are presumably not real contradictions, but rather different aspects of the total goal of a biblical theology, which encompasses both the exegetical and systematic horizons. A solution to the difficulties can only be expected through the cooperation of both theological disciplines, which would transcend the estrangement of exegesis and dogmatics that has obtained since Gabler.

5. Skeptical Voices. Skepticism about the theological value of the OT is as old as Marcion. In addition to the historical factors behind such skepticism (sometimes including anti-Semitism), there were often also theological factors. E. Hirsch considered the OT to be "a document of a religion of law which was superseded by Christian faith" (1936: 26); to it he opposed the NT ("the Christian religion") as the witness of the Gospel (pp. 11, 76). Hirsch therefore held that the OT is only of interest for Christians since there we encounter the *deus absconditus* in the masks of sin, death, and turmoils of faith (pp. 27–

30), features which were, however, subdued forever through the God of love, the father of Jesus Christ. A similar rejection, based, however, on depth psychology, has been presented by Hannah Wolff (1983). According to Wolff, were we to acknowledge the OT as part of the Christian canon, the Christian self-identity, which is to be determined through the historical Jesus, would be subordinated to Jewish-patriarchal and counter-Christian foreign influence.

The judgment of R. Bultmann was more subtle. For him the scheme of "law and Gospel" means a legitimately "historical" existential question of "what basic possibility it presents for an understanding of human existence" (1963: 13). The OT is "being under the law," and since this is the necessary prerequisite for "being under grace," man must be subject to the OT if he hopes to understand the NT. Similar views were also espoused by F. Baumgärtel and F. Hesse (see above). Bultmann's attitude toward the OT is still effective among his students and other NT scholars today.

Such skepticism as does appear often clothes itself partially in the guise of criticism of a given program (so, for example, in Grässer's 1980 criticism of Stuhlmacher; incidentally, Grässer [1980: 219–20] agrees with R. Smend that a biblical theology which begins with the NT and looks back to the OT remains possible; Strecker 1980). However, skepticism is sometimes explicit; thus, for example, Merk (1972: 270–71; see also *TRE* 6: 455–77) regards the separate treatment of the OT and NT to be the necessary consequence of Gabler's methodological approach. For Merk, the demand for a "biblical theology" which embraces both Testaments is a "retrograde tendency, which abandons the insights of Gabler and G. L. Bauer" (1972: 271, n. 193).

6. Conclusion. What might we expect in the near future from the ongoing work on a biblical theology? The theological task of biblical scholarship unavoidably includes the problem of the relation between the testaments. Every Christian preacher has to expound biblical texts taken from both parts of the Bible. So the discussion about their unity and diversity will continue. But the expectations of discovering a comprehensive model—a basic idea or ongoing development that would allow us to understand the Bible as an organic unity—remain unfulfilled. Thus, the next steps to be taken will be more modest: to detect common topics where the NT is related to the OT, where it expressly cites the OT or builds upon conceptions which have been taken over from it. All these endeavors have one basic presupposition: that the God who revealed himself in the OT is the same as the father of Jesus Christ. Insofar as the enterprise of a biblical theology of both testaments is rooted in faith, it needs dogmatic reflection for results that transcend the realm of simple exegetical observations on a concrete scriptural text.

HENNING GRAF REVENTLOW
TRANS. FREDERICK H. CRYER

THEOPHANY IN THE OT. Theophany, the self-disclosure of God, is a widely attested phenomenon in the literature of ancient Israel, recorded by its historians, prophets, sages, and psalmists. The word "theophany" itself is a Greek term, from *theos,* "god," and *phainein,* "to appear," a classical

example of which in Greece was a festival at Delphi at which the statues of Apollo and other gods were shown to the people. Though the term is not a Hebrew one, and though divine images were not a part of Israelite ritual, "theophany" and related terms—"epiphany," "appearance," and "hierophany," "appearance of the sacred"—have come to be used among scholars for descriptions of the appearance of God in the Hebrew Scriptures.

God is understood by Israel to be a reality different from the world and unlimited by it (1 Kgs 8:27; Amos 9:2–4; Psalm 139). Yet in theophanies God is revealed by self-limitation to specific places and particular forms within the world itself. The distinctive places and forms within the world which become modes of divine manifestation in Israel are to be found in the realms of nature and of human society. Natural and social images of divine appearances are, in fact, closely integrated in most theophanies. God may be described, for example, in the form of a thunderstorm, unleashing lightning, hail, and torrents of rain, and at the same time as a warrior riding a chariot and leading heavenly armies into battle (Hab 3:3–15). Furthermore, this theophany may occur at a mountain revered as sacred both for its natural features and for its sanctuary and city which mark the center of a political entity. While great interest has been attached to the human form and social roles—warrior, king, judge—of divine self-disclosure in Israel, less attention has been given to the essential role of geography and natural forms in Israel's experience of theophany.

———

A. The Location of Theophanies
B. The Form of Theophanies
    1. Natural Forms
    2. Human Forms

———

A. The Location of Theophanies

One of the fundamental characteristics of theophany in Israel is its occurrence at locations in the natural environment which were considered particularly sacred, particularly conducive to contact and communication between the divine and human spheres of reality. God appears at springs (Gen 16:7), rivers (Gen 32:23–33—Eng 32:22–32), trees (Gen 12:6–7), but predominantly and most significantly at mountains (Gen 12:8; Exodus 19; Psalm 48). It is on the mountain that the deity becomes manifest as the divine warrior in the phenomena of the thunderstorm, is enthroned as king of the cosmos and history, and issues decrees about the divine will and intentions for the human community.

The occurrence of the most significant theophanies on mountains in ancient Israel is not unique but representative of a much wider phenomenon. For many cultures in antiquity the mountain was considered that point in the environment most conducive to contact with the divine, most revelatory of divine presence. This is true for the Canaanite culture, from which Israel emerged, whose major deities El and Baal both reside and become manifest on mountains (Clifford 1972: 34–97). It is also true for ancient cultures in Greece, India, China, Japan, Africa, and the Americas, which all recognized mountains as locations of divine manifestation (Eliade 1969: 41–44; Eck *EncRel* 10: 130–34).

The prominence of the mountain in biblical theophanies must be related on the one hand to its complete familiarity to the Israelite inhabitants of the Canaanite hill country and on the other hand to its extraordinary natural features. With its peak reaching into the skies, it represents the closest connection in the environment between earth, the domain of humanity, and heaven, the realm of the gods. The splendor of the highest peaks produces a sense of awe, a sense heightened and made more mysterious when the cloud banks of the thunderstorm veil the summit from view. Once scaled, the mountain offers an unlimited vision, not only of the clouds and the heavens but also of the horizon of the earth.

These features make the mountain the most suitable site of divine manifestation and thereby identify it as a cosmic center. The mountain as cosmic center is a concept fundamental in many traditional societies, as Mircea Eliade (1969: 27–56) has shown, and operative also in ancient Israel, as demonstrated by Richard Clifford (1972). In Israel, as elsewhere, the mountain functions as the center and site of theophany by linking the three cosmic regions along a central axis: located on earth, its top reaches into

heaven (Ps 48:2–3—Eng 48:1– 2) and its base down into the subterranean waters of the Underworld (Pss 46:3— Eng Ps 46:2; 104:5–9). The waters of the Underworld are frequently represented by a spring issuing from the earth at the mountain's base (Ps 46:5—Eng 46:4; Ezek 47:1–12). This point of intersection is supremely sacred, for it is the meeting place of heaven and earth, the point at which direct contact is made between the divine and human. This contact is represented by vivid manifestations of the divine, by theophanies in which Israel experienced divine assistance, divine rule, and divine communication.

As the center of the cosmos the mountain is also the center of human society. With its defensible height and its spring to provide a stable water supply, the mountain was both the location of divine presence and a favorable site for human habitation. The mountain thus became the focus of the familiar, inhabited, and organized space of society, a space representing the political microcosm beyond which existed the unknown, foreign, and chaotic reality of cosmic and historical enemies. The central institutions of a society, in particular its religious sanctuary, were constructed on the mountain to represent divine contact with and control of human affairs.

The understanding of the mountain as the site of divine manifestation and thus the center of cosmos and society is present in an ancient Canaanite mythic pattern which Frank Cross (*CMHE*, 147–94) has shown to have deeply influenced biblical descriptions of theophany. In this mythic structure, present in the Baal Cycle from Ugarit (and reflected in Enuma Elish from Babylon), the storm god Baal, sitting in the assembly of gods on the sacred mountain, is challenged by his enemies, preeminently Sea, who embodies chaos. Baal, as a warrior mounted on the clouds, responds by destroying Sea. As a result of this victory, Baal is enthroned as cosmic king on Mt. Zaphon, receives a house constructed on the summit, and appears as the storm with the thunder, lightning, and rains which bring fertility to the earth. While Baal is celebrated at Ugarit as king and ruler of the universe from his mountain height, it is El, father of the gods, who issues decrees and communicates to human beings the will of the divine council from its assembly atop his own sacred mountain.

In Israel, these modes of theophany have been combined in the activity of a single deity, Yahweh, who appears at the cosmic mountain as the divine warrior in the thunderstorm to protect Israel from cosmic and historical threats to its security, who is manifest as ruler of the cosmos and history, and in that capacity discloses the divine will by issuing decrees, revealing plans, judging nations and people, granting requests, answering inquiries, and commissioning messengers. These modes of the theophany of Yahweh are closely related and unified by their location at the sacred mountain.

Though Israelites experience the theophany of Yahweh in these modes at a variety of sacred mountains, by far the most important are a southern peak, Mt. Sinai, and the hill on which the city of Jerusalem was built, Mt. Zion. The southern mountain is the site of God's appearances in Israel's oldest accounts of theophany. A number of archaic poems composed before the monarchy identify God's appearances to Israel with a mountain in the S called Sinai or Paran, and perhaps Seir (Deut 33:2–5, 26–29; Judges 5 [esp. vv 4–5]; Habakkuk 3 [esp. vv 3, 7]; Psalm 68 [esp. vv 8–9—Eng 7–8; and vv 18–19—Eng 17–18]). In these poems, God becomes visible on the mountain in the phenomena of the thunderstorm and marches out from it as a warrior with heavenly armies to fight for Israel. All of these poems are in fact victory hymns depicting the theophany of the divine warrior at the mountain as decisive for the victories of Israel's armies. Present also in these archaic theophanies is the depiction of Yahweh as king who in divine and human assemblies issues decrees and instructions (Deut 33:3–5). Another premonarchic poem, Exod 15:1–18, opens with a theophany of Yahweh as a warrior in the storm fighting Pharaoh's armies at the sea and concludes with the enthronement of Yahweh on his holy mountain.

This early identification of Israel's deity with mountains can be illustrated further by two archaic titles. One identifies Yahweh as "the One of Sinai" (*zeh sînay;* Judg 5:5; Ps 68:9—Eng68:8). Another designates Yahweh *ʾĒl Šadday,* "God, the One of the mountain," a title used in archaic poems (Ps 68:15—Eng68:14) and again in later archaizing contexts (Job, Ezekiel, the priestly work). The divine mountain itself is identified as a sacred space (*qōdeš;* Ps 68:18—Eng68:17) and called the "mount of possession" (Exod 15:17), designating it as exclusively divine property.

This southern mountain is identified as the site of the most significant theophany in Israel's formative period by the epic tradents, the Yahwist (J), who refers to it as Sinai and the Elohist (E), who calls it Horeb. Sinai/Horeb is called the "mountain of God" (Exod 3:1) and is designated as sacred ground (Exod 3:5; 19:12–15, 21–23). Here God appears to Moses as a flaming tree during Israel's enslavement, commissions Moses to direct Israel's exodus, and reveals the divine name (Exodus 3). Here also God appears to the assembled Israelites after the deliverance at the sea (Exodus 19; 24). As in the old poems, the archaic theoxphanic pattern lies behind the description of God's manifestation (*CMHE*, 164–69). Yahweh meets Moses at the sacred mountain with instructions for the coming conflict (Exodus 3), appears at the sea to fight for Israel in the storm (the pillar of cloud and fire/lightning; Exod 14:19–20, 24–25), and then leads the people back to the holy mountain where, in a vivid self-disclosure of the victorious deity in the thunderstorm, the decrees which will constitute Israel as a covenant community are issued (Exodus 19–24).

The exilic Priestly writer (P), who appropriated these epic sources for an extended treatment of Israel's formative period (Genesis–Numbers), divided Israel's early history by three great moments of divine self-disclosure, the final and climactic of which occurred in God's revelation at Mt. Sinai. (The preparatory theophanies are to Noah on a mountain in Ararat [Gen 8:4; 9:1–17] and to Abram, presumably by the oaks of Mamre [Gen 14:13; 17:1–27].) The Priestly writer too preserves the old theophanic pattern. The glory *(kābôd)* of Yahweh in the cloud (e.g., Exod 16:10) leads Israel from Egypt through the wilderness to Mt. Sinai, where the glory of God is manifested in the thundercloud (Exod 24:15b–18). Here as in the epic sources, the emphasis in the theophany at the southern mountain is on the rule of God and on the communication to Israel of decrees and instructions which will place that rule into effect. Indeed, the entire collection of Israelite law has been identified by P as promulgated in the Sinai theophany, an assertion which makes this theophany and the divine will communicated through it definitive for all subsequent generations of Israelites. The martial character of the theophany at Sinai, though less emphasized by P, may still be recognized not only in the divine leadership in the cloud from the battle at the sea, but also in the assembling of Israel in military companies by tribe and in the march from the mountain by the tribes following the divine warrior in the cloud (Numbers 1; 2; 9; 10).

The old tradition in Deuteronomy which now provides the introduction to the Deuteronomistic History (Joshua–2 Kings) contains essentially the same modes of theophany at the southern mountain, here called Horeb. The deity becomes manifest in the thunderstorm at the mountaintop, is recognized as Israel's divine warrior, and issues decrees which become the basis for Israel's community life (Deuteronomy 4–5). The pilgrimage of the prophet Elijah to Horeb and the divine revelation to him there recorded by the Deuteronomistic Historian (1 Kings 19), a theophany reminiscent of an earlier one to Moses (Exod 33:17–23), indicate that this southern mountain continued to be regarded as a site of theophany down into the days of Israel's monarchy.

The location of this mountain can no longer be identified with certainty, except that it lay in a desert area S of the land of Israel. Though tradition has understood it to be Jebel Musa in the S tip of the Sinai peninsula, this tradition is late and uncorroborated by archaeological evidence. The mount of theophany may in fact have been located in the N Sinai or, more likely, in the mountainous area SE of Israel in the Transjordan where the old poetic and epic material place it. The various names for the mountain—Sinai, Horeb, Paran—could even reflect different traditions connecting theophanies of Yahweh and Yahwistic sanctuaries with more than one S peak.

During the Israelite monarchy this S mountain in the desert, which had been the preeminent location of theophany in Israel's formative period, is superseded in importance by a mountain in the land of Israel itself known as Zion. Zion was the name given to the ancient fortified ridge between the Tyropoeon and Kidron valleys. A modest mountain when compared with surrounding peaks, its summit was inhabited as early as the EB Age (ca. 3000 B.C.E.), likely because the Gihon spring at its base provided a stable water supply. This spring undoubtedly also lent the mountain cosmic significance, symbolizing the subterranean realm linked to the earth and heaven at this point. Mt. Zion was captured by David and became the site of the royal palace and then of the temple of Yahweh constructed under Solomon at its summit. From the

time of David on, psalmists, prophets, historians, and apocalyptic writers see Zion as the most prominent place of divine self-disclosure.

The psalmists, while believing heaven to be the divine realm proper (Pss 11:4; 14:2; 20:7—Eng20:6), understand God to be present within the human realm at Mt. Zion (Pss 11:4; 46:5–6—Eng46:4–5; 48:1–4—Eng 48:1–3; 76:1–3—Eng76:1–2), frequently referring to it as God's sacred mountain (Pss 2:6; 48:2—Eng48:1; 87:1). The same modes of Yahweh's epiphany associated with the southern mountain are also present in Zion theophanies. The deity appears on Mt. Zion as a thunderstorm, going into war against Israel's enemies to protect Zion and the Davidic king (Pss 18:7–20—Eng18:6–19; 29:1–11; 97:1–5; 144:1–11). God's kingship on Zion is celebrated, in particular in a series of hymns which may have been used in the liturgy of a fall New Year festival (Psalms 47; 93; 95; 96; 97; 98; 99). From Zion the divine king communicates with Israel, issuing decrees which govern the Davidic state and the nations at large (Pss 2:5–9; 89:20–38—Eng89:19–37; 132:11–18), rendering judgment on Israel and the nations (Pss 9:8–9, 20–21—Eng9:7–8, 19–20; 96:10–13; 99:1–5), and accepting the prayers and offerings of Israel (Pss 5:1–4—Eng5:1–3; 12:6–7—Eng12:5– 6; 20:1–5).

Even among prophetic figures, for whom divine self-disclosure in Israel was not bound to specific spaces and the institutions and offices attached to them (Amos 7:14–15; Jer 18:1–2; Ezek 1:1), theophanies are primarily associated with Zion (Ezekiel 1; 10; 43; Amos 1:2; Mic 1:2–4; Zephaniah 1). This is particularly true for Isaiah, whose vision of Yahweh in the temple (Isa 6:1–13) and description of the appearance of Israel's God as a thunderstorm to protect Jerusalem (Isa 29:1–6; 30:27–33) identify God's manifestation on earth as inextricably linked to Mt. Zion.

Apocalyptic writers regard Mt. Zion as the site at which theophany would one day become an everyday reality. Here the divine warrior would appear in the storm to fight a decisive battle against the nations to remove permanently any threat to Zion's security (Isa 66:15–23; Ezekiel 38–39; Joel 3:1–21; Zechariah 9). God would then be enthroned over an eternal kingdom of peace and prosperity in which the light of God's presence would replace the sun, moon, and stars (Isa 24:21–23; 25:6–8; 60:16–22; Joel 3:17–21; Zech 14:6–21) and in which all would by nature respond to the divine law (Jer 31:31–34; Ezekiel 36).

Though Sinai and Zion dominate Israel's theophanic landscape, other mountain peaks also mark the sites of divine appearances. Mt. Carmel is the location of a decisive theophany to Elijah, Ahab, the prophets, and the people of Israel in which Yahweh is manifest as a thunderstorm consuming the offering of Elijah by lightning and bringing rain and fertility (1 Kings 18). Together with Carmel, Mt. Tabor is also referred to as a sacred mountain (Jer 46:18; cf. Hos 5:1; Ps 89:13—Eng89:12; Judg 4:6, 12, 14). Mts. Ebal and Gerizim figure prominently in an archaic ceremony near Shechem affirming the acceptance of the divine law (Deuteronomy 27; Josh 8:30–35). Divine appearances in ancestral traditions also occur at mountains (Gen 12:7–8; 22:1–14; 28:12).

The primary symbol identifying the mountain as the site of divine disclosure not only within the natural realm but within the realm of human society as well is the religious sanctuary, the dwelling place for the deity constructed on the mountaintop. This sanctuary, or earthly house of God, becomes the focal point for the political structures which order Israelite life. Located at the center of the community, the sanctuary represents the presence, the protection, and the rule of God within Israelite society. At the southern mountain in Israel's formative period this dwelling appears to have taken the form of a tabernacle or tent shrine. The Priestly writer later described its construction as based on a divine design related to Moses on Mt. Sinai, thus representing an earthly copy of God's heavenly home (Exodus 25–27). Its two designations, "place of tenting/encampment" *(miškān)* and "tent of meeting/assembly" *(ʾōhel môʿēd)*, indicate that Israel saw the tabernacle as the location of God's presence and communication with Israel and its leaders (Exod 25:22; 33:7–11).

On Mt. Zion a more elaborate and permanent dwelling for the deity was constructed during the monarchy by King Solomon (1 Kings 6–8). Within the temple the psalmists experience the presence and behold the beauty of God (Pss 11:4; 27:4; 63:3—Eng63:2; 84:1–5—Eng84:1–4). In this temple God appears to and commissions Isaiah in a vivid theophany (Isaiah 6). Here the Deuteronomistic Historian

believes God to be present on earth (1 Kings 8). From this sanctuary and through the Davidic king in his adjacent palace, God governs the affairs of Israel and of the nations (Psalms 2; 46; 48).

The way in which the cosmic mountain with the temple at its summit provides the focal point for the different modes of divine appearance—that is, as warrior, king, and lawgiver—suggests that theophany is a more unified phenomenon than much recent scholarship has claimed. A distinction is customarily made between theophanies during war and those in the cult (e.g., Jeremias *IDBSup*, 896–98; Westermann 1965: 93–101), and arguments are made for its origins in holy war (e.g., Jeremias 1965: 118–50; von Rad 1959) or during the great festivals of Israel's cult (e.g., Mowinckel 1967: 142–43; Weiser 1950: 513–31). In fact, these settings are closely linked from earliest times by their relationship to the sacred mountain, a linkage present in the archaic mythic structure of conflict, rule, and law-giving, and in the cultic life of the worshiping community. At the mountain sanctuary God appeared as warrior and led out Israel's troops to battle. At the mountain sanctuary the victorious God was enthroned to the praises of Israel and the divine rule over cosmos and history recited and reenacted. And at the mountain sanctuary the divine will was communicated and accepted by the community. These modes of theophany are thus not isolated phenomena, but part of a single pattern of thought and practice in Israel from earliest times.

Though the mountain is the customary location of theophanies in Israel, divine appearances do occur at other sites. In many of these cases, the manifestation of God is marked by other geographical features which represent portals or points of transition within the natural environment between the divine and human worlds. One of these geographical features is the water source, be it a spring, well, or river, which represents a link to the subterranean realm. The clearest example of the water source as a point of theophany is the spring issuing from the base of the cosmic mountain, indicating this location as a cosmic center where the three regions meet (Ps 46:1–6—Eng46:1–5; Ezek 47:1–12; Joel 3:1–18; Zech 14:8). Theophanies at other water sources are common in the accounts of Israel's ancestors; they are experienced by Hagar (Gen 16:7–14; 21:15–19), Isaac (Gen 26:24), and Jacob (Gen 32:23–33—Eng32:22–32).

Another aspect of the natural environment which locates theophanies is the sacred tree, which is the most widely attested variant to the mountain as cosmic center in traditional societies (Eliade 1969: 44–47). With its roots reaching into the Underworld and its branches into the heavens, it unites the three worlds on a single axis. The divine garden in Eden is populated with trees (Genesis 2–3), and trees are particularly prominent as points of theophany in traditions about Israel's early period. Theophanies to the ancestors (Gen 12:6–7; 18:1; 21:33–34), Moses (Exod 3:1–6), and the judges (Judg 6:11–24) occur at trees which mark sacred space (Exod 3:4–5).

While natural features like mountains, springs, and trees which mark the meeting point between divine and human realms determine the basic experience of theophany in Israel, not all divine appearances are located in this way. In some cases, the exact location of the theophany is unmarked (Gen 15:1; 20:3; Judg 13:2–3; Amos 7:4; Job 38:1). In other cases, a mobile symbol of divine presence, the tabernacle or the ark, determines the location of theophanies even when moved from the mountain itself (Exod 40:34–38; Num 10:35–36). These examples indicate that while certain places in the natural environment were especially sacred, particularly conducive to contact between God and human beings, divine presence and manifestation were not confined to these locations alone but ultimately pervaded the earthly realm and those above and below (1 Kgs 8:27–28; Amos 9:1–4).

B. The Form of Theophanies

Just as the essentially unlimited deity of Israel becomes manifest by a self-limitation to concrete space within the ordinary world, so the deity takes on familiar forms from mundane reality. Some of these forms are natural phenomena and others are human or social. In most cases the natural and social coalesce in Israel's description of the form of divine appearances.

1. Natural Forms. The most common natural form of divine appearance in Israelite literature is the thunderstorm, with its dark storm cloud representing the divine chariot or throne (Hab 3:8; Ezekiel 1), its thunder representing God's voice (Exod 19:16, 19; Ps 18:14—Eng18:13), and its fiery lightning bolts God's weapons (Hab 3:11; Ps 18:15—Eng18:14). The thunderstorm is the predominant form of

theophany in Israel's older literature, the early poetry and epic (J/E) sources, and in the psalms. While not as frequent or explicit, it also lies behind the major theophanies in the literature of Israel's later historians, prophets, and apocalyptic writers.

The reason the thunderstorm became the primary form of divine manifestation in Israel must be derived from its character as the most powerful and essential phenomenon in the life of people in a Canaanite agricultural society. Its violent winds, lightning, hail, and driving rain were the greatest demonstration of the powers of nature regularly experienced by Israelites, powers which could threaten and destroy life. On the other hand, the rain brought by the storm clouds was crucial to sustain the farming economy in Israel and provide food for its people. Drought and famine were constant threats. Thus the thunderstorm represented absolute power which could be both malevolent and beneficent.

In its frightening and beneficent qualities the storm reflects the dual character of the holy which Rudolf Otto understood to be at the heart of all religious experience (Otto 1958: 1–40). The apprehension of the holy, the *mysterium tremendum,* is widely characterized by a sense of "awfulness," or fear combined with a sense of fascination and of gracious intent. This "strange harmony of contrasts," which Otto sees as the most noteworthy phenomenon in the history of religions, is captured more powerfully in the experience of the thunderstorm for Israelite agrarian society than in any other experience of the world. It represents most intensely both the awful power and the benevolent care of divine powers at work in the universe.

The "awful" aspect of the manifestation of the sacred, so apparent in the storm, is the source of the great danger at times associated with theophanies in Israel. Divine appearances frequently elicit terror from those who experience them (Gen 28:17; Exod 3:6; 19:6; Lev 9:24; Judg 6:22–24). Furthermore, the prospect of death from a direct encounter with the divine is a common concern (Gen 32:31—Eng32:30; Exod 19:12–13; 33:17–23; Num 17:12–13; Deut 5:24–27; Judg 13:21–23).

The thunderstorm as the preeminent manifestation of divine power is given expression in the same ancient Canaanite mythic pattern in which the sacred mountain functions as cosmic center. The pattern celebrates the supreme position of a storm deity (Baal in Ugarit, Marduk in Babylon, Yahweh in Israel), before whose military strength the universe and natural environment can be shaken. It concludes with a theophany of the storm god enthroned as king of the universe, in which the rain from the storm brings fertility to the earth.

The dominance of the thunderstorm in Israel's theophanies can be seen already in Israel's premonarchic poetry, in which Yahweh's appearance is in every case the storm. Since these poems are victory hymns, the destructive power of the storm, directed against Israel's enemies, is emphasized (Exod 15:7–10; Deut 33:2–3, 26–29; Judg 5:4–5; Hab 3:3–15; Ps 68:7–8, 31–34—Eng68:8–9, 32–35). The beneficence of the storm as a source of fertility, is, however, also recognized (Exod 15:17; Ps 68:9–10—Eng68:10–11; Deut 33:28). The psalms from Israel's monarchy reflect the enduring strength of this old theophanic tradition. The most vivid theophanies in the Psalter take the form of a thunderstorm, in which Yahweh's destructive power over Israel's enemies and blessings of fertility to Israel are both praised (Psalms 18; 29; 50; 77; 83; 97; 104; 144).

The thunderstorm is also the most prominent theophanic form in the epic sources (J/E), picturing in particular God's presence in the great revelation at Mt. Sinai (Exodus 19). The archaic traditions of the theophany of the storm god in Canaan and Israel make it clear that this epic depiction of God's manifestation has its origins in the thunderstorm rather than in the phenomenon of a volcanic eruption, as some have argued (Jeremias 1965: 100–11). The column of cloud and fire/lightning which Israel meets on its march to the sea (Exod 13:21–22; 14:19–20) and which leads Israel to and from the sacred mountain (Num 10:33–34; 14:13–14) is derived from this same storm imagery (Mann 1971: 15–30; *CMHE,* 163–69). See PILLAR OF FIRE AND CLOUD. The pillar of cloud by day and fire by night (Exod 13:22) does not represent different manifestations of divine presence by the single storm cloud (Exod 14:24) apprehended as a cloud column during daylight and as a fiery, lightning-filled column at night. The storm cloud is closely associated with the divine presence in the tabernacle in these epic sources (Num 12:5). Other manifestations of the deity as fire in epic and other sources (Gen 15:17; Exod 3:2–4; Lev 9:24;

Num 11:1–3; Deut 9:3; 1 Kgs 18:38–39) may ultimately derive from the lightning of the storm and its effects.

The Priestly writer and the Deuteronomistic Historian both preserve this experience of the storm cloud as the form of divine appearances (Exod 24:15–18; 40:34–38; Num 9:15–23; Deut 1:33; 4:9–40; 1 Kgs 8:10–13). In relationship to this image P frequently uses the term "glory" *(kābôd)* to describe the presence of God (Exod 40:34–38; 24:15–20), a term used also by his exilic contemporary Ezekiel (chap. 1). While this term may have its origin in the radiance widely attributed to deities in the ANE, it may more narrowly also derive from the aura of the fiery storm cloud (*CMHE,* 153, 165–69).

Detailed theophanies are not characteristic of prophetic discourse, but where they are described, the thunderstorm lies behind the images chosen (Isa 28:2; 29:6; 30; 27–33; Ezekiel 1; 10; 43; Amos 1:2; Nah 1:2–4; Zeph 1:14–16). In apocalyptic literature, thunderstorm theophany is taken up to describe both the ultimate destruction of evil nations and the bountiful harvests Israel will experience when Yahweh appears to inaugurate the new age (Isa 24:17–25:8; Joel 3; Zech 9; 10:1–2). In Wisdom Literature as well, in particular the book of Job, the thunderstorm is employed to describe the manifestation of God (Job 26:5–14; 38:1; 40:6).

The theophany of Yahweh in the powerful natural phenomenon of the thunderstorm is ritualized in Israel in the iconography present in the divine dwelling, the tabernacle, and later the temple. The chief symbols in both sanctuaries were the cherubim fashioned for the top of the ark (Exod 25:18–22), embroidered into the tabernacle curtains (Exod 26:1), placed in the holiest room of the temple (1 Kgs 6:23–28), and carved into its walls and doors (1 Kgs 6:29–36). The cherubim represented the throne of God and the place of divine presence without equal (Exod 25:20–22; 1 Sam 4:4; 1 Kgs 8:6–13; Isa 6:1–4; Pss 80:1–3—Eng80:1–2; 99:1–5). The cherubim, hybrid creatures composed of the body of a lion with eagles' wings, were common throughout the ANE in royal and religious iconography as representations of the storm god, the lion representing the roar of thunder and the wings representing the storm winds (Jacobsen 1976: 128–29; Albright 1938). The identification of Yahweh's storm cloud with the cherubim in an early royal psalm (18:11—Eng18:10; cf. 104:3) and later in Ezekiel's exilic vision (Ezekiel 1) illustrates the enduring understanding of these cultic figures as representative of the storm theophany of Yahweh.

Other features within the temple representing the appearance of Yahweh as the thunderstorm are the incense cloud and the blast of the trumpet (Beyerlin 1965: 134–35). The Priestly writer closely relates the divine cloud in which the deity appears above the cherubim to the cloud of incense produced by the priestly censer to cover these cherubim (Lev 16:2, 12–13). The epic sources connect the voice of God in the thunder with the blast of the trumpet *(šōpār)* at Mt. Sinai (Exod 19:16–19). Three of the greatest biblical theophanies—those to Samuel (1 Samuel 3), Isaiah (Isaiah 6) and Ezekiel (Ezekiel 1)—are understood best as manifestations of Israel's deity as the thunderstorm represented by its iconography in the sanctuary.

While the cherubim are understood as the divine throne and the cloud of incense as the storm cloud in which the deity is present, no images were fashioned for the sanctuary to represent God's actual form. Images of Yahweh himself were in fact prohibited as a means of divine self-disclosure (Exod 20:4, 23; 34:17; Lev 19:4). Since divine images are the primary means of divine manifestation in other ANE cultures, their prohibition represents a most distinctive characteristic of Israel's understanding of theophany. This rejection of images cannot stem from an identification of God with historical processes instead of with the realm of nature or a sense of God's absolute transcendence of the creaturely world (*ROTT* 1: 212–19; Zimmerli 1963: 234–48), since Israel experienced the manifestation of God within natural phenomena. The rejection of images may represent, rather, a dimension of the demand for exclusive allegiance to Yahweh and a barrier against the syncretistic influences which divine images would introduce. The close link between the First and Second Commandments and the reference to Yahweh's jealousy point in this direction (Stamm and Andrew 1967: 81–88; Exod 20:3–6, 23; 34:11–17).

2. Human Forms. As in the religions of Israel's neighbors, this depiction of the divine in imagery drawn from the natural environment is integrated with imagery drawn from human society. Within the

description of God's appearance as a thunderstorm, the deity is at the same time attributed human characteristics: God has ears, nose, and mouth (Exod 15:8; Ps 18:7, 9, 16—Eng18:6, 8, 15), as well as hands and feet (Exod 15:5; Deut 33:3; Ps 18:10—Eng18:9); God stands and looks (Hab 3:6), marches into battle (Hab 3:12–13), rides a chariot (Hab 3:8, Ps 18:11—Eng18:10), shoots arrows and hurls spears (Hab 3:9, 11; Ps 18:15—Eng18:14); God speaks (Exod 19:3; Deut 33:27) and reveals such human emotions as anger and compassion (Exod 15:7; Hab 3:2, 8, 12). Especially prominent in the psalms is the reference to God's face, which is associated with divine favor. The psalmists seek God's face (Pss 27:7–9; 80:4, 8,20—Eng80:3, 7, 19) and entreat God not to hide his face (Pss 13:2—Eng 13:1; 30:8—Eng30:7).

As a human figure, God is represented in biblical theophanies as assuming roles central to the society of ancient Israel. Storm theophanies characterize Yahweh as warrior (Exod 15:3) and king (Pss 97:1–5; 99:1–5) and in the role of king as lawgiver (Exodus 19) and judge (Ps 94:1–3). The representation of God as a human figure assuming familiar social roles indicates Israel's apprehension of the divine presence within the realm of human culture as well as in the powers of nature. The self-disclosure of God as warrior and king is described in imagery which mirrors these figures in Israelite society and gives expression to the belief that a divine power stands behind Israel's warriors, its leader or king, and the social order they defend and legislate.

As a warrior, God appears as the commander of heavenly armies which wage war against cosmic enemies threatening the orders of nature as well as against historical enemies which threaten Israel's security (Psalm 89). In these historical engagements, the divine warrior is the counterpart of Israel's commander, and the heavenly armies of Israel's own troops (Miller 1973: 74–141, 156; Deut 33:2–3; Hab 3:13). Storm theophanies which picture Yahweh as a warrior thus reveal the presence of divine powers in Israel's wars, fighting with, protecting, and achieving victory for Israel's armies.

As king, God is represented as the supreme power in the cosmos, surrounded by a divine council of heavenly attendants and ministers, a heavenly parallel of the court setting in the Israelite monarchy (Deut 32:7–8; Pss 82:1; 89:8–9—Eng89:7–8; 103:20). Though in one stream of tradition God's manifestation as king precluded a human counterpart (Judg 8:22–23; 1 Samuel 8), for the most part it gave divine legitimation to the rule of the Israelite monarch (Psalms 2; 89; 132). The laws which governed Israelite society were not considered human conventions but divine decrees issued by the heavenly king. Thus the revelation of the law is a crucial part of the theophanies of Yahweh as king (Exodus 19–24; Psalm 132; Isa 2:2–4). The announcement of the divine will is frequently conveyed to individuals in the form of visions or dreams, a phenomenon particularly frequent among the prophets (Jeremiah 24; Amos 7:1–9; 9:1–4; Zechariah 1–6) and later apocalyptic authors (Daniel 7–12).

Members of the divine council, who assist the sovereign God in the administration of divine rule in the world, frequently appear to human beings as divine representatives or messengers (*mal*ʾ*ākîm;* Robinson 1944: 151–57). Appearances of members of the divine council as messengers announcing the divine will, protecting the righteous, and executing divine judgment are common in the old epic sources (Gen 16:7–11; 22:9–19; Numbers 22), in the Deuteronomistic History (Judg 6:11–22; 13:6–9; 2 Sam 24:16–17), and in the psalms (34:8—Eng34:7;148:2). Theophanies in prophetic literature are particularly affected by the conception of the divine council, since the prophets regard themselves as the earthly counterpart to the heavenly messenger conveying to their contemporaries divine pronouncements (Ross 1962: 98–107; Isa 6; 40:1–8; Jeremiah 23; 1 Kings 22).

The theophanic images of Israel's deity which are human in form and representative of specific social roles are almost exclusively masculine. The figure of Yahweh is treated as male grammatically: pronouns and verb forms in theophanic narratives are always in the masculine gender. Furthermore, the primary social roles which Yahweh assumes as warrior, king, and judge are offices ordinarily filled by men. Recent attention has been drawn to feminine imagery also employed in the Bible to picture God (Trible *IDBSup*, 368–69), and to the place of women as recipients of theophanies (Bird 1987: 409). The use of feminine as well as masculine imagery to represent God indicates that the sacred was understood in Israel to encompass both male and female characteristics. Yet theophanic imagery in Israel is predominantly masculine, a circumstance certainly related to the patriarchal character of Israelite society itself. This is

one further representation of the fact that in their description of the unlimited divine reality in its limited manifestation, Israelites employed forms which represented the character of the natural and social worlds with which they were familiar.

THEODORE HIEBERT

THEOPHILUS (PERSON) [Gk *Theophilos* (Θεοφιλος)]. The name, meaning "friend or beloved of God," appears in literature, inscriptions, and papyri of both Jews and gentiles from the 3d century B.C. (*BAGD* 358). In the NT, Theophilus is the only person mentioned to whom writings were dedicated (Luke 1:3; Acts 1:1). Many scholars believe that he was a real person, because dedications of the time customarily referred to real persons. However, this specific person is not easy to identify, and the pseudonym "Theophilus" was probably used to protect this individual from the political authorities. Any number of suggestions have been made about Theophilus' identity: (1) Theophilus, the brother-in-law of Caiaphas; (2) Theophilus, an Athenian official convicted of perjury by the Areopagus; (3) Theophilus of Antioch; (4) Sergius Paulus, proconsul (Acts 13:6–12); (5) Lucius Junius Annaeus Gallio (Acts 18:12–17), the brother of Seneca; (6) Titus Flavius Clemens, the husband of Domitilla and the heir presumptive of Domitian, who may have been executed because of his interest in Christianity; (7) Philo; or (8) Agrippa II (Acts 25:13–26:32; Marx 1980: 18–26). The title which Luke gives Theophilus, "most excellent" (Luke 1:3; cf. Acts 23:26; 24:3; 26:25), suggests that he was a person of social and political prominence, perhaps a Roman governor, procurator, or magistrate, but this is by no means certain (Minear 1973: 133). Very likely, he was a leading figure in the group that Luke was addressing (Maddox 1982: 12).

Among other things, the dedication very probably indicates that Theophilus helped to make the two volumes available to potential readers. In the best of circumstances, as an influential patron he may have

also made a considerable contribution toward this end. But there is no reason to think that Theophilus was a publisher (cf. Goodspeed 1954: 84) or Luke's literary agent, or that he hoped to benefit financially from the sale of Luke's double volume (Vögtle 1971: 41–42).

Through his prefaces, which bear a striking resemblance to two of Josephus' prefaces (cf. *AgAp* 1.1–4; 2.1–2), Luke unites his two volumes, reveals a certain literary intention, and claims through and for Theophilus both a place for Christianity on the stage of world history and a wider audience: Luke–Acts may be addressed to Christians, but there is a universal aspect to the work. In addition, Luke justifies his work for Theophilus by reference to earlier similar writings, his trustworthy sources based on careful research (*Acts* NIGTC 1978: 40–43).

There is a dialogic setting between Luke and Theophilus; thus, even more important than the insoluble question of his personal identity is the question of whom Theophilus represents. This question is closely related to Luke's purpose. Scholars are divided on the question of whether Theophilus was even a Christian (Brown 1978: 107). The main argument against it is that Christians supposedly would not have used a title like "most excellent" for one another. However, this observation seems to be truer of Paul's writings than of Luke's, and there is evidence that Theophilus was a Christian: in Luke 1:1–2, Theophilus is included in the "us" which refers to a domain shared by Luke and Christians. As W. Ong has indicated, while the writer's audience is always a fiction, Theophilus is Luke's implied reader and symbolizes his wider Christian audience (Kurz 1987: 208–12). If Theophilus was expected as patron to assist in making the book available to others, this would suggest that he was a Christian (Marshall 1979: 38). Also, the contents of Luke–Acts do not give the impression that it was specifically addressed to non-Christians, and so "the things about which you have been informed" (v 4 would mean Theophilus' catechetical instruction. This instruction, in all likelihood, did not include the whole content of the gospels in detail but the broad outline of the kerygma, including the ministry, death, and resurrection of Jesus and the coming of the spirit (cf. Acts 10:34–43; Marshall 1983: 296, 302–7). Hence, Theophilus most likely represents a wider Christian audience, and from the prologue we can get an insight into the nature of this audience or community. It was a community which had received some instruction about Jesus but now needed to be reassured of the reliability of this information. Luke's gospel was to help the community recognize this reliability. Moreover, this community saw itself as an eschatological and ecclesiastical "we" (Mussner 1984: 382–92).

Of all of his purposes, Luke clearly mentions only one; namely, when he writes to Theophilus, "that you might know the truth concerning the things of which you have been informed" (Luke 1:4; Minear 1973: 132). However, "truth" may not be the best translation of Luke's *asphaleia.* Most probably, Luke is not speaking only of the truth of historical facts, but also of the belief to which this truth would naturally lead. He has in mind the general anthropological conditions which relate to knowledge and historical experience and provide a basis for one's Christian faith decision (Glöckner 1975: 38–41). Perhaps "reliability" is a better translation of *asphaleia.* Luke wants to provide for Theophilus a reliable account of what Jesus did and taught and of how this was continued in the early Church (cf. Acts 1:1).

THEOPHORIC NAMES. See NAMES, THEOPHORIC.

THEORIES OF TRANSLATION. Any discussion of theories of Bible translating must reckon with the fact that most translations are not accompanied by any explicit statement of the theory or principles involved in the production of the text. As a result, only by analyzing the text can one ascertain the implicit principles. Even when a text does include a statement concerning translation principles, a study of the text often reveals that quite different considerations must have significantly influenced the work of the translators.

In general, the introductions or explanations of the nature of a Bible translation contain not a statement of an underlying theory, but a set of principles which are usually very little more than "rules of thumb." Even when theories of translation are mentioned, they are usually not related to such communicative disciplines as philology, information theory, communication theory, psychology, linguistics, or semiotics, but primarily to matters of text and exegesis explained as corollaries of a theology of revelation and inspiration.

The various theories, either implicit or explicit, which have influenced Bible translating run the entire gamut from the most literal word-for-word renderings to the most paraphrastic interpretative amplifications. Note for example, the Concordant Version (1926) of Eph 2:1–2:

> And you, being dead to your offences and sins, in which once you walked, in accord with the eon of this world, in accord with the chief of the jurisdiction of the air, the spirit now operating in the sons of stubbornness.

And the Amplified New Testament (1958):

> And you [He made alive], when you were dead (slain) by [your] trespasses and sins in which at one time you walked [habitually]. You were following the course *and* fashion of this world [were under the sway of the tendency of this present age], following the prince of the power of the air. [You were obedient to and under the control of] the [demon] spirit that still constantly works in the sons of disobedience [the careless, the rebellious and the unbelieving, who go against the purpose of God].

One might suspect that the various gradations of literalism and freedom in translating would reflect a theological continuum of conservative to liberal, but that is not the case. Some theologically conservative persons are particularly anxious to have strictly literal translations, while many other conservatives are delighted with the highly paraphrastic Living Bible. Conversely, people of theologically liberal persuasion are often pleased with free translations which seem to be more meaningful, but others of this same theological orientation insist on literal translations, since they appear to communicate more of the aesthetic mystery of religious experience.

A brief review of some of the highlights in the history of Bible translating may help in understanding the great diversities in theories and principles used by translators and something of the present situation in which there are so many different translations, especially in English, reflecting so many different points of view.

The most significant of the ancient OT translations is the LXX, which according to tradition was translated by 72 elders for the use of the Greek-speaking Jews in Egypt. In reality, of course, this translation was not done by 72 elders who produced identical texts, but was produced during the 3d and 2d centuries B.C. by a number of different translators employing quite different principles. In some cases, the Greek is painfully literal and awkward, and in other places quite paraphrastic and interpretative. This was, of course, the OT used primarily by early Christians and quoted more in the NT than the Hebrew text itself. Many Jews, however, were not satisfied with the LXX translation and so Aquila produced an

extremely literal translation. This text hardly makes sense in Greek, but is extremely valuable to textual scholars who try to reconstruct its underlying Hebrew text.

Early Latin translations of the LXX and of Greek texts of the NT were for the most part quite literal. As such they were not in accordance with principles of translation which had been proposed by various Roman authors, particularly Cicero, who made a number of meaningful comments on the necessity of producing intelligible and acceptable translations. Because of the unsatisfactory nature of the early Latin translations, Jerome was commissioned by Pope Damasus toward the end of the 4th century to produce a new translation based on the best existing Greek and Hebrew mss. His translation was in a sense quite revolutionary, for it was in the popular form of the Latin language, and as a result his text was known as the *Vulgata.* As with any daring attempt to put the Scriptures into meaningful form, there was a strong reaction against the Vulgate New Testament and only the prestige of Pope Damasus rescued the text and Jerome from serious condemnation.

During the Middle Ages, whatever translations were produced in the Western world tended to be quite literal and were greatly influenced by the Vulgate. But finally at the time of the Reformation Martin Luther produced a meaningful translation of the Bible in German and explained in a remarkable way his fundamental principles of translation in a document entitled *Sendbrief zum Dolmetschen* (1530). The German translation by Luther influenced a great many other translations made during the time of the Reformation and was particularly significant in a number of different translations made into English.

The most important translation in English was the King James Version, which was not designed to be an entirely new text, but to contain the best of existing translations. In view, however, of its extraordinary sensitivity to style, the KJV became widely used and constituted both a base and a model for many translations produced by 19th-century missionaries in different parts of the world.

There is an assumption that there was little or no translating into English between the time of the KJV (1611) and the Revised Standard Version (1953). In reality, however, some 500 different translations of at least one full book (not including translations made in connection with commentaries) were published in English. These translations ranged from very literal to excessively free. During this time, however, some translations were particularly important. One of these was John Wesley's New Testament (1755), which in many respects was ahead of its time, both in the level of language and exegesis. But the person who directly and indirectly influenced Bible translating most during the 19th century was George Campbell, who in 1789 published a translation of the Gospels with an introduction of some 700 pages outlining in detail the principles which should govern the translation of the Scriptures. His book, however, was not as influential as a book published by Alexander Fraser Tytler, who clearly plagiarized Campbell's statement of principles and in 1790 published an *Essay on the Principles of Translation.* Tytler's book was reprinted many times and frequently quoted by those involved in a study of principles and procedures in translating.

Toward the end of the 19th century there was a widespread reaction against the principles of freedom in translating the Scriptures. In certain respects this same tendency greatly influenced translations of secular literature. It is not surprising, therefore, that the Revised Version (1881) made in England and the corresponding American Standard Version (1901) favored quite literal renderings. In many respects the exegesis was more accurate and the textual basis more scientific, but the results were stylistically awkward and neither of these texts obtained wide acceptance.

Prior to World War II, the two most important translations, which were to influence considerably the theory of Bible translation into English, as well as in other languages, were *The Bible: A New Translation* by James Moffatt (1922) and *The Bible: An American Translation* by Smith and Goodspeed (1935). Particularly important was a book by Goodspeed titled *Problems of New Testament Translation* (1945), for in this volume Goodspeed enunciated clearly and effectively the requirements for translation which would be intelligible in terms of content and acceptable in terms of style. Goodspeed was also important in early discussions concerning what later became the RSV (1953). The translations of Moffatt and Goodspeed were both freer than the RSV, which took as its base the KJV and the RV of 1881 and 1901.

Since World War II, there has been an explosion in the number and variety of Bible translations, not only in English but in numerous European languages and in hundreds of languages and dialects

throughout the world. These have ranged from the traditional and literal New American Standard Bible (1960) to the highly literary and relatively free translation of the New English Bible (1970). The New International Version (1978) is a kind of hybrid as far as the theory of translation is concerned. In a number of passages it aims at clarity of statement, and hence uses present-day language, but in passages which are well known by the conservative constituency there is a tendency to revert to traditional terminology, even when it is quite misleading. For example, in Psalm 1:1 "the counsel of the wicked" is likely to be heard as "the council of the wicked" and "stand in the way of sinners" means in present-day English "to prevent sinners from doing or going some place," while in reality the Hebrew refers to "close association with sinners."

Since 1945, considerable attention in translation theory has been given to the production of texts which would be especially meaningful to particular constituencies. J. B. Phillips (1947) produced *Letters to Young Churches* as a way of capturing the attention of young people who could not understand or appreciate more traditional translations, and Today's English Version (known as the Good News Bible) (1976) was published in so-called common language (the overlap between the literary and the colloquial) in order to reach out beyond the Church to a largely secular constituency. Those who have played a particularly important role in the development of present-day theory and practice of Bible translating are Eugene A. Nida and colleagues of the American Bible Society and the United Bible Societies. Translation theory and practice have been described in detail in a number of volumes (see Bibliography) and in *The Bible Translator*, published quarterly by the United Bible Societies since 1950.

The present-day approach to the problems of Bible translating has required a careful consideration of four different disciplines: philology, linguistics, communication theory, and sociosemiotics. All of these approaches to communication are valid in different respects, but all are highly significant for any full understanding of interlingual communication. Based on insights from these different disciplines, the focus of theories of Bible translation has shifted from the context of the author to the understanding of receptors. This does not mean that translators overlook the implications of the historical-cultural context of the original communication, but the correctness of a translation must be judged on how correctly present-day receptors understand the text. Intelligibility, however, is not enough; a text must also be acceptable in such matters as level of language, style, format, and marginal helps.

Special attention must be paid to different constituencies, who employ different levels of language. What is understandable to children may seem unnecessarily simplified for adults, and what may be appropriate for devotional reading or for critical study may be out of place in a liturgical setting. Moreover, one must employ quite different principles of translation depending upon the literary genre represented in diverse biblical texts, for example, lyric poetry (Psalms), didactic poetry (Job, Ecclesiastes), prophecy, laws, history, narrative, letters, and apocalyptic. Furthermore, it seems quite evident that in major languages at least three different kinds of Bible translations are probably necessary in view of the diversity of receptors and differences of use: (1) a traditional, ecclesiastical text which will reflect customary Church usage, e.g., RSV; (2) a translation in common language, such as TEV; and (3) a literary text, such as the NEB. Translations are also being prepared for those who use American Sign Language, which has syntactic and lexical features differing significantly from American English.

A number of significant developments in biblical studies and in attitudes toward communication are of increasing importance in Bible translating. In matters of text most translators are moving away from the tradition of the textus receptus and are prepared to introduce into footnotes most of the significant variants. Similarly, in the case of the OT most translators no longer follow the Masoretic Text (the standard Hebrew text) blindly, for the Qumran evidence has clearly shown the diversity of traditions lying behind the LXX. It is important to note that translators are increasingly willing to indicate the diversities of textual evidence. In some circles this change has seemed to represent an intellectual revolution.

The changes in attitudes toward exegetical matters have been even more pronounced than those involving textual evidence. Rather than attempting to go behind the Hebrew text to discover some underlying meaning, whether on the basis of literary or historical criticism, more and more translators are recognizing the legitimacy of adopting as the exegetical perspective the meaning of the text when it was

evidently recognized as "Word of God" for the believing community. Though the theological bases for a more canonical approach to Scripture do vary widely, the results clearly reflect a greater concern for the meaning of the Scriptures as evidently interpreted by those who participated in the community of faith.

Concern for effective communication has forced translators to focus more on the response of receptors and to recognize that correctness of rendering can only be judged in terms of the way in which the intended audience is likely to understand a text. Translators are no longer content to think merely in terms of source, message, and receptors. They are also concerned with setting, but not just the original setting of the message, but the setting in which the translation is to be employed. How will it be used, by whom, under what circumstances, and for what purpose?

Finally, translators are becoming increasingly aware that the meanings of words and sentences cannot be defined merely by what is to be found in dictionaries and grammars. In addition to designative meanings, syntax and lexical units are filled with all kinds of associative meanings, which in many respects are more important in acceptability of the message than the designative meanings. An old-fashioned style can signal that a text is irrelevant, and a jazzed-up, journalistic rendering of Scripture can make the text appear to be nothing but cheap propaganda. Words and idioms have far more meaning than most dictionaries suggest. There are hosts of associative meanings clinging to lexical units—those resonances of usage which are hard to define but clearly evident in people's subjective reactions to any text. In English the term *righteous* seems to be too closely connected with *self-righteous* and *sanctification* sounds too much like *sanctimonious.* Semantic contamination or infiltration, whether positive or negative, is a constant concern of any sensitive translator.

The rate of Bible translating throughout the world is greater than it has ever been in history. Translating is actually going on in well over 1,500 languages, including many languages which have only recently been reduced to writing. Major revisions, or even new translations, are also being undertaken in most major languages throughout the world. Increasingly this work of Bible translating is not being done by missionaries but by trained nationals, who under the guidance of consultants can do a much better job of translating into their own mother tongue than anyone can do in trying to render the Scriptures into a foreign language. These translations are also having a highly significant impact on the growth of churches in the Third World.

THERAS (PLACE) [Gk *Thera* (Θερα)]. An alternate form of the name AHAVA (PLACE).

THESSALONIANS, FIRST AND SECOND EPISTLES TO THE. There is little doubt that 1 Thessalonians, the 13th book in the NT canon, is an authentic letter written by the apostle Paul to the Christian community at Thessalonica in Macedonia. It is the oldest document contained in the NT. However, a growing number of scholars doubt that 2 Thessalonians, the 14th book in the NT canon, was actually written by the apostle Paul himself; rather, it appears that it was written by an unknown Paulinist who used 1 Thessalonians as a model to address a new situation in Macedonia.

1 THESSALONIANS

A. Outline and Structure

The First Epistle to the Thessalonians has three major parts. The first major part (1:1–5) is the opening, which includes a greeting and opening thanksgiving. The second major part—the body of the letter—itself can be subdivided into two sections. In the first section (through chap. 3) Paul recounts his interactions with the Thessalonian church, stressing his integrity while proclaiming the gospel among them, and his ongoing concern for them after he had moved on. In the second section (or Great

Paraenesis, 4:1–5:24), Paul exhorts the Christians of Thessalonica to live in a way that pleases God, aware that Christ may return at any moment. A final greeting, adjuration, and benediction (5:25–28) constitutes the third major part of the letter.

1 Thessalonians has an unusual but effective structure. The letter opening (1:1–5) follows the normal pattern of greeting and thanksgiving, as does the letter conclusion (greetings and benediction, 5:23–28; Boers 1976: 140). Paul regularly includes in his opening thanksgivings material related to the congregation he addresses. Scholars debate whether the thanksgiving belongs to the letter opening (as above) or to the letter body, and whether 1:6–10 is part of the thanksgiving. The outline given above treats 1:6–3:13 and 4:1–5:24 as the major units of the letter body. Boers (1976) argues that the intermediate thanksgiving (2:13–16), an unusual unit in the center of a section, is an interpolation. He divides the letter body into thanksgiving (1:2–10), apostolic apology (2:1–12), apostolic parousia (2:17–3:12), and exhortation (4:1–5:22).

B. Authorship, Literary Form, and Genre

1 Thessalonians names Paul, Silvanus, and Timothy as its writers (1:1). Though the letter is written in the first person plural throughout, Paul's viewpoint is consistently preeminent (cf. 2:1–11: the character of the initial preaching and manual labor; 2:18: Paul's desire to visit; 3:1: Paul alone in Athens). There is nothing to suggest that either Silvanus or Timothy participated in the writing. Scholars universally affirm that Paul is the actual writer of the letter.

Ancient epistolary theorists talk about both letter style and letter types (Malherbe 1988: 12–15, with ancient texts). 1 Thessalonians is an authentic letter, not a technical treatise, giving a real communication. Its subsections correspond to various letter types (1:2–10: friendly; 2:1–12: apologetic), but Malherbe (1988) has argued convincingly that the entire letter uses hortatory motifs and techniques and falls into the "admonishing letter" type (Pseudo-Demetrius *Epistolary Types* 7) or the "encouraging letter" (Pseudo-Libanius *Epistolary Styles* 83). Using ancient rhetoric as a guide, Kennedy (1984: 142) identifies 1 Thessalonians as a deliberative letter, a rhetorical analysis close to Malherbe's letter-style identification in spirit, but Jewett (1986: 71–78) characterizes 1 Thessalonians as an epideictic text and provides an outline based on the rhetorical analysis of an oration.

C. Origins and Social Setting

Thessalonica was the capital of the Roman province Macedonia. It was essentially a Greek city with early devotion to the cult of the Roman emperor. Acts 17:1–9 narrates Paul's initial missionary activity in Thessalonica. Paul travels there from Philippi along the Via Egnatia through Amphipolis and Apollonia. Paul preached Jesus as the Anointed One *(christos)* for three Sabbaths in the synagogue. His success among the non-Jewish worshipers of God stirred up opposition among the Jews, who accused him of anti-Roman propaganda to the politarchs (chief officials in the administration). Lüdemann (1989: 185–88) argues that the preaching in the synagogue (Acts 17:2–3), the conversion of some Jews (17:4), and the rebellion of others (17:5–9) are all part of the Lukan redaction and are not historical. On the other hand, the travel itinerary of Acts, the conversion of Greeks, and the trial of Jason rest on good historical tradition.

Some data in 1 Thessalonians agree with the Acts narrative. 1 Thess 2:2 refers to Paul's initial preaching occurring after mistreatment in Philippi. But nothing in the letter suggests a Jewish element in the congregation. 1 Thess 2:14 (if authentic) implies that the church was wholly, or at least largely, non-Jewish in composition. The only mention of Jews in 1 Thessalonians (2:14–16) refers to the Jews who "killed Jesus and the prophets, persecuted us, do not please God, and are opposed to all people," clearly non-Christian Jews in Palestine and Jerusalem. The description of the initial proclamation (1:9–10), the advice about life in the city (4:10–12), the eschatological message (4:13–5:11), and the paraenesis about life inside the church (5:12–22) fit well into a Greek city (Malherbe 1987; Krentz 1988). The new congregation in Philippi sent Paul money twice (Phil 4:16) while he was at Thessalonica, which implies a longer stay than the two weeks of Acts 17:2. Other than that, Paul did some form of work to support himself (1 Thess 2:9) while in Thessalonica.

After leaving Thessalonica Paul came to Athens. Unable to revisit the Thessalonians, he sent Timothy north to get information about the conditions in the congregation (3:1–2) and to solidify them by exhortation to remain firm in persecution (3:2–3). Timothy's return with good news about their fidelity and their warm friendship for Paul occasioned the letter. Paul does not write to combat a theological aberration in the church at Thessalonica. There is none. His purpose is to strengthen the congregation by reminding them of his initial proclamation and by reinforcing the exhortation he had given them on the founding visit (4:1–2).

Recently scholars have stressed different aspects of Thessalonian history and culture as the social setting in which to place Paul's thought in 1 Thessalonians. Malherbe (1987) argues that the role of the philosophic teachers of ethics, especially as portrayed by Dio Chrysostom, illuminates Paul's self-description in 2:1–12 and the paraenesis in 4:1–12. Donfried (1985) stresses the significance of the cults of Dionysus and Cabirus for understanding Paul's discussion of sexual morality (4:1–9) and the civic cults for understanding the unique eschatology in 4:13–18 and the affliction present there. Jewett (1986) using the categories of modern sociology, interprets the Thessalonians as members of a millennial cult which Paul must fight. Krentz (1988) more generally calls attention to the character of a Greek polis as the matrix for interpretation. We still await a definitive answer.

D. Authenticity and Integrity

Though scholars accept the Pauline authorship of 1 Thessalonians, in spite of attacks on its authenticity by K. Schrader and the school of F. C. Baur in the 19th century, some question its integrity or regard two paragraphs, 2:13–16 and 5:1–11, as interpolations. Collins (1984: 96–135) summarizes the recent, inconclusive discussion.

Pearson (1971) identifies 2:13–16 as an interpolation because the paragraph interrupts the argument, introduces an unnecessary thanksgiving at an inappropriate location in the letter, contradicts Paul's hope for the Jews in Rom 11:25–32, and reflects a situation of persecution after A.D. 70. In evaluating his arguments, Davies (1977: 6–9) concludes that Paul was still working out his view of non-Christian Judaism. Donfried (1984) points out that 2:13–16 does not interrupt the argument, but takes up the themes of imitation and affliction announced in 1:6–9. Gilliard (1989) suggested a new solution: Paul only condemns the Jews doing the specific acts named in the restrictive participial modifiers in 2:15–16. He does not condemn all Jews. The rejection of 5:1–11 as an interpolation by a writer of the Lukan school who sought to correct false inferences drawn from 4:13–18 was proposed by Friedrich (1973). He based his opinion on the presence of traditional motifs of early Christian paraenesis and vocabulary not common in Paul. His suggestion has not won general acceptance (see Rigaux 1975).

Theories suggesting the combination of two or more authentic letters were offered by Eckart (1961), Schmithals (1964), and Demke (1973), among others. Differing from one another in general and detail, they have not gained general approval. Kümmel (1962) subjected Eckart's proposal to detailed analysis, while Collins (1984: 106–9, 114–35) and Marshall (*1–2 Thessalonians* NCBC, 13–16) critique the major proposals.

E. Historical Significance

1 Thessalonians is the oldest document in the NT. It offers the earliest direct insight into the early Christian mission and the life of an early, fundamentally non–Jewish-Christian church. It also contains the oldest summary of Paul's missionary proclamation to a non-Jewish community (1:9–10). Paul called the Thessalonians to turn away from the worship of images of gods to believe in and serve a God who is alive and authentic. Paul stresses that the gospel is the gospel about this God (the "word about God," 2:13; the "gospel about God," 2:2, 8, 9), who has demonstrated that he is authentic and alive by raising Jesus from the dead.

Paul's earliest proclamation also included exhortation about a lifestyle that corresponded to this call to faith (4:1–2). He had handed on to the Thessalonians "how they were to live and please God" (4:2). The standard of action and judgment is "the will of God" (4:3). Disregard the brother in sexual misconduct and God will carry out the judgment against the transgressor (*ekdikos,* 4:6), since misconduct "disregards the God who gave the Holy Spirit" (4:8). Thessalonians are "taught by God" (a single Greek word, unique

in the NT, 4:9) to love one another. Because God has destined them for the possession of salvation, they are to exhort one another (5:9–11). Paraenesis is oriented to God, not the Spirit or Christ. Indeed, the Spirit is almost absent from this letter, and baptism and the Lord's Supper are not mentioned.

Paul also uses early traditional christological formulas. Havener (1981) identifies three christological passages: 1:10, 4:14, and 5:9–10. The first mentions Jesus' resurrection by God, but not his death, and stresses his rescue of the Thessalonians from future wrath. The second (4:14) states that the Thessalonians believe that Christ died and rose as the basis for their certainty of the future resurrection, while 5:9–10 states that the formula "who died on our behalf" is the basis for the conviction about future salvation (Rigaux 1975). Paul makes no use of Jesus' death in this letter. He stresses that the resurrection made him the Lord who will come as deliverer (1:10; 4:13–17). 1 Thessalonians uses *parousia* (the technical term for the arrival of a ruler) to describe Jesus' coming as Lord, the future deliverer, more than any other Pauline letter. The language is borrowed from the ANE ruler cult to proclaim Jesus as Lord.

Some language and modes of argumentation frequent in the later letters are totally absent. There is no use of the OT or any reference to any of the great OT figures (Abraham, Moses, David, the prophets), any great events in Israel's history (Exodus, kingship, Exile), or any of its cultic institutions (temple, priesthood, sacrifice). There is no reference to the Torah and, consequently, no language of justification. Paul does not refer to baptism or the Lord's Supper. There is no developed description of the Church as the body of Christ or the Israel of God. Christians are not described as living "in Christ" or "by the Spirit." Paul's theological and linguistic resources in this letter differ from the later ones. That does not mean his thought is impoverished; it is simply different, fitted to the church he addresses.

The Thessalonian church has only informal leadership (5:12). There is no trace of any clerical office. Thessalonians are encouraged to support one another by admonishing, encouraging, and enduring one another (4:14). Even their worship appears unstructured. 1 Thess 5:16–22 suggests common prayer. Spirit-filled prophecy (5:19–20), which is encouraged, must be put to the practical test of whether it leads to good or not. The Thessalonian church still lives in the spontaneous joy (1:6; 5:16) that does not require ecclesial structure to endure.

1 Thessalonians, so far as we know, is the first Christian letter. It sets the pattern for Christian letter writing that goes beyond the NT into the life of the early Church (the Apostolic Fathers). Koester (1980) calls it an "experiment in Christian writing" that influenced the subsequent Church.

2 THESSALONIANS

A. Outline and Structure
B. Origin of the Letter
1. Historical Situation Presumed
2. Theories Assuming Authenticity
3. Theories Assuming Pseudonymous Authorship
4. Reconstruction of Historical Origin

A. Outline and Structure

Like 1 Thessalonians, 2 Thessalonians has three major parts. The first major part (1:1–2) is the opening greeting. The second major part—the body of the letter (1:3–3:16)—itself can be subdivided into three sections. The first section (through chap. 1) is a prayer of thanksgiving for the steadfast faith of the church at Thessalonica. In the second section (2:1–3:5) the writer addresses the problem confronting the church: the excitement over the supposed revelation of the imminent Parousia (return) of Christ. The third section (3:6–16) addresses the issue of lifestyle: the Christians are encouraged not to fall into disorderliness and idleness but rather to follow the example of Paul, who worked while he lived and preached among the Thessalonians. The third major part of the letter is the closing (3:17–18).

2 Thessalonians resembles 1 Thessalonians in structure and content (Milligan 1908: lxxxi–lxxxii). Bailey (1978: 133) represents this similarity in a brief table:

	2 Thessalonians	1 Thessalonians
A. Letter opening	1:1–12	1:1–10
1. Prescript	1:1–2	1:1
2. Thanksgiving	1:3–12	1:2–10
B. Letter body	2:1–16	2:1–3:13
1. Thanksgiving in the middle	2:13	2:13
2. Benediction at the end	2:16	3:11–13
C. Letter close	3:1–18	4:1–5:28
1. *Paraenesis*	3:1–15	4:1–5:22
2. Peace wish	3:16	5:23–24
3. Greetings	3:17	5:26
4. Benediction	3:18	5:28

The salutation in the two letters is almost identical, describing the recipients as "the church of the Thessalonians," naming the inhabitants rather than the city, as Paul does elsewhere (1 Thess 1:1; 2 Thess 1:1). Both letters begin with a long thanksgiving. Both also have thanksgivings for the Thessalonians in the middle of the letter body (Krodel [1978: 77] speaks of "two thanksgivings"), a feature found in no other Pauline letter. The letter body in each closes with a request to God expressed by a volitive optative (each uses the optative verb form *sterixai* and the phrase *hymon tas kardias* as direct object, a combination found nowhere else in Paul). Each letter concludes the paraenetic section with a request that the "God [Lord] of peace" do something (1 Thess 5:23–24; 2 Thess 3:16). Both include petitions that use the verb *kateuthynai* (though in different contexts, 1 Thess 3:11; 2 Thess 3:16), found nowhere else in Paul. Both letters describe the situation of the Thessalonians in the context of the opening thanksgiving (1 Thess 1:6–10; 2 Thess 1:4–6). Their structure, as Bailey makes clear, is similar.

Neither letter identifies Paul as an apostle in the prescript. Both letters describe Paul's manual labor in Thessalonica in similar wording (1 Thess 2:9; 2 Thess 3:8) and urge the Thessalonians to imitate him in

doing manual labor (1 Thess 4:11; 2 Thess 3:12) in quietness or tranquillity *(hēsychia).* They use the same form of appeal (*erōtōmen [de] hymas,* 1 Thess 4:1; 2 Thess 2:1), a locution that occurs elsewhere in Paul's letters only in Phil 4:3. Both have extensive sections dealing with matters of eschatology (1 Thess 4:13–5:11; 2 Thess 1:6–2:12), though the one in 2 Thessalonians appears in the opening thanksgiving and forms the body of the letter, while the one in 1 Thessalonians occurs in the paraenesis. Both letters use motifs and expressions that do not occur elsewhere in Paul.

Rhetorical criticism is a recent development in the study of 2 Thessalonians. Scholars agree that 2 Thessalonians belongs to the deliberative genre of rhetoric. Holland (1988: 6, a revision of his 1986 dissertation) states that its constituent elements are exhortation and dissuasion. The author exhorts his readers to "obey the Pauline tradition" and dissuades them from "heeding the false proclamation that 'the Day of the Lord is here' (2:1–2)." Jewett (1986: 82, referring to Holland's dissertation) argues that Paul seeks to persuade the Thessalonians "to take some action in the future" that relates to their "self-interest and future benefits," in this case "a reassessment of the eschatological expectation and a stiffened policy toward the 'disorderly.' " Hughes (1989: 73–74, a revision of his 1984 dissertation) supports this genre identification by comparing 2 Thessalonians to Demosthenes' *Epistle* 1 in structure and topics treated; its goal is "to refute those who say, 'whether by spirit or *logos* or a letter as from us, that the Day of the Lord has already come.' "

They all analyze the letter into the five constituent parts of an oration (bounded by an epistolary prescript and postscript): exordium, narratio (or partitio), probatio, exhortatio, and peroratio (see RHETORIC AND RHETORICAL CRITICISM), but their identification of these sections in the letter differs. Their rhetorical analysis leads to differing statements of the goal of the letter because they identify the narratio (or partitio, the statement of the theme) differently. Jewett places 3:1–5 into the probatio (or proof by argument), while Holland and Hughes both regard it as part of the exhortatio. Hughes places the peroratio *before* the exhortatio because he does not regard it as a constituent part of deliberative oratory, but a contribution of ancient letter theory (1989: 63).

Rhetorical Analysis of 2 Thessalonians

Rhetorical section	Holland (1988: 8–33)	Jewett (1986: 82–85)	Hughes (1989: 68–73)
Exordium	1:3–4	1:1–12	1:1–12
Narratio (partitio)	1:5–12	2:1–2	2:1–2
Probatio	2:1–17	2:3–3:5	2:3–15
Exhortation	3:1–13	3:6–15	3:1–15
Peroratio	3:14–16	3:16–18	2:16–17

B. Origin of the Letter

1. Historical Situation Presumed. The contents and historical situation presupposed in 1 Thessalonians influence all decisions about the origins of 2 Thessalonians. 2 Thessalonians claims the same authors as 1 Thessalonians: Paul, Silvanus, and Timothy (2 Thess 1:1; 1 Thess 1:1). However, Paul himself is the major figure, as is clear from 2 Thess 3:7–10 (the same is true in 1 Thessalonians, as 2:17–3:10 makes clear). "Improper and evil people" are impeding Paul's (their?) missionary work (2 Thess 3:1–2). However, the letter gives no additional information about Paul's situation, present location, or future plans. The only additional detail the letter provides is a reference to the signature in Paul's own hand in the letter conclusion, "which is a sign in every letter; that is the way I write" (2 Thess 3:17). 1 Cor 16:21, Gal 5:11, and Philemon 19 also refer to Paul's own handwriting in the letter conclusion; however, they do not identify it as a mark of authenticity.

The letter addresses the Thessalonians, who are undergoing severe persecution (2 Thess 1:4, 6–7). 2 Thessalonians does not name the persecutors or identify them ethnically (contrary to 1 Thess 2:14–17, which identifies the oppressors as "members of the same tribe" *[symphyletōn]*). They are simply identified as "those who do not know God and do not obey the gospel" (2 Thess 1:8; cf. 2:12). That persecution dominates the letter, which is essentially a one-theme document. The Thessalonians expect

the Parousia of Jesus to occur very soon on the basis of Christian prophetic teaching (cf. 2:2; *dia pneumatos*), a theological argument *(logos),* or a letter claiming Pauline authorship (2 Thess 2:2). The letter does not indicate how the writer obtained information about the situation in Thessalonica. There is reference to earlier eschatological teaching (2 Thess 2:5) and instruction in living (2 Thess 3:6, 10). The historical situation is vague.

Collins (1988: 223–24) points out that it is the "necessary proximity of the composition of 2 Thessalonians to 1 Thessalonians in the event of Pauline authorship of both letters which constitutes the problem of 2 Thess 2:2." Collins' analysis can be generalized. Any historical reconstruction of the origin of the two letters must account for the linguistic and structural similarity of the two letters if written in a brief time span, while also recognizing the differences in historical situation, in eschatological outlook, and in their christology and soteriology.

2. Theories Assuming Authenticity. Until the end of the 18th century readers assumed the Pauline authorship of 2 Thessalonians. Attestation of the letter is early and as strong as for other Pauline letters. Pol. *Phil* 11:3 refers to 2 Thess 1:4 and Pol. 11:4 apparently refers to 2 Thess 3:15. The Muratorian Canon lists it among the Pauline letters. It was cited by Justin Martyr (*Dial.* 110), the Epistle of Vienne and Lyons (Eusebius *Hist. Eccl.* 5. 1), Irenaeus (*Haer.* 3.7.2), and Tertullian (*de Res. Carnis* 24). Although Chester Beatty Papyrus 2 (P^{46}) does not include any of 2 Thessalonians, possibly because of its fragmentary preservation, Codex Sinaiticus, Codex Vaticanus, and Codex Alexandrinus, the earliest uncials, do. While most contemporary scholars no longer argue for Pauline authorship, those who do account for Paul's authorship in one of three ways.

a. Interpretations Assuming the Priority of 1 Thessalonians. Marshall (1983: 24–25) argues that the situation in 2 Thessalonians is easily accounted for as a development of the situation in 1 Thessalonians. 1 Thess 2:14–16 shows that intense persecution was already present. 2 Thessalonians reflects the growth of the opposition. The expectation of the Parousia in 1 Thess 4:13–18 could easily lead to seeing signs of the end of the world, while 1 Thessalonians also suggests that some members of the church "were living in idleness." The situation could develop quite rapidly. He also argues that "purporting to be from us" (*hōs di hēmōn,* 2 Thess 2:2) is not a reference to a spurious letter, but a phrase modifying all three items mentioned before; it refers to "whether the message attributed to Paul was a faithful representation of his teaching" (1983: 187), and that 2 Thess 3:17, the "mark" of Paul's own handwriting, is not designed to distinguish this letter from a spurious letter of Paul in circulation at Thessalonica, but to underline "the importance of the contents in each of his letters" (pp. 231–32).

Best (1972: 56–59) and Bruce (*Thessalonians* WBC) both support this position, though a bit more hesitantly than Marshall. Jewett (1986: 3–18) surveys the arguments against authenticity to conclude that the evidence is equivocal, but tilts in favor of authenticity. He accounts for the differences in emphasis by constructing a millenarian model of Thessalonian Christianity that would account for the misunderstanding of Paul's first letter that led to the situation described in 2 Thessalonians (1986: 161–92).

b. Inverted Order Solutions. Manson (1952–53: 268–78) brought back into the modern discussion a theory first proposed by H. Grotius, namely that Paul wrote 2 Thessalonians before 1 Thessalonians. Manson argued that the troubles in Thessalonica are present in 2 Thessalonians, but past in 1 Thessalonians (pp. 269–72); that the internal difficulties in 2 Thess 3:11–12 are a new development, but completely familiar to all in 1 Thessalonians (pp. 272–73); that the emphasis on the autograph close (2 Thess 3:17) is "pointless except in a first letter" (pp. 273–74); that the statement in 1 Thess 5:1 (that the Thessalonians do not need instruction about the times and seasons) is to the point if 2 Thessalonians 2 is already known; and that 1 Thess 4:9–5:11 introduces three didactic sections with the formula "Now concerning …," where Paul must be replying point by point to questions raised by the Thessalonians, either by letter or through Timothy. As Marshall (1983: 26) comments, this "interesting theory has failed to gain support."

c. Different Recipients. The same is true of theories that Paul wrote 1 Thessalonians and 2 Thessalonians to different audiences in the Thessalonian church. Harnack proposed that 1 Thessalonians

went to the gentile Christians, 2 Thessalonians to the Jewish Christians (cf. Best 1972: 38–39), while Dibelius (1937: 57–58) held that Paul wrote to different circles at Thessalonica, tentatively suggesting that 1 Thessalonians went to the community leaders while 2 Thessalonians was intended for liturgical reading. All such theories founder on lack of textual evidence for such partial audiences inside the Thessalonian church (see Marshall 1983: 26–27).

3. Theories Assuming Pseudonymous Authorship. Scholars in growing numbers argue against Pauline authorship in favor of authorship by an unknown Paulinist who used 1 Thessalonians as a model to meet a new situation in Macedonia.

a. History of Scholarship. J. E. C. Schmidt first proposed pseudonymous authorship in 1798 (Trilling 1972: 13, with reprint of the key pages of Schmidt's work, 1972: 159–61). He challenged the authenticity of 2 Thess 2:1–12 on the basis of its eschatology. In 1892 Holtzmann (pp. 213–16) summed up the arguments against authenticity after 90 years of scholarship: no anti-Jewish polemic as in the authentic Pauline letters; non-Pauline form of the language; basically an expansive repetition of parallels from the first letter; no OT citations. Wrede (1903) introduced a new stage into the research by providing evidence for the literary dependence of 2 Thessalonians on 1 Thessalonians in language, order of motifs, and structure. He formulated the questions that dominated scholarship down to 1972 (see Jewett 1986: 35ff.; Collins 1988: 212–13), even though the majority of scholars still held to Pauline authorship. Trilling's *Untersuchungen* (1972) ushered in the third stage of discussion, in which more and more scholars incline to pseudonymous authorship, e.g., Bailey (1978), Krodel (1978), Lindemann (1977), Collins (1988), Holland (1988), and Hughes (1989). Trilling supported his historical reconstruction in his 1980 commentary. Krodel and Collins provide convenient summaries of the cumulated argumentation.

b. Linguistic-Literary Evidence. (1) Vocabulary. Vocabulary statistics are deceptive. Of the ten hapax legomena in 2 Thessalonians five occur in the LXX; the other five are not unusual (Milligan 1908: liii). Bornemann (1894: 471) suggests that the vocabulary of 2 Thessalonians is close to that of Luke–Acts, a suggestion supported by an examination of the eleven words that are Pauline hapax legomena in 2 Thessalonians but occur elsewhere in the NT, and the five that occur only in the Deutero-Pauline Ephesians and Pastoral Epistles. There are also a series of Pauline terms that are completely absent from 2 Thessalonians: *agapētos, aiōn, hamartia, an, anēr, apothnēskō, apostolos, ginōskō, gnō rizō, egeirō, egō, ethnos, zēteō, kalos, kerykssō, laleō, mallon, men, nekros, polys, syn, sōma, teknon, tis.* The particles and prepositions are especially important. *Thessalonikeus* (1 Thess 1:1; 2 Thess 1:1) and *euthynō* (1 Thess 3:11; 2 Thess 3:5) are the only terms that occur in both Thessalonian letters, but nowhere else in Paul. The former is striking, because it is the only time Paul uses the term for the inhabitants of a city rather than the city name. Such word statistics allow no firm conclusions.

2 Thessalonians uses a number of terms in a sense unusual for Paul. Gk *thlipsis* ("suffering") is viewed as the basis for the retribution of the persecutors in 2 Thess 1:4–6, but as confirmation of the Thessalonians' election in 1 Thess 1:6–10. Paul regards the *basileia tou theou* as present in Rom 17:17, 1 Cor 4:20 and 1 Thess 2:12, but future in 2 Thess 1:5. (Paul does regard it as future in the phrase "inherit the kingdom," 1 Cor 6:9, 10; 15:50; Gal 5:21.) 2 Thess 1:7 uses *apokalypsis* of Jesus' Parousia (cf. 1 Cor 1:7), while elsewhere Paul uses it of the wrath of God (Rom 2:5), of some specific item of information (1 Cor 14:6, 20; Gal 1:12; 2:2), or of mystical experience (2 Cor 12:1, 7). Gk *klēsis* has a future orientation in 2 Thess 1:11 (without any tie to baptism), while 1 Thess 4:7 uses it of Christian life in the world. Paul usually relates "calling" to baptism (Gal 1:6, 15; 5:13; 1 Cor 1:26; 7:20).

Unusual turns of phrase are more significant. Frame (1912: 32–34) presents an extensive list of such phrases and turns of thought in 2 Thessalonians, which Trilling (1972: 49–50; cf. Rigaux 1956: 85–87) presents in a convenient format. While Frame claims that the apocalyptic subject matter accounts for many of them, Trilling more persuasively claims that recurring features of style in 2 Thessalonians better account for them: figures of speech, recurrent parallelism (see Trilling 1972: 52–53), and frequent plerophory.

(2) Literary Style. 2 Thessalonians has a distinctive style for such a short letter. On the one hand, it betrays few of the characteristic stylistic features of the authentic Pauline letters described by Weiss

(1897: 5): individual, short sentences, rarely formed into periods, even when clauses are introduced by *hoti, hina, hopōs, hōste, etc.*; asyndetic clauses or clauses joined by the copula or antithetical or comparative particles; frequent appositions; infrequent genitive absolutes. In short, this is the style of the Cynic-Stoic diatribe. Such style uses much figurative language drawn from daily life, with frequent address to the readers.

2 Thessalonians is different. Some things characteristic of Paul's style are missing. There are no parenthetic expressions, no play on prepositions (cf. Gal 1:11, 12; Rom 11:36), and no initial or end rhyme (except for the one possibility in 2 Thess 2:17). Rigaux (1956: 90) gives an extensive list of pictorial language drawn from daily life in 1 Thessalonians, but finds only two examples of pictorial language in 2 Thessalonians: "rest" in 1:6 and the Word of the Lord "running" in 3:2, a sure indication of nonauthenticity for Trilling (1972: 56). The sentence structure is different. 2 Thessalonians has long sentences (1:3–12; 2:5–12; 3:7–9), formed of elements joined like links in a chain ("kettenartige Verknüpfung," von Dobschütz 1909: 42). 2 Thessalonians frequently repeats terms or expressions in identical form or a slight variant, a mark of the letter's "poverty of expression." Trilling (1972: 62–63) gives a long list that demonstrates this as a distinctive mark of style of 2 Thessalonians. This pleonastic style also led to the frequent use of parallelism, in 2 Thessalonians most frequently synonymous, more rarely synthetic, almost never antithetical. Trilling (1972: 52–53) gives a long list of such passages. Krodel (1978: 82–83) translates part of the list into English and comments that these parallelisms are "all the more important when we recognize their sparsity in 1 Thessalonians." Weiss (1897: 12–13) points out that Paul himself most frequently used antithetical parallelism, a basic element of his theological thought.

Rigaux (1956: 89) called attention to Paul's development of thought by triadic groupings in 1 Thessalonians. He identified sixteen such triads. But 2 Thessalonians has only one such triad (2 Thess 2:9). This is striking in view of 2 Thessalonians' tendency to pleonasm, fullness of expression, seen in compound verbs when the simplex would do (2 Thess 1:3, 4, 5, 10), in the frequent use of *pas, pantes, en panti tropō,* the use of substantive chains, and the use of hendiadys (2 Thess 2:4, 17; 3:8, 12; Trilling 1972: 58–60). A comparison of the paraenetic sections of the Thessalonians letters makes this clear. 1 Thess 4:4–10; 5:1–11 are formed of short sentences, while 5:14–22 is a series of short, asyndetic imperatives. 2 Thessalonians is different: there are only two short sentences in its paraenesis (2 Thess 3:2b, 17) and four paraenetic imperatives (2 Thess 2:15; 3:13, 14).

(3) Verbal Similarity. Bornemann (1894: 473) already pointed out that the similarity of 1 and 2 Thessalonians went far beyond structure to include "sequence of thought, clauses, turns of phrase and expressions." Wrede (1903: 3–36) provided massive documentation by presenting the parallels in tabular form, by showing that every paragraph in 2 Thessalonians has a conceptually related section in 2 Thessalonians. He demonstrates that these significant parallels occur in the same order in both letters. (Many of the linguistic similarities are listed in the paragraphs above.) They are not dependent on a specific historical situation in the congregation addressed. Wrede finally concludes in an impassioned paragraph (pp. 29–30) that the coincidence of memory or historical situation is not adequate to explain the similarity.

(4) Lack of Personal Warmth. Commentators point to the striking difference in tone between 1 and 2 Thessalonians. 1 Thessalonians is written with warmth. Paul's affection for his readers is clear. He recalls their reception of the gospel in a time of great pressure (1 Thess 1:6) and their open announcement of the gospel to others (1 Thess 1:8) so that their faith was known throughout Achaia as well as Macedonia. When separated from them, he felt the loss, repeatedly striving (in vain) to visit them (1 Thess 2:17–18). His affection for them led him to send Timothy N from Athens so that he was bereft of companionship there (1 Thess 3:1–2). And when Timothy returned with the good news of their fidelity in faith and their enduring affection for him, Paul becomes lyrical in his joy (1 Thess 3:7–10). The tone of 2 Thessalonians is quite different. Bornemann (1894: 468; cf. Trilling 1972: 63) spoke of the letter's consistent impersonal, official tone, closer to prophetic speech than to a true letter. For example, in both thanksgivings 2 Thessalonians uses *opheilomen* with *eucharistein* ("we ought to give thanks," 2 Thess 1:3; 2:13). The opening thanksgiving is impersonal in tone. While *adelphoi* ("brothers") is found eighteen

times in 1 Thessalonians, it occurs in 2 Thessalonians "only when it is part of a structural formula or when it is taken over from 1 Thessalonians" (2 Thess 1:3; 2:1, 13, 15; 3:1, 6, 13; Collins 1988: 222). 2 Thess 3:6 introduces the paraenesis with the verb "we order" (*paraggelomen,* cf. 3:4, 10, 12), not "we beseech" *(parakaloumen),* as in 1 Thess 4:1 (cf. 4:10; 5:11, 14). The relationship between writer and readers differs from that in 1 Thessalonians.

In short, while the structure and language of 2 Thessalonians are in many respects close to 1 Thessalonians, there are significant differences in vocabulary, rhetoric, and tone. Such differences call for explanation.

c. Theological Arguments. 2 Thessalonians introduces no new themes into the Thessalonian correspondence. But there are many differences in theological emphasis or nuance that suggest the writer differs from Paul in theological outlook and probably comes from a later age.

(1) Eschatology. 2 Thessalonians is the only Pauline letter in which eschatology is the major topic. Its eschatology, strongly apocalyptic in language and outlook (Giblin 1967), is a response to the persecution undergone by the readers (2 Thess 1:4). 2 Thessalonians exhorts the readers to fidelity and endurance by pointing out that God's justice (2 Thess 1:5) leads inevitably to the condemnation of the oppressors and the vindication of the faithful at the revelation of the Lord Jesus. Jesus will "execute vengeance on those who do not know God" (2 Thess 1:8–9), a point reinforced in 2 Thess 2:11–12. 2 Thess 2:1–12 reinforces the need to remain faithful by pointing out that a series of events must take place before the Parousia of Jesus can happen. The persecution will grow worse as the opposition develops in intensity. The "Man of Lawlessness, the son of destruction" (2 Thess 2:3) must appear first. He will be a parody of the Lord, whose Parousia, accompanied by false signs and acts of power and miracle, will deceive and lead to destruction all those who "do not receive the love of the truth in order that they might be saved" (2 Thess 2:9–10).

Paul elsewhere makes use of apocalyptic motifs and language, but without such a consistent apocalyptic schema of events. He speaks of the present age and the coming age (Gal 1:4) and sets out in 1 Cor 15:21–28 a periodization of events that lead to the resurrection of believers. In 1 Thessalonians he speaks of the Parousia of Jesus (1 Thess 2:19; 3:13; 4:15; 5:23) in a context strongly influenced by the ruler cult *(apantēsis, kyrios),* not apocalyptic. The "day of the Lord" in 1 Thess 5:2 is borrowed from prophetic, not apocalyptic, imagery. Krodel (1978: 84) points out that nowhere does Paul "use the idea of divine retribution to *comfort* believers in distress."

2 Thess 2:1–2 suggests that some of the readers expected the Parousia very soon. But Christians must be clear about the Lord's Parousia and their future gathering before him (2 Thess 2:1–2). Paul stressed the nearness of the Lord's Parousia in 1 Thess 4:15, 17; 5:1–5, while his later letters continued to say "The Lord is at hand" (1 Cor 7:29, 31; Rom 13:11–12; Phil 4:5). 2 Thessalonians stresses the opposite to reinforce the urgency of the need to stand fast and remain faithful (2 Thess 2:15) to the God who called the readers through the gospel (2 Thess 2:14; cf. Krodel 1978: 74–77). And both letters appeal to earlier teaching (1 Thess 5:1–2, explicitly rejecting time speculation; 2 Thess 2:5 affirms a sequence of events).

(2) Christology. 2 Thessalonians never mentions the death or resurrection of Jesus. Jesus is primarily the Lord *(kyrios)* in 2 Thessalonians (cf. 1:1, 7, 8, 12; 2:1, 8 [13?], 14, 16; 3:3, [5?], 6, 12, 16, 18), but the letter nowhere tells how he became the Lord. It does not cite earlier creedal formulas (1 Thess 1:9–10; 4:14; 5:10 does), does not talk of Jesus' death as sacrifice (as 1 Thess 5:10 does), or relate his lordship over the Thessalonians to baptism. There is nothing like "the word of the cross" (cf. 1 Cor 1:18) in this letter. In 2 Thessalonians Jesus, the Lord, does not have a past, but only a future, significance. At the Parousia he will punish the oppressors (2 Thess 1:8; cf. "righteous judgment," 1:5), while the faithful will be gathered before him (2 Thess 2:1). His Parousia will also be his revelation as Lord, i.e., as benefactor and vindicator. His major characteristic is power exercised in the destruction of the "Man of Lawlessness" (2 Thess 2:8). This contrasts strongly with other letters in the Pauline corpus, where the confession "Jesus is Lord" is tied to his resurrection and to baptism (1 Cor 12:3; Rom 10:9; Phil 2:11).

2 Thessalonians also diverges from Paul by using language about Jesus that Paul reserves for God. The term "Lord," referring to Jesus, occurs where Paul speaks of God. Thus 2 Thess 2:13 speaks of the

"beloved of the Lord," while 1 Thess 1:4 speaks of the "beloved of God." 2 Thess 2:14 speaks of the "glory of our Lord Jesus Christ" (cf. 2 Thess 1:10, 12). Paul ascribes glory only to God (Rom 1:23; 3:7, 23; 4:20; 5:2; 6:4; 1 Cor 10:31, etc.); Jesus only reflects God's glory (2 Cor 3:18; 4:4, 6). Where 1 Thess 5:23 invokes the "God of peace," 2 Thess 3:12 calls on the "Lord of peace." The language of 1 Thessalonians is the normal Pauline expression (Rom 15:33, 16:20; 1 Cor 14:33; 2 Cor 13:11; Phil 4:9). 2 Thessalonians reveals a christological development that gives greater prominence to Jesus.

(3) Theology. God's acts in the past are the basis of the Christians' hope. He chose the Thessalonians as the "firstfruits" toward salvation (2 Thess 2:13), an election that is the basis for their conviction that they are "beloved by the Lord" and destined "for the sure possession of the glory of our Lord Jesus Christ." Because God called them, they are his assembly (*ekklēsia,* 1:4) that suffers for the royal rule of God *(basileia tou theou).* Suffering leads to the demonstration of the "just judgment of God" (2 Thess 1:5) because it leads to the public demonstration that God is just. Twice God is addressed as "our Father" (1:1; 2:16), but never as "the God and Father of our Lord Jesus Christ" (cf. 2 Cor 1:3) or as the one who "raised Jesus from the dead" (Rom 4:24; 8:11; 10:9, etc.).

God's election and justice determine the content of the gospel in 2 Thessalonians. God will carry out his apocalyptic plans for them. "The gospel of our Lord Jesus" (2 Thess 1:8) describes how Jesus' Parousia executes judgment and gathers the faithful. God is responsible for all that happens: their election (2 Thess 2:13), their growing faith and love (2 Thess 1:3), his past love for them (2 Thess 2:16), the sanctification of the spirit (2 Thess 2:13), their past comfort and hope (2 Thess 2:16). It is not surprising that grace *(charis)* plays so small a role in this book. It occurs twice in stock formulas (2 Thess 1:2; 3:18). 2 Thess 1:12 relates grace to the Parousia of the Lord, while 2:16 ties it to God's love and the gift of comfort and hope in the past to pray that God exhort and establish them in the present. The familiar Pauline contour is absent.

(4) Tradition and Life. 1 Thess 3:8 urges the Thessalonians to "stand fast in the Lord." 2 Thessalonians urges its readers to "stand fast and hold on to the traditions" (*paradoseis,* 2 Thess 2:15; the singular is used in 3:6). By tradition 2 Thessalonians means the content of the letter itself, that is, the apocalyptic teaching that God will vindicate those faithful under persecution. Tradition is thus a criterion for action. Paul's work in order not to accept any money from the Thessalonians (2 Thess 3:8–9) is described in language reminiscent of 1 Thess 2:9. The imitation of Paul is a part of the tradition they must (*dei,* 2 Thess 3:7) keep.

Prayers in 1 Thessalonians pray for the survival of the readers in the Parousia (1 Thess 5:23), since the coming of Christ is the basis for comfort and encouragement (1 Thess 4:18; 5:11). 2 Thessalonians prays for a right action in word and deed (2:16–17), for "love of God and the endurance of Christ" (3:5), for a life lived in peace (3:16). The eschatology determines the content of the prayer. Thus it is not surprising that 2 Thessalonians urges the readers to proper action against those "who live [walk] without order" (2 Thess 3:6, 11), because of the imminent Parousia of the Lord Jesus (2 Thess 2:8). The Thessalonians themselves should not grow tired of doing what is good (2 Thess 3:13).

4. Reconstruction of Historical Origin. Apocalyptic eschatology flowered at the end of the 1st century, as Revelation and Matthew suggest. The last two decades (80–100 C.E.) was a time of persecution for the Church. The stress on authoritative tradition also suggests a later age in which Paul has become a revered figure. This dating also provides a good historical context for interpreting the reference to spurious Pauline revelation, theological argument *(logos),* or correspondence mentioned in 2 Thess 2:2. People were invoking Paul's name as authority for their teaching—and 2 Thessalonians does the same. The reference to Paul's handwriting in 2 Thess 3:17 is based on the earlier references in 1 Cor 16:21, Gal 6:11, and Philemon 19. Nowhere does Paul suggest it as a mark of authenticity; in Galatians it is a mark of his personal feelings for the addressees. 2 Thess 3:17 is the only place the handwriting is used as a mark of authenticity. (The word *semeion* elsewhere in Paul always refers to miraculous events or to evidence of the Spirit's activity.) Bailey (1978: 138) comments that 3:17 "makes more sense as the product of the pseudonymous author who wished by it to allay any suspicions of inauthenticity which his letter might arouse." Krodel's proposal (1978: 85), supporting the suggestion of Lindemann (1977: 35–

47) that 2 Thess 2:2 might refer to 1 Thessalonians, now misinterpreted at this later date, is attractive, but not compelling. In short, 2 Thessalonians is the work of a late Paulinist who rethinks Paul in terms of apocalyptic eschatology and the Pauline tradition to reinforce the fidelity of persecuted Christians.

EDGAR M. KRENTZ

THESSALONICA (PLACE) [Gk *Thessalonikeus* (Θεσσαλονικευς)*, Thessalonikē* (Θεσσαλονικη)]. City mentioned in Acts 17:1–13; 1–2 Thessalonians; Phil 4:16; and 2 Tim 4:10. It was founded in 316 B.C.E. by Cassander, the son of Antipater, whom Alexander the Great had left in charge of Macedonia. It was named in honor of Cassander's wife, Thessalonike, a stepsister of Alexander and the last surviving member of the ancient royal family of Macedonia. Built at the head of the Thermaikos Gulf below the Hortiates mountains, the city rose steeply above its harbor.

It is possible that Thessalonica was constructed on the site of an earlier settlement, Therme. Remains of foundations and fragments of an archaic temple (ca. 500 B.C.E.) have been found in the W part of the city, but it has not been possible to ascertain the deity in whose honor it was erected or the structure's precise size and plan. A series of ancient Greek coins without a legend but bearing a Pegasus obverse type found at Thessalonica has been connected with Therme (Gaebler 1906). On the basis of the association, it has been suggested that Therme was a Corinthian foundation, colonized perhaps under Periander's rule (ca. 600 B.C.E.).

A. Hellenistic Thessalonica
B. Early Roman Thessalonica
C. Later Roman and Early Christian Thessalonica

A. Hellenistic Thessalonica

Aside from a number of tombs, some pottery, terra-cotta figurines, and smaller objects, surprisingly few Hellenistic remains have been discovered in Thessalonica. An inscription dated to 60 B.C.E. (*IT* [= Edson 1972] no. 7) found near the Roman forum makes mention of an agora. It is possible that this earlier Hellenistic agora was rebuilt later into the Roman forum, at least part of which has been excavated. Beneath the forum's pavement were found varieties of Hellenistic pottery and a late Hellenistic "Atlas" now on display in the city's Archaeological Museum.

Remains of a sanctuary of the Egyptian gods were discovered at Thessalonica. Unfortunately, the site could not be preserved. A scale model of one of the structures excavated, a small temple, is in storage at the Archaeological Museum. The temple, one of a complex of structures constituting the sanctuary of the Egyptian gods, consisted of a small anteroom which opened onto a larger hall. Directly opposite the opening of the anteroom, in the center of the far (N) wall was a niche, in front of which a stone bench was found. The walls were of simple Roman construction: rough stones and lime mortar alternating with successive horizontal bands of three layers of baked brick. Small irregular pieces of multicolored marble pavement decorated the floor in a simple geometric pattern.

Lying directly under the W portion of the anteroom and running some 4 m along its length to the E was an elongated vaulted room (1.6 by 4 m). Providing access to this crypt was a long tunnel-like corridor (1 by 10 m) which ran parallel to the W wall of the building above. Its outside opening terminated in a staircase beside the niche, though outside the temple proper. The corridor was connected to the crypt at the other end by an arched opening in the W extremity of the crypt's N wall. The entrance to the corridor was found sealed at the top with marble slabs, a fortunate result of which was that the corridor and crypt were preserved in their original state.

In the middle of the crypt's E wall there was a niche in which stood a small herm in archaizing style depicting a bearded Dionysos. The floor of the crypt, which was about 2.5 m below the floor level of the temple above, had no special covering. Unlike the corridor and the superstructure above, the crypt was constructed of simple mortar without lime. To the N and E of the temple other structures were found, consisting of small rooms probably belonging to the sanctuary complex. A few meters to the NW, the end of a small rectangular building (5 m wide) was found. The masonry of the building's substructure has been described as Hellenistic, but its walls clearly are Roman, constructed in alternating bands of brick and green schist.

The movable finds at the Serapeum, including some 69 inscriptions, were transferred to Thessalonica's Archaeological Museum. Of special note are a dedicatory epigram of the 2d century B.C.E. by the otherwise unknown poet Damaios (*IT* no. 108), the head of a statue of Sarapis and one probably of Isis, a small Roman statue of Harpocrates and one of Aphrodite-Harmony, a small headless statue of a seated goddess of the known Isis-Cybele type, a small Hekataion, the upper part of a statue of an initiate or priest, and a relief dedicated to "Osiris initiate" *(Oseiridi mystei)* of the late Hellenistic period depicting an altar (in a space surrounded by a templelike structure) around which are three figures, one of whom is pouring a libation (*IT* no. 107). Also of interest is a letter of Philip V dated 187 B.C.E. in which he prohibited the use of the Serapeum's funds for extracultic purposes and declared specific penalties for contraventions of the regulation (*IT* no. 3). The inscription attests to the early importance and power of the cult.

An inscription mentioning the gymnasium administration of 96–95 B.C.E. (*IT* no. 4) and two later Roman inscriptions referring to ephebes (*IT* nos. 236 and 237) were found near the basilica of St. Demetrios. Byzantine literary sources indicate the existence of a stadium also in the vicinity of St. Demetrios. Although it is not certain that the Hellenistic gymnasium complex included a stadium, such an

arrangement would not have been unusual. The most likely site for the gymnasium and stadium would seem to be immediately S of St. Demetrios and just N of the Roman forum.

Stretches of the early Hellenistic city wall of Thessalonica have been incorporated into the medieval fortifications visible today. Rows of large blocks of well-worked stone characteristic of Hellenistic masonry occur especially in the N wall, while reused marble slabs and porous rocks (perhaps belonging originally to the Hellenistic wall and gates) are apparent elsewhere. The walls preserved today, which are thought to follow substantially the Roman and Hellenistic fortifications, date primarily from the 4th to 5th centuries C.E. and later. Their circuit was about 7 km, while their height extended from 8 to over 10 m.

B. Early Roman Thessalonica

The Macedonian kingdom under Perseus unsuccessfully defied Roman interests in the E Mediterranean. After a decisive defeat in 168 B.C.E., Perseus was seized while claiming asylum on Samothrace. Under the Roman division of Macedonia, Thessalonica was the capital of the second of four regions. When an independence movement was crushed 20 years later (148 B.C.E.), the Romans deported to Italy the entire surviving Macedonian aristocracy, including military and civil officials. Although its most important industries and much of its trade were curtailed sharply and despite its isolated and extremely vulnerable position, Macedonia hardly stagnated.

Thessalonica appears to have been in the forefront of the Macedonian recovery. In 146 B.C.E., it was made the capital of the reorganized province of Macedonia and enjoyed the commercial and civic privileges (including the right to mint its own coinage) accorded the seats of provincial governors. Its proximity to the Via Egnatia, the main artery linking Rome and the East, and the major N-S trade routes further facilitated security and commercial prosperity.

There is some indication of local unrest and magisterial abuses at Thessalonica during the mid–1st century B.C.E. Late in 60 B.C.E., the Roman governor in Macedonia, C. Antonius Hybrida, returned to Rome on charges of misadministration (extortion) and *maiestas.* The proconsul was convicted and exiled.

Six months of Cicero's exile was spent in Thessalonica (May to November, 58 B.C.E.). In 18 letters written in Thessalonica, Cicero only twice refers to his environment: once to the *quaestorium* where he was lodged (residence of the province's financial officer; *Plan.* 99) and once to the Via Egnatia, where heavy traffic apparently made his own travel difficult (*Att.* 3.4). More instructive of Thessalonica's situation during the period is information gleaned from Cicero's speech *(Pis.)* on the alleged abuses of L. Calpurnius Piso Caesoninus, governor of Macedonia from 57 to 55 B.C.E. Although some of the senator's charges may have involved complete fabrications and others probably reflected manipulation of information, there is little reason to doubt that during this period Thessalonica did not enjoy the Roman benefactions and attention to security it had realized in other times.

During the civil wars of the 1st century B.C.E., Thessalonica seems to have pursued a policy of neutrality, though Pompey and his retinue resided there for a time in flight from Rome (49–48 B.C.E.). Many of Rome's senators and knights of the equestrian order joined Pompey at Thessalonica, and the city became effectively a "second Rome" with the consecration of a site for the authoritative convening of the Senate. Following the defeat of Pompey at Pharsalus, Thessalonica was caught again in the crossfire of competing Roman powers. The city seems originally to have been supportive of the "liberators" Brutus and Cassius, who had been instrumental in the assassination of Julius Caesar. At some point before the second battle of Philippi (42 B.C.E.), however, Thessalonica must have withdrawn her support, since Brutus is reported to have promised his soldiers the sack of the city if they were victorious. The victors at Philippi, Octavian (later titled Augustus) and Antony, received lavish honors from the city. So extreme was Thessalonica's attachment to Antony, the new Roman ruler in the East, that the city inaugurated a local era in his honor. That this later proved problematic with Octavian's defeat of Antony at Actium is demonstrated by the erasure of dates on inscriptions from the period (e.g., *IT* nos. 83 and 109).

A profusion of honors granted by Thessalonica marks Octavian's ascendancy as sole ruler of the Roman Empire and bearer of the title "Augustus." In the last third of the 1st century B.C.E., the laureate head of Julius Caesar with the legend *theos* occupies the obverse of a series of coins minted at the city, while the reverse presents the bare head of Octavian with the inscription *Thessalonikeon.* An inscription (*IT* no. 31)

refers to a temple *(naos)* of "Caesar" probably dating from this interlude in the Roman city's history. Blocks from the archaic temple (of Therme?) with later Roman markings indicating directions for reconstruction were found in proximity to fragments of imperial statuary. It is possible that the early temple was made over to accommodate honors for the emperor. From this period also dates the establishment of a "priest and agonothete of the Imperator Augustus 'son of god' " and a priest of "Roma and Roman benefactors." A group of "Roman benefactors" received honors at Thessalonica from at least 95 B.C.E.

Among the fragments of imperial statuary recovered in the W part of the city N of the Serapeum was an almost complete statue of Augustus. He is depicted in a standing heroized representation with his right hand upraised. At least five precut pieces were used in the composition of the statue, suggesting that it may have been produced elsewhere and transported to Thessalonica for assembly. The statue has been dated to the reign of Gaius ("Caligula") or Claudius, and it is one of the few objects recovered at the city which can be dated with certainty to the period of Paul's visit. It is perhaps in the context of so effusive an outpouring of honors for Augustus that one should understand Paul's condemnation of those who promote "peace and security" (1 Thess 5:3—a Julio-Claudian program of *pax et securitas*?).

An institution apparently peculiar to Thessalonica was the office of "priest and agonothete of god Fulvus." The Fulvus deified was the son of Marcus Aurelius who died at the age of four in 165 C.E. His divinization at Thessalonica may represent a case of local syncretism probably involving the Cabiros (a principal civic deity), perhaps Osiris, and the devotional interests of the city's "youths" and ephebes. The office is attested for the period 206–70 C.E. but must have originated shortly after the youth's death (*IT* nos. 153–70 and 236). The priesthood was related intimately to other offices involving the "youths," ephebes, and the gymnasium but was not synonymous with the ephebarchate or gymnasiarchate (*IT* nos. 236, 180, 195–96). Nor did the office supersede or displace that of the civic agonothete (*IT* nos. 163, 171, 178).

On the basis of the archaeological record, the most important civic cults of the early Roman imperial period were those of "the gods" (for a time, the tutelary deities of the city), of the emperor, and of Roma and Roman benefactors. Official decrees of the city, made sometimes in concert with an official association of Romans *(Romaioi sympragmateumenoi)*, were dated to the terms of individuals holding these offices. Also important in the city's religious life in the 1st century C.E. was the cult of the Egyptian gods. An inscription (*IT* no. 255) records the divinely ordered diffusion of the cult from the sanctuary at Thessalonica to the Greek city of Opus. This is an indication, perhaps, of the "metropolitan" character of Thessalonica's Egyptian cult establishment and presents an interesting parallel to the diffusion of early Christianity from the city to which Paul may refer in 1 Thess 1:8. The cult of the Egyptian gods appears to have absorbed elements of Dionysos worship at the city (*IT* no. 259). A small herm of Dionysos recovered in the central niche of the Serapeum's subterranean crypt had a precisely worked hole for the apparent removal (and replacement?) of the statue's genitalia. The ritual reconstitution of the dismembered Osiris is known to have been practiced generally in Egyptian cults (Arn. *Adv. Nat.* 7.5.19.9–13). It is possible that at Thessalonica in Macedonia, an area famous for its devotion to Dionysos, the object of reconstitution may have been Dionysos, with whom Osiris was identified under the umbrage of the Egyptian cult.

Found near the Serapeum were 1st-century-C.E. dedications to the "highest god" *(theos hypsistos)*, one involving a vision on the part of the devotee (*IT* no. 67) and another indicating a cultic dining association (*IT* no. 68 and cp. 70). Devotion to Zeus "the highest" with the goddess Nemesis is also in evidence at the city, though in a slightly later period (*IT* no. 62, 2d or 3d century C.E.). Other divine objects of honor in early Roman Thessalonica include Herakles, the Dioskouri, a Hero for whom there is evidence of a temple, Apollo, and Aphrodite.

In the 2d and 3d centuries, Thessalonica's principal civic deity was the Cabiros, who figures prominently in this period of the city's numismatic record. According to legend, the Cabiros, a young prince, was murdered treacherously by his two brothers, who subsequently enshrined his remains at the foot of Mt. Olympos (Firm. Mat. *Err. prof. rel.* 11). Clement of Alexandria in the late 2d century C.E.

identified the murderous brothers as those who had absconded to Tuscany with the chest in which Dionysos' *virilia* were preserved, suggesting another possible link between Dionysos and an important Thessalonican religious figure. From the 2d or 3d century C.E., there is epigraphic evidence of a priesthood of the divine Alexander at Thessalonica (*IT* no. 278 and cp. 275 and 276). Iconographic materials also attest the presence of devotees of Cybele and Mithras, and from the same period an association of Asklepiasts is known (*IT* no. 480).

The remains of Roman Thessalonica's forum complex now visible in the modern city date to the 2d century C.E., while the odeum to the E appears to have been built about a century later. The open area of the forum measured at least 65 m N-S by 100 m E-W. It was bounded by a portico on the S as well as the E. A Corinthian capital found at the site has been restored on a base in the outer colonnade. The E portico (running N-S) has a well-preserved mosaic floor of geometric design. On parts of its edge are preserved three steps leading down over a drainage channel to the open paved area. Beneath the portico running E-W is a cryptoporticus consisting of two vaulted passageways constructed of extremely well-dressed blocks and finely hewn smaller pieces. In addition to large circular covered openings occurring in the apex of the vaults at regular intervals, there is an extensive series of smaller arched openings along the top of the sides of the passageway. The E extremity of the excavated passage ends abruptly before intersecting the N-S portico. To the S, the cryptoporticus would have opened onto a lower level of the forum which was multitiered in construction.

The odeum features a marble-paved orchestra which is slightly elliptic. At a level considerably above it are preserved seven rows of seats. The height of the first row of seats may indicate that the structure was used for shows involving animals. In its original state, the odeum extended some 26 rows of seats beyond the seven preserved rows. The proscenium has eleven niches, alternately semicircular and rectangular, constructed in brick, faced with marble and flanked by stairs leading to the proscenium proper. Before it were found two headless marble statues of muses, identifiable by their attributes as Thalia and Erato. The scaena is paved with mosaic at the level of the orchestra floor in meander and interlace designs. Monumental doorways lead from it to vaulted lobbies under the lower seats. From these the orchestra is entered. The lower part of one of the broad stairways leading to the diazoma (a gallery or lobby giving access to the theater seats) has also been excavated. A number of rooms were found beneath the seats and there are two larger rooms presumably opening onto the portico which were adjacent to the odeum proper.

C. Later Roman and Early Christian Thessalonica

The Arch of Galerius at Thessalonica commemorates Roman victories over the Persians in the last years of the First Tetrarchy (270–300 C.E.). The original arch included two triple archways, only one of which is preserved at the W. The height of the arch is about 21 m. It is built of brick, like the Galerian palace, octagon, and rotunda, which all belong to the same complex. The middle piers bear stone sculpture, divided into four registers. The sculpture is typical of late imperial times in crowding together many forms in a narrow space and representing objects out of scale with one another.

As the central figures of honor, the tetrarchs Maximianus, Constantius Chlorus, Diocletian, and Galerius probably were represented by four statues in the four niches to the left and right above the pillars of the central passageway. Approaching the arch from W to E, one is presented with a series of scenes epitomizing the Roman victory in the East (specifically, the war in Armenia and the second or punitive campaign in Assyria). The traveler approaching from the E first would have passed through the SE arch complex (which has not survived) and then proceeded through the second arch.

Of particular interest on the SE facade of the arch is the central register in the SW pillar. Here Diocletian is shown joining Galerius in a *nuncupatio votorum* (a public declaration of vows) at an altar of Zeus and Heracles. Galerius is in military attire on the right while Diocletian, wearing a toga, stands to the left. They present a sacrifice in thanksgiving for the victory over the Persians. Between the two is the altar, toward which Galerius extends his right hand. The two visible sides of the altar are ornamented with sculptural representations of Zeus, with whom Diocletian was associated, and Heracles, with whom Galerius was connected. In back of the altar are two female figures labeled *Oikoumene*, the inhabited world, on the left and *Eirene*, peace, on the right. The relief's propagandistic message is that peace has

been established in the world through the exertions of Galerius and Diocletian and their divine supporters Heracles and Zeus.

The surviving portion of the palace of Galerius, built as his official residence around 300 C.E., consists of a court about 22 m square, surrounded on the E, S, and W by rectangular rooms and beyond them, corridors paved with mosaics or marble. Beyond the wall forming the E boundary of the corridor are the remains of a bath complex. Opening beyond the SE wall of this complex is a large semicircular exedra. A little over 40 m due W and S of this position is an octagonal structure excavated in the early 1950s.

The so-called octagonal building had a central area opening onto seven large apses. The eighth wall, facing SW, contained the entrance. Although six of the apses are identical, the one opposite the entrance is appreciably larger. Each of the apses is somewhat larger than a semicircle, appearing rather more like a horseshoe in plan. From the head of one apse to that of its opposite is about 30 m. The structure was furnished with an extremely elaborate marble floor (including well-preserved *opus sectile* compositions on display in the Archaeological Museum). Found on the floor were four marble pilaster capitals, apparently wall revetments. On each of them the centerpiece is a deity in high relief, either draped or nude. Deities represented include Jupiter, Cabiros, Dioscuros, and Hygeia. In the larger NE apse there is a cross with equal arms, each consisting of a single brick enclosed within a circle of rayed bricks. On each side there appears a brick-composed lateral design representing a branch or plant of some kind. It has been suggested that these are later Christian insertions (i.e., the cross flanked by branches), perhaps depicting Constantine's vision of a cross on the sun with the injunction "by this conquer." It also is possible that the piece is an iconographic acclamation of the "victory of the cross" purportedly realized in Galerius' edict of toleration of Christians.

Associated with the Galerius palace complex is a marble arch found near the octagonal building and now on display in the Archaeological Museum. Two medallions enclose the central subjects of the arch. The tondo on the right contains a bust of Galerius with details finished in paint, while the one on the left contains the bust of a crowned woman, probably representing the *Tyche* or *Fortuna* of Thessalonica. Supporting the medallions are two figures in Persian costume, while holding either end of the wreath are smaller winged figures thought to be *erotes.*

The presentation of Galerius with the *Tyche* of Thessalonica is an instance of a pattern of protector god or hero and city goddess which recurs in Thessalonica's religious history. At an early stage in legends surrounding the martyr St. Demetrios, regarded as the protector of the city, he was connected with the Lady Eutaxia ("good order") and in later legend and art, he was associated closely with the Virgin. Before St. Demetrios superseded him, the Cabiros had been the city's protector and was depicted in its coinage on the obverse with *Tyche* on the reverse. It appears from this arch that Galerius also may have assumed this role for a brief period in Thessalonica's history.

Springing from a kantharos at each end of the vault (soffit) of the arch is a complex vine with twin interlacing shoots bearing thick bunches of grapes and leaves. These rise on either side to a central medallion containing a bust of Dionysos wearing a heavy wreath. An almost identical design appears in the mosaic decoration of a soffit between the columns of the nave in the Basilica of the Holy Virgin *(Acheiropoietos)* in Thessalonica. From a kantharos flanked by two birds rises a twin vine, rich with bunches of grapes and leaves. Instead of the central medallion containing a bust of Dionysos, a four-armed Latin cross appears in a blue circular field. Excavations in the NE portion of the church have revealed a succession of mosaic-covered floors dating to the imperial period.

Immediately E of the Galerian palace are the remains of a bath complex which has been related to the hippodrome. According to the original plan, a colonnaded avenue led from the palace and hippodrome to the triumphal arch, then on to the rotunda. The rotunda originally may have been intended as a mausoleum. Though it dwarfs Diocletian's mausoleum at Spoleto, it closely resembles it in plan. The massive size of the Galerian structure is demonstrated by the dimensions: the wall is 6.3 m thick, supporting a dome about 24.5 m in diameter. Inside are eight vaulted openings in the wall, each decorated with a different mosaic design. The original entrance was from the S, where an elaborate approach flanked by stoas extended N from the arch of Galerius. With the conversion of the building for use as a

Christian church about 400 C.E., the entrance was changed to the W, a nave was built to the E, an exterior corridor around the structure was built, and on the interior, the dome was decorated with mosaics, featuring portraits of saints and architectural constructions. The building was adapted for Moslem worship about 1590, and a minaret was added to the precinct.

Other important early Christian monuments at Thessalonica in addition to the Church of the Virgin *(Acheiropoietos)* and the Rotunda *(Hagios Georgios)* include the chapel of *Hosios David* and the Basilica of St. Demetrios. *Hosios David*, located in the central N portion of the modern city just below the acropolis, contains an apse mosaic of Christ *Pantocrator* from the 5th century C.E. The restored mosaic is remarkable not only for its stunning presentation of a young, unbearded Christ but also for its depiction of scenes drawn from Ezekiel and perhaps Revelation. Preserved at the Basilica of St. Demetrios, just NE of the Roman forum, are a number of early Christian mosaics and architectural elements and a crypt complex adapted from an earlier martyrium for the saint.

A Samaritan-Greek bilingual inscription (*IT* 789) has been recovered at Thessalonica. The inscription consists of three elements: two lines in Samaritan characters (line 1, "Blessed be our Lord forever" and line 15, "Blessed be his name forever"); a biblical text, the benediction of the priests from Num 6:22–27 (lines 2–14) in a Greek translation that differs from the LXX, more closely approximating the Hebrew of the MT and the Sam. Pent.; and the dedication by one Siricius (lines 15–18), the donor, who along with his wife and children had the plaque set up. Siricius expressed good wishes to the city of Neapolis (Samarian Nablus?) and its friends (lines 18–20). The inscription, which bears no date, has been placed in the Byzantine period (ca. 4th–6th centuries C.E.). It may provide evidence for a Samaritan diaspora community at Thessalonica.

THETA. The eighth letter of the Greek alphabet.

THEUDAS (PERSON) [Gk *Theudas* (Θευδας)]. The leader of an unsuccessful Jewish rebellion in the region of Judea during the 1st century C.E.

Two sources from antiquity provide brief information concerning the rebellion of Theudas. The NT records a reference to Theudas in the speech of the rabbi Gamaliel at Acts 5:36. In his address to the Sanhedrin, Gamaliel argues that the Jewish religious leaders should assume a lenient posture toward the rise of the early Christian sect, since history and the will of God typically bring false religious movements to a quick end. The aborted efforts of Theudas and of Judas the Galilean are offered as evidence for this conclusion.

Josephus (*JW* 20.5.1 §97–99) provides a more detailed account of the rebellion. Theudas, to whom Josephus refers as an "imposter" (or "wizard"), was the leader of "the majority of the masses" (a number which is set at 400 men by Acts, perhaps to "minimize the extent of the movement"; Horsley and Hanson 1985: 166). As a self-proclaimed prophet, Theudas promised to separate the waters of the Jordan river in order to afford his followers easy passage upon dry ground. This sign probably was offered as a replication of the feat of Joshua, who led the wandering Israelites into Canaan over the dry riverbed of the Jordan (Joshua 3), or possibly in remembrance of the miracle of Elijah, who separated the waters in order to return to his destiny with God in the desert (2 Kgs 2:6–8). The claims of Theudas quickly drew the attention of the Roman army, which managed to destroy the rebellion, to disrupt and capture many of the participants, and to behead Theudas himself.

The account in Acts places the rise of Theudas at a date that is prior to the rebellion of Judas, a figure whose revolt is associated with "the days of the census" (i.e., most likely the general taxation under Quirinius in ca. C.E. 6; Haenchen 1971: 257). Josephus, however, records the event almost half a century later, during the reign of the procurator Cuspius Fadus (C.E. 44–46). The escalation of tensions between Rome and the Jews immediately prior to the rule of Fadus suggests that the chronology of the respective movements may be confused in Acts.

The eschatological nature of the rebellion that Theudas led was characterized by his claims to authority, the implication that he regarded himself as the "prophet like Moses" (Deut 18:15–18), and his symbolic attempts to work miracles. These claims and actions suggest that ultimately he hoped to reunite the divided religious factions of Judaism and to overthrow the Roman occupation in Palestine (Aune 1983: 126–62). While there is no indication that the movement under Theudas was an armed revolt, there is little question that the insurrection was seen as an important event during the years of disorder that followed the death of Herod in 4 B.C.E.

Modern attempts to explain the accounts of Josephus and Acts as the records of two different individuals are based upon the arguments that Acts often is accurate historically and that the name Theudas was common during the Second Temple period. In addition, scholars have attempted to associate Theudas with other Jewish millenarian leaders who are known from the Second Temple period (Bruce *Acts* TNTC, 147). These arguments, however, have not proven to be convincing. The minor divergencies of dating and details between the two records of Acts and Josephus suggest instead that some difficulty with the historical details behind the revolt of Theudas occurs within the sources that were incorporated by the authors.

THIASOS. See ASSOCIATIONS, CLUBS, THIASOI.

THISBE (PLACE) [Gk *Thisbē* (Θισβη)]. The N Galilean village from which Tobit was taken into exile by Enemessarus (RSV "Shalmaneser"), king of Assyria (Tob 1:2). The village is said to be located "south of Kadesh-Naphtali" (M.R. 200279) and "above/overlooking Hazor" (M.R. 203269; Gk *hyperanō Aser* [LXX A,B]/*Assōr* [Sinaiticus]; RSV translates "Asher"). This suggests a location somewhere near the E edge of the Alma plateau. Simons (*GTTOT,* 1614f) suggests that the Gk *ek Thisbē* be viewed much like "Tishbe" in 1 Kgs 17:1, as an original Heb **mittōšĕbê,* "from the inhabitants of." See also TISHBE (PLACE).
GARY A. HERION

THISTLE. See FLORA.

THOMAS (PERSON) [Gk *Thōmas* (Θωμας)]. "One of the twelve" disciples of Jesus (John 20:24). Paired with Matthew, the name of Thomas appears in the middle of the list of the Twelve in the Synoptic Gospels (Matt 10:3; Mark 3:18; Luke 6:15). Paired with Philip, Thomas appears on the list of the Twelve given in Acts (Acts 1:13). None of these texts, however, attributes any specific role to Thomas.

A portrait of Thomas emerges with some clarity in the Fourth Gospel, where Thomas appears in four passages (John 11:16; 14:5; 20:24–28; 21:2). In three of these Thomas is "called the Twin" (*ho legomenos Didymos;* John 11:16; 20:24; 21:2). In Aramaic *tĕ›omâ* (Hebrew, *tĕ›om*) means "twin," but there is not much indication that this word was used as a proper name in the Semitic world. The Greek word for "twin," *didymos,* is a well-attested name and may be the name by which Thomas was known in Greek-speaking Christian circles. The Fourth Gospel tells us nothing about his twin, nor how Thomas came to acquire this name, leaving the 3d-century *Acts of Thomas* to suggest that Thomas was Jesus' twin and some Syriac manuscripts of John 14:22 to suggest that his real name was Judas (cf. *Gos. Thom.* 1).

In the epilogue to the Fourth Gospel the name of Thomas appears in second place among the disciples who benefited from the revelation of Jesus by the Sea of Tiberias (John 21:2). Thus, the epilogue identifies Thomas not only as a "disciple" (cf. John 11:16; 20:25), but also as a particularly significant witness to the risen Jesus. Thomas appears as a representative figure among the disciples in John 20:24–29, a scene which has merited for him the descriptive epithet "doubting Thomas." Prior to that narrative, the Evangelist had twice introduced Thomas into his gospel in scenes which have no parallel in the synoptic tradition. In John 11:16 Thomas is portrayed as a courageous leader among the disciples of Jesus, ready to go to death with him. His appearance heightens the dramatic intensity of the scene by linking the resurrection of Lazarus to the death of Jesus. In John 14:5 Thomas reappears, this time as some one who does not know where Jesus is going. In response, Jesus reveals himself to be "the way, the truth, and the life."

Bravado and misunderstanding continue to characterize Thomas in John 20:24–29, a thoroughly Johannine composition, without parallel in the synoptic tradition, and a literary doublet of John 20:19–23. Thomas has been chosen from among the Twelve to dramatize the disbelief of the group. The refusal of the disciples to believe the testimony of those who had seen the risen Lord is a common feature of the gospel tradition (Matt 28:17; Mark 16:11, 14; Luke 24:36–43); the fourth Evangelist alone has chosen Thomas to represent and symbolize this doubt.

According to his account, Thomas was not present when Jesus appeared to his disciples on Easter day (John 20:24, cf. v 19). Those disciples tell Thomas that they have seen the risen Lord but Thomas demands a quasi-physical proof of the resurrection in order that he might believe (John 20:25; cf. 19:34; 20:27). He recognizes Jesus' death, but not his glory (cf. John 11:16; 14:5).

In a scenario which is a virtual repeat of the Easter day apparition (cf. John 20:26, 19), Jesus appears to the full complement of disciples. He satisfies Thomas' request for proof, but exhorts him: "Do not be faithless, but believing." Thomas responds with a solemn confession of faith, "My Lord and my God." Nonetheless, he is chided by Jesus, who then pronounces a macarism on those who have believed without seeing.

Thomas' confession is the only explicit confession of the divinity of Jesus in the Fourth Gospel. Influenced by liturgical usage, it represents the conviction of the Johannine confession that belief in the resurrection is belief in the divinity of Jesus.

The Evangelist's characterization of Thomas looks to the future as well as to the past. He is one who ought to have believed because he had heard the testimony of disciples who did believe in the risen one. Reproached by Jesus for demanding proof rather than accepting testimony, Thomas serves as a foil for those who believe without benefit of a visionary experience. Jesus' praise of them, "Blessed are those who have not seen and yet believe" (John 20:29), is the final word of Jesus in the main body of the gospel.

According to some later texts, especially the Coptic *Gospel of Thomas* and the *Apocalypse of Thomas,* Thomas was the beneficiary of secret revelations from the Lord. The 3d- (or 4th-) century *Acts of Thomas* tells of his evangelizing and being martyred in India, a tradition maintained by Syro-Malabar Christians today.

RAYMOND F. COLLINS

THOMAS THE CONTENDER, BOOK OF (NHC II,*7*). The seventh and last treatise in Codex II of the Coptic Gnostic Library from Nag Hammadi. It is a revelation dialogue between the resurrected Jesus and his twin brother Judas Thomas, ostensibly recorded by Mathaias (the apostle Matthew?) at a time just before Jesus' ascension. It is written in a rather standard Sahidic dialect of the Coptic language, and, except for partial damage to the bottom five lines of each leaf of the Coptic text (most of which is able to be restored), it is almost completely preserved.

The *Book of Thomas the Contender* is a literary expression of traditions native to Syrian Edessa about the apostle Jude, surnamed Thomas, the missionary to India. It was likely composed in the first half of the 3d century A.D. Two products of this tradition have been dated with fair certainty: the *Gospel of Thomas,* composed ca. A.D. 50–125, and the *Acts of Thomas,* composed ca. A.D. 225. Both seem to derive from the ascetic, pre-Manichean Christianity in the Osrhoëne (Eastern Syria, between Edessa [modern Urfu] and Messene). *Thom. Cont.* seems to occupy a median position between the *Gospel* and the *Acts* in (1) date of composition, (2) relative dominance of the role played by Thomas in these works, and (3) in terms of the development from a *sayings collection* preserved by Thomas *(Gospel of Thomas)* to an actual *dialogue* between Jesus and Thomas *(The Book of Thomas the Contender)* to a full-blown *romance* centered on the missionary exploits of Thomas *(Acts of Thomas).* See also THOMAS, ACTS OF; THOMAS, GOSPEL OF. The present Coptic version was probably translated from Greek; the existence of the text is otherwise unattested in antiquity.

The subscripted title designates the work as the "book" of "Thomas the *athlētēs* [i.e., "one who struggles" against the fiery passions of the body] writing to the perfect," while the opening lines designate the work as "secret sayings" spoken by Jesus to Judas Thomas and recorded by Mathaias as he heard them speaking. The designation "sayings" does not really correspond to the genre of the work, which is a revelation dialogue. This type of dialogue is unlike the Platonic dialogue in which a conversational

process of statement, counterstatement, and clarification leads step by step to the birth of knowledge. It is instead more related to the literature sometimes called *eratapokriseis* ("questions and answers") in which an initiate elicits revealed truth from a spiritual authority or revealer figure in the form of catechetical answers to topical questions. Such revelation dialogues are found in many pagan hermetic and gnostic Christian texts, including many from Nag Hammadi: *The Apocryphon of John* (NHC II,*1*), *The Sophia of Jesus Christ* (NHC III,*4*), *The Discourse on the Eighth and Ninth* (NHC VI,*6*), *The Dialogue of the Savior* (NHC III,*5*), and *The Letter of Peter to Philip* (NHC VIII,*2*). These dialogues are set at a time between the resurrection and ascension, when the Savior appeared on earth in his true divine form. Thus, both he and his teaching were available to select apostles in a form unclouded by the sort of materiality which was believed to obscure the spiritual significance of his rather parabolic and earthly preresurrection teaching. This special teaching might consist of enlightening commentary on his darker earthly teaching, or even new revelations to special apostles. As the Savior's twin, Thomas (= Aramaic *tāuma* = Greek *didymos,* "twin") had a claim to direct insight into the nature of the Savior and his teaching. By "knowing himself" Thomas would also know the "depth of the all," whence the Savior came and whither he was about to return, and thus become a missionary possessing the true teaching of Jesus.

This true teaching of Jesus turns out to be consistently ascetic. Its basic theme and catchword is "fire," the fire of bodily passions that torment the soul, and its counterpart in the flames of hell: one shall be punished by that by which one sins. Around this principal theme are gathered a number of conceptual oppositions (divine light versus passionate and infernal fire, the wise man who understands the truth versus the ignorant fool who is guided by the fiery illusion of truth, as well as Platonic oppositions between the visible and invisible and the dragging down of the soul by the passions versus the wings by which the wise flee the bodily appetites). It is of course the presence of the Savior as the emissary of the light which serves to illuminate the eyes to see invisible reality within that which heretofore was only perceptually visible and thus illusory. The treatise thus evinces a Platonic dualism of a radically ascetic stripe, and may be properly considered broadly ascetic rather than gnostic. The gnostic myth of the creation of the world by a divine accident or evil power is neither mentioned nor apparently presupposed, and the dualism of the treatise is much more anthropological (body/soul) than cosmic (the above/below). A more appropriate designation for the doctrine of this work is Christian (ized) wisdom with ascetic application; the wisdom themes of seeking, finding, being troubled, resting, and ruling (cf. *Gos. Thom.* logion 2 etc.) are distinctly present and pressed into the service of an exhortation to the ascetic life by means of a Platonic dualism between the visible-passional-illusory and the invisible-spiritual-real.

There are presently two competing theories concerning the composition of *Thom. Cont.* The more recent one, developed by H. Schenke (1983), holds that its underlying source lay in a probably non-Christian Hellenistic Jewish wisdom treatise containing the above-mentioned doctrine pseudonymously designated as a letter from the patriarch Jacob as "the contender [with God] writing to the perfect." Subsequently, in the Christian orbit, this ascetic treatise was Christianized by the substitution of Jesus for the figure of the divine wisdom as the revelatory figure of the work, the addition to the title of the phrase "the Book of Thomas," and the attendant recasting of the whole from the genre of expository treatise into the genre of revelation dialogue. That is, the text was dissected into smaller expository sections placed upon the lips of the risen Jesus; these were recast as answers to fictitious questions put to him by the apostle Thomas which themselves were inserted into the text as pretexts for the ensuing answers of the Savior. The questions of Thomas thus presuppose and were composed on the basis of the answers of Jesus. For the existence of the ultimate source of the work in the form of an epistle of Jacob, Schenke appeals to the canonical Epistle of James, which, although it is not a dialogue, was considered by Arnold Meyer as an apocryphal Hellenistic Jewish epistle of Jacob with only superficial Christian interpolations. As an example of a similar conversion of an expository work into a dialogue found within the Nag Hammadi treatises, one may point to the *Sophia of Jesus Christ,* which is acknowledged to be a recasting of the non-Christian *Letter of Eugnostos* into a postresurrection dialogue between Jesus and certain trusted disciples.

The earlier theory, developed by the author of this article, began from the observation that the actual dialogue between Thomas and Jesus occupies only the first three fifths of the treatise (NHC II,138:4–

142:21), while the remaining two fifths (NHC II,142:21–end) actually constitutes a long monologue of the Savior, in which Thomas no longer plays a role. This and the detection of a transitional editorial seam at 142:21 suggest that *Thom. Cont.* could have been compiled by a redactor from two separate works, the first three fifths from a dialogue between Thomas and Jesus, perhaps entitled the "Book of Thomas the Contender Writing to the Perfect," and the second two fifths from a collection of the sayings of the Savior gathered into a homiletical discourse perhaps entitled "The Hidden Words Which the Savior Spoke, Which I Recorded, Even I, Mathaias." A redactor later prefixed the dialogue to the sayings collection, prefaced the whole with the present opening lines augmented by the reference to Thomas as the recipient of the secret words and Mathaias as the scribe, but then appended a subscript title designating Thomas as the author of the whole. In its original form, the last two fifths would have existed as a late and decadent reflection of the literary genre of the sayings of Jesus, in which original sayings have been so expanded with interpretation that the original saying has been all but obliterated, leaving only vestigial Jesuanic formulas such as "Amen I say to you," "blessed are you who …," "woe to you," "watch and pray," and one instance of a parable (144:21–36). On this hypothesis, *Thom. Cont.* fits into a natural interpretive development of the sayings of Jesus: original, relatively unadulterated collections of Jesus' sayings were gradually collected and expanded by means of interpretive material as in Q (the Gospel Source) or the *Gospel of Thomas,* and then later embedded in a larger interpretive frame story such as a postresurrection dialogue or a life-of-Jesus gospel concluding with a passion or resurrection narrative.

While a final decision between these two compositional theories is still awaited, there can be no question that *Thom. Cont.* displays the marks of a redactional history. On either view, it represents a new source for the form-critical investigation of early Christian literature and for the process by which ever new literary genres were adapted for Christian teaching. It also constitutes another instance in a growing body of Christian Wisdom Literature with its emphasis on seeking, finding, resting on, and ruling by the truth, and thus escaping the troubles of life.

JOHN D. TURNER

THOMAS, ACTS OF. Pseudepigraphic text which relates the adventures of the apostle Judas Thomas as he preaches an ascetical or encratite form of Christianity on the way to and from India. Like other apocryphal acts combining popular legend and religious propaganda, the work attempts to entertain and instruct. In addition to narratives of Thomas' adventures, its poetic and liturgical elements provide important evidence for early Syrian Christian traditions.

———

A. Language and Recensions

The principle witnesses are in Greek and Syriac, although the *Acts of Thomas* also survive in Armenian, Latin, Arabic, Coptic, and Ethiopic. Among the various versions of this popular work there are several abridged recensions. The complete *Acts* is attested in only one Syriac and two Greek mss. Translation errors and other linguistic phenomena make it clear that the work was originally composed in Syriac and translated into Greek. The current Syriac version, however, has been heavily edited in an orthodox direction.

B. Date

The major Syriac witness (B.M. add. 14.645) dates to 936 C.E. The earliest Syriac witness to the text, a fragmentary palimpsest (Sinai 30), dates from the 5th or 6th century. The major Greek witnesses (Paris. gr. 1510 and Vallicel. B 35) date to the 11th century, although there are partial Greek witnesses dating from the 10th. Some form of the work was clearly in circulation by the end of the 4th century when testimonies begin. Epiphanius (*Anac.* 47.1 and 60.1.5) records its use by Encratites. Augustine (*de serm. dom. in monte* 1.20.65; *c. Adiamantium* 17; *c. Faustum* 14 and 22.79) attests its use by Manicheans, and allusions are found in the Manichean Psalms. Attestations continue sporadically until the 9th-century Byzantine patriarch Photius (*Cod.* 114) and the 11th-century archbishop, Nicetas of Thessalonica, who paraphrased the work. The original composition is probably to be dated in the first half of the 3d century, slightly later than the *Acts of Peter, John,* and *Paul,* which are attested in the 2d century. Some sections, particularly the originally independent *Hymn of the Pearl,* presuppose conditions in the Parthian period, which ended with the establishment of the Sassanian Empire in 226 C.E. It is likely that *Acts Thom.* underwent redactional development, including adaptation by Manicheans, in the late 3d or 4th centuries.

C. Authorship and Provenance

According to Photius, all the major apocryphal *Acts (Paul, John, Andrew, Peter, Thomas)* were the work of one Leucius Charinus. While there may be reason to connect this otherwise unknown author to the *Acts of John,* the other acts are independent and anonymous compositions. Earlier scholars conjectured some connection of *Acts Thom.* or of the *Hymn of the Pearl* (chaps. 108–13) with the Syrian theologian of the 2d century, Bardaisan, yet that connection, too, is unlikely.

The work is clearly associated with Syria, and particularly with the city of Edessa, where Thomas was traditionally venerated. The apostle's martyrdom (chaps. 159–70) records the translation of his relics from India back to the West, presumably to Edessa. *Acts Thom.* has parallels with other Thomas literature of probable Syrian provenance, including the *Gospel of Thomas* (NHC II,*2*) and *The Book of Thomas the Contender* (NHC II,*7*), discovered at Nag Hammadi, both of which rely on the notion that the apostle was Jesus' twin, and advocate a radical asceticism.

D. Contents

The Greek version consists of thirteen acts concluding the martyrdom. The first six are loosely connected episodes highlighting Thomas' miraculous powers. The first act (chaps. 1–16) begins with the distribution of mission territories among the apostles in Jerusalem. Since Thomas is reluctant to undertake his assignment to India, his master and twin, Jesus, sells him to an Indian merchant, Chaban, who seeks a skilled craftsman. Thomas submits to God's will and departs with his new owner. On the way to India they stop in a city—Sandrok in Syriac, Andropolis in Greek—where a royal wedding is in progress. At the banquet Thomas encounters a Hebrew flutist for whom he sings the Hymn of the Bride (chaps. 6–7). An insulting waiter soon meets a dire fate in accordance with the apostle's prediction. The prophecy brings Thomas to the attention of the king, who requires a nuptial blessing for his daughter. After Thomas prays for the bride and groom, Jesus appears to the couple and converts them to celibacy, to their parents' dismay. Before the king can react, Thomas departs.

In the second act (chaps. 17–29), Thomas, now in India, is interviewed by King Gundaphor, for whom the apostle undertakes to construct a palace. With the king's abundant supplies Thomas initiates a program of poor relief while preaching the Gospel. Gundaphor, on an inspection visit, discovers the truth about Thomas' activity. He imprisons the apostle with the merchant Chaban. While they languish in jail awaiting punishment, the king's brother, Gad, dies and goes to heaven, where angels show him various mansions. He requests to dwell in one but is told that it belongs to his brother. Gad obtains permission to

return to earth to purchase the property, whereupon Gundaphor finally understands the sort of palace Thomas had been constructing. Both royal brothers are converted and seek initiation. In the first major liturgical passage, Thomas anoints the two royals, preaches, and celebrates the eucharist.

In the third act (chaps. 30–38) Thomas, instructed by a nocturnal vision, discovers the corpse of a youth. A lewd serpent claims responsibility and then sings of his diabolical lineage. At Thomas' command the serpent sucks his poison from the youth and dies. The youth then hymns his deliverance. All of this prompts a series of homilies from Thomas advocating an ascetical life and promising forgiveness to the youth and other bystanders.

In the fourth act (chaps. 39–41) Thomas is returned to the city by a talking ass' foal who claims descent from Balaam's ass. Upon arrival, the animal dies and Thomas orders a proper burial.

In the fifth act (chaps. 42–50) Thomas, now back in the city, is confronted by a woman possessed by a demon. Thomas exorcizes the demon, who complains at length before being expelled. After an elaborate prayer Thomas baptizes the woman and celebrates the eucharist.

In the sixth act (chaps. 51–61) Thomas is told of a youth crippled at the reception of the eucharist. An inquiry reveals that the youth had tried to convince a beloved prostitute to embrace celibacy. Her refusal provoked him to kill her. Thomas prepares holy water to cleanse him, but he remains in despair. The apostle brings him to the victim's corpse, where, prompted by Thomas, the youth prays and revives the woman, who gives a graphic account of Hell and the punishments in store for the wicked (chaps. 55–57). Inspired by this vision, Thomas preaches repentance and conversion to Jesus, the fulfillment of Scripture. Prayers of praise and requests for divine aid close the section.

The second half of the acts is a more integrated composition with a number of interlocking episodes. Here the work displays a Christian version of erotic motifs at home in the Hellenistic novel. The dramatic tension increases as Thomas' ascetic gospel is accepted by two upper class women to the consternation of their powerful husbands.

In the seventh act (chaps. 62–68) Thomas encounters a character prominent in the rest of the work who will finally (Chap. 169) be ordained a presbyter. He is a military commander, later identified as Siphor, who serves a King Misdai. He seeks assistance for a wife and daughter possessed by demons. The apostle departs with him, after praying for his flock and appointing a deacon in his place.

In the eighth act (chaps. 68–81) Thomas and Siphor travel together until their draught animals drop from exhaustion. Thomas sends Siphor to request assistance from a herd of wild asses who readily comply. One, like the ass in the fourth act, is endowed with speech. At the commander's city, Thomas prays and sends this ass to exorcise the demons who possess Siphor's wife and daughter. It does so, rendering the women unconscious. The demons try to strike a bargain with Thomas, but he rejects their offer. The asses then preach, urging the crowds to listen to the apostle. Thomas offers a lengthy doxology to Christ, restores the women to consciousness, and dismisses the helpful beasts.

In the long ninth act (chaps. 82–118) the romantic drama and Thomas' encratite theology become prominent. A noble woman, Mygdonia, wife of a high royal counsellor, Carish, comes to hear Thomas preach. After a sermon on chastity, humility, and related virtues, she asks to be baptized, and Thomas admonishes her to forsake the world. That night she refuses to eat or sleep with her husband, who has a symbolic dream about an eagle who snatches a partridge from him. Mygdonia hints at the interpretation of the eagle as Thomas and the partridge as herself. With a tense farewell, Carish goes to attend on the king, while Mygdonia seeks out Thomas. Later Carish confronts Mygdonia, and piteously entreats her to return to his bed and board. She instead prays to be delivered from him and flees. After a bitter soliloquy Carish complains to King Misdai, who summons Siphor. While Thomas questions Mygdonia about her husband, the king questions the commander, who explains how Thomas healed his wife and daughter. The king authorizes Carish to arrest Thomas, who is interrogated, scourged, and imprisoned. The apostle offers a prayer of thanksgiving that echoes numerous gospel texts. He then launches into a poetic reflection, the *Hymn of the Pearl* (chaps. 108–13). Carish returns home to find Mygdonia unkempt and in squalid attire. After emotional appeals to give up her religious folly, he finally tries to bargain Thomas' life for

Mygdonia's love. She remains adamant. Still unbaptized, she yearns to see Thomas, takes money for bribes, and hides from her husband.

In the tenth act (chaps. 119–133) the conflict intensifies. While Mygdonia is in hiding with Marcia (or in Syr, Narkia), her nurse, Thomas comes to her. Marcia provides bread, water, and oil. Thomas blesses the oil, baptizes the two women, and celebrates the eucharist before returning to prison. Dawn finds Carish in a dramatic confrontation with Mygdonia while King Misdai again interrogates Thomas. The king advises and Carish implores Thomas to convince Mygdonia to return to her husband. Thomas accompanies Carish to his home and advises Mygdonia to obey her husband, but she refuses. Thomas returns to Siphor, who requests baptism. The apostle preaches, baptizes, then celebrates the eucharist with Siphor and his family.

In the eleventh act (chaps. 134–38) Thomas gets into deeper trouble. Misdai tells the story of Mygdonia to his own wife, Tertia, whom he urges to visit Mygdonia. Tertia complies, but Mygdonia preaches Thomas' gospel. Tertia, enthralled, visits Thomas, then tries to evangelize the king. An exasperated Misdai finds Carish and together they seek to arrest Thomas.

In the twelfth act (chaps. 139–49) Thomas continues to make important converts. Vizan, the king's son, assumes command of the soldiers guarding Thomas and the apostle preaches to him. Misdai tries to interrogate Thomas under torture, but the instrument of torture, a set of hot slabs, is miraculously neutralized by a sudden flood, which threatens to submerge the area until stopped by Thomas' prayer. Thomas then bids his followers farewell and prays.

In the thirteenth and final act (chaps. 150–171) Vizan asks Thomas to visit his ailing wife. Mygdonia, Marcia, and Tertia, miraculously freed from imprisonment, come and, like the friends of Socrates, seek to take Thomas into exile. Tertia explains how they came to the prison, guided by a divine visitation. Thomas leads his visitors in prayer and song. Vizan, sent to bring necessities, meets his wife, Mnesara, miraculously healed and guided to the prison. All assemble at Vizan's house, where Mnesara recognizes Thomas as her healer. Thomas prays, blesses the oil, then anoints and baptizes Vizan. Mygdonia baptizes Mnesara and Tertia. Thomas celebrates the eucharist, then returns to prison for a final farewell. After the guards report to Misdai the strange comings and goings of the night, there follows another dramatic encounter between Misdai and Thomas, reminiscent of that between Pilate and Jesus. The king orders Thomas to be removed and speared. Thomas compares his fate to that of Jesus, bids final farewell to his friends, and prays before being slain. After his death he appears to several of his followers. Later still Misdai searches for Thomas' bones, with which to heal an ailing son. They have been taken west, but the king uses dust from the tomb area to good effect. After Thomas appears to him he is brought to Siphor, now a presbyter, and requests prayers. The work ends on this happy note, with the persecutor brought to the threshold of the persecuted community.

E. The Hymns

Considerable attention has been devoted to the two major poetic sections, the Hymn of the Bride (chaps. 6–7) and the *Hymn of the Pearl* (chaps. 108–113). In both pieces, which were probably independent poems adapted to *Acts Thom.*, the elusive symbolism has elicited a wide variety of readings.

The first poem, which in the Syriac is an allegory of the Church, begins with a description of a bride, the "daughter of light," who is "glowing with a radiant beauty." The imagery becomes surreal with the reference to her headgear consisting of "The King and Truth." That the bride has some cosmic significance is suggested by the descriptions of her neck which is "like the steps which the First Craftsman fashioned" and of her hands which "give signs and clues, announcing the dance of the blessed aeons." She has seven groomsmen and bridesmaids and twelve servants, all watching for the bridegroom, so that they might be admitted to the "banquet of the eternal ones." There they will put on royal garments and celebrate forever. In the meantime they have received his ambrosial food and wine and have glorified the "Father of Truth and Mother of Wisdom." The bride may indeed be meant to symbolize the community of the celibate faithful, although other readings are possible. She is probably related to the figure of Lady Wisdom (e.g., Proverbs 7 and Wisdom of Solomon 7), and to the Sophia-Pronoia of

gnostic sources. If so, she could represent the insight or the faith which enables its attendants to enter the heavenly wedding banquet and put on the wedding garment.

The better known *Hymn of the Pearl* is introduced as a reflection by Thomas on his own fate. It tells of the quest by a prince who as a child is equipped and sent from an eastern kingdom to Egypt with a mission to acquire "the one pearl which is there with the dragon, the devourer." His reward is be to invested with a special garment. He travels to Egypt through Babylonia acquiring guides for the trip. In Egypt he disguises himself and takes an eastern prince as a companion. Although the prince warns his friend about Egyptian ways, he himself is overcome when the locals learn that he is a stranger. After tasting their food and drink, he enters the service of their king, forgetful of his mission. At home the royal council hears of his plight and dispatches a letter recalling him to his task. This letter issues a dramatic summons: "Arise and awake from sleep … and remember that you are a son of kings … Remember your garment woven of gold. Remember the pearl for which you were sent to Egypt." This sealed letter, which speaks and serves as an ambassador, evokes a response from the prince. He seizes the pearl and makes for home. At his approach, the promised royal garment appears. In it the prince perceives himself and is reunited with his former glory. Suitably clad he enters with the pearl to the presence of the king of kings.

Although the hymn is susceptible to various interpretations, many of which it probably received as it was adapted in successive contexts, it probably serves as an allegory of the fate of the soul. Represented by the prince, it is sent into the realm of materiality where it experiences oblivion of its heavenly origin and destiny. Impelled by a message of heavenly origin, it completes its mission. In the royal garment, which recalls the wedding garment imagery of the earlier hymn, the prince sees himself. Donning it apparently symbolizes reunion with the soul's heavenly counterpart or higher, pneumatic self. The poem reaches its climax when that salvific union is achieved. See HYMN OF THE PEARL.

F. Liturgical Elements

Initiation rituals, or impositions of the "seal," are described in several episodes (chaps. 25–27, 49, 121, 132, 157). The last three cases follow the common Syrian order of anointing before baptism. The brief reference in Chap. 49 provides little information. In the first account Thomas' preliminary prayer (Chap. 25) refers to washing before anointing. The ritual itself consists only of anointing and involves an elaborate epiclesis (Chap. 26) on the oil which, in its Greek form, invokes the spirit, in good Syrian style, as "the merciful mother" and, unusually, as the "fellowship with the male." The initiation rite brings remission of sins, new birth, and participation in the spirit (Chap. 132).

The apostle celebrates the eucharist on various occasions (chaps. 26, 27, 29, 49–50, 121, 133, 158). Wine is not regularly mentioned, appearing only at 158 and, at the request of Mygdonia, it is expressly excluded from the eucharist at 121, according to the Greek version. An epiclesis on the bread (Chap. 50) repeats some of the unusual invocations of the earlier epiclesis on the oil. Participation in the eucharist, like baptism, secures forgiveness of sins and spiritual empowerment (Chap. 158).

G. Theological Perspectives

While poems and liturgies have exotic elements, Thomas' explicit teaching is generally familiar early Christian material. The major focus is the Savior, Jesus Christ, who combines divinity and humanity (chaps. 48, 80), and who reduced himself to smallness (chaps. 15, 123) to enable humans to participate in the majesty of a new humanity (Chap. 48). Through his prophetically proclaimed (Chap. 59) suffering, death, and resurrection, he overcame the powers of death, entered Hades, and released its captives (chaps. 10, 143, 156). He has come as the revealer of saving truth (Chap. 25) and is expected as eschatological judge (Chap. 28).

Acceptance of Christ and his apostle brings salvation from inimical powers graphically portrayed in the exorcisms (Chap. 32) and from the punishments of hell (chaps. 56–58). It also liberates the believer from ignorance and error (Chap. 98) while providing knowledge of the origin and destiny of the self (Chap. 15).

Conversion entails a life of rigorous asceticism, particularly in sexual matters. While the transitory world and all its allurements are to be rejected in favor of the world above (chaps. 36–37), the source of all other ills is clearly sex and its use is to be rejected, even in marriage (chaps. 12, 28, 84, 126, 144). To

be attached to Christ is to find the true bridegroom (chaps. 14, 124) and is the basis for entry into the heavenly wedding feast. Although ascetisicm is a feature of most of the apocryphal acts, the position of this work is extreme and probably represents the position of the encratite movement of which Tatian is the best known representative.

It is generally recognized that the classification of all the apocryphal acts as "gnostic" is an obsolete oversimplification. The *Acts of Thomas* does have some elements which are gnostic in a general sense, such as the awareness of (Chap. 15) and eschatological union with (Chap. 113, in the *Hymn of the Pearl*) one's true self. Yet it lacks the cosmogonic myths characteristic of Gnosticism in the strictest sense. The work basically represents the mixture of theology, liturgy, and ascetical piety characteristic of Syrian Christianity of the 2d and 3d centuries. For text, see *NTApocr* 2: 425–531.

HAROLD W. ATTRIDGE

THOMAS, APOCALYPSE OF. A 5th-century apocryphal apocalypse that describes the events that are to occur before the end of the world. It is unlike other apocalypses, such as those of Peter and Paul, which provide visions of a future world. The *Apocalypse of Thomas* was known only through a reference in the *Decretum Glasianum* until 1908 when C. Frick discovered a citation in the Chronicle of Jerome of the *Codex Philippsianus No. 1829* in Berlin. Now it is found in two versions.

A longer version is attested by several manuscripts, such as the 9th-century Cod. Clm 4585 of Benediktbeuern; an 8th-century manuscript from the Library of the Chapter of Verona; Cod. Vatic. Palat. Nono. 220; and an Old English version from the 9th-century Anglo-Saxon Manuscript of Vercelli. There are two parts to this longer version. The first part describes what is to occur before the last judgment, and includes a series of anathemas and cries of pain and woe that will come to those who live on the earth during these last days. It is usually identified as an interpolation. The second part corresponds to the shorter version. It is represented by the 5th-century Cod. Vindob. Palatinus 16, which is the oldest known witness to the original text of all the apocalypses, and it is known from Cod. Clm 4563 from Benedikteruern that dates from the 11th or 12th century (see Otero 1965: 798–99; Quasten 1962: 149; James 1924: 556–59; and also James 1910a and 1910b).

The shorter version is the oldest known witness to the original text of the *Apocalypse of Thomas.* However, it has also been subjected to numerous revisions, especially as it was influenced by

Manichaeism and Priscillianism (Otero 1965: 799). Otero suggests that both versions provide indications that the *Apocalypse of Thomas* may be earlier than the 5th century (1965: 799). A multiplicity of variants in the Latin manuscripts leads some scholars to think that it may have originally been composed in Greek (*IDB* 4: 634; Quasten 1962: 149; Otero 1965: 799). English translations of both versions may be found in James; Otero provides a translation of the shorter version.

The shorter version of the *Apocalypse of Thomas* begins with a revelation to Thomas from the Lord, who identifies himself as "the Son of God the Father" and "the father of all spirits," about the "signs which will be at the end of the world" (Otero 1965: 799–800). These signs will take place over seven days. On the first day it will rain blood on the earth; on the second day smoke will cover the whole earth; on the third day pillars of smoke and the stench of sulfur will fill the earth; an earthquake will topple the idols of the heathens on the fourth day; darkness will cover the earth on the fifth day; on the sixth day people will hide from the righteous angels and the "bodies of the saints will rise"; on the seventh day angels will fill the air and make war among themselves and deliver the elect. On the eighth day the elect who believe in Jesus will be delivered, and they will rejoice over the destruction of the world.

DANA ANDREW THOMASON

THOMAS, GOSPEL OF (NHC II,*2*). The *Gospel of Thomas* is an anthology of aphorisms, proverbs, parables, prophetic sayings, and community rules preserved in the name, and under the authority, of Jesus. It is thus a representative of the genre chreia collection: concise sayings aptly attributed to Jesus are listed seriatim in the form of direct statements made by Jesus or responses to questions asked of him. Whereas the colophon at the end of the text presents the anthology as a "gospel," the incipit provides the original designation for the genre as a collection of attributed "sayings." *The Gospel of Thomas* may therefore be regarded as a sayings gospel. The division of the text into 114 sayings is not given in any manuscript but has become a standard scholarly practice since that procedure was introduced in 1959 (Guillaumont et al. 1959: vi).

———

A. Text and Attestation

The Coptic text of *Gos. Thom.* is a translation of a lost Greek original. Although fragments of three different mss of the Greek text were discovered among the Oxyrhynchus papyri *(P. Oxy.)* and published in 1897 and 1904, the gospel is extant in its entirety solely in a Coptic translation. It survives as the second of seven tractates of Codex II of the Coptic Gnostic Library from Nag Hammadi, which was buried in the 4th century and unearthed in Egypt in 1945. The Coptic text is conserved in the Coptic Museum of Old Cairo. The three Greek fragments (*P. Oxy.* 1, 654, 655) are conserved, respectively, in the Bodleian Library, Oxford University; the British Library, London; and the Houghton Library, Harvard University.

The discovery of the Coptic text enabled scholars to identify the Greek papyri as fragments of *Gos. Thom.* and, in turn, assess the relationship of the Greek to the Coptic text. *P. Oxy.* 654 corresponds to the prologue and sayings 1–7 of *Gos. Thom.; P. Oxy.* 1 corresponds to *Gos. Thom.* 26–30, 77.2, and 31–33;

and *P. Oxy.* 655 corresponds to *Gos. Thom.* 24 and 36–39. On paleographical grounds *P. Oxy.* 1 has been assigned a date shortly after 200 C.E.; the copying of the other two Greek fragments is estimated to date from various decades in the mid–3d century. Analysis of the handwriting of the Coptic text, which is well preserved, indicates that it was copied just before the year 350. According to the critical edition of the Coptic text by Layton (1989: 7), the admixture of Sahidic and Subakhmimic forms indicates that the language of this translation is "a literary language," apparently "written by a speaker" of Subakhmimic "attempting, artificially, to conform" to Sahidic. See LANGUAGES (COPTIC).

Substantial differences do exist between the Greek fragments and the Coptic text. These are best explained as variants resulting from the circulation of more than one Greek edition of *Gos. Thom.* in antiquity. The existence of three different copies of the Greek text of *Gos. Thom.* does give evidence of rather frequent copying of this gospel in the 3d century. According to the critical edition of the Greek text by Attridge (in Layton 1989: 99), however, even though these copies do not come from a single ms, the fragmentary state of the papyri does not permit one to determine whether any of the mss "was copied from another, whether they derive independently from a single archetype, or whether they represent distinct recensions." It is clear, nevertheless, that *Gos. Thom.* was subject to redaction as it was transmitted. The presence of inner-Coptic errors in the sole surviving translation, moreover, suggests that our present *Gos. Thom.* is not the first Coptic transcription made from the Greek. The ms tradition indicates that this gospel was appropriated again and again in the generations following its composition. Like many other gospels in the first three centuries, the text of *Gos. Thom.* must be regarded as unstable.

The one incontrovertible testimonium to *Gos. Thom.* is found in Hippolytus of Rome (*Haer.* 5.7.20). Writing between the years 222–235 C.E., Hippolytus quotes a variant of saying 4 expressly stated to be taken from a text entitled *Gos. Thom.* Possible references to this gospel by its title alone abound in early Christianity (e.g., Eus. *Hist. Eccl.* 3.25. 6). But such indirect attestations must be treated with care, since they might refer to the *Infancy Gospel of Thomas.* Parallels to certain sayings in *Gos. Thom.* are also abundant; some are found, according to Clement of Alexandria, in the *Gospel of the Hebrews* and the *Gospel of the Egyptians.* However, a direct dependence of *Gos. Thom.* upon another noncanonical gospel is problematic and extremely unlikely. The relationship of *Gos. Thom.* to the *Diatessaron* of Tatian is even more vexed, exacerbated by untold difficulties in reconstructing the textual basis of Tatian's tradition, and has not yet been resolved.

B. Authorship and Origins

The prologue of *Gos. Thom.* explicitly identifies Jesus as the speaker of its sayings and Didymus Judas Thomas as the one who recorded them in writing. Although the sayings' authority ultimately resides in the voice of the "living Jesus," attribution of those sayings to Jesus is said to be authenticated by Didymus Judas Thomas, who was revered in the early Syriac church as an apostle and twin brother of Jesus. The simple name Thomas is a transliteration of a Semitic surname, whose underlying meaning, like that of the accompanying Greek "Didymus," is the ordinary word for "twin." Judas is thus the original, given name of the pseudepigraphic author of the collection, the same person to whom the letter of Jude in the NT is also attributed. However, because the colophon identifies the text as *Gos. Thom.*, it has become customary to refer to the author by the derivative cognomen Thomas.

Attribution of authorship to Judas Thomas situates the text at a time in which appeals of authority were made to individual disciples or apostles by name, in order to secure the identity and guarantee the reliability of the tradition of those communities which looked to such individuals as their patron. Thus, though James is respected (saying 12; cf. Gal 1:19; 2:9, 12), his authority is succeeded in *Gos. Thom.* by that of Thomas (saying 13). And the contrasting of Thomas' authority with that of Peter and Matthew (saying 13; cf. Gal 1:18; 2:7–9, 11–14; Matt 16:15–19; John 21:15–23) may indicate further that *Gos. Thom.* was composed at a time in which collections of written traditions about Jesus were connected with the competitive claims of authority under the names of individual followers of Jesus.

The fact that Judas "the Twin" was the apostolic figure particularly revered in Syriac-speaking churches is important evidence for the date and place of composition of the text. For as Koester (in Layton 1989: 39) has shown, *Gos. Thom.*'s identification of its author as Jesus' brother Judas does not presuppose a

knowledge of the NT, but "rests upon an independent tradition." In addition, the peculiar, redundant name Didymus Judas Thomas seems to be attested only in the East, where the shadowy disciple named Thomas (Mark 3:18 par.; John 14:5) or Thomas Didymus (John 11:16; 20:24; 21:2) was identified with Judas in the Syriac NT and called Judas Thomas (John 14:22). The occurrence of variants of this distinctive name in the *Acts of Thomas* is especially striking, not only because the latter evidently shows acquaintance with *Gos. Thom.* 2, 13, 22, and 52, but also because it is widely held that the *Acts of Thomas* was composed in Syriac in the early 3d century. Other documents that invoke the authority of Judas Thomas by name are also of Syrian origin, such as the *Teaching of Addai,* the Abgar legend (Eus. *Hist. Eccl.* 1.13.1–22), and the *Book of Thomas the Contender* (NHC II,*7*).

Accordingly, the naming of Judas Thomas as the ostensible author of *Gos. Thom.* serves to locate the likely composition of the text in a bilingual environment in E Syria. Since Edessa was the capital city of the N Mesopotamian region known as Osrhoëne, whose church preserved the bones of Thomas as relics since the end of the 4th century (Layton 1987: 361), scholars have generally accepted it as the place of composition of the text. Another city in the same geographical provenance, however, would not be implausible. A bilingual culture is thought to be required for the production of a gospel extant in Greek and showing traces of Semitisms. Nevertheless, it is questionable whether*Gos. Thom.* was actually composed in Aramaic or Syriac and then translated into Greek and Coptic. There is no evidence for the text of *Gos. Thom.* other than that preserved in Greek and in a Coptic translation made from the Greek. If there ever were a Syriac version, it apparently has not survived.

Although the Coptic text of *Gos. Thom.* was copied in the 4th century, the Oxyrhynchus papyri establish a date of composition prior to the year 200 C.E. The original editors of the Greek fragments had proposed the year 140 as the latest likely date of composition for *P. Oxy.* 1 and 654 (Grenfell and Hunt 1897: 16; 1904: 25), and the year 150 for *P. Oxy.* 655 (1904: 44). Even though they preferred to date the collection ca. 100 (1897: 18), their terminus ad quem of 140 became widely assumed as the actual date of composition of the gospel (e.g., Guillaumont et al. 1959: vi; *NTApocr* 1: 305; Quispel 1975: 180, 194; 1981: 222–23). Determining a plausible date of composition is speculative and depends on a delicate weighing of critical judgments about the history of the transmission of the sayings-of-Jesus tradition and the process of the formation of written gospel texts. The earliest possible date would be in the middle of the 1st century, when sayings collections such as the Synoptic Sayings Gospel Q first began to be compiled. The latest possible date would be toward the end of the 2d century, prior to the copying of *P. Oxy.* 1 and the first reference to the text by Hippolytus. If *Gos. Thom.* is a sayings collection based on an autonomous tradition, and not a gospel harmony conflated from the NT, then a date of composition in, say, the last decades of the 1st century would be more likely than a mid-to-late-2d-century date. As such, this gospel would provide the earliest surviving evidence for the beginnings of Christianity in and around Edessa.

C. Relationship to the NT

The scholarly community is more sharply divided over the question of the relationship of *Gos. Thom.* and the writings of the NT than any other single issue. Since no fewer than 68 of the 114 sayings in the text have biblical parallels, establishing a connection between *Gos. Thom.* and the NT could have far-reaching consequences. The outcome would not be restricted to the narrow confines of source criticism or the extent of the Synoptic Gospels' influence on those texts which eventually were not accepted into the canon. Broader issues are at stake as well, including the significance of *Gos. Thom.* for the history of the transmission of the sayings-of-Jesus tradition, the place of this text in the intersection of cultures symbolized by the term "Christian beginnings," and the very designs of the gospel itself.

Scholars who argue that *Gos. Thom.* is dependent on the NT generally regard the former as a mid-to-late-2d-century gospel harmony, composed for the needs of a Christian gnostic community (e.g., Schrage 1964). Scholars who maintain that *Gos. Thom.* is independent of the NT generally consider this gospel a 1st- or early-2d-century sayings collection, based on traditions which are closely related to the traditions of the canonical gospels but which have undergone a separate process of transmission (e.g. A.e.g., Robinson and Koester 1971). An intermediate position is taken by those scholars who propose that an

original core of chreiai, parallel to but independent of the NT, forms the basis of *Gos. Thom.*, which at some later stage in the development of the text was combined with sayings derived from the Synoptic Gospels (e.g., Wilson 1960).

The most distinctive hypothesis for *Gos. Thom.*'s dependence on sources but independence from the NT has been repeatedly advanced by Quispel (e.g., 1975: 3–16, 180–209; 1981: 218–66). Starting from the observation that Clement of Alexandria attributed variants of saying 2 to the *Gospel of the Hebrews* and saying 22 to the *Gospel of the Egyptians,* Quispel proposed that *Gos. Thom.* is a collection of sayings derived in part from those two noncanonical gospels. The presence of doublets in the text of *Gos. Thom.* is regarded as proof of its use of written sources. Where there are doublets, one member of the pair is said to reflect a more Jewish-Christian theology and the other a more encratite theology. The *Gospel of the Hebrews* (which Quispel frequently equates with the *Gospel of the Nazoreans*) is considered the source of the former; the latter member, it is argued, was reproduced from the *Gospel of the Egyptians.* In addition, a third source is provided for those sayings that have neither a Jewish-Christian nor an encratite theology: a hermetic gnomologium, comprising hellenizing sayings which speak about one's knowledge of the self (Quispel 1981: 259–66).

Quispel's arguments have not received the endorsement of most scholars (Haenchen 1961–62: 162–69; Fallon and Cameron *ANRW* 2/25/6: 4216–19). He predicates his source-critical hypothesis on fragmentary texts of indeterminate content, tenuous attestation, and uncertain designation. Entire gospels are thus reconstructed from a handful of quotations preserved in early Christian writers, then put forward as the textual bases from which *Gos. Thom.* is supposed to have extracted some of its sayings while, simultaneously, eliminating all traces of their narratives. Quispel equates the presence of Jewish-Christian and encratite sayings in *Gos. Thom.* with the necessity of their stemming, respectively, from a single written source. But what he identifies as isolated sources are not coherent written texts, only sayings which apparently share a common heritage. Attempts to establish a direct dependence of *Gos. Thom.* on noncanonical gospels are very precarious indeed.

The question of the relationship of *Gos. Thom.* and the Gospels of the NT is still to be resolved. Arguments for dependence or independence ultimately must come to grips with two fundamental issues: the wording of the sayings in *Gos. Thom.* and the order in which they are presented in the text. Close analysis of a saying's wording seeks to establish whether or not individual words or phrases in *Gos. Thom.* and the NT are dependent on their respective parallel passages. Careful scrutiny of the sayings' order endeavors to account for the differences in the sequence of those sayings that are preserved in *Gos. Thom.* and the NT. Constructing an argument based on wording is compounded by the difficulties in determining whether specific terms that appear in *Gos. Thom.* and the NT show the distinguishing signs of redactional revisions of the other's sayings; indicate coincidental agreements that may be drawn from oral traditions or written texts shared in common; or attest to a process of intertextual composition, in which the authors of *Gos. Thom.* and the NT experimented with creative ways to integrate past reflections and present perceptions into novel literary performances, in order to make sense of the various junctures of their groups' histories. Constructing an argument based on order, on the other hand, is compromised by the fact that *Gos. Thom.* presents its sayings in a sequence totally different from that of any of the Synoptic Gospels, and does so with no discernible compositional pattern demanding such a rearrangement.

Those who argue that *Gos. Thom.* is dependent on the Synoptics not only must explain the differences in wording and order, but also give a reason for *Gos. Thom.*'s choice of genre and the absence of the gospels' narrative material in the text. To assert, for example, that *Gos. Thom.* erased the passion narratives because Gnosticism was concerned solely with a redeeming message contained in words of revelation (Haenchen 1961: 11) is simply not convincing, since the *Apocryphon of James* (NHC I,*2*), the *Second treatise of the Great Seth* (NHC VII,*2*), and the *Apocalypse of Peter* (NHC VII,*3*) all indicate that sayings of and stories about the death and resurrection of Jesus were reinterpreted by various gnostic groups. For any theory of dependence on *Gos. Thom.* or the NT to be made plausible, one must show that the variations in form and content of their individual sayings, together with the differences in genre and

structure of their entire texts, are intentional modifications of their respective parallels, designed to serve a particular purpose.

There are only four instances in which *Gos. Thom.*'s order approximates that of sections of the NT:

(1) saying 32 (Matt 5:14b)
saying 33.2 (Matt 5:15 = Luke 11:33 = Mark 4:21 par.)
(2) saying 43.3 (cf. Matt 7:16a, 17–18; 12:33 = Luke 6:43–44a)
saying 44 (Matt 12:31–32 = Luke 12:10 = Mark 3:28–29)
saying 45.1 (Matt 7:16b = Luke 6:44b)
saying 45.2 (Matt 12:35 = Luke 6:45ab)
saying 45.3 (Matt 12:34b = Luke 6:45c)
(3) saying 65 (Matt 21:33–39 = Mark 12:1–8 = Luke 20:9–15)
saying 66 (Matt 21:42 = Mark 12:10 = Luke 20:17)
(4) saying 92.1 (Matt 7:7b = Luke 11:9b)
saying 93 (Matt 7:6)
saying 94 (Matt 7:8bc = Luke 11:10bc)

For those who argue that *Gos. Thom.* is independent of the Synoptics, these parallels present a problem that cannot readily be resolved according to current assumptions about documentary relationships. An intertextual model may prove helpful, for it enables texts to be understood as highly conscious authorial compositions, adapted and adopted from various encounters with groups and repeated engagements with texts that constituted the cultural tapestry of the times. The relationship of *Gos. Thom.* and the gospels of the NT may be imagined intertextually as a process of creative borrowing and reworking by all parties over time, in which original contributions were entertained and traditional materials recast to produce novel literary performances that addressed the concerns of socially autonomous Christian communities. In *Gos. Thom.* these particular sequences are arranged according to similarity in form, shared theme, and catchword association. Only saying 44 disrupts the proverbial features of these four sets—and it seems to have been inserted as a judicial threat, to warn the "disciples" (mentioned in saying 43.1) of the perils of misconstruing the identity of Jesus, manifest in his words. These chreiai do not function as a harmony of the gospels, but are grouped in units that express the labor invested in maintaining the fabric of an ordered society. By formulating insights essential for living astutely in the world, the collected sayings of *Gos. Thom.* offer the path of wisdom, described throughout the gospel, as the guiding perspective for the community counseled by the text.

Most discussions of *Gos. Thom.* and the NT have been conceived somewhat narrowly, couched chiefly in terms of *Gos. Thom.*'s possible dependence on the canonical Gospels as written sources. A broader perspective is called for, which not only inquires into a text's use of sources but also examines how the authors of a text appropriated everything that they used. Developing a method for controlling the ways in which *Gos. Thom.* may have inserted, deleted, transposed, or conflated its sources is an exceedingly intricate task. In a chreia collection, sayings could conceivably be added or subtracted anywhere, at any time, to update the collection, take a position on issues of interest to the Jesus movements, and reflect on the development of a particular group's history. *Gos. Thom.* is a text that lays claim to formal authorship and renders critical judgments upon the patterns of practice of its times. It therefore must be considered the guiding religious statement of an autonomous Christian community.

Both that community and its gospel have their own rationales, patterns of discourse, and networks of social and textual relations. To be sure, there may be some evidence that the scribes who copied the Coptic text of *Gos. Thom.* were acquainted with the gospels of the NT. But a correspondence between the Coptic translations of the NT and the Coptic text of *Gos. Thom.* would prove some sort of relationship only at the stage of their translations, not at the compositional level of their Greek texts. And the Greek *Gos. Thom.* appears to be further from the NT than the Coptic text. Accordingly, *Gos. Thom.* is best

understood as an independent sayings collection of a self-conscious scribal tradition, a gospel with its own compositional integrity, generic identity, and transmissional history. Most of the sayings in the gospel are preserved in forms more original than their parallels in the NT or reflect developments of more original forms of such sayings. *Gos. Thom.* thus continues the process of creative remembering. Its group has persisted in collecting, composing, and updating its heritage by acts of reinterpretation over the course of several decades of social history.

D. Literary Criticism

The fundamental literary feature governing the composition and interpretation of *Gos. Thom.* is its genre. As a chreia collection, the gospel comprises self-contained units arranged in no discernible order. Its chief organizing principle seems to be the linking of discrete sayings by catchword association. Although some chreiai have been grouped according to a similarity in form (e.g., proverbs in sayings 31–35; parables in sayings 96–98) or a shared theme (e.g., the "elect" in sayings 49–50), few display a compositional sequence structured according to antique patterns of rhetorical elaboration. It is possible that our present *Gos. Thom.* is based on an older collection of sayings which neither the Greek nor the Coptic version has preserved in its original form. However, no cogent literary arguments have yet been adduced for isolating such a collection, identifying its characteristics and contours, and indicating which sayings clusters may compose that earlier stratum and which a later recension.

A chreia collection imparts its own distinctive claim of authority. The teacher is regarded as present in the words that are selected for inclusion in written form. It is the task of the reader, on the other hand, to provide an interpretative context, and thus imitate or assimilate the virtues displayed by the teacher and offered in the text. Ascribing *Gos. Thom.* to Jesus, who is characterized as a sage with a distinguished reputation, presupposes that his counsel is endowed with special wisdom. By identifying him as "the living Jesus," moreover, the claim is made that his wisdom is invested with divine authority. Jesus' sayings are thus understood to be those of the voice of divine Wisdom manifesting herself. His authority resides not in the mythology of the risen Christ—a postresurrection setting is disallowed by the text—but is localized in sayings that offer contemporizing wisdom, made available through the gospel, for those who have ears to hear.

The designation of the text as "the secret sayings which the living Jesus spoke," whose interpretation will enable one not to "taste death," indicates that the discernment of the meaning of these sayings was thought to bring secret wisdom. As Kloppenborg (1987: 301) has shown, the sayings in *Gos. Thom.* have been "formulated so that they require interpretation in order to become efficacious." In fact, there is a direct correlation between the production of this text and the skill needed to interpret it correctly. According to the prologue, the secret sayings of the living Jesus are recorded in writing by his twin brother Thomas. Correspondingly, in saying 1, "the reader is to penetrate the opacity of the written word by means of a hermeneutical key which would unlock the secret of life." That key is proposed programmatically in saying 2, which describes by way of a sorites nothing less than "a process of 'sapiential research,' " in which "interpretation and salvation coincide" (Kloppenborg 1987: 305). Fundamentally, therefore, *Gos. Thom.* is an esoteric book whose explication, marked by insight and mastered by research, discloses one's origin, identity, and destiny (saying 50).

The majority of the sayings in *Gos. Thom.* are indicative of reflective activity pertaining to and characteristic of the phenomenon of wisdom. Proverbs (e.g., sayings 31–35, 45, 47, 94) clarify the world and one's situation in it. They conceptualize the sense to be made of the social order by identifying the skills and articulating the responses appropriate to exemplary, lived circumstances. Parables (e.g., sayings 8–9, 20, 63–65, 76, 96–98, 107, 109) express the discovery of one's identity and destiny in the words of wisdom that form the basis of a community. It is striking that the parables preserved in *Gos. Thom.* regularly refer to the labor requisite to cultivating the kingdom, and feature none of the elaborate allegorical interpretations attested in their parallels in the gospels of the NT (Cameron 1986: 3–39). Prophetic sayings (e.g., sayings 3, 18, 51, 113) announce that the arena for encountering the ethos of the kingdom is an ideal order, which must be recognized without and internalized within the imagination of the individual. Even those sayings formulated in the first person singular (e.g., sayings 17, 23, 28, 77, 90,

108) are pronouncements of heavenly Wisdom, not announcements of some role for Jesus as a savior who is to come. For *Gos. Thom.*, the kingdom is not projected into an apocalyptic future, but is made accessible and rendered intelligible through pondering the meaning of Jesus' words.

Community rules (e.g., sayings 6, 14, 27, 53, 104) present a critical assessment of traditional codes of religious etiquette. In marking the differences that define group membership, these rules direct the community's attention to the consequences of imitating the patterns of practice exemplified by Jesus and described in the text. The distinctive character of the conditions of discipleship comes to expression most personally in selected aphorisms (e.g., sayings 42, 49, 58, 82) in *Gos. Thom.* Individual no less than collective wisdom has been aptly ascribed to the figure of Jesus. Such a sapiential characterization indicates that Jesus is not only sanctioned as the envoy of Wisdom; he is also the one through whom that divinely anchored order is maintained and manifest in the midst of the world. By presenting the entire gospel as a collection of attributed sayings, therefore, *Gos. Thom.* locates the realm of imaginative discourse as the social space for cultivating a sane and circumspect society made possible by the wisdom remembered in Jesus' name.

E. Theology and Social Formation

One of the most discussed issues in the literature on *Gos. Thom.* is whether or not this gospel is gnostic. Quispel (1975: 196, 198, 206; 1981: 219, 223, 234, 264) has consistently maintained that *Gos. Thom.* is not a gnostic but an encratite text, whose apparent gnostic features owe their appearance to the author's use of hermetic sources, thought, and lore. It is certainly possible that some gnostic sayings were interpolated into the text during the course of its transmission, and may well form the latest stage in the social history of the gospel. Nevertheless, no literary arguments have been adduced to indicate why such sayings were inserted in the text where they are. A majority of scholars have concluded that *Gos. Thom.* is a gnostic gospel, though it cannot be assigned to a particular sect or school. As the text now stands, it surely seems to be gnostic, for *Gos. Thom.*'s members acknowledge in the first person plural their origin and identity in the realm of light (saying 50), and where they preexisted (saying 19.1) and are destined to return (sayings 18, 49). This gospel thus bears witness to that widespread esoteric movement in antiquity which regarded insight as the means of attaining liberation, the recognition of one's own identity with the divine.

For some readers, a hidden clue to gnostic interpretations of other sayings may have been provided by finding what were regarded as allusions to a "myth of the heavenly origin, fall, incarnation, awakening, and return of the soul" (Layton 1987: 376) encoded in the otherwise "obscure" aphorisms in the text. The fact that Jesus' twin brother Thomas is the ostensible author of the gospel may therefore be especially significant. It is noteworthy in any case, for, as Layton (1987: 359) has shown, the motif of the twin "provided a profound theological model for the reciprocal relationship of the individual Christian and the inner divine light or 'living Jesus': to know oneself was to know one's divine double and thence to know god." Accordingly, whoever comes to recognize the essential identity of himself, the living Jesus, and the father is characterized in *Gos. Thom.* as a "solitary" (sayings 16, 49, 75) or "single" one (sayings 4, 11, 22, 23, 30, 106), who has broken the bonds that mark existence without integrity and been restored to a state of primordial unity. Jesus himself is the prototype of that oneness (saying 61); correspondingly, Thomas' recognition of his identification with Jesus (saying 13) discloses the profile of self-awareness that is mirrored through the text.

Becoming a solitary or single one is signified in *Gos. Thom.* by baptismal initiation. Sayings that focused on the disciples' stripping themselves naked, being without shame, treading on their garments, and becoming as little children (sayings 21.1–2, 22, 37) were elaborated in baptismal practices and attendant interpretations of the Genesis accounts of the creation and the fall (Smith 1965–66: 217–38). According to this tradition, the unity of the first human was disrupted by the creation of woman and subsequent sexual division. Redemption was imagined to be the replication of Adam and Eve's primordial state, the reunification of the sexes and transcendence of the world. *Gos. Thom.* thus presents baptism as a symbol of rectification, making paradise the paradigm for social relations in the community. Initiates were invited to take their place in that ideal new order identified as the kingdom. References to the solitary or

single one that are appended to other sayings in *Gos. Thom.* (sayings 4.2, 16.2, 23) indicate that the language of baptism not only signified a ritual of initiation, but has also become a focusing lens for conceptualizing the difference that solidarity in the community makes.

As the guiding religious statement of an identifiable Christian community, *Gos. Thom.* is fundamentally concerned with questions of social self-definition. What the kingdom is like, to whom it belongs, how one is admitted, and what etiquette is proper were the burning issues that the sayings addressed to designate membership in that community. In addition to the function of baptism in *Gos. Thom.* as an elaboration of identification, table fellowship is also attested as a social setting for remembering the gatherings that Jesus occasioned. Sayings that refer to a member's place on dining couches at a banquet (sayings 61.1–2, 64) were told in the context of community meals, to demarcate one's belonging to the group and to assess the significance of invested loyalties (Cameron 1986: 16–19). Parables and other chreiai that were understood self-referentially may well have been produced on similar occasions.

Two of those parables are introduced with a question from or about the disciples (sayings 20, 21.1–2). Such attributions are particularly striking, since the "disciples" serve as foils in *Gos. Thom.* to underscore Jesus' identity and his consequence for the community (sayings 18, 24, 37, 43, 51, 52, 99, 113), and to inquire about the codes that constitute their activity (sayings 6, 53). The *Gos. Thom.* is acquainted with the apocalyptic responses of other, threatened groups, but it rejects them by redirecting the disciples' queries about the future (e.g., sayings 18, 51, 113) with answers which employ the aphoristic imagination that was cultivated by the earliest Jesus movements. Accordingly, Jesus is neither presented as an apocalyptic preacher nor characterized as the coming "Son of Man" (*Gos. Thom.* 86 preserves a generic, nontitular usage). Instead, he is identified as the personification of Wisdom (e.g., saying 28), whose appearance made a difference in the way the social order would be established, sought, and found.

Moreover, *Gos. Thom.* does not interpret Jesus' death by means of a theology of the cross, but advances a christology in which such a proclamation was not necessary. When the disciples are aware that Jesus will pass away, they reflect on the implications of his departure in terms of group leadership (sayings 12, 13). Accordingly, there is no need to appeal to the cross and resurrection in order to imagine the origins of Christianity, for *Gos. Thom.* documents an alternative rationale sufficient to account for its beginnings, and presents a wisdom paradigm as a mythic precedent to reflect upon its subsequent history. Jesus' death is conceptually linked to the life of the disciple, who bears his own cross in imitation of Jesus' stance of endurance (sayings 55, 101). For this gospel, therefore, the reciprocal relationship of Jesus and his followers is characterized as an ethos marked by self-identification, social solidarity, and personal integrity.

Gos. Thom. took Jesus seriously as a teacher who spoke with authority. It celebrated his memory by preserving sayings in his name that sanctioned the formation of a distinctive community. The gospel locates its group's position within the Christian tradition as an independent Jesus movement, which persisted over the course of several generations of social history without becoming an apocalyptic or kerygmatic sect. Authorized by interpreting the written legacy of Jesus, *Gos. Thom.* maintained its autonomy and distinct identity by acts of creative attribution. Jesus was characterized as the embodiment of Wisdom; his words, which could harness the very power of the universe, offered her path of "knowing" as an investment of the imagination. *Gos. Thom.* defines the role of its community in constructing the fabric of society as a process of sapiential insight and research. This gospel, therefore, charts the course of salvation as a study in interpretation, providing the elixir of life to those for whom the secret of the kingdom is disclosed in the interpretation of Jesus' words.

RON CAMERON

THOMAS, THE INFANCY GOSPEL OF. The *Infancy Gospel of Thomas* (= *Inf. Thom.*) is a popular collection of novelistic miracle stories which purport to recount the miracles and sayings of the boy Jesus between five and twelve years of age. In terms of the development of the tradition sometime in the mid–2d century, *Inf. Thom.* represents the textualization of a cycle of orally transmitted folklore which was continually expanded by the still circulating oral tradition (Gero 1971: 56–57) and, at the textual level, by creative editors. The text is not to be confused with the sayings gospel *The Gospel of Thomas* (NHC II,*2*) from Nag Hammadi.

A. The Manuscript Tradition

The most noticeable and problematic feature of the ms tradition of *Inf. Thom.* is that the text is known in numerous recensions and translations (at least 13 languages; Mirecki 1983: 191–201). This is not surprising considering the popular and folkloristic nature of the narratives. Some of the earliest and most important mss have not yet been edited and studied, so that basic questions concerning the original language (Greek or Syriac [cf. Peeters 1911–14: i–lix, esp. xx; and the critique by Gero 1971: 48 n. 1]), the earliest written form of the narratives, and the time, place, and circumstances of composition still remain unanswered (for a useful stemma of the ms tradition, see Gero 1971: 56; my abbreviations for mss follow Gero's model [49–54] and references to texts in *Inf. Thom.* follow that of Cullmann *NTApocr* 2: 388–401).

1. Syriac Manuscripts. One of the most important mss dates from the second half of the 6th century and contains *Inf. Thom.* in the Estrangela script of Syriac (= *BMSyr*). Edited by Wright (1865: 6–11), the ms is in the British Museum and is considered by Gero (1971: 51, 55) to represent the earliest known form of the text. There are two other Syriac mss but neither has been published. One is in Göttingen (= *Gött*) and dates from the 5th or 6th century (cf. Gero 1971: 51 n. 6); the other is a Vatican ms (= *Vat. syr.;* Bib. Vat. Syr. 159) dated to 1622–23, which Peeters (1911–14: xiii-xvi) suggests is at the base of all other recensions. The Syriac text of *Inf. Thom.* was incorporated into a later work of unknown date called the *Life of Mary* (Budge 1899: 1.65–70, 75–76; 2.70–82), which itself is known from a 13th- or 14th-century Syriac ms (= *BVM*).

2. Greek Manuscripts. In the modern period, *Inf. Thom.* is best known in the so-called longer recension (*GrA;* = Gero's A-type text), based on two Greek mss. One is dated to the 15th century and is currently in Bologna (= *Bonon*) and the other is dated to the 16th century, may be dependent on *Bonon,* and is in Dresden (= *Dresd;* Mingarelli 1764: 73–155; Thilo 1832: 275–315; Tischendorf 1876: xxxvi–xlviii, 140–57; Michel 1911–14: xxiii–xxxii, 161–89; Santos Otero 1984: 280–303). Two other mss of the longer recension are a fragmentary 15th-century ms in Paris (= *Par;* Bibl. nat. gr. 239), first edited by J. B. Cotelier in 1698 (repr. 1700 and 1724) and reprinted by J. A. Fabricius in 1703 (1.127–67), and a now-lost fragment from Vienna (= *Vind;* Tischendorf's discussion [1876: xliii] is derived from Thilo [1832: lxxv, 275–81]). Also of the longer recension and demonstrating significant agreements with the Latin and Slavonic versions is a 15th-century ms in Athens (= *Ath;* Athens bibl. nat. gr. 355), edited by Delatte (1927: 264–71). Finally, the longer recension in Greek is preserved in an important and unedited 14th- or 15th-century ms in the library of Vatopedi Monastery on Mt. Athos (= *Athos;* cod. 37), a little-known ms which has so far received only brief notice beginning with R. Lipsius in 1890 (24). A shorter and possibly secondary recension in Greek (*GrB;* = Gero's B-type text) is known from a 14th- or 15th-century ms at Mt. Sinai (= *Sinai*). This text was edited by Tischendorf (1876: xliv, 158–63) and shows similarities with the late Latin infancy gospel *Pseudo-Matthew* (see below). The shorter recension is generally understood to be a selective abbreviation of the longer recension (Gero 1971: 49) but McNamara (1971: 42–66) argues that the shorter (also known in an Irish version, see below) is prior to the longer and so preserves an earlier "short form" of the text.

3. Latin Manuscripts. A late and undated Latin ms (= *Vat*) in the Vatican library (Vat. Reginae Sueciae 648 [cf. Gero 1971: 50 n. 2]), edited by Tischendorf (1876: 164–80), begins with the story of the flight to Egypt when Jesus was two years old (as does *Ath*). Another of our earliest unedited mss is a damaged Latin palimpsest in Vienna (=*Lat palimps.*) which Tischendorf (1876: xliv–xlvi) dates to the 5th century. The Latin text of *Inf. Thom.* was incorporated into a larger work sometime during or before the 9th century (Gero 1971: 51 n. 1), known as the infancy gospel of *Pseudo-Matthew* (= *Ps-Matt*). At least four mss of *Ps-Matt* are extant from the 14th and 15th centuries (for discussion of *Ps-Matt* follow the reference to the work of Sanchez [1968] in Gero 1971: 51 n. 2). Select episodes from the Latin versions of *Inf. Thom.* were incorporated into other medieval Latin infancy gospels, and the most striking is a 13th-century ms in Paris (= *Lat. Par.;* Paris Bibl. nat. lat. 11867), which transmits the story of the boy Jesus riding on a sunbeam also found in other mss, including Codex B of *Ps-Matt* (Gero 1971: 51 nn. 3–4; 57).

4. Slavonic Manuscripts. At least fourteen mss dating from the 14th through 19th centuries in five Slavonic languages are extant. They generally conform to Gero's A-type text and may derive from more than one early translation into Old Slavonic from Greek (see bibliographies in Gero 1971: 53–55; Lüdtke 1927: 490–508; Santos Otero 1984: 284). Following Gero, we have a Russian ms (= *S*) from the 16th century edited by Speranskij in 1895; three Serbian mss, the first (= *X;* the Chudlov ms) from the 14th century edited by Popov in 1872, the second (= *N*) also from the 14th century edited by Novakovic in 1876, and the third (= *L*) from the 16th century edited by Lavrov in 1899; a Middle Bulgarian ms (= *J*) from 1337–55 edited by Jacimirskij in 1899; a Croatian ms (= *Cr*) from the 15th century, in Glagolitic script, translated into Serbo-Croatian by Grabar in 1969; and finally eight Ukrainian mss from the 18th and early 19th centuries published by Franko, Adrianova, and Speranskij.

5. An Irish Manuscript. A 17th-century ms (= *Ir*) contains an Irish translation of *Inf. Thom.* into verse. The ms was edited by J. Carney (1958: 1–43), who argues that the translation into Irish was made about the year 700. The text represents Gero's Greek B-type text (the shorter recension) and demonstrates affinities with the Syriac versions and the Latin *Ps-Matt* Gero does not discuss the ms, while McNamara (1971: 42–66) argues against the consensus that the shorter recension, shared only by *Ir* and *Sinai,* is prior to the longer and so preserves an earlier "short form" of the text. The issue is yet to be decided but the burden of proof is on McNamara's position.

6. Arabic, Armenian, Ethiopic, and Georgian Manuscripts. We have already noted the incorporation of *Inf. Thom.* into later infancy gospels in the case of the Syriac version used as a source for *BVM* and the Latin version used as a source for *Ps-Matt* An Arabic infancy gospel, using several episodes in chaps. 36–53 from the Greek and Syriac *Inf. Thom.,* was first published in 1697 by Sike on the basis of a poor and now lost ms (= *Arab* or *S;* text available in Thilo 1832: 63–158). Another ms (= *Flor. arab.*) of the Arabic infancy gospel is in the Medici Library in Florence (Codex Laurentianus orientalis 32) and is dated to the year 1299, but does not employ the episodes from *Inf. Thom.* (Thilo 1832: xxxi; Peeters 1911–14: viii). An Armenian infancy gospel of the 12th century, employing episodes from *Inf. Thom.* in chaps. 18–20, is extant in several Armenian mss (= *Arm;* Peeters 1911–14: xxx, 199–220). Chap. 8 of the Ethiopian *Miracles of Jesus,* a 15th-century compilation of various traditions in Ethiopic, contains materials from *Inf. Thom.* The Ethiopic text was published by Grebaut (1919: 565–66, 625–42) on the basis of five Ethiopic mss which derive from either the Arabic or the Syriac (Gero 1971: 53 n. 4). An 11th-century Georgian ms (= *Geo;* Codex A95) in the Museum in Tiflis, containing what Gero describes as homiletic and hagiographic texts, includes a mutilated Georgian version of *Inf. Thom.* breaking off at Chap. 7. Gero suggests that *Geo* is the second oldest textual witness to *Inf. Thom.* after *BMSyr,* with which it shares a close relationship (discussion and literal Latin translation in Garitte 1956: 511–20).

B. Time and Place of Composition

Although nothing definite can be said about the place of composition, the high value ascribed to the early Syriac mss, the traditional association with the Syrian Thomas tradition, and the possibility of shared traditions with the *Gospel of Thomas* (cf. *Inf. Thom.* 10:2 and *Gos. Thom.* logion 77) all suggest Syria as the place of composition (but Gero is probably correct in suggesting that the ascription to Thomas, as we have it, is medieval [1971: 58–59]). Data for the time of composition include both ms evidence and patristic testimonies. The ms evidence takes us back to the 5th century at the earliest (*BMSyr* and *Gött*), leaving us merely to surmise how much earlier the time of composition might have been. The most relevant patristic testimony comes from Irenaeus (ca. 180; *Haer.* 1.20.1) where we find the well-known Alpha-Beta logion, found twice in *Inf. Thom.* (Irenaeus' form of the logion is closer to that in *Inf. Thom.* 14:2 than in 6:3), giving us a date in the second half of the 2d century at least for this logion. Irenaeus does not specify whether he quotes it from an infancy gospel, but he does contrast his source for the logion with "the true scriptures," suggesting he knew it as part of a text which some (the gnostic Marcosians) apparently considered as authoritative. He also introduces the saying by summarizing its narrative context (a context which is essentially, but not exactly, the same as that in *Inf. Thom.*), further suggesting that he knew it already as part of a narrative story (apophthegm? infancy gospel?) rather than as an independent oral saying. Other sayings' parallels or patristic allusions are either references to the *Gos. Thom.* or else are not explicit enough so that identification can be made (Hippo. *Haer.* 5.7; Origen, *Hom. I in Lc.;* Euseb. *Hist. Eccl.* 3.25. 6; Cyril of Jerusalem, *Catech.* 4.36 and 6.31). Another, but less objective, evidence for dating is provided by comparative analysis with the datable canonical infancy narratives (discussed in section D below).

C. The Story Line

The contents of the text are presented below in the order of the episodes as they are presented in the Greek A-type text (*NTApocr* 392–99): (1) prologue in which Thomas speaks in the first person; (2) when Jesus is five years old, he cleans the pools of water and brings twelve clay sparrows to life; (3) Jesus strikes dead the son of Annas the scribe; (4) Jesus strikes dead a young boy who bumps into him; (5) Joseph rebukes Jesus, who then strikes his detractors blind; (6) Zacchaeus attempts to teach Jesus the

alphabet, but Jesus responds with the abstruse Alpha-Beta logion and so confounds his teacher; (7) confounded, Zacchaeus speaks to the people and praises Jesus' power; (8) Jesus laughs, speaks as a heavenly redeemer, and then heals those he struck blind; (9) Jesus' playmate Zenon dies from a fall and Jesus raises him from the dead; (10) a young man cuts his foot with an ax, Jesus heals him, and speaks logion 77 of *Gos. Thom.*; (11) at six years of age, Jesus saves the spilt water from a broken pitcher; (12) when he is eight years old, he sows a single seed and reaps one hundred measures; (13) Jesus stretches a piece of wood which Joseph cut too short; (14) Joseph takes Jesus to another teacher to learn the alphabet, but Jesus again responds with the Alpha-Beta logion and strikes the teacher unconscious; (15) a third teacher tries to teach him, but Jesus teaches the Law and heals the other teacher; (16) Joseph's son James is bitten by a viper and Jesus heals him; (17) a child dies and Jesus raises him from death; (18) a workman dies and Jesus raises him from death; (19) at twelve years of age Jesus and his parents go to Jerusalem for the Passover feast (= Luke 2:41–51); and (20) a brief editorial conclusion.

D. Tradition and Redaction

The impetus behind the creation and transmission of the stories of the words and actions of the boy Jesus was already at work in the canonical infancy narratives in Matthew 1–2 and Luke 1–2. What we observe in *Inf. Thom.* is the continuing response to the still active interest in the so-called "lost years" of Jesus' life. By the time these stories were circulating orally, the canonical infancy narratives were no longer providing answers and were instead the sources which generated new questions, questions which the stories now in *Inf. Thom.* attempted to answer. This would give us a date ranging from the late 1st to early 2d centuries for the origin of these traditions, but some could date from as early as the period of the formulation of the canonical infancy stories (pre-80 C.E.?).

Most of the stories appear to be form-critically discrete traditional units which most likely existed independently of each other and were secondarily clustered together into a rather loosely structured narrative framework. Irenaeus was, as we have seen in the case of the Alpha-Beta logion, one of the tradents who confirms the independent nature of these stories. Typical editorial devices, emphasizing sequences of time and place, help create a narrative structure which only barely gives the impression of an integrated and functional story line. There is really no narrative plot, no cohesive theological framework (gnostic or otherwise), and no moral to the story except to focus on the sensational nature of the precocious child's activities and his gradual maturation. The sensational nature of the miracle stories is primarily related to the desire at the popular level for entertaining descriptive stories about the boy Jesus (Brown 1977: 28–29 speaks of a popular "curiosity"; cf. Gero 1971: 47 n. 1), rather than to the propagandistic needs of the movement as Cameron has stressed (1982: 122–23). It seems *Inf. Thom.* like the many apocryphal acts of the apostles (MacDonald 1986: 1–6), was among the popular novels of the early and late medieval Church, and so was not read as a serious theological tractate. If the text makes any theological statement, it is that a high christology can be applied successfully to the childhood period (Brown 1977: 29) to offset adoptionist tendencies or beliefs that his power was somehow diminished during his prebaptismal earthly life.

E. Forgotten Sources for the "Hidden Years" of Jesus' Life?

Simply because the secondary narrative framework over the traditional stories frames all events between Jesus' fifth through twelfth years, we need not assume that all of the stories now incorporated into *Inf. Thom.* were originally understood to have occurred during those years. It is quite probable that some of the stories were originally understood to have been stories about Jesus' activities as a young man after the age of twelve and right up to his involvement with the Baptist. The complete absence from early Christian literature of any stories about these "hidden years" of Jesus' life after the age of twelve is unusually striking and yet has received no comment from researchers. The "absence" of such stories can be explained by the thesis that they did in fact exist and survived only after they were gathered together at the textual level and subsumed under the secondary framework of infancy narratives. The standard infancy narrative was an acceptable textual framework for the retrojection of such traditions in virtue of its precedence in the canonical gospels. Further, the silent period of Jesus' life after age twelve then acquired a numinous quality (still in effect today) so that Luke 2:52 (=*Inf. Thom.* (19:5b) could function

as the final word on the now silenced and mysterious "hidden years". The entire tradition is carefully placed into the (seven-year?) childhood period between Luke 2:40 (the end of the infancy period) and 2:41–51 (the visit to Jerusalem at age twelve). In like manner, retrojected elements from the canonical stories that depict activities in the period of Jesus' ministry have influenced, if not generated, in *Inf. Thom.*, both stories (cf. Mark 5:22–24, 41–42a and *Inf. Thom.* 18:1–2a) and editorial comments (cf. Mark 3:6 and *Inf. Thom.* 2:5). From another angle, scholars have not yet asked whether any of the traditional stories or sayings in the canonical or other gospels were originally associated with the period of Jesus' childhood or his young adult life before his contact with the Baptist, and were only later projected into the period of his postbatismal life (cf. *Inf. Thom.* 10:2 and *Gos. Thom.* logion 77; also cf. *Inf. Thom.* 15:1–2 and Luke 4:16–22).

F. Diverse Theological Elements

The presence in the text of a large number of diverse theological elements and the absence of any cohesive and unifying theological framework suggest the text's primary audience was not among the theologically astute, but rather among the masses who found such stories about the wonder-working child to be entertaining (Cullmann *NTApocr* 2: 392). The text presents an almost frivolous and carefree story rather than a theologically precise rhetorical argument requiring an existential commitment or ideologically correct response from the reader, as in the sayings and narrative gospels.

The most popular misconception about the text's theology is that it is gnostic. See GNOSTICISM. The most influential early statement, although not well argued, was by Tischendorf (1876: xlvi–xlvii), who set the agenda by focusing on perceived gnostic christological elements. All such statements employ a misunderstanding of Gnosticism and focus too narrowly on a perceived docetic christology (see also Michel 1911–14: xxxi). More balanced is Gero's critique (1971: 51 n. 3) which emphasizes the child's physical and emotional characteristics in tandem with a high christology which need not be docetic (as in Johannine theology).

The broad range of diverse christological elements can be seen in the following list (references follow the numbering for sections in the GrA-type text in *NTApocr* 2: 392–401): (1) diverse christological titles and confessions in 7:2, 4; 9:3; 10:2b; 17:2; 18:2; (2) a vague numinous christology (cf. Mark 4:41) in 3:3; 4:1b; 5:2, 6:1 b; 7:1–4; 14:3b; 15:3; 19:4–5; (3) the boy Jesus is worshiped in 9:3, 10:2b; 18:1; (4) he speaks as a heavenly redeemer in 8:1; (5) he has a special relation with God as Father in 19:3 (= Luke 2:49); (6) he has divine insight in 6:3–4; 15:1–3; and 19:2, 4–5; (7) he gives life to inanimate objects in 2:4; (8) he smites people at will in 5:1b; 14:2; (9) he freely takes human life in 3:2–3; 4:1a; (10) he raises people from death in 9:1–3; 18:1; (11) he heals people in 8:2; 10:1–2; 15:4; 16:1; and (12) he performs nature miracles in 11:1–2; 12:1–2; 13:1–2.

Finally, the overall theological effect of the redaction is that as the boy Jesus matures from his fifth through twelfth years, he seems to take on a more responsible attitude concerning the divine powers at work in him. By the end of the story he has gradually become obedient to his parents and has ceased the irresponsible use of divine power. The theological understanding behind this development is that the divine power within him was almost alien to him until he gradually, over seven years, came to realize what it was. It is this divine-human conflict in the child, and the gradual process of psychological development leading to a genuine self-recognition, that lends itself to a docetic understanding, despite the incarnational interests of the compiler (Gero 1971: 51 n. 3).

THORN. See FLORA.

THOUGHT OF NOREA. See NOREA, THOUGHT OF (NHC IX,*2*).

THRACIA (PLACE) [Gk *Thrakia* (Θρακια)]. THRACIAN. Country E of Macedonia which lay between the Danube and Strymon rivers. Ancient Thrace (to use the more common term) was located in the E half of the Balkan peninsula which presently is part of NE Greece, S Bulgaria and European Turkey. Ramsay (1890) notes that the term "Thrace" was often used imprecisely and at times even the Macedonians were referred to as a "Tribe of Thrace" which meant, more or less, the land N and NE of Greece. The geographical boundaries of Thrace, however, were not always constant. There is evidence that before 1300 B.C. the Thracian tribes retreated from the Adriatic to the Axius. In 480 B.C., the Macedonians forcibly annexed all Thracian territory W of the Strymon river. Thracian S territories were lost to Philip II of Macedon in 342 B.C. After considerable struggle, in A.D. 46, Thrace became a Roman province.

Thracian social structure consisted of a confederacy of patriarchal tribes, each with a feudal aristocracy and a serflike peasantry. Thracian religion was organized around Dionysos, the vegetation god who was worshiped ritually. Though the Thracians developed culturally somewhat, especially in their poetry and music, their barbarism was infamous in the world of civilized Hellenism. The Thracians developed this reputation based upon the practice of human sacrifice, the wearing of unseemly tattoos, the abuse of alcohol, and a most inhumane treatment of fellow human beings. Beyond this savagery, the Thracians were known as fierce warriors and were sought as mercenaries. Before the Roman era, the boundary between Thrace and Macedonia was seen as the boundary between civilization and barbarianism. The land of Thracia, like the Thracians, was rugged. It included the forested mountainous territory of Haemus, the Dobrudja steppe region, and the fertile Hebrus valley.

Neither Thrace nor the Thracians are mentioned or alluded to in the NT. There is, however, a reference in 2 Macc 12:35 in which a Thracian soldier is identified as the one who rescued Gorgias, whom the text identifies as the governor of Idumea (some scholars reject "Idumea" in favor of "Jamnia"). Since Thracians were used as mercenaries, this account is not impossible. There is no record of Christianity having reached Thrace in the NT period. Moreover, the identification of Thrace with Tiras (Gen 10:2) by some scholars is nothing more than conjecture.

THREE STELES OF SETH. See SETH, THREE STELES OF (NHC VII,*5*).

THREE TAVERNS (PLACE) [Gk *Treis Tabernai* (Τρεις Ταβερναι)]. A station in Latium located along the Appian Way, about one day's journey or 33 Roman miles (30 U.S. miles) S of Rome (*CIL* X.685). It was between the towns of Arica and the Forum of Appius, which were 16 and 43 Roman miles S of Rome, respectively. Three Taverns became a convenient stopping point because it was located at the intersection of the Appian Way and the road from Antium to Norba. The ancient site, while not precisely located, is near the modern town of Cisterna (42°35´N; 12°51´E). Two groups of Christians from Rome set out to meet Paul when news arrived that he had landed in Italy at the harbor city of Puteoli. The first group greeted him at the Forum of Appius and the second met him at Three Taverns (Acts 28:15).

The NT contains a transliteration of the Latin *Tres Tabernae*. The Latin term *Tabernae* is neither identical nor as limited in meaning as the English word "tavern." Rather, it denotes any shop, booth, or inn. The Three Taverns may have been a group of inns where travelers could rest, eat, and spend the night. This group of inns could have provided a suitable name for this crossroad station.

Three Taverns was only 6 miles from Tripontium, the point where the Appian Way entered the Pontine marshes. Horace traveled down the Appian Way through Three Taverns and he then went by canal barge through the marsh area (Horace *Sa.* I. v.3–6; cf. Strabo V.3.6). Cicero mentions Three Taverns several times in his letters (*Att.* i.13; ii.10, 12–13). See PW 4: 1875.

JOHN D. WINELAND

THRESHING. See AGRICULTURE.

THRESHOLD. Two synonymous Hebrew nouns—*sap* (occurs 24 times) and the less common *miptan* (8 times)—belong to the architectural vocabulary of ancient Israel and denote an essential component of an entrance, whether gate or doorway. In the Hebrew Bible, that component is always the threshold, with the one exception of Ezek 40:6–7, where a gate chamber may be indicated.

In other ancient Semitic languages, the terms equivalent to *sap* can denote parts of a doorway other than its threshold. For example, Akkadian *sippu* can indicate "doorjamb" or "door-hinge stone" or a composite of these elements (Salonen 1961: 62–66). This variety of legitimate meanings results from the great variation in the design of entryways over time in Mesopotamia and also from the difference in type and size of the buildings involved in the use of the terms.

The more straightforward biblical usage probably reflects the consistent use of one kind of doorway and gateway construction in ancient Palestine (see Dever and Paul 1973: 35–36). The threshold was the bottom horizontal component of the door frame, the other parts being the two jambs (the vertical components) and the lintel (the top horizontal component). Although the jambs and lintel could be made of wood or of stone, the threshold was probably always stone. Usually it consisted of one large stone block, wide enough to extend the full width of the door frame; but sometimes it was made of two or more smaller blocks fitted together. Most thresholds were slightly higher than the floor level inside the building and the street or courtyard level outside. Presumably this helped to keep water from rushing in during the rainy season.

Depending on the width of the door or gate, a socket was cut on one or both sides of the threshold, near the jambs, to accommodate the doorpost or gatepost projecting from the door leaf or gate leaf. Wide entryways had double-hung doors or gates, meaning a socket at each end of the threshold. Small square indentations cut into some thresholds provide evidence of the bolting of doors by metal bars sliding down vertically. The threshold, and the lintel above it, were frequently cut with ledges, often several inches high, to prevent the inward opening doors from swinging outward. See also HOUSE, ISRAELITE.

"Threshold" appears in the Bible mainly in the Prophets (five different prophetic books) and in the Former Prophets (in all but Joshua); and it also occurs several times in Chronicles and twice in Esther. Most of the biblical usages are in reference to the entrance of a temple building, usually the temple in Jerusalem; but the threshold of a pagan temple, the house of Dagon at Ashdod, also appears (1 Sam 5:4, 5). In at least three passages the threshold is that of a royal building (Est 2:21; 6:2; 1 Kgs 14:17; and perhaps Zeph 2:14), and two occurrences involve private dwellings (Judg 19:27; Ezek 43:8).

In addition to being an integral structural element in public or private buildings, the threshold as boundary between domains of activity has clear symbolic significance. At its most basic level, the threshold represents the border between the inside, domestic world (whether of ordinary people, royalty, or gods) and the outside world. As a sort of neutral territory between domains, it marks transition and is often associated with magic or religious rites that accompany passage over the threshold (van Gennep 1960: 15–25). Entryways were sacred zones, which had to be controlled so as to protect the goods and people inside from what lurked without. Sometimes special sacrifices were made or deposits buried at the threshold of a building.

For these reasons, the three "keepers of the threshold" (*šōmrê hasap;* e.g., Jer 35:4; 2 Kgs 23:4) were among the major cultic functionaries in the priestly hierarchy of the Jerusalem temple. They appear as leading figures, following the chief priest and the second priests (see Jer 52:24 = 2 Kgs 25:18). Their involvement in the temple renovation projects of Josiah (2 Kgs 22:4; 2 Chr 34:9) and Jehoash (2 Kgs 12:10) and also in Josiah's purge (2 Kgs 23:4) also testifies to their important administrative and religious roles. There were probably three threshold officers because of the three major gateways (north, south, west) to the temple precinct (Ezek 40:6, 24, 35); each gateway had its own threshold official to oversee the flow of temple business and visitors.

In addition to these high-ranking officials, a lower order of levitical servants were called gatekeepers *(šō‹arê-hasap).* They functioned as porters or entry guards (1 Chr 9:22; 2 Chr 23:4; and probably 1 Chr 9:19) and numbered in the hundreds in the postexilic period.

CAROL MEYERS

THRONE, HALL OF THE (PLACE) [Heb *›ûlām hakkisē›* (אוּלָם הַכִּסֵּא)]. See JUDGMENT, HALL OF (PLACE).

THUNDER, PERFECT MIND, THE (NHC VI, *2*). Among the gnostic texts of the Coptic Nag Hammadi Library, discovered in 1945, few can match *The Thunder, Perfect Mind (Thund.)* in philosophical inscrutability. *Thund.* consists entirely of a monologue by an unnamed female revealer ("I am the utterance of my name"). Most conspicuous are, indeed, the recurring sections of "I am" statements, which alternate with teachings, exhortations, and pleas. The self-proclamations include antitheses, such as "I am the honored and the scorned one. I am the whore and the holy one," and paradoxes, for instance, "I am the bride and the bridegroom, and it is my husband who begot me. I am the mother of my father and the sister of my husband, and he is my offspring."

The speaker is one yet many, earthly as well as heavenly: "I am the one below, and they come up to me." Universal, she declares herself to belong to Greeks, Egyptians, and barbarians. She is intimately connected to her devotees and identifies herself with the faculty of understanding and devotion in them. *Thund.* emphasizes the believers' obedience toward the revealer—a trying relationship because the goddess appears and acts in oppositional terms. The speaker retains her identity despite—and, paradoxically, because of—her antithetical traits.

After debating the first part of the document's title *(nebront* vs. *tebronte),* scholars now spend more effort on the problem of recognizable contexts, both *of* the text and *in* it. H.-G. Bethge (1973), representing the *Berliner Arbeitskreis,* notes a possibly underlying gnostic "fall of Sophia" myth, and M. Tardieu (1974) draws attention to the Jewish "divine voice" traditions, for instance in *1 En.* On the other hand, the late G. MacRae, who first translated *Thund.* into English, finds scarcely any Jewish (or Christian) influences in it (see MacRae and Parrott 1977).

Ties to the Isis religion may be relevant, for Isis' sexual, wifely, and motherly aspects resemble those of the female speaking in *Thund.* Isis' self-descriptions in universal imagery are known from, e.g., Apuleius' *Golden Ass,* Book 11. However, as MacRae observes, the contrasts and paradoxes, so characteristic of

Thund., do not occur in the Isis mythologies or aretalogies (cf. Bergman 1968). B. Layton (1986) suggests parallels to Greek riddles, and, along with other scholars, points to the gnostic Eve traditions, where some striking similarities appear (see, e.g., *Orig World* [*NHC* II,*5*] and *The Gospel of Eve,* as attested by Epiph. *Pan.* 26. 2–3). One might also compare a part of *Megalē Apophasis,* transmitted in Hipp. *Haer.* 6. 17.3, to *Thund.* Another gnostic female that shows certain affinities with the one in *Thund.* is the Mandaean Ruha ("Spirit") (see Buckley 1980).

Thund. is a well-preserved document; damage is limited to the first few lines at the top of each page. Like the rest of the *NHC* documents, *Thund.* was originally written in Greek, subsequently translated into Coptic. The text's language is Sahidic, with some sub-Achmimic aspects. Suggested dates for *Thund.* range from the 1st to the 4th century C.E. However, these data are of scant help in determining the text's provenance, readership, and spiritual home. *Thund.* singularly testifies to a style not found in other documents of Late Antiquity, and it cannot be neatly fitted into any known system, gnostic or otherwise. Philosophically sophisticated, the text calls for new levels of interpretations in religious speculations and salvation systems of Late Antiquity. For instance, *Thund.* insists on a positive evaluation of oppositional elements and of paradoxes. Such lack of negativity regarding antitheses merits serious scholarly consideration, particularly in view of traditional interpretations of gnostic dualism. Thus, one cannot ascribe to *Thund.* a clear ethical message of "dos" and "don'ts." The goddess speaking in this text does not fit the patterns of the more familiar, pedagogical biblical Wisdom figure found in Proverbs and Wisdom; neither do the "I am" statements in John seem immediately relevant. However, these as well as other OT and NT traditions will no doubt continue to be consulted in future research on *Thund.*

THUTMOSE (PERSON). See EGYPT, HISTORY OF (NEW KINGDOM [18th–20th DYNASTY]).

THYATIRA (PLACE) [Gk *Thyatira* (Θυατιρα)]. City in Lydia, in W Asia Minor, at the junction of roads between Lydia and Mysia, on the plain of the river Lycus (modern Akhisar; 38°54´N, 27°50´E).

Very few architectural remains have been found at the site, but inscriptions show an active civic and social life from the 2d century B.C. until the 3d century A.D. They mention shrines to Apollo Tyrimnaeus and Artemis Boreitene, to Helius, and to Hadrian; three gymnasiums full of statues; stoas and shops; and a portico of 100 columns in which the gerousia met.

Thyatira was an important center of the wool trade. A guild of wool workers is mentioned in an inscription (*IGRR* 4: 1252), and others name several dyers and fullers in and around Thyatira, as well as the neighboring cities of Laodicea, Hierapolis, and Colossae (Broughton 1938: 818–22).

This recalls Lydia of Thyatira, who is known to us from Paul's visit to Philippi (Acts 16:14–15, 39) as a well-to-do householder engaged in the trade in luxury purple dye. (An inscription from Thessalonica also tells of a resident there from Thyatira, Menippus, who deals in purple dyes [Broughton 1938: 819]).

Thyatira also appears as one of the seven churches of Asia Minor in the Apocalypse (Rev 1:11; 2:18, 24). The account mentions the blazing eyes and brass feet of Jesus, and this has been interpreted as an allusion to a cult statue of Apollo or Helius (both of whom appear on the city's coins).

JOHN E. STAMBAUGH

TIAMAT (DEITY). In the Babylonian liturgical text Enuma Elish the goddess Tiamat appears as one of a pair of primordial deities, with her consort Apsu. Since the first publication of the text it has been understood that this goddess represented the "seawater" from which the name derives *(tiamtu);* it also was posited that Tiamat was the primordial chaos and that the Mesopotamian myth had influenced the P account of creation in Genesis, where *tĕhôm* was seen as derived from her name (Smith 1876: 64). The battle which is presented in the Babylonian myth sets younger gods, and especially Marduk (Ashur in the Assyrian version), against the primordial couple. Apsu is slain and Tiamat responds with the creation of monsters, but to no avail. Marduk slays her and creates from her carcass a dome for the sky. A reference from this action to that of God dividing the waters in Genesis and creating a dome to separate them has been posited, along with a notion that Tiamat's body also was used to create the earth (Heidel 1951: 116).

There is scant evidence for the recognition of this goddess outside of the Enuma Elish itself (Lambert 1963: 189–90; Tsumura 1989: 48–49), and such references may be related to the myth. Within the myth Tiamat is the mother of all the divine world and hesitant to engage in their destruction. She provides for the story both the original creation and the opposition to further creation, embodying both chaos and the source of life (May 1955: 18–21; Wakeman 1973: 21–22). For the creation of the rule of Marduk she represents the chaos which must be controlled each year in the Akitu festival (Bottéro 1985: 160).

The relation of "Tiamat" to the biblical *tĕhôm* has been satisfactorily discounted since the Heb noun is clearly a Northwest Semitic common noun referring to the cosmic waters (Lambert 1965: 293; Day 1985: 7, 50–51; Tsumura 1989: 47–48, 51–52). The possibility of Genesis using the Babylonian text as a primary source has now been generally abandoned (Rapaport 1979: 13; Day 1985: 50–51; Tsumura 1989: 158–59). The mythological content of the narrative, however, remains a central concern for biblical scholars. It is clear that the battle between Marduk and Tiamat liturgically presents both the order made of chaos in nature and the order of the social and political world, reaffirmed in the cult (Stolz 1970: 20–21; Day 1985: 19; Grønbaek 1985: 29–30). This divine battle for rule and order may be found in several biblical passages which do not, however, refer to Tiamat.

TIBERIAS (PLACE) [Gk *Tiberias* (Τιβεριας)]. A city founded on the W coast of the Sea of Galilee (M.R. 201242) in A.D. 20 by Herod Antipas, tetrarch of Galilee, as a new capital city to replace Sepphoris. The city is mentioned only once in the Bible, and then only in a passing reference to boats from Tiberias carrying people in search of Jesus (John 6:23; but cf. John 6:1; 21:1).

A. Location and Establishment

According to Josephus, Tiberias was built "in the best region of Galilee" near hot springs (*Ant* 18.2.3 §36). The city lay between steep hills to the W and the Sea of Galilee (Lake Tiberias) to the E. Magdala-Taricheae lay two miles to the N and Hammath one mile to the S. The region was famous for its wine, figs, and wheat, and wheat and barley were sold in separate markets at Tiberias (*Eccl. Rab.* 1.12; *j. B. Qam.* 6d; *Gen. Rab.* 79; *Midr. Ps.* 1). In Jewish tradition, Rakkath of Josh 19:35 was identified with Tiberias (*j. Meg.* 1.1); however, it is now usually identified with Khirbet Qunaytirah, N of modern Tiberias. The hot springs of Tiberias are mentioned in Pliny (*HN* 5.15), and the Mishnah (*Šabb.* 3.4; *Makš.* 6.7) described them as hot enough to cause injury (*Neg.* 9.1). The rabbinical sources indicate that the springs (Hammath) were one Roman mile from Tiberias (*t. Meg.* 4.3). See HAMMATH (PLACE).

During the construction of the city, tombs were discovered, which rendered the site unclean for Jews (*j. Šeb.* 9.1). Therefore, Antipas was forced to settle the city with a mixed population of Jews and gentiles, including landless people and freed slaves (*Ant* 18.2.3 §36; *b. Šabb.* 33b). Antipas named the new city in honor of the emperor Tiberius, and immediately began minting coins at the city. The earliest extant coins show a reed and an inscription in Greek, "Of Herod the Tetrarch." The reverse displays the name Tiberias written in Greek letters within a wreath. The earliest date is "Year 24" (of Herod Antipas), which corresponds to A.D. 20. All subsequent dates in Tiberias were calculated from this founding date.

B. Government and History

The city was governed as a Hellenistic *polis* by a council of 600, headed by an elected archon. The administrative details were under the control of royal appointed *hyparchs* (governors) and an *agoranomos* (market overseer; *Life* 12 §64; 34 §169; 55 §285; *JW* 2.21.6 §615). The city also had a Council of Ten (*JW* 2.21.3 §9; *Life* 27 §134; 54 §278). Tiberias, like Magdala-Taricheae, was the head of a toparchy (*JW* 2.13.2 §252), of which there may have been five in Herodian Galilee.

Antipas built at Tiberias a stadium, a forum or market, baths, and a royal palace on the hill that overlooked the city (*JW* 2.21.6 §618). He adorned the palace with animal statuary, which was so offensive to Jews that it was the first building to be destroyed in the First Revolt against Rome (*Life* 12 §65–67). There was also a Jewish place of prayer (a *proseuchē,* a "large edifice" in *Life* 54 §277; cf. Acts 16:13). A city wall apparently existed, since one was destroyed in the First Revolt (*JW* 3.10.1).

When Herod Antipas fell from the emperor's favor and was exiled in A.D. 39, Caligula granted Tiberias and other territories, along with the title of king, to his good friend Herod Agrippa I, grandson of Herod the Great and Mariamne (*Ant* 18.7.2 §252; *JW* 2.9.6 §183). Agrippa had previously been a market overseer in Tiberias. In spite of his Jewishness, Agrippa depicted himself and Caligula on his coins, which were struck at Tiberias. Five years later, when Agrippa suddenly died, Tiberias and the rest of the Jewish kingdom reverted to rule under the Roman procurators, who resided in Caesarea.

In A.D. 61, Nero granted Tiberias to Herod Agrippa II, son of Agrippa I (*Ant* 20.8.4 §159; *JW* 2.13.2 §252), and the title "king" appears on his coins. Agrippa II ruled his father's lands, including Tiberias, through the First Revolt of A.D. 66–70 to the end of the century. At the outbreak of the First Revolt, most inhabitants of the city favored the revolt, among whom was Justus ben Sapphias, archon of the city and leader in the revolutionary party (*Life* 12 §66; 27 §134; *JW* 2.21.3 §599). During the revolt, Josephus used Tiberias as a headquarters of his Galilean command. He set up a court, or synedrion, of 70 elders in Tiberias to decide cases of capital punishment (*JW* 2.20.5).

When Vespasian arrived at Tiberias with his armies, the city offered no resistance, but threw open its gates and begged for mercy. Vespasian spared the city and returned it to Agrippa, though he breached its S wall (*JW* 3.9.7–8 §445–61). Vespasian, however, ordered 12,000 refugees from Taricheae to be slaughtered in the stadium of Tiberias, while 6,000 were sent to build Nero's canal at Corinth, and 30,400 were sold as slaves (*JW* 3.10.10 §539–40). The city retained its importance, as inferred from the fact that the city received the toparchy of Magdala-Taricheae after the First Revolt. Tiberias then administered a territory which extended 15 miles S of the lake, 8 miles W to the border with the city-territory of Sepphoris, and to a point 5 miles N of Capernaum and Lake Tiberias.

Municipal coinage of Roman Tiberias begins in A.D. 100, during the reign of Trajan, which marks its change to an autonomous city attached to the Provincia Judea. On these coins the title of the city is

"Tiberias Claudia" in honor of the emperor Claudius, who must have granted some political favor to Tiberias. Later coins depict the Greek deities Zeus, Tyche, Sarapis, Hygeia, and Poseidon.

During the reign of Hadrian, a Hadrianeum (i.e., a temple to Hadrian) was built but not completed (Epiphanius, *Panarion* 30.12.1). Coins of the city dated to A.D. 119/120, the year of the emperor's visit to Judea, show a temple to Zeus, possibly the Hadrianeum. Tiberian coins were occasionally overstruck by the Jewish rebels of the Second Revolt. Hadrian abolished Jewish municipal government in the province of Judea in retaliation for the Second Revolt of A.D. 135. This affected Tiberias directly, even though the city had not participated in the Second Revolt. During this revolt the Romans made a fortified patrol line between Tiberias and Sepphoris 18 miles to the W (*t. ʿErub.* 4.11; *j. ʿErub.* 5.22b). This road may have been patrolled as far W as Acco-Ptolemais.

In spite of the Second Revolt, and perhaps because of the expansion of its territories, successful commercial connections extended from Tiberias to Rome, as inferred from two inscriptions attesting to a guildhall in Rome which had been erected by merchants of Tiberias (Cagnat 1911: 132). In these inscriptions the city is called "Claudiopolis in Syria Palestina" and "Tiberias Claudiopolis in Syria Palestina." The official Roman name of the city by A.D. 170 was "Tiberias Claudia in Syria-Palestina," as evidenced by its coins. According to a Talmudic legend, Tiberias was granted the title of a colony by the emperor "Antoninus," who is represented to be in dialogue with the patriarch Judah I (Judah ha-Nasi; see *b. ʿAbod. Zar.* 10.71). In fact, coins of Tiberias from the reign of Elagabalus (A.D. 218–22) bear the title "Colonia." The city wall was rebuilt, perhaps during the reign of Septimus Severus (A.D. 192–211), increasing the municipal tax burden.

Tiberias was known to be a fishing center, and its fishermen are mentioned frequently in ancient sources (*j. Pes.* 4.2). The city was also known for its textile production of rough cloth and reed mats (*b. Sukk.*20b; *Gen. Rab.* 79), as well as for its tanners (*Shir. Rab.* 1.4). The glass which was manufactured at Tiberias was famous for its clarity (*Gen. Rab.* 96).

Although there is sparse Talmudic evidence of Jewish followers of Jesus in Tiberias in the 2d and 3d centuries (*j. Sanh.* 25d; *j. Šabb.* 14d), Tiberias sustained a long, predominantly Jewish tradition. A synagogue of Tiberias is mentioned in the Mishnah (*ʿErub.* 10.10), while 13 are mentioned in later sources (*b. Ber.* 8a, 30b). Following the Second Revolt, Rabbi Simeon bar Yohai declared Tiberias to be pure (*j. Šeb.* 9.1), and by the 3d century A.D., Rabbi Yohanan ben Nappaha and the Sanhedrin moved to Tiberias. During the time of Judah I, the city council was composed of Jews, as was the board of strategoi (municipal executives?) which then ruled the city (*j. ʿAbod. Zar.* 4.4). The Jewish presence was strong enough in the middle of the 3d century that Yohanan bar Nappaha could order the destruction of statues in the baths of Tiberias, and see the decree carried out (*j. ʿAbod. Zar.* 4.4). Rabbi Yohanan presided over a famous rabbinical academy at Tiberias that included Rabbi Simeon bar Lakish, Rabbi Ammi, and Rabbi Assi (the third generation of the Amoraim) and their successors. The tombs of these sages are still venerated in Tiberias.

Even though the economic trend of Tiberias took a downturn in the 3d century, the leadership among Palestinian Judaism was not diminished. Rabbi Yohanan said, "Tiberias is the lowest of all [cities of the Sanhedrin] … and salvation shall come from there" (*b. Roš Haš.* 31b). Taxation grew so severe that rich men sought to evade service on the city council (*j. Ber.* 5.1), yet Tiberias became perhaps the greatest intellectual center of ancient Judaism. It had its own community of Babylonian Jews with their own synagogue and a synagogue for Jews of Tarsus (*j. Yoma* 7.1), as well as a special synagogue of the city council (*j. Šeqal.* 7.4). Indeed, in the 4th century Eusebius of Caesarea could refer to Tiberias as a "famous city" (*Onomast.* 16.1).

The first mention of a Christian church in Tiberias occurs during the early 4th century. It was built, using the still unfinished Hadrianeum, by Count Joseph of Tiberias with the permission and intervention of Constantine, since Tiberias was still largely Jewish (Epiphanius, *Panarion* 30.12; 30.10.10).

A few years later, in 351, Tiberias joined with Sepphoris in revolt against Consantius Gallus. For their participation in the revolt, Tiberias and Lydda were punished by Roman forces (Aur. Vict., *Caes.* 42.9–

12; Jerome, *Chron.* 24). Tiberias recovered swiftly, though some rabbis had fled the city during the revolt (*Gen. Rab.* 31.11; *j. Ketub.* 11.1).

Shortly afterward (A.D. 361–63), the Christian citizens of Tiberias received a letter from the emperor Julian "the Apostate" urging them to return to the old Roman religion (*Juliani epistulae et leges* 154, 209). However, in 383, when Eugeria made a pilgrimage to Tiberias, she saw a church on the spot where the house of James and John had stood (Peter the Deacon, 6.2).

A strong Jewish presence persisted in Tiberias. The so-called Jerusalem Talmud or Palestinian Talmud was composed largely at Tiberias by the 5th century A.D. During the 5th century Jerome brought from Tiberias to Bethlehem a Jewish "doctor of the law" to assist him in translating the book of Chronicles into Latin. By A.D. 429 the Roman authorities had abolished the patriarchate (*Cod. Theod.* 16.8.22), though Jews everywhere continued to recognize Tiberias as the center of Jewry in Palestina Secunda. In 520, Mar Zutra, the posthumous son of the executed exilarch in Babylon, dared to move to Tiberias and became head of its academy *(Rosh ha-Perek).* The successive heads of the academy can be traced for ten generations (Mann 1970: 58).

After Justinian's accession to the imperial throne in A.D. 527, a law was enacted which banned Jews from municipal government (*Nov.* 45), so the city administration of Tiberias passed to Christians. Justinian also renewed the city wall of Tiberias (Procop., *Aed.* 5.9 §358).

At this time the Jews of Tiberias were in communication with the kings of the tiny nation of Himyar on the E shores of the Red Sea. The Byzantines saw this connection as a betrayal of Christian interests. In 614, at the hour of the Persian invasion of Palestine, the Jews of Tiberias regarded the invasion as potentially a rescue from Christian oppression and at first assisted the Persians. The Jewish leader was Benjamin of Tiberias (Theophanes a.m. 6120). The Byzantine emperor Heraclius met with Benjamin and other Jewish leaders of Galilee at Tiberias in 629 after his final defeat of the Persians. Heraclius pardoned the leaders and spared Tiberias. Even though Benjamin accepted baptism, Heraclius later rescinded the pardon and tried and executed the Jewish leaders of Tiberias, among others. This event may be contemporary with the emergence of Palestinian liturgical poetry *(piyyut),* which is identified with Tiberias.

In the spring of 636, the Arab forces under the command of Shurahbil ibn Hasanah occupied Galilee and Tiberias. The inhabitants of the city surrendered peacefully, only asking that their churches (including synagogues?) and houses be spared (Marmardji 1951: 129). Archaeological evidence suggests that the city had already expanded S to include Hammath. Tiberias became the capital of the province of al-Urdun (Jordan), and was especially famed for its spa built around the hot springs. During the same century Tiberias became a center for the Masoretes, who developed what became the standard vocalization system of the Hebrew text of the Bible.

C. Archaeological Investigations

The archaeology of Tiberias is largely unpublished, except for the synagogue at Hammath-Tiberias (*EAEHL* 4: 1178–84; Dothan 1983). However, the excavations at Hammath-Tiberias have disclosed an area of Seleucid and Hasmonean public structures associated with the springs. These were followed by a building of A.D. 20–135 that was either a gymnasium or a palaestra. In the first half of the 3d century, the first synagogue was built on the site. This synagogue was superseded by the synagogue of Severos, the major donor, who is recognized in the large Greek inscription in the floor as "disciple of the most illustrious patriarchs." This synagogue includes a splendid floor with a zodiac, the four seasons, Helios driving his chariot, a detailed representation of a holy ark, and two menorahs standing left and right of the ark with other Jewish symbols. This building is dated A.D. 325–83. It was remodeled and used continuously for several centuries. The final building dates to the Early Arab period and apparently was also a synagogue.

Weights with the names of *agoranomoi* of Tiberias, written in Greek, have been found at Yodefat N of Sepphoris. The S city gate with two round towers and the remains of the main N–S road have been excavated, as well as the 5th–century city walls, which were built against the 1st-century gate and its towers. These walls have been traced from the shores of the lake for more than a kilometer.

Some synagogue remains from Tiberias proper date from the 5th century and include inscriptions written in Greek and Aramaic. A 5th- or 6th-century panel from a synagogue chancel has been found, which is carved in open lattice work in white marble with an inscribed menorah. Baths and a basilica, both of the Byzantine period, are known from salvage excavations.

JAMES F. STRANGE

TIBERIUS (EMPEROR). Tiberius succeeded Augustus as the second Roman emperor, ruling from 14–37 C.E. He was born the son of an aristocrat, whose name he bore, and Livia Drusilla in 42 B.C.E. Tiberius' parents divorced when he was four, shortly before the birth of his younger brother Nero Drusus. His mother Livia married Octavian, the future Augustus.

From 20 B.C.E. to 12 C.E. Tiberius pursued a successful military career, despite an eight-year voluntary exile to Rhodes beginning in 6 B.C.E. In 20 B.C.E. he campaigned with Augustus in the east against the Parthians. Between 12 and 9 B.C.E. Tiberius brought Pannonia into the Roman Empire and he fought in Germany from 9 B.C.E. (the same year Nero Drusus died) to 7 B.C.E. and later from 4–6 C.E. From 7–9 C.E., he suppressed uprisings in Pannonia and Illyricum and was subsequently sent to reclaim the Rhine frontier after the humiliating decimation of Varus' three legions by Arminius the Cheruscan in 9 C.E.

After the death of Agrippa, Augustus' chief lieutenant, in 12 B.C.E., Tiberius was compelled to divorce his wife Vipsania and to marry Julia, Augustus' daughter and Agrippa's widow. Julia was exiled in 2 B.C.E. for adultery. Although Tiberius was granted tribunician power in 6 B.C.E., he retired to Rhodes in indignation because Augustus was making overtures to prepare Gaius and Lucius, the emperor's grandsons, for the imperial throne.

When those two grandsons died in 4 C.E., the aging emperor reluctantly adopted Tiberius along with the ruler's surviving grandson, Agrippa Postumus, who was later exiled. Tiberius was reawarded tribunician power for a ten-year period and was commissioned to a special command on the Rhine. When Agrippa Postumus was exiled, Tiberius was simultaneously ordered to adopt his own nephew Germanicus. Tiberius' succession was confirmed in 13 C.E. when he was made coregent by a special law. The following year Augustus died and at the age of 56 Tiberius was named emperor of Rome.

Tiberius' reign was a bridge between the idiosyncratic rule of Augustus and the formally established imperial system. Tiberius, whose father was an unpopular republican, was reticent to preempt senatorial authority by assuming too much of an outward show of dictatorial power. At the same time, Tiberius harbored deep suspicions (bordering on paranoia) against many of the senators. Tiberius cautiously consolidated his authority while continuing the earlier policies of Augustus.

At the beginning of his reign, the armies in Pannonia and Germany mutinied. Tiberius' son, Drusus the younger, dealt efficiently with the problem in Pannonia but Tiberius' adopted son, Germanicus, was less effective with the disturbance in Germany. Germanicus, however, enjoyed great popularity, particularly with the soldiers, and led an expedition to reclaim the territories lost when Varus was defeated by the Germans between the Rhine and the Elbe. Although the expedition ended in failure, Germanicus was awarded a triumph and given an enthusiastic reception in Rome.

Drusus the younger was given charge over the Danubian forces and Germanicus was placed in command of a similar post in the east. The thorny question of their ultimate succession never arose because in 19 C.E. Germanicus died. His death was probably the result of natural causes, despite the protests of his widow Agrippina the elder. In 23 C.E. Drusus the younger also died and the emperor excluded from his presence all of Drusus' friends (which included Agrippa I), for fear of awakening painful memories. By 29 C.E. Agrippina the elder and two of her sons were murdered. The heir apparent was the sole surviving son of Germanicus and Agrippina the elder, Gaius (CALIGULA).

The greatest tragedy of Tiberius' reign was the appointment of Sejanus, a Roman of nonsenatorial rank, as the emperor's personal adviser and co-worker. A number of incidents enabled Sejanus to enjoy a brief ascendancy to a position of unequaled authority until his assassination in 31 C.E. The emperor authorized Sejanus to recall nine praetorian cohorts to Rome, which were previously distributed between Rome and other Roman towns, greatly increasing Sejanus' power. Sejanus also used treason trials to eliminate his own personal enemies. Tiberius withdrew to his Villa of Jupiter on the island of Capreae to get away from the domineering influence of his mother and to escape from the burdens of the empire. Sejanus used Tiberius' isolation to enhance his own position back in Rome. Tiberius' isolation gave occasion for a number of reports about his alleged (yet unverifiable) sexual exploits on the island (see Suet. *Tib.*).

By Sejanus' bidding, Agrippina the elder and two of her sons were executed. When Sejanus was implicated in a plot to assassinate Gaius (Caligula), the emperor transferred the praetorian command to Macro, another one of Tiberius' close friends. Sejanus was arrested and swiftly executed by order of the senate. When Tiberius drew up his last will, Gaius and Gemellus (the son of the emperor's dead brother Drusus the younger) were named as joint heirs. It was evident, however, that Gaius would be the next emperor. The 78-year-old emperor died at the Villa of Lucullus at Misenum of natural causes in 37 C.E. Contemporary ancient sources write favorably about Tiberius' reign (Velleius Paterculus 2; and Valerius Maximus *Praef.*) while later senatorial sources seem to accentuate the emperor's faults (Tac. *Ann.* 1–4; Dio Cass. *Hist.* 46–48; and Suet. *Tib.*).

Tiberius had little tolerance for foreign cults and expelled all the Jews from Rome in 19 C.E. (Jos. *Ant* 18.3–5), allowing them to return later in his reign. In 18 C.E. Herod Antipas, tetrarch of Galilee, founded the city of Tiberias, which was named in honor of the emperor. Ironically, the city would later become one of the four holy cities of Israel and a center for Jewish learning.

Tiberius is the Caesar of the Gospels (except Luke 2:1) and his regnal years are used to fix the date of John the Baptist's ministry and the baptism of Jesus (Luke 3:1). It was during the reign of Tiberius that Jesus ministered in Galilee and was subsequently crucified in Jerusalem under the Judean procurator Pontius Pilate. Pontius Pilate was appointed by Tiberius to rule Palestine in 26 C.E. and was removed from office by the same ruler in 36 C.E. Early Church sources claim that Pilate sent to the emperor a report of the trial and execution (Just. *Apol* 1.35; Tert. *Apol* 26; and Eus. *Hist. Eccl.* 2.2). The silver denarius mentioned in the NT (see Matt 22:15–21; Mark 12:13–17; Luke 20:20–26; 23:2) bore the image of Tiberius with the inscription "Tiberius, son of the divine Augustus."

SCOTT T. CARROLL

TIBHATH (PLACE) [Heb *ṭibḥat* (טִבְחַת)]. A city, in what is today NE Lebanon or Syria, belonging to Hadadezer, the Aramean king of Zobah, whose domain stretched from the fertile central Lebanese Beqaʿ valley as far N as the upper Euphrates river. It was from this place that David, after his victory over the Arameans (1 Chr 18:8), brought to Jerusalem large supplies of bronze later used in the construction of Solomon's temple. The place is called Betah in the parallel passage (2 Sam 8:8), and is possibly associated with Tebah (Gen 22:24). Tebah was the nephew of Abraham, and the ancestor of an Aramean tribe. Some scholars identify him as the founder of this city. The city is thought to have been located in the country of Amurru in an area between Tunip and Baalbek; its precise location is unknown.

RAY L. ROTH

TIBNI (PERSON) [Heb *tibnî* (תִּבְנִי)]. A rival of Omri for the throne of Israel (1 Kgs 16:21–22). In the 27th year of Asa of Judah (886/4 B.C., *IJH*, 682), Zimri conspired against and killed Elah son of Baasha, the king of Israel. The troops besieging Gibbethon acclaimed their general, Omri, as king and marched on Zimri in Tirzah. Zimri set the palace on fire and died in the conflagration after a reign of only seven days (1 Kgs 16:8–20).

At this point the Israelites were divided into two factions—one that favored making Tibni son of Ginath king, the other for Omri. The fact that there was no prophetic designation of a successor to Elah caused a crisis in government. The rivalry lasted four years. In that time the people following Omri grew stronger

(wayyeḥĕzaq) than those with Tibni. Finally Tibni died. There is no explicit reference to any fighting. It may be that Omri's cause gradually gained popular support and Tibni died of natural causes. However, the LXX statement that "Joram his brother died at that time" may indicate a violent death for both at the instigation of Omri. Regardless, "somehow, somewhere Tibni died, and then Omri ruled without a rival" (DeVries *1 Kings* WBC, 200). Omri was finally acclaimed king by the people in the 31st year of Asa (882/0 B.C., 1 Kgs 16:23; cf. Gray *Kings* OTL, 365–66; *HHI*, 202; Miller 1968: 392–94; *NHI*, 229).

It has been suggested that the movement Tibni led manifested the Israelite religious community's opposition to the power of the professional army (though surely the Deuteronomist would have given more detail if the rivalry had been of religious significance) or was a protest of the older, more conservative elements against the younger officers of the army who aspired to the throne (Gray *Kings* OTL, 366). There is not enough evidence to be able to know with any certainty. That the movement was of major import is clear, however, from the length of time that the rivalry endured, from its broad impact on the people of the nation, and from the LXX statement that Omri "reigned after Tibni" (v 22, apparently counting the four years as Tibni's reign, though MT accredits them to Omri; cf. Thiele 1977: 33–35).

The brief mention of Tibni in 1 Kings is important in several respects. First, the silence of Kings regarding such a long and probably significant rivalry shows how the book was compiled with intentions other than to be a full secular history. Second, the sequence of events from Elah to Omri is a reminder of the clash between antidynastic traditions of charismatic leadership and a desire for dynastic stability. Third, the story indicates the power of the army in Israel at that time. Also of note are the unique literary features of the end of v 22—*wayyāmāt tibnî wayyimlōk ʿomrî* ("Tibni died and Omri became king")—assonance of the *y* and *m* sounds, the repetition of *wayy-* at the beginning of each verb, and the rhyme at the end of both names.

The name Tibni has been paralleled to the Akk "Tabniea" ("May Ea give a son") or possibly the Phoenician "Tabnith." These affinities are suggested by the fact that LXX and Josephus have the name with *a* rather than *i* (Tabni, Thamni). "Tibni" might then be a parody of the name, meaning "man of straw, scarecrow" (KB 1018; Gray *Kings* OTL, 365; *IPN* 232). He is called the "son of Ginath." Ginath appears to be the name of his father. However, the feminine ending may indicate that it is a place name, i.e., his home. Gray *Kings* OTL, 365–66; cf. *LBHG*, 434) suggests that this is En-gannim in the territory of Issachar, Gina in the Amarna texts and modern Kh. Beit Jann.

KENNETH H. CUFFEY

TIDAL (PERSON) [Heb *tidʿāl* (תִּדְעָל)]. King of Goiim, one of the allies of Chedorlaomer (Gen 14:1, 9). The original form of the name can be reconstructed as **tadġal,* with the voiced pharyngeal *ġ* which had not yet merged with ʿ in the pronunciation of Hebrew at the time of the LXX translation (*r* instead of *d* in LXX and Syr is due to the virtual identity of the two letters in the Aramaic square script, and the reduction of *a* to *i* in an unstressed closed syllable followed the rule of Masoretic vocalization). When the publication of the Babylonian "Chedorlaomer texts" (see CHEDORLAOMER [PERSON]) revealed royal names reminiscent of those of the four E kings in Genesis 14, Tidal was compared with ^{m}*Tu-ud-ḫul-a* son of ^{m}GAZ.ZA […], who "plundered Babylon, the glorious city, led water over Babylon and Esagil (temple of Marduk, principal sanctuary of Babylon); his son, with the weapon of his hands, smashed his skull." As noticed by Pinches (1897: 74), *Tudḫula* apparently meant "The Evil Offspring" (TUD.HÉUL.A) in Sumerian. Böhl (1916; 1924: 151) equated Tudḫula, hence also Tidal, with one of the Hittite kings named Tudḫaliyaš (incidentally, in an Assyrian letter of the 13th century found at Ugarit and published by Lackenbacher 1982, this name is spelled even closer to its form in the "Chedorlaomer texts": ^{m}*Tu-ud-ḫu-li-ia*). Böhl's identification was widely followed. However, none of the Tudḫaliyašes plundered Babylon or even waged war against Babylonia. Astour 1966: 88–90 thought that the name Tudḫula was substituted for that of another Hittite king, Muršiliš I, who had indeed sacked Babylon in

1531 B.C. (low chronology) and carried away the statues of Marduk and his consort Ṣarpanitum. But why the substitution was made remained unexplained; besides, even though Muršiliš was assassinated after his return from Babylon, the murderer was not his son but his brother-in-law. A simple and convincing identification was proposed by Tadmor (*EncMiqr* 8: 435–36). He took the meaning of *Tudḫula* as "The Evil Offspring" not as an intentional pun with *Tudḫaliya (š),* as understood by Astour 1966: 89, but at its face value—as a derogatory pseudonym for Sennacherib, whose father Sargon I was killed in battle—hence the patronymic ^{m}GAZ.ZA, ideographic writing for *dâku,* "to kill" and its derivatives. In 689 B.C., Sennacherib captured Babylon and systematically destroyed it, razing to the ground its houses, walls, temples, and temple towers. In his own words (*LAR* 2: 341), "through the midst of that city I dug canals, I flooded its site with water, and the very foundations thereof I destroyed. I made its destruction more complete than that by a flood … I completely blotted it out with water and made it like a meadow" (cf. also Esarhaddon's relation of the same event, *LAR* 2: 642, 649). Sennacherib also carried away to Assyria the statue of Marduk. In 681, Sennacherib was murdered by his son Arda-Mulišši, whose name was miswritten in 2 Kgs 19:37 as "Adrammelech" (Parpola 1980). Nabonidus later recalled, without naming him, Sennacherib's "evil intentions" against Babylon, his destruction of the city and carrying away the statue of Marduk, for which that god made his own son murder him (*ANET,* 309). At the same time, a new destruction of Babylon by water was anticipated by the authors of Isa 14:23 and Jer 51:42.

MICHAEL C. ASTOUR

TIGLATH-PILESER (PERSON) [Heb *tiglat pil›eser* (תִּגְלַת פִּלְאֶסֶר)]. Var. TIGLATH-

PILNESER; PUL. An Assyrian king who invaded N Israel twice, once intervening on behalf of Judah (2 Kgs 15:19–20, 29; 16:5–18; Tiglath-Pilneser [Heb *tiglat pilně›eser*] in 1 Chr 5:6, 26; 2 Chr 28:16–21). In Assyrian the name is spelled *Tukultī-apil-ešarra* and means "my trust is in the firstborn of the shrine Ešarra." The phrase "the fistborn of the shrine Ešarra" refers to the god Ninurta who was the son of the god Ashur, since Esharra was the shrine of Ashur. Three kings in Assyrian history bore this name and two of them were outstanding monarchs, Tiglath-pileser I (1114–1076 B.C.) and Tiglath-pileser III (744–727 B.C.). For a fuller treatment of their reigns see MESOPOTAMIA, HISTORY OF (ASSYRIA). Only Tiglath-pileser III is mentioned in the Bible, where he is sometimes called Pul (Heb *pûl*), a form of his nickname Pulu (an abbreviation of the element *apil* in his name), which is attested in cuneiform records.

It is known from the royal inscriptions of Tiglath-pileser III that Samaria, together with other major cities such as Damascus and Tyre, paid tribute to Assyria as early as 738 B.C. That the kingdom of Israel was submissive to Assyria in the reign of Menahem is confirmed by the biblical narrative in 2 Kings (cf. *ANET,* 282–83). Certainly by 734 B.C. Tiglath-pileser was able to march right through Palestine without opposition and capture Gaza in the S. This was part of Tiglath-pileser's attempt to establish an Assyrian trading center on the border with Egypt.

This attempt in S Palestine and the Sinai was frustrated, however, by a major rebellion in the years 733–732 B.C. The leader of the rebellion was Rezin (*Rahianu* in cuneiform sources) of Damascus. Rezin was supported, among others, by Samaria, which was now ruled by Pekah. In 733 the Assyrians defeated Rezin's army and laid siege to Damascus. But when the city had not fallen after 45 days, Tiglath-pileser III gave up the attempt and returned to Assyria, carrying many people from the surrounding regions into exile. In the following year, 732 B.C., Damascus was once again attacked and this time captured.

According to the narrative in 2 Kgs 16:5–18, Tiglath-pileser III launched a campaign against Rezin of Syria because he together with Pekah of Israel had laid siege to Ahaz, king of Judah. Ahaz appealed to the Assyrian king for help and accompanied the appeal with a bribe. After the fall of Damascus Ahaz went there to pay homage to Tiglath-pileser. The biblical narrative continues to describe how Ahaz was impressed by Assyrian religious practices and tried to institute them in Jerusalem.

Pekah, king of Israel, who had been in league with Rezin of Damascus, was a target of Assyrian vengeance during this period. According to Assyrian records Pekah's army was defeated and various regions such as Gilead and Galilee were captured and their people taken back to Assyria in exile. Samaria, however, remained free and was not captured until the time of Shalmaneser V. Some time after the Assyrians defeated Pekah he was assassinated and replaced by Hoshea as king of Israel, who became an Assyrian vassal. See *CAH* 3/2/22.

A. KIRK GRAYSON

TIKVAH (PERSON) [Heb *tiqwâ* (תִּקְוָה)]. **1.** The father-in-law of Huldah the prophetess, who authenticated the temple scroll found during the reign of Josiah (2 Kgs 22:14). In the parallel text of 2 Chr 34:22, he is named Tokhath; however, that involves only a minor difference in the consonantal Hebrew text (*tqwh* versus *twqht*). Noth takes the spelling of 2 Chronicles to be original and argues that the name is non-Semitic (*IPN*, 260). Wilson (1980: 223) believes that Tikvah's son, Shallum, is the same Shallum identified as Jeremiah's uncle (Jer 32:7). If he is correct, Tikvah was also the father of Hilkiah, the grandfather of Jeremiah, and a member of a priestly family in Anathoth—a family long conjectured to be descended from Abiathar and possibly Eli (see 1 Kgs 2:26–27). Further, if Hilkiah the priest mentioned here is also the father of Jeremiah, then we can infer that he brought the temple scroll to his sister-in-law for verification of its authority. However, both "Shallum" and "Hilkiah" are relatively common names; therefore, these possible identifications must remain uncertain.

2. The father of Jahzeiah, who was one of the few opponents of Ezra's procedure to dissolve the marriages between Judean men and foreign women (Ezra 10:15; 1 Esdr 9:14). Noth considers the name to be a modification of *tāwqhat* and considers it to be non-Semitic (*IPN*, 260). For the discussion, see JAHZEIAH (PERSON).

JEFFREY A. FAGER

TILON (PERSON) [Heb K *twlwn* (תּוֹלוֹן), Q *tîlôn* (תִּילוֹן)]. The son of Shimon, belonging to the tribe of Judah (1 Chr 4:20). The MT records a variation in spelling of this name between what was written and what was spoken (preserved in the margin).

DAVID CHANNING SMITH

TIMAEUS (PERSON) [Gk *Timaios* (Τιμαιος)]. The father of the blind beggar Bartimaeus of Jericho, to whom Jesus restored sight (Mark 10:46). The preservation of the name of Timaeus and his son is limited to Mark and is one of only two instances in which Mark gives a name within a healing story (cf. 5:22). Such detail may indicate the later influence of Bartimaeus within the Church. This common name is shared by the famous dialogue of Plato, the *maeus.*

JOANN FORD WATSON

TIMNA (PERSON) [Heb *timnāʿ* (תִּמְנָע)]. **1.** A sister of the Horite chief Lotan (Gen 36:22; 1 Chr 1:39); she became the concubine of Eliphaz (a son of Esau) and the mother of Amalek (Gen 36:12). A few scholars assume that two different persons are described in these passages: Lotan's sister and Eliphaz' concubine (see, for instance, Douglas in *NBD*, 1200). Most, however, accept that the Timna of Gen 36:22 and 1 Chr 1:39 is the same person as the Timna of Gen 36:12. Some feel that the identification of a Horite as a concubine rather than a wife is meant to convey information concerning relations among various

groups. According to Wilson (1977: 180), for example, assigning Timna the status of a concubine indicates not only that social mixing had taken place between Horites and Edomites (whose eponymous ancestor was Esau), but also that the Horites were assigned an inferior status among the Edomites. Sarna (1989: 250) adds that the purpose of Timna's status as a concubine is to draw attention to the Amalekites not being genuine Edomites. This becomes important when one considers that whereas the Israelites were to consider Edomites as kinsmen (Deut 23:7–8), the Amalekites were to be punished for their treatment of Israel (Exod 17:8–16; Deut 25:17–19).

2. A clan chief of Edom (Gen 36:40; 1 Chr 1:51), apparently listed in 1 Chr 1:36 as a son of Eliphaz. This suggests that Eliphaz had a concubine and a son each named Timna. Scholars have offered other possibilities. Keil and Delitzsch (1986: 323) noted that the wording of 1 Chr 1:36 is "and Timna and Amalek," and claimed that this is simply a concise way of saying "and from Timna, Amalek." Williamson (*Chronicles* NCBC, 44) claims that the names Timna and Amalek in 1 Chr 1:36 were loosely attached to the preceding list and that the Chronicler was relying on the reader's knowledge of Genesis to make sense of the reference. Several scholars, however, suggest that the "Timna" of Gen 36:40 and 1 Chr 1:36, 51 was not a person at all. Rather, it was a geographical designation of the territory inhabited by the Edomite clan (see, for example, Hicks in *IDB* 4: 649).

DAVID SALTER WILLIAMS

TIMNAʿ (PLACE). A valley at the S end of the Arabah, and some 30 km N of the Gulf of Aqabah. The valley has been the center of intermittent copper mining and smelting activities for over six millennia, and dozens of sites in the valley yield remains attesting to this activity. Consequently, for precision, map-reference (M.R.) numbers in this entry are not rounded off to the usual six digits.

———

A. Geographic Setting and Nature of the Site

Timnaʿ consists of a semicircular valley covering ca. 70 km^2 and is drained by four wadis. The valley opens toward the E into the Arabah, and the N, W, and S walls of the valley are protected with formidable cliffs ca. 500–700 m high. In the center of the valley is a large mountain rising 453 m above the surrounding area. The erosion of the predominantly sandstone cliffs of this mountain has left an array of geologic formations, among which is one called "King Solomon's Pillars." The exposed stone throughout the valley encases veins of high-concentration copper-bearing ores which have been exploited from the Chalcolithic period to the modern operation run by Israel's Timna Copper Mines, Ltd.

B. History of Explorations

Timnaʿ was first noted by the British explorer J. Petherick in 1845 (1861), who identified the presence of copper smelting slag. A. Musil in 1902 noted the remains of buildings in the area (1907). In 1934, F. Frank (1934) identified seven copper smelting sites; N. Glueck in 1935 claimed to have identified Iron Age I and II sherds in the area, and as late as 1970 attributed the mining operations in part to Solomon (1970: 91–92, 120; however see discussion in C.1.c below). B. Rothenberg began a systematic investigation of the region in 1959–60, which resumed annually in 1964. For this study he assembled an international and interdisciplinary team combining archaeologists with specialists in metallurgy, extractive metallurgy, mineralogy, and chemistry.

C. Results of the Excavations

1. The Copper Installations. The copper installations consist of areas devoted either to one or a combination of operations—copper mining, ore preparation, smelting, and casting. While the region has been exploited intermittently over a long period of time, this summary will concentrate on those operations that occurred during four major periods—the Chalcolithic, the EB, the LB–Iron Age I, and the Roman.

a. The Chalcolithic Period. Site #39 (M.R. 14909183) consists of two areas—"a" and "b." At the bottom of a hill is Site 39a, which was a preparation site for mixing ores and fluxes. These were then probably smelted at Site 39b on the top of the hill some 30 m higher. A building (ca. 4 × 5 m) with rounded corners and an entrance on the W was excavated at the bottom of the hill and apparently was a dwelling in which some of the ore was processed. Site 39b, on the top of the hill, yielded an array of Chalcolithic flints and ceramic remains *in situ*, and of special importance was the smelting installation, which consisted of a primitively constructed bowl furnace (ca. 45 cm in diameter and ca. 30 cm deep; *EAEHL* 4: 1186–88).

The copper ores were gathered during the Chalcolithic period by a combination of trenching and pitting, essentially a pit-mining process. There is some tentative evidence of shaft-and-gallery underground mining (Site 42), but this has not been fully investigated (Rothenberg 1972: pl. 2, 3; 1978: 1). The evidence from the Timnaʿ valley constitutes the earliest evidence of a metal production complex in the ANE (Rothenberg 1978: 4).

b. The Early Bronze Period. Several sites yielded remains of copper operations from the EB period. The EB I is represented by a fully developed underground mining system (in Area T) consisting of shaft-and-gallery networks. The tunnels were dug and the ores extracted by means of stone tools. Examples of these tools were discovered in the tunnel system, along with a typical EB I lamp. There are several smelting sites in the area which may date to the EB I, but these have not been fully investigated (Rothenberg 1978: 1–2).

While there is no evidence of copper mines in the Timnaʿ valley itself during EB II; several sites have been located just a few km N of the valley—Sites 144, 167, 168, 201, and 231. Site 201a (M.R. 15109175; ca. 3 km N of Timnaʿ in the Arabah), along with some of the others, has produced pottery and flints of the EB II, as well as a smelting furnace built of stone. These installations are particularly significant because they are the first evidence of tapping the slag out of the furnace during the smelting process (Rothenberg 1978: 2). The earlier process had involved mixing the fuel and ore, after which the slag and copper were allowed to cool. The mass was then broken up and the copper nodules removed for further processing (1978: 28–29).

Evidence for copper metal mining and processing during the rest of the EB is lacking, although it is possible that some activity occurred during the EB IV (inferred from the discovery of EB IV remains in the S Arabah; Rothenberg 1978: 1). Such activity might be expected in view of the appearance of copper ingots at several EB IV sites in the N Negeb—e.g.Beer Resisim (Cohen and Dever 1980) and Yeruham (Kochavi 1969)—and also at Lachish (Tufnell 1958: 39–43, 75).

c. The Late Bronze–Iron Age I. A gap appears in the mining/smelting operations at Timnaʿ during the MB, but it commenced again in LB II. A large operation was found at Site 2 (M.R. 14489107) and showed evidence of several steps of the processing operation. One area (B) had a furnace for smelting and casting as well as a facility to produce charcoal from acacia wood. In another area (D–K), a 400 m^2 building seems to have been used to house some of the personnel and to store and process raw materials for smelting; this was built around an 8 × 11 m courtyard in which were storage pits and stone platforms where ores were crushed (inferred from grinding tools and crushed ores found *in situ*). In the N of this area was a casting workshop with remains of charcoal, wood ash, copper pellets, and slag (*EAEHL* 4: 1188–90). There was also an area that appears to have been a *bamah* W of the site (see 2.b below).

Site 30 (M.R. 14479093) is a large, 40 × 80 m walled smelting area, which had three strata. Strata 3–2 showed evidence of rather extensive use and several rectangular buildings—probably a combination of workshops, dwellings, and storage facilities. The predominant smelting technique was the more tedious

process of allowing the slag to cool, from which the copper nodules were picked. The open areas in the compound were used to store raw materials, or to discard broken slag. The ceramic repertorie consists of a combination of black, handmade Negeb ware (Negebite ware), along with Midianite and Egyptian ceramics which appear to be generally Iron Age I. Stratum 1 did not encompass as large an area, but the metallurgical process was more sophisticated than in the earlier strata, as shown in the larger, more durable furnaces, and the reintroduction of tapping the slag. The ceramics of this stratum were almost exclusively Iron Age I (*EAEHL* 4: 1199–1201).

In spite of Glueck's claim that Solomon engaged in copper mining activity in this area (1970: 91–92, 120), there has been no evidence to indicate any such activity during the Iron Age IB, much less any activity attributable to Solomon. Instead, there is a gap in mining/smelting operations from the mid–12th century B.C. to the Nabatean period. The texts, on the other hand, indicate that Solomon's copper/bronze resources were in large part secured by David as a result of his military exploits (cf. 1 Chr 18:8, 10; 22:3, 14). There are no textual nor archaeological indications that Solomon sponsored mining activities in the area of Timnaʿ, or anywhere else.

d. The Roman Period. Site 28 (M.R. 14829032) appears to have been a major center for Roman copper extraction, and Rothenberg suggests that it was associated with the presence of the Third Legion Cyrenaica (*EAEHL* 4: 1199). The site has remains of smelting furnaces which incorporated the slag tapping procedure, in addition to casting workshop areas (*EAEHL* 4: 1198–99).

2. The Shrines. a. The Chalcolithic Period. A shrine has been inferred in Site 191 (M.R. 14979166), which rests next to one of the cliffs in Timnaʿ valley. It consists of a semicircular enclosure against the face of the cliff, in which there is a narrow fissure. The enclosure was littered with Chalcolithic sherds and flints and inside the fissure is an apparently ancient rock drawing/carving depicting two beings (a male and female?) along with four abstractly executed ostriches. Rothenberg suggests that the female figure is reminiscent of the Ghassulian fresco and suggests that the two figures may represent the deities worshiped at the site (1972: 53–62).

b. The Late Bronze–Iron Age I. Area F at Site 2 (see C.1.c above) is located about 70 m W of the main smelting area and has what appears to be a *bamah.* It is on a ridge which connects a 20-m-high hill to the adjoining lower intermediate valley walls. The *bamah* is an oval tumulus measuring 4.8 × 3.1 m and about 22 cm high (*EAEHL* 4: 1190; Rothenberg 1972: 114–16). In association with the structure along with the black Negeb ware were found numerous decorated Midianite sherds; various small precious items such as beads of carnelian and faience; stone, glass, and copper needles and spatulas; Red Sea shells, ostrich eggshells; several goat horns; and evidence of metallurgical activities. Rothenberg suggests that this site may be where some of the copper implements associated with the worship at the nearby Hathor shrine were produced (*EAEHL* 4: 1190).

A series of cup marks next to a deliberately leveled area, 3 × 3 m, were found on a high plateau (M.R. 14509090) in association with another copper site (Site 34). This installation apparently dates to the LB II period (Rothenberg 1972: 66). The site, which Rothenberg suggests is a *bamah,* rises 10 m above the plateau and has a series of steps leading up to it which shows signs of tool marks (1972: 117). The platform has engraved on its surface a small representation of a human sitting on a one-hump camel.

Site 199 (M.R. 14579094) is nestled deep within a series of crevices associated with the so-called King Solomon's Pillars. The presence of human skeletal remains enclosed within a number of the crevices implies a burial place. In association with these were ceramic goods dating to the LB–Iron Age period, including an ornate Midianite jug. About 50 m S of this funeral area is a sheltered area which was created when a large piece of sandstone fell and formed an artificial cave. In this cavity (Site 198) was a platform on which was a rounded *maṣṣebâ* stone (55 cm high and 30 cm wide) with a shallow cup mark (libation bowl?) beside it. Rothenberg suggests (1972: 118–19) that these were associated sites, and infers from the slag, tools, and charcoal remains in the cave that perhaps this area was used for ritual casting.

The most complex shrine is Site 200 (M.R. 14579090), also known as the Hathor Temple, which is built against the face of the "Pillars," and is centrally located. The remains were located in a mound measuring

ca. 15 × 15 m and ca. 1.5 m high. Excavations revealed 5 strata ranging from the Chalcolithic to the Roman periods, although the primary activities were concentrated in the LB–Iron Age I (strata 4–2).

The Chalcolithic period (stratum 5) was represented by flints and sherds and had some sparse remains of buildings and fireplaces (*EAEHL* 4: 1190).

Strata 4–3 are dated to the LB II–Iron Age I period and were associated with the 19th–20th Dyn. of Egypt, who were exploiting the copper of the region.

The stratum 4 shrine consisted of a 9 × 7 m courtyard in which was a *naos* measuring 2.7 × 1.7 m. The raised *naos* was built of imported white sandstone and rested against the red sandstone cliff, in which had been carved a large niche; the niche probably accommodated the representation of a deity. Two square foundation stones were located flanking the *naos,* where probably stood two large squared pillars depicting Hathor. Such pillars were found in clear secondary use in the shrine (*EAEHL* 4: 1190–92). It seems that stone lintels (i.e., architraves) bridged from the Hathor columns to the back of the shrine into holes that had been dug into the cliff to support the end (Rothenberg 1972: 130). Some of the small finds associated with stratum 4 include incense altars and offering tables (*EAEHL* 4: 1192); otherwise, because of the disturbed stratigraphy of the site, many of the small finds for strata 4–2 are grouped together (Rothenberg 1972: 152–53). Rothenberg suggests (*EAEHL* 4: 1190) that the shrine was built sometime during the reigns of either Rameses II (ca. 1304–1237 B.C.) or Seti I (ca. 1318–1304 B.C.; the later is the date given in 1972: 129–30). Because of the extreme obliteration of the architectural remains, it appears that the shrine was deliberately destroyed, but by unknown agents (Rothenberg 1972: 131).

Stratum 3 was built after the lapse of about a generation, at which time the courtyard was enlarged to ca. 9 × 9 m and paved with a layer of crushed white stone. The *naos* also was renovated with a layer of lime plaster and with the installation of a special area, a *pronaos,* just in front of it (measuring 3 × 3 m). From the inscribed objects found in this stratum (e.g., a faience ring stand with a cartouche inscription; *EAEHL*4: 1195), it appears that the new shrine may have been rebuilt during the reign of Rameses III (ca. 1198–1166 B.C.). Further corroborating this conclusion is the outline of a rock stele (ca. 90 cm high and 55 cm wide) carved into the face of the cliff above the shrine. The stele shows Rameses III, identified by two of his cartouches carved into the stone, offering gifts to Hathor (Ventura 1974), who was the Egyptian goddess of mining. That the shrine was devoted to the worship of Hathor, at least in these earlier strata, can be inferred from the stele depicting Hathor, the presence of the Hathor-faced square columns, representations of the cat which is associated with Hathor (and especially a leopard; Rothenberg 1972: 166), and the discovery of an inscribed bracelet fragment which reads: "Hathor, Lady of the Turquoise," and another similar inscription on a sistrum handle (Rothenberg 1972: 166). The monumental elements of the stratum 3 shrine were almost exclusively Egyptian in character. The shrine was probably destroyed by an earthquake (Rothenberg 1972: 149), and if the shrine were associated with Rameses III, it would have been in the first half of the 12th century B.C.

The shrine of stratum 2, however, takes on a different character (*EAEHL* 4: 1193–96)—a room was added outside, but attached to the E side of the shrine and against the cliff, stone benches were built flanking each side of the entrance into the shrine, and a series of *maṣṣebôt* were placed along the W wall, most of which consisted of earlier Egyptian elements in reuse (e.g., one of the square Hathor columns, which had been defaced and was placed upside down). Rather large quantities of animal bone fragments were found in this stratum, and especially around the *maṣṣebôt* (Rothenberg 1972: 176). Perhaps most surprising was the discovery, along both side walls of the shrine, of fairly large pieces of red and yellow heavy fabric into which beads had been woven. The material was a combination of flax and wool, and from the discovery of strategically placed postholes, it is inferred that these were the remains of a tent covering (Rothenberg 1972: 151; *EAEHL* 4: 1196). In the *naos* was found *in situ* a copper snake, measuring ca. 12 cm. with a gilded head which depicted two eyes (Rothenberg 1972: 152, 173).

Stratum 2 appears to have more of a "Semitic" character. Because of the Midianite ceramic motifs, some of the non-Egyptian motifs at the site, and the apparently contemptuous regard for some of the Egyptian elements (e.g., the defacing and inversion of the Hathor column, and yet its retention as a religious artifact: the effort to eradicate the obvious hieroglyphic elements at the site), one can infer that

the Midianites, or at least groups who were more indigenous to Canaan, were probably the predominant group working the sites. The non-Egyptian motifs include the copper serpent; a copper figurine of a sheep; copper jewelry resembling the geometric designs on the Midianite pottery; a very stylized copper figurine with outstretched arms, a phallus, and almost a "beak face" head; and another cast copper figurine of a phallic image [Rothenberg 1972: 172–76]).

The small finds from strata 3 and 2 consist of those with Egyptian motifs: the fragment of a small sphinx (which Rothenberg says resembles the figure of Rameses II; 1972: 132), faience beads, bowls, animal figurines, scarabs, wands, alabaster vessels, and Hathor figurines (*EAEHL* 4: 1196); and those of more local origin (cf. the listing above). While Rothenberg is unwilling to attribute these artifacts specifically to either stratum 3 or 2 because of the disturbed nature of the site and the resulting stratigraphic problems (*EAEHL* 4: 1196–98; 1972: 152–53)—and it is necessary to respect these factors—one nevertheless wonders if the artifacts should generally be divided to correspond to the respective character differentiations of the site's monumental remains. This shrine came to an end about the middle of the 12th century B.C.

c. The Roman Period. Part of Site 200, the shrine, was briefly reoccupied during the Roman period and was used as a casting workshop (Rothenberg 1972: 177–79).

A possible shrine of some kind was found at site 28 (M.R. 14829032). It consists of a somewhat rectangular area (7.5 × 5.5 m), outlined with large slag pieces that had been embedded into foundation trenches. On the S side was an "apse." Rothenberg hints that it might have been a symbolic Christian church from the Roman period (1972: 221–22).

D. Questions and Observations from the Excavations

The transition from the predominantly Egyptian nature of the copper activities of the LB–Iron Age to the more Semitic character is intriguing: what was the relationship between the Semitic elements and the Egyptian? Rothenberg (1972: 183) and Kenyon (1987: 45–46) think that the Semitic peoples collaborated with the Egyptians in the copper-extracting processes (1987: 45–46), while Singer (1978: 20) hints that there was perhaps coerced labor: "Egyptians … more likely directed, imported Midianite and Amalekite laborers." Regardless of this relationship, a change of attitude apparently occurred among the Semitic elements as implied in the contemptuous treatment of the exposed hieroglyphs, the defaced Hathor columns, and especially the apparent deliberate inversion of one of the columns while retaining it in the shrine context. Somewhat peculiarly, there is no evidence to infer an armed conflict, but with the destruction of the Hathor shrine by an earthquake (during the reign of Rameses III?), the Semitic elements appear to have gained the supremacy.

Perhaps the Egyptians decreased their presence at Timnaʿ to redirect their manpower in the face of the Libyan threat on their W border, and because of conflicts with the Sea Peoples (cf. *CAH* 2/2: 371–78). Additionally, one benefit of military campaigns (tm the victors) is the spoils, which could diminish the need to extract raw materials. Perhaps the earthquake, then, was simply coincidental to the "ethnic" shift, or perhaps the earthquake was perceived as a convenient time to diminish the operation in view of the time and energy needed to "retool." The answer to this question remains elusive.

The appearance of the copper snake in the *naos* of the Hathor shrine easily recalls the episode of Moses and the serpents in the wilderness, and in particular Moses' construction of a bronze serpent which he placed on a pole (Num 21:6–9). This relic, which was called "Nehushtan," is that which Hezekiah is said to have destroyed as part of his reforms (2 Kgs 18:4). It is unclear whether the word *nĕḥuštan* is derived from the root meaning "copper, bronze," or from the root for "serpent" (cf. BDB, 639), but either way, the name is appropriate. While no claim is made to connect directly the Timnaʿ serpent with either of these traditions, its presence corroborates a wider cultural veneration of the serpent among those who became Israel's neighbors (as do also various ceramic representations of serpents on cultic vessels; e.g., the cult stand from Beth-shan, stratum 5).

The discovery of the fabric which covered the Hathor shrine, while by no means duplicating the description of the tabernacle (cf. Exodus 26, 36), shows the antiquity of the practice on at least a "permanent" structure.

TIMNAH (PLACE) [Heb *timnâ* (תִּמְנָה)]. **1.** A town on the N border of the tribal allotment of Judah (Josh 15:7), between Beth-shemesh and Ekron (probably Tel Miqne). According to Josh 19:43, it was originally assigned to the tribe of Dan. Alt (*KlSchr* 1: 193–202) has persuasively argued that the border list of Joshua 15 is derived from an ancient legal document delineating the territorial claims of the tribes during the period of the judges. Despite these claims, for a time Timnah was in the hands of the Philistines, for it was here that Samson's famous misadventure with his Philistine wife took place (Judges 14). The fact that Timnah was taken by the Philistines during the time of Ahaz (2 Chr 28:18) indicates that it came under Israelite control for a time, perhaps as a result of Uzziah's campaign against the Philistines (2 Chr 26:6).

A majority of scholars accept the identification of ancient Timnah with Tell el-Batashi (M.R. 141133), a large mound in a broad section of the Nahal Sorek approximately 9 km WNW of Beth-shemesh and 5.5 km E of Tel Miqne (Ekron). Extensive excavations have demonstrated a close correspondence between the history of ancient Timnah and this most impressive mound, including a substantial Philistine occupation during the Iron I period and clear evidence of Israelite reoccupation during the 8th century (Kelm and Mazar 1985). When combined with this archaeological evidence, the ideal geographic location of Tell el-Batashi with respect to other known points on Judah's N border makes this identification difficult to question. See also BATASHI, TELL EL- (M.R. 142132).

2. A town situated in the S hill country of Judah (Josh 15:17), within the same district as Maon. This settlement is included in the list of towns within the tribal allotment of Judah (Josh 15:21–62). The theory that this list is derived from an administrative roster compiled under the Judean monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise makeup of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the monarchy to which the original roster belongs (*Joshua* 64–72). Given the tentative identifications of neighboring towns such as Maon with Tell Ma'in, Carmel with Khirbet el-Kirmil, and Juttah with modern Yatta, the hill country Timnah is no doubt located in the same region, 10 to 15 km SW of Hebron. However, no satisfactory candidate within this region has yet been identified.

3. A town in S Canaan (Gen 38:12). It was on his journey to Timnah that Judah is said to have mistaken his daughter-in-law Tamar for a ritual prostitute (Gen 38:12–19). The lack of detailed geographical clues makes it difficult to provide a firm identification. Many scholars (eg. Gold in *IDB* 4: 649) equate it with Timnah of the S Judean hill country (#2 above), although its identification with Timnah/Tell el-Batashi seems equally probable in geographic terms. The discovery that Tell el-Batashi was a major city during the Bronze Age (Kelm and Mazar 1985) lends considerable strength to the second of these associations. Given that Timnah is a relatively common place name, it is entirely possible that a third location is referred to in these verses.

TIMNATH (PLACE) [Gk *Thamnatha* (Θαμναθα)]. Listed in 1 Macc 9:50 as one of the cities of Judea fortified by Bacchides in his battle with Jonathan. While the major mss of the Greek text read *Thamnatha Pharathōn,* as if the two terms comprise the name of a single location, Abel has rightly pointed to the readings of the Vulgate, Syriac versions, and Josephus (*Ant* 13.15), all of which place a *kai* between the two words (1925: 206–7; Goldstein *I Maccabees* AB, 386).

The location of this city has been the subject of some debate. The discussion is rooted in the various references to *timnāh* in the Hebrew Scriptures, all of which do not designate the same location. See TIMNAH (PLACE). While Aharoni and Avi-Yonah identify the city in 1 Macc 9:50, also called Thamna, with a site SW of Jerusalem (*MBA*, 197), Abel considered it to be at the location of Joshua's tomb, the modern Khirbet Tibnah (M.R. 160157), also known as TIMNATH-HERES or Timnath-serah (1925: 206–7; *GP* 2: 481–82). There is also a Timnah now identified with the modern Tell el-Batashi (M.R. 141132) in the Sorek valley E of Jerusalem, even though that site has also been the subject of debate (Aharoni 1958: 27–30). Goldstein is probably correct in asserting that the fortifications erected by Bacchides would have been to the N of Jerusalem (AB, 386), the primary base of the Maccabean insurgency (AB, 236), thereby arguing for the Khirbet Tibnah site located about 12 miles NE of Emmaus. This is probably the same city reduced to servitude by Cassius (*Ant* 14.275).

JOHN KAMPEN

TIMNATH-HERES (PLACE) [Heb *timnat-ḥeres* (תִּמְנַת־חֶרֶס)]. Var. TIMNATH-SERAH. A toponym that denotes the portion allotted to Joshua as a personal possession (Judg 2:9). The initial problem presented by the biblical evidence is the variation in the name between Judges (2:9; Timnath-heres) and Joshua (19:50; 24:30; Timnath-serah [Heb *timnat-seraḥ*]). Though most scholars have accepted "Timnath-heres" as the original form (Boling and Wright *Joshua* AB, 469), they do not share the same unanimity in their interpretations concerning the difference between the renderings in Judges and Joshua. Some suggest that the name "Timnath-heres," "Portion of the Sun," indicates the presence of a cult center, dedicated to the sun deity (cf. *IDB* 4: 650). Therefore the change in Joshua may represent an attempt by the redactors of Joshua to remove any hint of idolatry on the part of Joshua.

Another suggestion by van Selms (*ISBE* 4: 856) maintains on the basis of etymology that the change was due to the geographical location of the settlement. If Timnath-heres is part of the S slopes of Ephraim (see below), then it is located in the most rugged portion of the whole territory of Ephraim (Finkelstein *AIS*, 128). According to van Selms (*ISBE* 4: 856), the change from *ḥeres* to *seraḥ* was due to "spontaneous metathesis" and the new form should be translated "overhang." This etymology would seem to be a logical referent for a town built in an area of steep incline.

The third interpretation suggests that the metathesis is due to popular etymology. In contrast to van Selms, Boling proposes that "Timnath-serah" means "leftover portion" (*Judges* AB, 72). Therefore the name is an inference gleaned from the fact that Joshua received his allotment from what was left after all the other tribes had been given their inheritance. The interpretation of van Selms is difficult to sustain because *seraḥ* is never used to describe mountain formations, but rather to describe the "excess" such as cloth that overhangs the edge of the top of a tent. It is that surplus which is "left over." In summary, the evidence is not sufficient to make a definitive resolution of the problem, although the third suggestion seems most likely.

All three references to Timnath-heres/-serah locate Joshua's inheritance within the geographical boundaries of his own tribe, Ephraim (Num 13:8). However, the city appears to belong exclusively to Joshua and not to the tribe of Ephraim. The suggestion that Joshua had a private city (like David with Jerusalem and Omri with Samaria) bears further study (cf. van Selms *ISBE* 4: 856). In this connection, it should be noted that Caleb also receives a special inheritance of Hebron in the tribe of Judah.

Timnath-heres has been predominantly identified with Khirbet Tibnah (M.R. 160157) among the S slopes of Ephraim (Finkelstein *AIS,* 121, 169). The site, 24 km SW of Shechem, was occupied as early as MB II. However, during the LB Age it was mostly abandoned (Boling and Wright AB, 469). In contrast, during Iron I, the site was a rather large village of 35–40 dunams. The abundance of pottery also indicates active occupation in Iron II. There is evidence of occupation down until the Early Arab and medieval periods. The archaeological evidence would seem to support that the settlement was extensively rebuilt during Iron I and may be the source of the tradition that Joshua rebuilt the settlement (Josh 19:50). It is clear that this site was part of the early settlement of the hill country of Ephraim that would finally emerge as Israel. See TIMNATH (PLACE).

HARRY R. WEEKS

TIMON (PERSON) [Gk *Timōn* (Τιμων)]. Timon appears only in Acts 6:5, where he is one of seven gifted leaders "of good repute, full of the spirit and of wisdom" (Acts 6:3), who were chosen to look after the needs of the Hellenistic Jewish-Christian widows who had been neglected in the "daily distribution" (Acts 6:1). Since all seven had Greek names and only one of them, Nicolaus, is explicitly called a proselyte, it is probable that the other six, including Timon, were either Jews born in the Diaspora or Palestinian Jews with Greek names (as would be the case with Jesus' disciples Andrew and Philip). The work of two of them, Stephen (Acts 6:8–8:2) and Philip (Acts 8:5–40; 21:8), makes it clear that the seven did not limit themselves to "serving tables" (Acts 6:2) but functioned for the Hellenists in the way that the Twelve did for the Hebrew Christians (see Simon 1958: 7).

Tradition holds, according to Schermann (1907: 302–3, 348), that Timon was one of the 70 appointed by Jesus (Luke 10:1), later became bishop of Bostra in Arabia, and was eventually martyred by fire in Basrah at the instigation of heathen Greeks.

JON PAULIEN

TIMOTHY (PERSON) [Gk *Timotheos* (Τιμοθεος)]. A missionary associate, fellow worker, and trusted emissary of Paul over an extended period of time. Timothy is mentioned after Paul in the prescript of various Pauline letters as a cosender of those letters (1 Thess 1:1; 2 Cor 1:1; Phil 1:1; Philemon 1; cf. also 2 Thess 1:1; Col 1:1). He is variously identified as "our brother" (1 Thess 3:2; 2 Cor 1:1; Philemon 1), as "fellow worker" (1 Thess 3:2; Rom 16:21), and as Paul's "beloved and faithful child in the Lord" (1 Cor 4:17; cf. 1 Tim 1:2) who enjoys a special relationship with this apostle (Phil 2:20–22; cf. 1 Tim 1:2, 18; 2 Tim 1:2; 2:1). Many interpreters also see the phrase "apostles of Christ" (1 Thess 2:6) as including Timothy along with Paul (and Silas).

According to Acts Timothy was a native of Lystra in Asia Minor (16:1, 2), the son of a Jewish woman and a Greek father (16:1). Because of the matrilineal principle of descent, Timothy would have been considered a Jew, although the applicability of this principle in the 1st-century Diaspora has been questioned by Cohen (1986: 251–68). The author of 2 Timothy, preserving what is probably historically reliable tradition, names his mother as Eunice and his grandmother as Lois, both of whom are described as Christian believers (1:5). Timothy's mother did not have him circumcised (Acts 16:3). This together with her marriage to a (nonbelieving?) gentile suggests that Timothy, living in the Diaspora, did not grow up in a pious or strictly observant Jewish home (although see 2 Tim 3:15).

At Lystra during Paul's second missionary journey, Timothy is chosen by Paul to accompany him, probably because "he was well spoken of by the brethren" of that area (Acts 16:2–3). The reason for his good reputation remains unknown. At this time Timothy was already a Christian. Although there is no

indication in Acts or Paul's letters when Paul first encountered Timothy, nor is there reference to the person who brought Timothy to the Christian faith, it is usually assumed that Paul and Barnabas met and converted him during their first missionary journey to that area. In accord with Jewish legal observance, Paul had Timothy circumcised, thus regularizing his religious status and hence making him fully acceptable and more effective as Paul's co-worker to the Jews of his native area and elsewhere (Acts 16:3). The noninterference of Timothy's father with the circumcision leads to the assumption that he was deceased at this time.

Timothy along with Silas (= Silvanus) accompanied Paul through Asia Minor to Troas and then went over to Macedonia. At Philippi they became involved in conflict (Acts 16:6–40; 1 Thess 2:2); however, Paul and Silas are the only ones mentioned as having been brought before the magistrate. Timothy may have been spared because he was half Greek. Afterward the missionaries passed through Amphipolis and Apollonia, eventually arriving at Thessalonica, where opposition was also encountered (Acts 17:1–9). The sources offer different accounts about what happened next. According to the author of Acts, Paul, Silas, and Timothy left by night for Beroea, where Timothy and Silas remained, while Paul set sail for Athens (17:10–14). From Athens Paul sent word that Timothy and Silas were to join him in that city "as soon as possible" (17:15). Yet, according to the narrative, they do not meet Paul until he is in Corinth (18:5). According to Paul in 1 Thessalonians, Timothy (and Silvanus?) had joined him in Athens from where Paul, anxious about the newly established community at Thessalonica, sent Timothy to them (3:2). Since Paul was closer to the events related, his account merits priority.

The decision to send Timothy may have been collaborative (cf. "*we* sent …," 1 Thess 3:2), with Timothy taking an active part in the determination that Paul remain in Athens, while he (and Silvanus?) went back to Thessalonica. Timothy's task included the following: to establish the Thessalonians in their faith and to encourage them (3:2), to assess how the community was faring so that he could report back to Paul (3:5), and probably to tell them of Paul's longing to see them personally and to explain why Paul himself could not come (2:17). At the time the Thessalonians were suffering afflictions from their neighbors, just as Paul had told them would happen (3:3–4). Already known to the new converts, Timothy undoubtedly had Paul's confidence that he was quite capable of the mission entrusted to him. Timothy's close collegial relationship to Paul is underscored by the words "our brother" (3:2), his commitment to service by the phrase "God's fellow-worker [*synergos*] in the gospel of Christ" (3:2), and the divine origin of his call by the title "apostle of Christ" (2:7, assuming that the "we" in this section includes the cosenders mentioned in 1:1). Although Paul calls others "brother," this designation is used characteristically for Timothy, and brings to mind, along with the other titles, the common ministry he shared with Paul.

After his mission to the Thessalonians, Timothy returned to Paul in Corinth (cf. Acts 18:5), bringing a report of successful missionary work. He informed Paul about "the good news" of their "faith and love," and related how the believers remembered the apostles always and longed to see them (1 Thess 3:6). Such news was a source of comfort to Paul amid his own distress and afflictions (3:7). It also appears that Timothy brought a list of questions from the new converts about, for example, the fate of those who died before the Parousia (4:13–18), and concerns about "the times and seasons" (5:1–11). One wonders whether Timothy himself gave some response to these concerns while he was with the Thessalonians. Whatever the case, Paul, Silvanus, and Timothy find it necessary to send their reply by means of a letter (1 Thessalonians).

While in Corinth, Timothy was active in establishing the community of believers there, for he, along with Paul and Silvanus, preached "the Son of God, Jesus Christ" (2 Cor 1:19). It is uncertain, however, how long Timothy remained in Corinth after his Thessalonian mission. Was it for 18 months, the duration of Paul's stay (ca. 51–52, cf. 2 Cor 1:19; Acts 18:11)? Also unclear is Timothy's path over the next few years.

At some point Timothy joins Paul during his Ephesian stay of the third journey (ca. 54–57). Having heard disturbing reports about the Corinthian community, Paul decides to send Timothy from Ephesus to Corinth as well as another letter (the canonical 1 Corinthians; cf. 1 Cor 7:1 regarding a previous letter) to

resolve the situation. The sending of Timothy is indicated by the verb *epempsa* in 1 Cor 4:17, which may be translated in two ways. As a regular aorist the sense is "I sent … Timothy," implying that he was sent before the letter (note that he is not mentioned in the prescript in 1 Cor 1:1, suggesting that he was not present when Paul wrote it). The verb may also be read as an epistolary aorist, "I am sending … Timothy," indicating that he was sent at the time of the letter, and possibly that Timothy himself brought the letter with him to Corinth. If the sending of Timothy is the same as that referred to in Acts 19:22, then he was accompanied by Erastus and together they traveled to Macedonia first before Timothy continued on to Corinth.

In any case, Timothy's mission was to serve as an apostolic reminder, recalling for the Corinthians Paul's ways in Christ (1 Cor 4:17). As his "beloved and faithful child in the Lord" (4:17) Paul counted on Timothy to remind the Corinthians of his own teaching. However, it appears that Paul was apprehensive about the kind of reception Timothy would receive. At the close of the letter Paul gives them a threefold instruction when Timothy arrives: "See that you put him at ease among you," as if Timothy was nervous and easily intimidated; "let no one despise him," as if he had been rejected previously by them or as if the sentiment against Paul would overflow toward Timothy; "send him on his way in peace," as if he had left without their support earlier (16:10–11). Did Paul have doubts about Timothy's effectiveness as a leader, or was Paul fearful that the Corinthians would complain, believing they merited the personal presence of Paul himself? The last instruction, "send him on his way [*propempsate*]" has been interpreted as meaning to equip Timothy with all the resources he needed for the journey, including some financial outlay (cf. 1 Cor 16:6; 2 Cor 1:16).

There is no indication in Paul's writings how Timothy's troubleshooting visit turned out. Although Timothy is mentioned as a cosender of 2 Corinthians, Titus becomes Paul's main emissary at the time of this letter. This may indicate that Titus was a stronger personality than Timothy, that Timothy was too closely involved in the conflict, or it may simply mean that Titus was appointed by Paul from the start to handle the collection, a major concern of this letter. It is not necessary to conclude that Timothy was incapable of the task at hand or a persona non grata. For, not too many months later when Paul himself was again in Corinth for three months, a period when Romans was written, Timothy was (still?) there and is the first whose own greetings are included (Rom 16:21). Identified as "*the* fellow-worker" of Paul *(ho synergos mou)*, meaning the "well-known co-laborer," Timothy remains highly regarded by Paul.

When Paul left Corinth, bound for Jerusalem and with plans to go on to Rome and Spain, Timothy was among those who started out with him and went at least as far as Troas (Acts 20:4). It is unknown whether Timothy continued on with Paul to Jerusalem, or intended to travel farther with him.

Timothy is mentioned as the cosender in the prescripts of three letters Paul wrote from prison (Phil 1:1; Philemon 1; cf. Col 1:1). None of these letters implies that Timothy was also imprisoned. In Philippians the imprisoned Paul plans to send to them Timothy, about whom he says: "I have no one like him, who will be genuinely anxious for your welfare … Timothy's worth you know, how as a son with a father he has served with me in the gospel" (2:20–22). Paul leaves no doubt about Timothy's selfless devotion to him.

The significance of Timothy is underscored by his being named as the recipient of two pastoral letters. These letters allegedly written by Paul are usually taken to be pseudonymous. Timothy is portrayed as a youthful, inexperienced protégé of Paul, intimidated by strong opposition, requiring the encouragement and instruction of his mentor on both personal and Church matters. The letters also pick on the theme of the uniquely close relationship between Paul and Timothy, who is referred to variously as "true child of the faith" (1 Tim 1:2; cf. 2 Tim 1:2), and "my son" (1 Tim 1:18; 1 Tim 2:1). The first letter suggests a situation in which Paul, freed from prison and having returned to work in the east, had appointed Timothy to remain at Ephesus (1 Tim 1:3). This implies that Timothy was in Ephesus after Paul's death. Timothy is also said to have received a gift "by prophetic utterance" (1 Tim 4:14). The second letter suggests a somewhat later period, which presents Paul as having been arrested and taken off to Rome a second time. It includes the tradition that Paul asked Timothy to come to him in his imprisonment soon, before winter, and to bring Mark along with his cloak (2 Tim 4:9, 11, 13, 21). If Timothy did go to Rome and was

imprisoned while he was there, this visit should be connected with the mention of Timothy's release from prison by the author of Hebrews (Heb 13:23).

According to later tradition preserved by Eusebius, Timothy, the disciple of Paul, was the first bishop of Ephesus (*Hist. Eccl.* 3. 4).

TIMOTHY AND TITUS, EPISTLES TO. The Pauline letters to Titus and (1–2) Timothy, in recent centuries, have been treated together as both a theological and a literary unity and have been called the "Pastoral Epistles" (hereafter PE). This phrase originated in 18th-century German NT studies, although Thomas Aquinas had already characterized 1 Timothy as "a rule for pastors." The three short letters are "pastoral" in the sense that they are concerned with "shepherding" the Church. Already in the late 2d century, the Muratorian Fragment justified their position in the Christian canon because of their contribution to ecclesial discipline in the Church universal; this case is made in the name of Paul. Additionally, they are concerned with what believers *do.* These letters, however, have no time for speculative thinking or theoretical research and they do not appreciate Christians who pursue such activities (Titus 3:9; 1 Tim 1:4; 2 Tim 2:14; 3:7). They are *pastoral* because they are *practical:* they are ordered to a Christian *praxis,* to the activities of believers.

4. Why Were the Pastorals Written?

———

A. Summaries of the Pastoral Epistles

The PE consist of three individual "letters" and are part of a small group of Pauline letters (including Philemon) that were addressed to *individuals.* These stand together in the NT after a larger collection of Pauline letters that were addressed to Christian *congregations* or *churches* (Romans, Corinthians, Galatians, Ephesians, Philippians, Colossians, Thessalonians). In the current order of the NT collection, eight additional letters (Hebrews, James, 1–2 Peter, 1–2–3 John, Jude) follow the Pauline collection. Altogether the epistles constitute a third of the NT.

1. The Epistle to Titus. The PE come to us as a collection of correspondences that opens with a letter under the name of Paul, to his collaborator, Titus. The individual, personal relationship of the apostle to his co-worker is the frame within which is sketched a Pauline policy and program for predominantly Jewish-Christian congregations, of which the churches in Crete are paradigms.

The long, solemn greeting and blessing for Titus which serves to open not only this letter but also the whole correspondence contains a descriptive definition of the apostolic task divinely imposed on Paul (Titus 1:1–4).

The body of the letter (1:5–3:11) then articulates the apostle's commission to the colleague who shares in and carries out the Pauline apostolate, as a man's son carries on the name and work of his father. The first series of orders from Paul (1:5–16) centers on the establishment of presbyter-bishop ministers in the

towns of Crete. The qualifications of candidates for this work are sketched through catalogs of vices and virtues (1:5–9). The list concludes pointedly with the requirement that these men be responsible, convincing teachers. The description that follows (1:10–16) offers the reason for that insistence: certain Jewish-Christian teachers are perverting the consciences of their fellow believers; the new Pauline presbyter-bishops must stop them.

The second series of orders in the body of this letter (2:1–3:11) again addresses Titus explicitly, giving him Pauline directives for the whole people of God. A domestic code (2:2–10) supplies the grid for instructing various groups within the Jewish-Christian congregation: older men and women, younger women and men (including Titus himself), the Christian slave. The visibly good and attractive lives of God's household are a revelation to all their fellow men of the blessing that the crucified Savior has in store for those who put their faith in him (2:11–14). Titus must confront the present Jewish-Christian troublemakers (2:15–3:11), with their disobedience and the reminder that they have relapsed into the evil life that preceded baptismal rebirth. That event, as it was interpreted by the Pauline teaching, is to be the center of gravity in Titus' instructions. His time is to be spent on encouraging the faithful to live out what they believe; he is to waste no time on theological quibbles.

As the composition closes (3:12–15a), an introduction appears for the pair of missionaries who bear the letter, commending their cause to the support of their fellow Christians in Crete. Titus is summoned to meet Paul at Actium (Nicopolis) as soon as his replacement from the Pauline entourage appears.

The plural address of the final prayer (3:15b) directly refers to all the Cretan Christians. Paul's commission to one of his collaborators is intended to be "overhead" by the Cretan churches.

2. The First Epistle to Timothy. The second unit of the Pastorals has the form of an epistolary diptych directed to Timothy. 1 Timothy constitutes an epistolary commission for this Pauline co-worker (2 Timothy is an epistolary testament to Timothy in the name of the apostle—see below).

Just as the letter to Titus had the cities of Crete and Jewish Christians principally in view, 1 Timothy is concerned with the metropolis of Ephesus and Christian converts that come mainly from paganism. The letter opens (1:1–2) with a brief apostolic greeting and blessing for Timothy, another of Paul's true children in Christian belief.

The body of the letter is arranged with respect to a core of prophetic texts, hymnic and oracular (3:14–4:5), which are proposed and interpreted for Timothy by Paul, for the benefit of the Church conceived of as God's household. Apostolic commissions for Timothy are then arranged both before this core (1 Tim 1:3–3:13) and after it (4:6–6:21a).

The former Pauline commission opens with the address to Timothy in the singular (1:3) in a series of apostolic commands about Judaizing heterodoxies in applying the Law among the converts from paganism. These errors have occasioned the decision to put Timothy in charge at Ephesus (1:3–7). The true Pauline teaching about the function of the Law is complemented by the apostle's thanksgiving prayer to the risen Jesus for his conversion and vocation (1:12–17). This section of commands closes with an emphatic repetition of the singular address to Timothy in the charge of 1:18–20. Then the figure of Timothy sinks out of view as Paul delivers a series of apostolic exhortations on the public worship of believers (2:1–3:1a) and the ministers who serve them (3:1b–13). The section on public worship employs an already traditional Christian order to community prayer which opens with a description of the universal scope of Christian liturgical prayer and the reasons (practical as well as theological) for this catholic inclusiveness (2:1–7). Then the church order turns to the praying community as such, dealing first with the dispositions appropriate for the men in the assembly, then for the women (2:8–10). Public teaching by a married woman in the liturgical assembly poses a special problem because of her prior commitment to her husband and children. The order proposes a solution grounded on the liturgical charge which a bride heard in her Christian marriage (2:11–3:1a).

Finally the order turns to the qualifications and dispositions required in those who minister to the liturgical assembly. The ministerial offices have the Pauline titles of bishop and deacon. In the first place, the ideal bishop is described with a catalog of the virtues to be sought in him and the vices that disqualify a candidate (3:1b–7). Secondly, the order submits catalogs of the qualities to be investigated in another

cadre of ministers, male and female. The former are titled deacons; the latter receive no formal title (3:8–13).

The lengthy church order concludes at the central core of prophetic and hymnic texts (3:14–4:5). At this point Timothy again appears as Paul, in the first person, addresses him. This singular address, relatively rare in the preceding apostolic commission, dominates the development of the second commission, which occupies the last half of 1 Timothy.

The second commission (4:6–6:21a) is divided into three sections. It may presuppose metropolitan house churches with stronger Jewish ties than the former commission. The first section addresses Timothy personally as a Pauline teacher, faithful to the apostolic instruction that he has received, putting it into practice for his own sake and for the sake of his fellow Christians, to whom he reads out the OT and whom he teaches in the assembly for public worship. For this task he has received a charism ("gift") through a presbyterial laying on of hands (4:6–16).

In the second section of the commission, Timothy appears as an apostolic supervisor of the orders of the church. A domestic code is used to frame this section (5:1–2 and 6:1–2). The implication is that the household was conceived of as the primary unit in the local church and that this was to be Timothy's primary concern. The orders of presbyters and widows suggest a more Jewish structuring of the congregations envisioned in this section than earlier. Timothy's supervision of an order of widows is described in terms of an already traditional church order (5:3–16). His relationship to an order of presbyters is delineated next, again using traditional materials (5:17–25).

The third and final section of the Pauline commission, after a brief polemic against heterodox opponents (6:3–5), turns to the problems which wealth occasions among believers (6:6–10, 17–19). In the middle of this exposition (vv 11–16) appears a traditional ordination charge that serves here to hearten the apostolic co-worker as he deals with the rich and thus the powerful and influential members of the Christian congregation.

1 Timothy closes with a summary warning to avoid speculative adventures and to adhere to the content of the preceding apostolic commissions (6:20–21a). The blessing prayer which closes many manuscripts of 1 Timothy (6:21b) may not be part of the original composition.

3. The Second Epistle to Timothy. The epistolary diptych directed to Timothy closes with a second paraenetic letter which assumes the form of an epistolary testament in the name of Paul on the eve of his death to Timothy as his child and heir. In 2 Timothy, the apostle is no longer conceived of as in transit (as in Titus and 1 Timothy) but as under arrest in Rome (1:16–17; 2:9). Thence he writes to summon Timothy from Asia Minor (probably from Ephesus), where the previous letter had left him (2 Tim 1:16, 18; 4:9, 11–12, 19).

2 Timothy opens with a brief apostolic greeting and blessing for Timothy (1:1–2), which corresponds closely (but not exactly) with the opening of 1 Timothy. A lengthy prayer of thanksgiving (vv 3–14) immediately follows, reminding one of the regular practice in the rest of the Pauline corpus but not of the other PE. The prayer rehearses Timothy's faith-history as a basis for his present courageous stand with Paul, who is suffering for being herald, apostle, and teacher of the Gospel.

The body of the epistolary testament (2:1–4:8) has been inserted between two personal notes (1:15–18 and 4:9–22), which can be read together. A similar preexisting envelope appears to have been used in composing the Epistle to Titus in its present form. The notes here not only transmit news about what has happened to Paul since his arrest, transfer to Rome, and imprisonment; they also provide instructions for Timothy to join him, and include a greeting for the house churches in Ephesus.

The testament within this framework falls into three major sections: the first, devoted mainly to the testator, Paul himself (2:1–13); the second, to those whose teachings and lives are a threat to the validity of the proposed will (2:14–3:9); the third and final section, to the legitimate heir, Timothy (3:10–4:8). It is Paul himself who is depicted as mandating the transmission of his apostolic teaching and his gospel. Timothy and those he picks to carry on this apostolic work must be ready to suffer as Paul. The second section of the testament prepares Timothy to withstand those who would overthrow the Pauline heritage, particularly by evacuating the reality from the final resurrection and the accompanying judgment. The

third and final section of the testament turns to the legatee, Timothy, in his relation to the legator, Paul. Three subdivisions are marked in Greek by a recurring *sy de*, "You, however …" (3:10, 14; 4:5). The first recalls Paul's apostolic life and sufferings from the first days when Timothy witnessed them in Pisidian Antioch, Iconium, and Lystra. Then Timothy is urged to continue living out the faith he had received through Paul and through Timothy's mother and grandmother, a faith fully grounded in the Scriptures of Israel. With this heritage he has to prepare for the Lord's judgment by indefatigable proclamation of the Pauline word to erring Christians. The closing section turns from Paul's heir to the apostle himself, who is about to die to this life, but who is alive with hope in and love for "the upright judge, the Lord" (4:8), who will recompense him.

After the personal notes mentioned previously, 2 Timothy ends in 4:22 with a double prayer, first for Timothy and then for all believers who have been privileged to overhear the extended conversation between Paul and his child that has occupied 1 and 2 Timothy.

B. Documents and Data

The Greek text of the PE, like the rest of the NT, has been transmitted in numerous ancient codices, i.e., on leaves of papyrus or parchment bound together into what we call a "book." However, before 100 C.E. practically all Hellenistic literary compositions were copied on rolls or "scrolls" (Roberts and Skeat 1983). It was during the latter part of the 1st Christian century in Rome that secular authors began to experiment with the codex for literary compositions (although Julius Caesar may have used a codex notebook before this for his letters to the Roman Senate [Suet. 1.56.6]). The innovation was attractive to late-1st-century Christians and, by the end of that century, they (in distinction from their Jewish and pagan contemporaries) had transferred their sacred literature (the Greek OT) from the rolls on which it had been originally copied into codices or books. The very earliest scraps of Christian documents, including a papyrus page of the Epistle to Titus (P^{32}), are already in "book" form. This innovation gave a visible identity to the Christian writings; it was also, in every sense, a pastoral (i.e., practical) measure that met a need in the 2d-century churches: the codex was an efficient way of gathering several compositions under one cover for easy consultation in public reading or private study.

Every manuscript of the PE is in codex form. Yet the Greek text of the PE was originally composed, in all probability, on one or more rolls (depending on whether the letters were originally written together as a collection or whether they were composed and dispatched separately). The reconstruction of the intervening process has its repercussions for every hypothesis about the origin and purpose of these letters. Certain features of the process can be discerned in the arrangement of the compositions within the extant NT codices; thus the gospels and Acts are always separate from the epistolary literature and, within the latter, a Pauline collection can be distinguished from a collection of seven other epistles (or eight if Hebrews is included). Within these epistolary collections the length of an individual letter appears generally to have determined its place within the collection (thus among the Paulines, Romans is first and Philemon last; see Frede 1966).

The PE appear to mark a new beginning within the extant Pauline codices because 1 Timothy is notably longer than 2 Thessalonians. This marks, in all probability, the seam where two 2d-century collections of Pauline letters were joined: a collection of letters to churches (at times including Hebrews, as in P^{46} and the archetype of B) and a smaller collection of Pauline letters addressed to individuals (also arranged in almost every extant codex with the longest first and Philemon, the shortest, last [Quinn 1974; Roberts 1979: 60, 62]). An alternate and perhaps even earlier order which is attested in the Muratorian Fragment and the 4th-century Latin commentary on the Paulines (Ambrosiaster), reads Titus before 1–2 Timothy.

The Greek text of the PE (*NovTG*[26] and Aland et al. 1983) has been transmitted in many manuscripts since the 4th century (see especially A, C, D), and P^{32} may be as early as 200 C.E. (Aland 1976: 253; van Haelst 1976: 189, 534; E. Turner 1977: 147). The absence of the PE from B still provokes questions (Skeat 1984: 464–65). J. K. Elliott (1968) studies every significant variant in the PE. The PE are alluded to or cited by many ancient Christian writers, and for the 2d century alone, *Biblia Patristica* (Allenbach et al. 1975: 1.507–18) offers about 450 references. In the mid–2d century, Marcion refused the PE a place in his canon (according to Tertullian) and Tatian rejected Timothy while retaining Titus (according to

Jerome). Polycarp, however, perhaps as early as 120 C.E., almost certainly cited the Epistles to Timothy in his *Letter to the Philippians.* Whether Ignatius and *1 Clement* knew the text of the PE is more problematic but seems more likely now than a generation ago (Spicq *Pastorals* EB, 162–63; Hagner 1973: 236–37; Quinn 1978b).

The language of the PE (their actual vocabulary, syntax, and style) is homogeneous over the small corpus and notably different from the rest of the Paulines (including the other "private" letter, to Philemon [see the tables assembled and revised by Harrison 1921; 1964]). As A. D. Nock noted, "It is clear that as we pass from the Pauline Epistles to the Pastorals … there is an approximation to the phraseology of the world around, a lessening of the feeling of isolation, and an increase in intelligibility to the ordinary contemporary man, had he happened upon these books" (1972: 342–43). Roughly one out of three words in the PE (names of persons and places aside) do not appear in the other Paulines; almost one out of five do not appear elsewhere in the NT (although the overwhelming majority of these do appear in Greek documents that predate 50 C.E., including Philo and the LXX). The language of the PE has notable resemblances to that of Luke–Acts (Strobel 1969; Quinn 1978a; Wilson 1979; Marshall 1981; Moule 1982a: 264–65, 281–82; 1982b: 113–32). Moreover, in their narrow compass, the PE coin about half a dozen terms (N. Turner 1974: 149–50) and use some terms in a quite unusual sense (thus *themelios,* "treasure," in 1 Tim 6:19). Such coinages are not only "spontaneous and unconscious creation," but they also "may represent an attempt to convey ideas which seemed to need new expressions" as well as devices for "stylistic emphasis or dramatic effect" (Nock 1972: 642–43).

Computer analyses of linguistic data from the PE have become available (Aland *VKGNT*; Friberg and Friberg 1981; Morton et al. 1982). With their aid, it is feasible to analyze in precise detail the use and distribution of the Gk particles and the length of the words and sentences in these compositions. Such studies appear to confirm that the PE are homogeneous among themselves and different from the rest of the Paulines; the relatively limited word pool in the individual letters, however, limits the certitude of such observations and the inferences that can be drawn from them (N. Turner and Moulton 1976: 102–4).

The large number of terms that are peculiar to the PE in biblical Greek already alert the reader to their affinities with the more literary traditions in Hellenistic Greek. Their vocabulary generally is less biblical (i.e., Septuagintal) than Paul's, though there are notable contacts with sapiential and other ethical compositions of Hellenistic Judaism (e.g., *4 Maccabees; Testaments of the Twelve Patriarchs*) as well as some language typical of the popular Epicurean, Cynic, and Stoic philosophers (e.g., Philodemus of Gadara; Epictetus; see N. Turner and Moulton 1976: 102). The language of Greek drama, particularly the language of the tragedies of Euripides and the comedies of Menander, had its effect on ordinary people and their speech, and consequently on the PE, which sought to address such people.

The 55 proper nouns and adjectives of the PE belong to the total working vocabulary of the author: some of them are unique to these letters (thus "Jewish" in Titus 1:14); some occur in the other Paulines ("Luke" in 2 Tim 4:11 and Col 4:14; Philemon 24); still others are found elsewhere only in the Lukan corpus (thus "Crete," and "Antioch, Iconium, Lystra," and the double name "Pontius Pilate"). The 17 cities mentioned suggest the geographical world presupposed by this correspondence. Of the personal names none occurs more often than that of Jesus; thus is signaled the christological concerns of these compositions.

In two areas, the vocabulary of the PE already reflects specialized patterns of use. The first falls in the area of Christian conduct or ethics, and the terminology is that used for distinguishing good from bad acts. The second area reflects particular Christian ministries, and the vocabulary is that used for designating those who shoulder specific roles in the service of the body of believers. In both areas, the PE share some of their emerging technical vocabulary with other 1st-century Christian documents (such as the terminological clusters around faith and love or apostle and presbyter). Other terminology is almost unique to the PE (the term "widow"; the clusters of words built around *sōphrōn* ["sensible"] and *eusebēs* ["godly"]).

The second major consideration regarding the language of the PE is the syntax—the way in which the words are ordered into sentences; their patterns in the use of coordinating and subordinating particles

(note computer analyses above); their characteristic ways of employing the Gk moods and tenses (thus the optative, a mood rarely used in the NT, appears several times in 2 Timothy). The influence of the LXX, Hellenistic Judaism, and Latin surfaces in these areas. A syntactic phenomenon in the PE is the periodic breakdown of syntax, ranging from inordinately abrupt transitions (thus Titus 2:6–8; 1 Tim 3:1a–b) to inexplicable shifts in the inflection of verbs (1 Tim 1:3–7). All this belongs to the individual character of the PE as Gk compositions.

With the question of the style of the PE one is beyond questions of vocabulary (see N. Turner and Moulton 1976: 101–72). When the text is read aloud in Greek, the author's use of sound to accent his thought is often notable. The reader hears alliteration, assonance, rhyme, paronomasia, polysyndeton (for abundant expressiveness), asyndeton (for a vivid impassioned effect; see *BDF* 460 and 1 Tim 3:16; 2 Tim 2:11–13). The prose at times has a distinctly poetic rhythmic structure, particularly when prayers are alluded to or cited (thus 1 Tim 1:12–17). A predilection for unusual, even unique, terminology has been observed above. By and large, the style of the PE is Hellenistic rather than Hebraic, and lacks the versatility which characterizes other parts of the Pauline Epistles; their style is paraenetic, the author urging his points rather than arguing them (Quinn 1981a).

C. Literary Form and Sources

Compositions in epistolary form represent the oldest surviving Christian literature. The form was a borrowing from the contemporary 1st-century world where the letter already had a long history in Roman, Hellenistic, and Semitic cultures. See LETTERS (GREEK AND LATIN). The epistolary form was used infrequently for literary composition in Palestinian Judaism (although note 4QEn^{g} and 4QMMT); but the popularity of the form in Greek-speaking Judaism appears in the LXX epistolary compositions cited in LXX Esther, Baruch, and Maccabees, not to mention the pseudepigraphical books *Enoch,* the *Letter of Aristeas,* and the *Apocalypse of Baruch.*

Current studies of epistolary theory in the ancient rhetoricians (Malherbe 1977a and 1977b/1983; White 1984) and the innumerable texts which the ancient world called "letters" or "epistles," are making clearer early Christians' expectations when a composition was read or heard in an epistolary form. The Christians did not look for a technical, scientific treatise; rather the letters were considered to be a limited, inadequate substitute for personal, face-to-face communication (see 1 Tim 3:14; 4:13). In ancient rhetorical schools, letters were written as exercises in which famous persons, mythical or historical, were characterized (see Ovid, *Heroides*). Just as an ancient author of a history composed speeches that certain persons might have given, so letters were written to depict the personality and character of a philosopher or statesman or literary figure (see the Cynic Epistles [Malherbe 1977a] and Horace, *Epistles,* passim).

When an ancient Christian began to read a letter "To Titus" or "To Timothy," he thus expected to hear a Pauline conversation in writing which conveyed Paul's heartfelt personal care as well as his teaching, directives, and requests. The reader expected this regardless of whether or not the letter was a piece of private correspondence originating before Paul's death or a "characterization" composed after his martyrdom (or a combination of these).

The PE have not come down as separate letters. They are an epistolary collection, already distinct from the collection of Pauline letters to churches in the 2d century, when they were being read in the order Titus, 1 Timothy, 2 Timothy. A letter collection itself is a literary genre which enjoyed a limited popularity in Greek philosophical circles and came into its own in Roman political life (see Carcopino 1951: 4–37). Thus, collections of the "letters" by persons as diverse as Cicero, Augustus, Horace, Ovid, Seneca, and Pliny were published (or in Augustus' case available in the archives; see Suet. *Aug.* 71, 76; *Claud.* 4), whether they were in prose or poetry, on personal or literary matters, on political or philosophical questions, edited by themselves while they were still alive or published by others after their deaths. The premise of these collections is that they contain letters that are worth saving for the education and instruction and enjoyment of the next generation of individuals and groups to whom the letters were not originally addressed.

The epistolary genre was used not only for letters, but also was incorporated into other genres. Sometimes a letter or an epistolary collection is prefixed to another work (i.e., the seven letters which

open the book of Revelation, the letter from Cyrus opening Ezra, and the pair of letters which open 2 Maccabees). Sometimes they are found within the composition (i.e., the correspondence with the exiles in Jeremiah 29; 1 Macc 10:22–45; 12:5–23; the Greek Esth 3:13$^{a–g}$; 8:12$^{a–x}$ [RSV 13:1–7; 16:1–24]; Acts 15:23–29; 23:25–30). Also they are added to the end of the composition (examples in Quinn 1978a: 68–69; see the Greek Esth 10:3^{l} [RSV 11:1]; additions to Justin, *Apology* 69–71). The appearance of epistolary compositions within a larger work of history signaled the authenticity, the credibility, and the authority of the narration. Letters within a narrative also served to satisfy questions in a particular community about outstanding and yet controversial personalities whose past teaching and acts were still being appreciated.

Accordingly, the PE were read as a collection (regardless of whether the letters had an individual preexistence). The collection offered an authoritative message from the past, a message from a significant personality, a message containing (at least in the judgment of the collectors) observations whose significance was meant to transcend the setting presupposed in their text. The collected letters thus came as a "prophecy" from the past to a new generation (see Pliny citing M. Cato's letter in *HN* 7.51.171; 29.7.14; Ovid occasionally describes his letters *Ex Ponto* as containing prophecies). The original addresses of such correspondence tend to sink below the historical horizon while the author (genuine or putative) remains the polestar around which a new public revolves. Thus Titus and Timothy in the PE are less actual historical individuals than paradigmatic persons, models with which the new public is expected to identify (Fiore 1982). "The essence of the epistolary genre, both in antiquity and the Middle Ages, was not whether the letter was actually sent but whether it performed a representative function" (Constable 1976: 13). The PE aim *to represent* Paul as herald, apostle, and teacher (1 Tim 2:7; 2 Tim 1:11), who instructs and directs the men sharing his apostolate. These men, in turn, as Paul's true "children" (Titus 1:4; 1 Tim 1:2) and heirs, transmit his directives to "God's house, which is the church of the living God" (1 Tim 3:15). They also see that this household has managers (Titus 1:5) who are the presbyters, bishops, and deacons and whose lives and teaching represent Paul (note also the "faithful men" of 2 Tim 2:1–2).

Other recent studies have more closely specified the paraenetic and hortatory character of the PE as the ancient world understood paraenesis (Perdue 1981): as ethical exhortation, universally applicable to individuals, and addressed to a paradigmatic audience (Quinn 1981a). Such letters do not expect answers but action from the recipients. The epistolary form of 2 Timothy has attracted special attention because it has many characteristics of the testamentary genre in the ancient world (Nordheim 1980). Paul becomes the dying patriarch, leaving his goods, his wisdom, and his wealth to his children who carry on his name, his plan, his hopes. A will is paraenesis par excellence because no one can argue effectively with it.

In the PE quotations of and allusions to compositions appear that served as sources for this paraenetic epistolary. Greek versions of the OT are quoted (1 Tim 5:18a) as well as an oracular line from a pagan poet (Titus 1:12); there is a saying in 1 Tim 5:18b which Luke 10:7 places on Jesus' lips. An allusion to an apocryphal composition about Jannes and Jambres appears in 2 Tim 3:8 (see *OTP*, 427–42). There are citations of archaic Christian hymns (1 Tim 3:16; 2 Tim 2:11–13; see Stenger 1979; Quinn 1979) and prophecies (1 Tim 1:18; 4:1; Quinn 1979) and possibly some short dispatches that originated at the end of Paul's life (Titus 1:1, 4–5; 3:12–15; 2 Tim 1:1–2, 15–18; 4:9–15). Although the case has been argued (Hanson 1981), there is no convincing evidence, aside from Romans, that the PE quote from the other Pauline letters.

If the foregoing compositions were already in relatively fixed texts, there appear to be sources cited in the PE that were in more plastic form and open to redactional activity. Such are the Christian domestic codes *(Haustafeln)* of Titus 2:2–10 (see Sampley 1971: 18–30; Verner 1983) and 1 Tim 5:1–2 (to be read with 6:1–2). Similarly, there are many lists that specify good and bad ethical qualities (e.g., Titus 1:6–10; 2 Tim 3:2–5). The lists of bad qualities use more archaic, catechetical materials that aim to identify the Christian in contrast to the unbeliever; the lists of virtuous qualities are not addressed to the whole believing community but to particular classes of believers. Specific conduct is demanded, often with an apologetic if not a missionary goal. See also HAUSTAFELN; HOUSEHOLD CODES; VIRTUE/VICE LISTS.

Also among the more plastic materials cited by the PE are those materials classified as church orders, which contain directives for the Christian life, particularly liturgical worship. They occupy 1 Timothy 2–3 and 5:3–25. The former, perhaps from a congregation of predominantly gentile origin, begins with directives for the public prayer of the church. Then it treats the liturgical conduct of men and women (with an added note on the role of the Christian wife in public teaching, 1 Tim 2:11–15). Finally it turns (1 Tim 3:1) to the qualifications and regulations for the specific ministries of men (bishop, deacons) and women (a group without a title who are parallel with the deacons; 1 Tim 3:11). The other church order of 1 Timothy, perhaps from a house church of predominantly Jewish origin, is enclosed within a household code (5:1–2; 6:1–2) and deals with widows (1 Tim 5:3–15) and presbyters.

Prayers abound in the PE. The briefest are in the opening and closing epistolary blessings (twofold in 2 Tim 4:22; there originally was probably no blessing in 1 Tim 6:21b). Other prayers also appear, both brief ones (thus 2 Tim 1:16–17) as well as long ones (thus 1 Tim 1:12–17; 2 Tim 1:3–14). Flexible as these compositions are, they often appear to contain traditional elements and to move formulaically from an opening address to the body of the prayer, which then concludes in a doxology. Another type of prayer that verges on the credal is the acclamation preserved in 1 Tim 2:5–6 (Quinn 1981b).

Of the materials cited or redacted by the author of the PE the most difficult to bring into precise focus are those that may be characterized as ecclesial paraenesis (as distinct from the epistolary paraenesis noted above). An authoritative teaching office seems to be presumed that articulates Pauline apostolic doctrine through creed, cult, and catechesis received in faith. Compositions of various types, cited under the rubric *pistos ho logos* ("this is the Christian message meant to be believed"; indicated with an asterisk[*] among the following references) also belong to this kind of paraenesis (Knight 1968).

Credal formulas in the PE are relatively rare, brief, and closely identified with Paul's gospel and his prayer (1 Tim 1:15*; 2 Tim 2:8). The paraenesis characteristic of the public worship of believers—the sacramental cult including liturgical orations and homilies—appears more frequently in the PE (see Titus 2:4–5 for a citation from a marriage charge; 2:11–14 for a baptismal confession; 3:4–8a* for a didactic baptismal oration; 1 Tim 2:13–15* for another citation from a marriage homily; 1 Tim 6:11–16 for an ordination charge; the previously noted hymn of 2 Tim 2:11–13* may have been used in a baptismal liturgy). Various types of ethical catechesis also appear to be drawing on previously existing materials and redacting them in an authoritative way for a particular purpose: Titus 2:7 adapts the household code which demands certain qualities of various ages and classes of believers and makes it apply to the apostolic minister himself; in 1 Tim 4:8–9*, the teaching on godliness is applied to the figure of Timothy; in 1 Tim 6:6–10, 17–19, the wealthy believers are the object of what seems to be at least a partially traditional exhortation.

D. Data Referred to in the Pastoral Epistles

After surveying the texts of the PE, their literary form, and the previous compositions upon which they drew, one approaches the methodologically delicate task of disengaging from these materials a sketch of the world—both geographical and social—to which the PE refer. The places and the persons, named and unnamed, which figure explicitly in the text suggest materials for a societal profile of ecclesial life as the PE conceive it, i.e., the ways in which believers are to relate to their God, to one another, and to those who do not share their faith.

Titus and 1 Timothy profess to come from Paul en route to Macedonia and Nicopolis in NW Greece; 2 Timothy comes from Rome (Quinn 1980a). The island of Crete is the destination for Titus, while Ephesus, the metropolis of Asia Minor, is the destination for Timothy. In the whole correspondence, a total of almost 20 places is mentioned from modern Italy and France to Yugoslavia and Greece and into central Turkey. Within these letters one encounters almost 41 persons by name, a few of whom belong to OT traditions (Adam and Eve, Moses, Jannes and Jambres, David). In the "present" that the PE presuppose, Paul and more than a dozen of his current and past co-workers, as well as some members of the churches, are explicitly named and, more surprisingly, some opponents of the apostle and his mission are also noted by name (1 Tim 1:20; 2 Tim 1:15; 2:17; 4:14). Beyond these names, the reader gets a glimpse of other "brothers," the "faithful" of the Christian generation (1 Tim 4:3, 10, 12; 4:6; 6:2; 2 Tim

4:21), as well as unfaithful and unnamed opponents of the Pauline teaching, some of whom are Jewish Christians (Titus 1:10, 14–16; 1 Tim 1:3–7). A secular society and its rules and rulers are in the author's peripheral vision (see Titus 1:12; 3:1; 1 Tim 1:9; 2:1–2; 6:15), and he senses their pressure upon Christian marriages and ministries (Titus 2:5, 8; 1 Tim 3:7) and upon the conduct of Christian slaves (1 Tim 6:1).

The social description presupposed by the PE indicates a stratified social structure within the ecclesial communities. The author models this structure after the concept of the extended family in the Hellenistic and Roman world and perceives it as the household of the living God (1 Tim 3:15; Verner 1983), i.e., the family to which God as Father gives life. Within this extended family are old and young, male and female, free and slave, married and single (including the widowed), parents and children, rich and poor, Jewish and pagan—all who have accepted faith in Christ and worship the one God through him. The faith and the worship it engenders are the keys for understanding the life of the Church as presented by the PE.

The rule of faith in the PE is rooted in the liturgical acclamation and confession of the one and only God of Israel, "who wills that all human beings be saved" (see 1 Tim 2:3–7; Quinn 1981). God is seldom called Father in the PE (only in the opening blessing of each letter), and Jesus is never called the Son. What differentiates the faith in the PE from normative forms of Judaism is its attitude toward Jesus, who is "risen from the dead, from the line of David" (2 Tim 2:8) and who receives the titles usually attributed to God, "our Savior" and "Lord" (thus Titus 1:3–4; 1 Tim 1:18); also Jesus is addressed directly in prayer (1 Tim 1:12; 2 Tim 1:18). In Titus 2:13 he is, almost certainly, "our great God" (Harris 1980). No name occurs more often in the PE (32 times) than "Jesus Christ" or "Christ Jesus" ("Christ" alone in 1 Tim 5:11).

From faith in "the human being, Christ Jesus, who gave himself as a ransom for all" (1 Tim 2:5–6) derives the vision of the mission of the Church in the PE and their intense concern for prayers by believers for the unbelieving society around them (1 Tim 2:1–2; 4:10). In this setting of ecclesial prayer and mission, a doctrine about the Holy Spirit has begun to take shape (Quinn 1979). The Spirit appears to be involved in the words of prophecy (1 Tim 1:18; 4:1, 14), and especially in the inspiration of the sacred written words of all Scripture (2 Tim 3:15–16). The only person to receive the title "prophet" is the pagan poet Epimenides (Titus 1:12). The liturgical actions of baptism and ordination are linked with the Spirit (Titus 3:5; 2 Tim 1:6–7; Quinn 1982). Fragmentary citations of compositions that may have originated from liturgies of marriage, reconciliation (2 Tim 2:25–26), and possibly even the Eucharist (1 Tim 4:4–5; Hanson 1968: 97–109) witness to the inclusive ecclesial vision that inspired the liturgical texts of the PE, even though they contain no reference to the Spirit.

This ecclesial vision includes an eschatological aspect which the Spirit also reveals: these days are the last days (1 Tim 4:1; 2 Tim 3:1). The Paul of these letters and his prayers set hope on life eternal, which has begun in this last age (Titus 1:2; 1 Tim 4:8) but which will reach its consummation on "that Day" (2 Tim 1:12, 18; 4:8) when Jesus appears in glory (Titus 2:13; 1 Tim 6:14) as "judge of the living and the dead" (2 Tim 4:1). Paul prays for the Lord's mercy on that judgment day upon a fellow Christian, apparently deceased, who had been kind to him (2 Tim 1:16–18; 4:1; see 4:19); he also leaves a coppersmith called Alexander to the Lord to be judged "according to his works" (2 Tim 4:14–15). Belief in the final judgment is closely linked to the judgment in the final resurrection (cf. Titus 3:5 with 2 Tim 2:17–19), although the PE do not emphasize the latter as such. Eternal life will consist in living with Christ, sharing his reign (2 Tim 2:10–12), and receiving "the crown of the upright life" (2 Tim 4:8) from him.

The PE have passing references to the angelic orders (1 Tim 3:16 may refer to the apostolic "messengers" of the resurrection). "The elect angels" of 1 Tim 5:21, loyal to God, stand in contrast to spirits and demons, who inspire false doctrines (1 Tim 4:1). The devil is perceived as implicated in certain activities for which believers face condemnation (1 Tim 1:20; 3:6–7; 5:15; 2 Tim 2:26).

This rule for faith expresses itself in the order for public worship presumed by the PE. A strong sense of community pervades the correspondence (first person plural pronouns are frequent) and the directives about assemblies for worship emphasize the groups involved. Thus the men are distinguished from the women in 1 Tim 2:8–10, and the wives are distinguished from women in general in verses 11–15. Various

groups of ministers can be discerned (see below). The place for worship, however, is not described. One infers from the paraenesis addressed to well-to-do-believers (1 Tim 6:6–10, 17–19) that the wealthy man or woman, married or widowed, offered his or her house for the liturgical assemblies (and perhaps hospitality) to itinerant apostolic ministers as well as to some indigent Christians (Titus 3:13–14; 1 Tim 5:10, 16; 2 Tim 1:18; 4:13, 19). Such a "house church" might be limited to one (extended) family; it hardly could accommodate an assembly of more than a few dozen persons for worship. As numbers increased, more homes would be the sites for separate assemblies. It is conceivable that a group of believers who were wholly of Jewish origin might have retained their own Jewish building for prayer *(proseuchē),* for their liturgical assemblies as Jewish Christians.

If the place for worship, as the PE envisions it, is elusive, the setting in time is irrecoverable. There is no evidence for the hour of the day or the day of the week which these congregations favored for their public worship, although the silence could be taken as a willingness to tolerate worship on the Sabbath (since other Jewish practices are explicitly criticized). "The widow proper … continues in entreaties and prayers night and day" (1 Tim 5:5) is a phrase which suggests the Jewish ways of reckoning the day from sunset to sunset. A hint at a ritual order for worship in 1 Tim 4:13 evinces no concern that it be observed by all congregations. The only ceremonial observance that the PE state as specific to their (Pauline) practice is that a wife does not teach or direct her husband in the liturgical assemblies (1 Tim 2:12).

The practical, day-to-day conduct of all believers is, for the PE, an integral part of their faith and worship, to such an extent that "the rule for praying" is the rule for action. The faith that expresses itself publicly in worship to God also expresses itself publicly in "fine works," *erga kala,* i.e., not simply good deeds (*erga agatha;* 1 Tim 2:10) but visibly and attractively good actions (Titus 2:7, 14; 3:8, 14, etc.). From these actions unbelievers can get a glimpse of the power of the gospel and its grace, delivering one from bad acts (Titus 2:11–12; 3:3–7), and enabling the believer to take his share in the suffering and death of Jesus (2 Tim 1:8; 2:11–12) and "to live in a sensible, honest, godly way in this present age" (see Quinn 1982). There is an emphasis upon the exemplary conduct of the baptized as "a people of his [God's] very own, enthusiastic for fine deeds" (Titus 2:14). The household codes demand certain types of action from various age groups, according to their sex as well as according to their legal status as slave or free (Titus 2:2–10; cf. 1 Tim 5:1–2; 6:1–2). Similarly, the conduct of the prebyster diaconate and the widow is prescribed with a view of each order in mind. In contrast, the qualifications for the candidate for bishop are always in the singular and envision him as an individual (1 Tim 3:1–7 and perhaps Titus 1:6–9).

The ethical conduct urged on believers (whether addressed as individuals or as members of the orders or classes of persons within the community) is an essential part of their missionary witness to the Hellenistic world. Ethical questions attracted popular interest in this society, and philosophers lectured on the streets and in the baths about moral issues. The ancient Greek drama had a powerful popular influence often overlooked in this regard: the plays, particularly those of Euripides and Menander, kept ethical debates constantly before the eyes of the populace. Thus, when the PE observe "that law is not laid down for an upright person" (1 Tim 1:9), they are not only speaking the language of the Greek philosophical tradition but also that of the Greek New Comedy (Quinn 1982: 236). The list of vicious persons that follows (1 Tim 1:9–10) reminds the reader not only of the Decalog but also of the acts that destroy the characters in Greek tragedy.

Finally, for the PE, "the rule for praying" is the rule for leadership. The approach of these letters to the conduct of apostolic ministers is typological. It is significant that in this typology, persons precede what we call "office" or "function." Paul is a "model of" and a "model for those who are going to believe in … [Jesus] for eternal life" (1 Tim 1:16; see 2 Tim 1:13). His individual teaching, his experience of the will of Christ, his sufferings, his way of living, define what it means to be an apostle. He does not fit an *a priori* abstract definition of an apostle; he personally defines what the term signals. As Paul is the apostle for the PE, so he is the teacher of one coherent teaching which explains how the believer lives according to the word of God. The PE understand the plurals "teachers" and "teachings" (2 Tim 4:3; 1 Tim 4:1) in a negative sense (Quinn 1980a). There is no evidence that the author of the PE remembered (much less tried to perpetuate) a tripartite local leadership of apostles, prophets, and teachers (1 Cor 12:28).

Titus and Timothy are in a true sense Paul's "children" (see Titus 1:4; 1 Tim 1:2, 18 etc.), and the dying patriarch directs his last will and testament to the latter as his heir. He who shared Paul's ministry during Paul's life will continue to do so after Paul's death. For the PE, Titus and Timothy are paradigmatic persons who furnish the pattern (Titus 2:7; 1 Tim 4:12) of this continuing Pauline apostolate. They are models of Paul and models for believers as they are designated to carry on the apostle's work, carry out his commands, imitate his sufferings, teach his gospel and practice it themselves, preside at the liturgy, receive material support for their ministerial work, and choose other men who will in their turn share their apostolic ministry (see Titus 1:5; 1 Tim 1:3–6, 18–19; 4:12–16; 6:11–14; 2 Tim 1:6–14; 2:1–8; 3:10–17; 4:2–5).

Even the opponents envisioned by the PE (Karris 1973) have a typological character, for to the extent that they are "anti-Paul" they are also "anti-Christ" (2 Tim 4:14); to the extent that their doctrines are opposed by the Holy Spirit they belong to unholy demons (1 Tim 4:1–2). The designation of some of the opposition by name (1 Tim 1:20; 2 Tim 1:15; 2:17; 4:14) is an unusual phenomenon in ancient Jewish and Christian polemic, which regularly demurred at granting acknowledgment of the existence of the opponents (see *Ign. Symrn.* 5.3); this underscores the typological function of the opponents in the PE. The Pauline cadre of ministers and their teaching contrast sharply with the mob of competitors who have been making inroads on the house churches, perhaps particularly through wealthy patronesses (see Titus 1:11; 2 Tim 3:6–7), who shared their strong Jewish interests in "myths and endless genealogies" (cf. 1 Tim 1:4 with 1:14; 3:9) as well as their quite un-Jewish rejection of marriage (1 Tim 4:3). Interests in emancipation from the constraints of domestic life seem to have played their part (see Titus 2:3–5; 1 Tim 2:11–15; 5:13–14). However, the key contention of the opponents is "that the resurrection has already occurred" (2 Tim 2:18), i.e., a collapsed eschatology in which the future resurrection of all believers has been simply identified with Jesus' resurrection. A form of this eschatology was already apparent in Corinth in the 50s (1 Cor 15:12).

Behind the figures of Paul and Titus and Timothy in the PE stand the unnamed leaders of the churches, leaders whose prerequisite qualities, particularly in verifiable good conduct, are spelled out in lists of vices and virtues. Presumably the congregation participates in verifying such conduct and presenting suitable candidates to Titus and Timothy; then the apostles designate them for a Pauline ministry as they once were themselves designated (see Titus 1:5; 1 Tim 5:22; 2 Tim 1:6; 2:2). Prophetic oracles appear to have been traditional in the liturgical action surrounding some appointments (1 Tim 1:18; 4:14). Those appointed lead the worship of the community, teach, care for the temporalities, provide for the needy (see Titus 1:7–9; 1 Tim 3:2–10, 12–13; 5:17). Unmarried women (1 Tim 3:11) and widows (1 Tim 5:3–16) have their own qualifications to collaborate in some of these ministries. From the two church orders in 1 Timothy the names of four groups or classes of ecclesial ministers appear (a representative of each in the Roman church may be sending a greeting in 2 Tim 4:21). A hint of the archaic Jewish-Christian origins of the ministers ("widows" and "presbyters") is that they are expected to receive financial support from believers, whereas the sources for the income of "bishop" and "deacons" are ignored (although they are not to be money-minded [1 Tim 3:3, 8; Titus 1:7] like the teachers who belong to the opposition [Titus 1:11]; see Theissen 1982: 27–67).

Titus envisions the establishment of Pauline ministers in Crete, perhaps combining the titles "presbyter" and "bishop" in order to designate them (no deacons or widows are mentioned). They are God's stewards (see Titus 1:7) for communities that appear to be small, independent house churches, dispersed throughout the many towns of the island (but not in the rural areas; Titus 1:5). If their members were of predominantly Jewish origin with strong Jewish ties and interests, the enticements of anti-Pauline teachers "from the circumcision" (Titus 1:10) with consequent controversies about the function of the Mosaic Law in Christian life become understandable (Titus 3:9). Perhaps one should think of these congregations as typologically as one does "Titus" and the "presbyter-bishop." They represent in this construction the more archaic, Jewish-Christian congregations of the Christian movement being updated according to a Pauline model.

1 Timothy envisions its text being read in the large metropolitan center, Ephesus (Tim 1:3). Apparently a significant number of the congregations are of predominantly gentile origin, since Paul in the first church order in this letter (2:1–3:13) is emphatically "the gentiles' teacher in faith and truth" (1 Tim 2:7; contrast 2 Tim 1:11). A bishop with deacon and female assistants presides over a house church with this background. However, the second church order of 1 Timothy (5:1–6:2) envisions house churches of predominantly Jewish origin, in which the registered widows and ordained presbyters are key ministers. The abuses that have risen in these orders and the set procedures for dealing with them give the impression that the Jewish-Christian house churches have been in existence somewhat longer than the predominantly gentile congregations (although these also have their members of long standing; see 1 Tim 3:6). Again, like Crete, Ephesus may be understood typologically as any large, Greek-speaking metropolis of the latter 1st century in which more or less established congregations of Jewish and gentile Christians live close to one another. 1 Timothy proposes a Pauline symbiosis for the different ways in which these groups of believers received their guidance from those who direct their worship and works of charity.

E. Hypotheses to Explain the Data

The PE, even in translation, differ notably from the other ten letters of the Pauline collection in the NT in their vocabulary and style, in their subject matter, in the development of their thought, and in the settings presupposed. The other Pauline letters appear to be earlier, some of them much earlier, than the PE. If, however, the PE are approached from the ecclesial world of Clement, of Ignatius and Polycarp, of Hermas, the same documents appear to be very close indeed to the other Pauline letters (thus Barrett 1963 versus Kelly 1963; but contrast Brox [*Pastorals* RNT] versus Jeremias [*Timothy/Titus* NTD]). The PE tend to resist questions about their background and origin and inquiries about when they were composed, and by whom. The historical-critical method gives these questions an urgency for modern commentators that was not always the case. All scholars of the PE draw inferences from practically the same concrete data, analyzing the linguistic, historic-sociological, and theological components of the correspondence. Yet these data have provoked dramatically different explanations about the origins and purposes of the PE. Basically, these scholars have asked four questions, each of which must be examined in detail.

1. Who Wrote the Pastorals? According to the text of the letters themselves, Paul is as much the author of them as he is of the other ten letters which begin with his name (thus Bernard *Pastorals* CGTC; Guthrie *Pastorals* TNTC; Spicq *Pastorals* EBib). Yet the language of this correspondence is notably different from the rest of the Paulines. On this basis, some have proposed that these letters were actually written by a member of the Pauline entourage and dispatched under Paul's authority at various times in the 50s and early 60s (thus, in various forms, Jeremias *Timothy/Titus* NTD; Kelly *Pastorals* BHNTC; Holtz *1–2 Timothy, Titus* THKNT; Fee *1–2 Timothy, Titus* GNC; see also the special studies by Dockx 1976/1984; Lestapis 1976; Reicke 1976; Metzger 1976). When an interest in gathering Paul's correspondence began at the end of the 1st century, the PE were copied into a codex of Paul's letters addressed to individuals (which also included Philemon, a letter with considerable similarities to other Pauline texts but few to the PE). In this construction, Paul is *author* of the PE because they were *authorized* by the apostle during his own ministry.

Other students of the PE submit that this hypothesis does not adequately account for the church orders and domestic codes cited in Titus and 1 Timothy or for the ministerial orders discussed in the correspondence (not to mention the differences of language). Such phenomena seem to presume that a generation of Christian development and reflection has intervened between Paul's time and that of the PE. The ancient conception of authorship was rather wider than ours. Even the epistolary genre and particularly the genre of the letter collection were not always taken as written by the person whose name stood at the head of these compositions. If the origin of the PE before the death of Paul cannot be defended, then it is conceivable that the letters were written in the second (70–100 C.E.) or even the third (100–130 C.E.) Christian generation.

Hypotheses have been advanced for each time frame. W. Bauer (1971: 222–24) has even argued that the PE were written as a riposte to Marcion (see also Gealy *1–2 Timothy, Titus* IB). A date in the third Christian generation is proposed (or presupposed) by Harrison (1921), Easton (1947), Campenhausen

(1951), Barrett (1963), Dibelius and Conzelmann (*Pastorals* Hermeneia), Hanson (*Pastorals* NCBC), and Hultgren (*1–2 Timothy, Titus* ACNT). Thus there is a tendency to favor the turn of the 1st Christian century. The ecclesial ministries envisioned by the PE appear less clearly organized and rather less developed than those in 2d-century Christian documents. Moreover, at least some of the other Pauline letters had been collected and were for the first time being cited as such by the authors in this third generation (beginning with *1 Clement* in 96 C.E.). If the PE originated in the 2d century, it is striking that they, intent on transmitting the Pauline heritage, do not quote Paul's own words. One reads in several places two or three words running which appear to be slogans from a Pauline tradition; none of these slogans is a proper citation of one of his letters. Thus Titus 1:16 states, "For the clean, all things are clean"; this is cited as if it were a proverb already in Rom 14:20.

The years from about 70 to 100 C.E. offer a time frame that allows for post-Pauline ecclesial developments as well as some linkage with the Paul of history and his apostolate (including perhaps short dispatches that he had sent to his co-workers; thus W. Lock [*Pastorals* ICC, xxii, "between 60 and 90 is probable"]; see Falconer 1937).

Some authors have been impressed by the linguistic and theological links between the PE and Luke–Acts (Moule 1982b: 112–32; 1982a: 281–82; Strobel 1969; Quinn 1978a; Wilson 1979 with critique by Marshall 1981). These links might reflect two different authors for PE and Luke–Acts, both drawing on common first- and/or second-generation traditions; or it may be, depending on the date assigned to Luke–Acts, that the author of the PE had access to Luke–Acts (or vice versa). Some scholars have hypothesized that one author was responsible for both Luke–Acts and the PE. Others suggest that the author of Luke–Acts was Paul's amanuensis for the PE (e.g., Lock *Pastorals* ICC, xxix). Another argues that they are quite separate compositions of the same author, written well into the second Christian generation (Wilson 1979). Still another has submitted that the PE were written by the author of Luke–Acts as the "third roll," intended to be read after the two volumes of Luke–Acts as an epistolary appendix that carried the narrative up to Paul's death (Quinn 1978a).

Those positing an author for the PE in the second Christian generation point to a variety of data. The emphatic apologia for Paul offered by the PE fits the decades immediately after his execution. The apostle had died as a Roman citizen subject to Roman law. There was an understandable tendency among believers, due to the shame of his end as a criminal, to play down the person of the apostle, his ministry, and his teaching (which had been controversial in the first place). Whoever wrote the PE wants to counter that tendency. Moreover, for the PE, Jewish Christianity is still a live option. House churches are still being established for Jewish Christians and are growing. Their relation with the Pauline apostolate and doctrine must still be worked out in practice. By the end of the 1st century large-scale conversion from Judaism had dwindled and Jewish-Christian house churches were withering.

Still, if this correspondence was composed in the second generation, why are there three letters? One might have sufficed. The genre of letter collections suggests the answer. Various churches in the second generation knew they had received letters from Paul. This correspondence was yet to be collected (Dahl 1962). The PE as a collection would have been received and read not as individual letters from the Paul of history but as a "characterization" of the great apostle and his teaching for the new generation.

The original order of the letters within the collection is probably Titus first, followed by 1 Timothy and then 2 Timothy. The elaborate 66-word epistolary prologue of Titus 1:1–4 sounds like a preface to the collection rather than to the short letter which follows. On the other hand, 1 and 2 Timothy complement each other and a final position for the epistolary testament of 2 Timothy is evidently appropriate (Quinn 1978a: 63–64; 1980b: 291–92). Titus does more in its initial position than introduce, on a small scale, the themes that 1 Timothy then expands at length. The house churches envisioned by Titus take first place in this collection not because they are small and relatively isolated but because they are predominantly Jewish Christian. The Pauline proclamation of the gospel in the previous generation had been "to everyone who believes," but that universal proclamation involved a divinely willed priority, "to Jew first and to Greek also" (Rom 1:16; see 2:9–10). The PE preserve this priority in their positioning of Titus

before 1 Timothy (where the house churches appear to be of predominantly pagan origin and Paul is explicitly "the Gentiles' teacher" [1 Tim 2:7]).

2. Where Were the Pastorals Composed? Titus and 1 Timothy profess to have been sent while Paul was on a journey from the island of Crete to Ephesus, with Macedonia and eventually Nicopolis in Epirus as his goal; 2 Timothy claims a Roman setting. If the letters originated as a collection in the second Christian generation, the data admits of several reconstructions. Some have proposed that Asia Minor, and specifically Ephesus, the destination which Timothy proposes, was actually the place of origin of the letters (most recently Hanson [NCBC] and Hultgren [ACNT]). This hypothesis postulates that an Ephesian leader with a deep attachment to the Pauline apostolate of the previous generation wrote the PE in the name of Paul to the Ephesian Christians. It is significant that in this reconstruction, the author of the correspondence proposes that this collection comes not only from Paul but from Rome.

It is also possible that the PE actually derive from the Roman church, where an author composed the collection to rehabilitate Paul, the apostle martyred in that city of which he was legally a citizen. In addition, the author may be proposing him as a teacher for the urban churches of the whole central Mediterranean area, whether the congregations were Jewish or pagan in origin. This proposal emphasizes the elements in the PE which reflect the archaic, Jewish-Christian organization of the Roman church, its Greek language, and its interests as they are documented from Romans and Acts through *1 Clement* and Hermas (see Brown and Meier 1983; Penna 1982–83; 1984). The Pauline apostolate had been an urban mission, not a rural one (Meeks 1983: 9–50). The roads that he had traversed all led to the city of Rome, whose influence was palpable in every other city of the empire. If the imperial city had executed Paul, the Roman Christians were determined to keep his apostolate alive. It is appropriate in this hypothesis that Rome was the place where letter collections had become popular and the codex had its origin.

3. To Whom (or Where) Were the Pastorals Sent? Assuming that the PE were written before Paul's martyrdom, the recipients of these letters were the same Titus we know from Galatians and 2 Corinthians and the same Timothy whom we encounter in the rest of the Paulines as well as in Acts, individuals who were, respectively, on the island of Crete and in Ephesus.

However, if the PE appeared after Paul's death, then the places to which the letters are addressed have a typical or representative function (see above). Thus the many small congregations on "Crete" are conceived to be comparatively new Jewish-Christian churches. "Titus" transmits and represents what Paul has to contribute to the organization and formation of such congregations. In 1 Timothy, Paul is emphatically "a herald and apostle—it is a fact though it sounds incredible—the Gentiles' teacher in faith and truth" (2:7). In this perspective, "Ephesus" stands for the result of the great Pauline mission in the metropolis of Asia Minor; some of these metropolitan congregations have a majority of members who are of pagan origin, others are predominantly Jewish-Christian house churches; "Timothy, [Paul's] true child in faith" (1:2), visibly joins these groups of large urban-centered congregations with the Pauline family of churches. In the Pauline last will and testament of 2 Timothy, the addressee is heir to the apostolic inheritance, the "deposit" (1:11–12) of Paul's teaching as well as his mission to "all the Gentiles" (4:17). Possibly the Christian congregations in Rome, those of Jewish as well as of pagan origin, were the actual models for the paradigmatic congregations of the PE.

4. Why Were the Pastorals Written? Whether these letters originated at the end of the first Christian generation or at the beginning of the second generation, they aim at providing continuity in the apostolic and ecclesial mission of bringing *all* persons—Jew and Gentile, slave and free, male and female, old and young—to faith in and worship of Jesus. They emphasize the links of Christians with their past, with the Scriptures of the OT, with Jewish ethics and family practices, with the Pauline apostolate and its teaching, and with the Hellenistic and Roman culture. The letters also emphasize the links between Christians and the symbiotic unity which they believe should characterize believers. They also urge a common Pauline faith and worship, a Pauline ethic, and Christian ministries that accord with Pauline precedents. The PE in addition prepare Christians for the future, a future which found the "catholic church" and the catholic canon of Scripture pitted against the gnostics and the followers of Marcion. The PE focus as well on a present Christian continuity with another "future." "Godliness is useful for everything, since it contains

the promise of a life that is now and that is going to be. This is the Christian message, meant to be believed and worth welcoming wholeheartedly" (1 Tim 4:8–9).

TIPHSAH (PERSON) [Heb *tīpsaḥ* (תִּפְסַח)]. See TAPPUAH (PERSON).

TIPHSAH (PLACE) [Heb *tipsaḥ* (תִּפְסַח)]. Toponym mentioned twice in the OT.

1. The name of a city which marked the far NE boundary of Solomon's kingdom (1 Kgs 5:4—Eng4:24). Tiphsah (35°54´N; 38°10´E) was an important city located on the main trade route connecting Mesopotamia with the W. Its inclusion in 1 Kings 5 indicates the extent of Solomon's control of the trade routes in Transjordan (Aharoni *LBHG,* 276–77). Tiphsah was located in N Syria on the W bank of the Euphrates at its great W bend. The town, which lay about 75 miles S of Carchemish, was known as "Thapsacus" in classical times and is mentioned by Xenophon as a crossing point for major military campaigns (*Anab.* 1.4.11). During the Seuleucid period, it expanded to cover both sides of the river and was called Amphipolis. Now known as "Dibseh," the site remains a major crossing point on the Euphrates. The question of whether Solomon actually controlled the far N territory represented by Tiphsah or whether the inclusion of Tiphsah represents a late idealization of his rule is controversial (DeVries *1 Kings* WBC, 72).

2. According to the MT, a town in which Menahem, king of Israel (ca. 749–738 B.C.E.), executed a brutal military action, slaughtering even the pregnant women (2 Kgs 15:16). The location of this town is quite uncertain. If Tiphsah on the Euphrates is intended, many view Menahem's involvement in a campaign this far N as impossible (Haran 1967: 284–90). Since a Greek manuscript substitutes "Tappuah" (Gk *taphōe*), most scholars have viewed Tiphsah as a copyist's error and prefer Tappuah (so RSV), a town on the N border of Ephraim (M.R. 172168; Josh 17:8), which would agree with a location near Tirzah referred to in 2 Kgs 15:16 (Gray *Kings* OTL, 622–23). However, Hobbs (*2 Kings* WBC, 197) argues that Tiphsah is at least as likely as Tappuah, since Jeroboam is said to have expanded the N kingdom (2 Kgs 14:28).

TIRAS (PERSON) [Heb *tîrās* (תִּירָס)]. Tiras, according to the Table of Nations in Gen 10:2 and the parallel genealogy in 1 Chr 1:5, is one of the seven sons of Japheth, who himself was a son of Noah. No other mention is made of the name or of any of his descendants in the Bible.

Due to the lack of more specific information concerning Tiras, it is difficult to locate him and his descendants geographically. His siblings, Gomer, Magog, Javan, Tubal, and Meshech, as far as they can be located, are associated with Asia Minor and the area stretching E toward the S shore of the Caspian sea. This could well indicate that Tiras also is located somewhere in this general region.

Among the Sea People who descended upon Egypt and were repulsed by Merneptah in 1232 B.C. were the *Trš,* or Turša (Gardiner 1947: 196*; *CAH*^{3} 2: 361). Since the Sea People apparently originated in the Aegean and in Asia Minor, some have sought an etymological link between the Turša and some of the peoples from this area. A common identification has been with the Etruscans *(Tyrsenoi),* who were forced out of the area of Phrygia before 1000 B.C. (*CAH*^{3} 2: 361, 367). The link between the Turša and the Etruscans is only circumstantial, but the biblical tradition apparently linking Tiras with Asia Minor needs also to be brought into consideration. Some suggest that by the 8th century B.C. the Etruscans had migrated W to Sicily and Italy (see *CAH*^{3} 2: 368), where Aharoni and Avi-Yonah locate Tiras (*MBA,* map no. 15). It is not impossible that only part of the original group went to each of the new areas. The location in Asia Minor seems to explain the various strands of evidence better.

TIRATHITES [Heb *tirʿātîm* (תִּרְעָתִים)]. A clan which belonged to the Kenite tribe and dwelt at Jabez (1 Chr 2:55). Family members evidently included scribes *(sōpĕrîm)* or else were connected with a group called Siphrites *(siprîm),* i.e., residents originally of the town Kiriath-sepher. Several different interpretations have been offered for the word "Tirathites": singers (or something related to sacred music), gatekeepers, or descendants from an unknown individual Tira (Curtis and Madsen *Chronicles* ICC, 98). The association of the Kenites, who seem to have been an ancient nomadic or seminomadic group, with Judah, especially at the time of David, is well known (1 Sam 30:29), but there is no reference to them afterward. Whether the Hammath from which these people came was a person or a place or both is conjectural. Braun (*1 Chronicles* WBC, 43) records the suggestion that Hammath is to be identified with the village of that name in Naphtali along the Sea of Galilee (Josh 19:35), near which, at Kedesh, one Heber the Kenite also settled (Judg 4:11, 17). The genealogies of 1 Chronicles 1–9 do contain personifications of place names, and perhaps a city may be viewed as the "father" of its inhabitants.
EDWIN C. HOSTETTER

TIRHAKAH (PERSON) [Heb *tirhāqâ* (תִּרְהָקָה)]. King of Egypt of Sudanese origin and third member of the 25th Dynasty (690–664 B.C.; 2 Kgs 19:9; Isa 37:9). He was the son of Piye (Piankhi; ca. 735–712) and possibly—though not certainly—the brother of his predecessor, Shebitku (ca. 697–690). The name is Eg *Thrk* (often "Taharqa," from the original Nubian) and in Greek reads *Tarkos/Tarakos.* Tirhakah first appears among the "goodly youths," siblings of the royal house, whom Shebitku summoned from Napata to Thebes to form his court shortly after his accession (Kitchen 1983: 246, 249–52). Later, at 20 years of age, he accompanied Shebitku N to the Delta, leaving his mother (the queen mother Abala) behind in the S (Kitchen 1973: 158–61). His overinsistence in his inscriptions on divine favor and his brother's love casts a shadow over the legitimacy of his own accession upon the death of Shebitku in 690, in which year he underwent a coronation at Memphis. In both 2 Kgs 19:9 and Isa 37:9, he is listed as the king of Ethiopia (cf. Kitchen 1973; 1983).

Tirhakah proved an energetic and strong ruler and an able administrator. For the first time in five centuries Egypt experienced a building boom of major proportions. City walls were restored as population expanded, and temples were refurbished, enlarged, or rebuilt. Substantial endowments were lavished on the cults, and the personnel of the temples increased. Although Tirhakah resided in Memphis, it was Thebes and Napata, which were centers of Amun worship, that received the lion's share of the building funds; and Tirhakah maintained the traditional worship of Amun which was the heritage of the Sudanese royal house. An especially high inundation in his 6th year (684 B.C.), which flushed out the Nile valley and brought a bumper harvest, was taken as a mark of God's favor, and was commemorated all over the land in inscriptions (Leclant 1965; Meeks 1979; Moussa 1981; Parker, Goyon, and Leclant 1979).

Tirhakah did not drastically alter the administration of Egypt. He preferred to rule through the Libyan family dynasties which for centuries had dominated the townships of Lower and Middle Egypt, although he obliged them to send daughters and/or wives S to serve as priestesses and maidservants in the temples of Nubia. The Thebaid from Asyut to the First Cataract he maintained under the control of the Divine Adoratress of Amun, the titular "high priestess" of Amun in Thebes, who at the time was his own sister Shepenwepet II. Before the close of his reign, Shebitku had adopted her niece, Amenirdes (II), daughter of Tirhakah, as Adoratress-in-training. See Gräfe 1981; Gräfe and Wassef 1979.

In foreign affairs Tirhakah ran the gamut from success to failure. From ca. 683 to 680 B.C., he seems to have actively campaigned in Libya and the Levant (probably up the coast of Palestine), to judge from dedications in the inventories of the temple of Kawa in Nubia (MacAdam 1947); and in the process to have allied himself with Ba›lu of Tyre and Abdi-milkutte of Sidon, implicitly against the threat of Assyrian attack (Spalinger 1978). The latter materialized in 679 when Esarhaddon (681–669 B.C.) dispatched troops against a recalcitrant sheikhdom at Arsia, S of Raph›a, with the added purpose, perhaps, of fortifying S Philistia against Tirhakah. With Egypt in check, Esarhaddon in 677 turned suddenly against Sidon, captured and destroyed the city, and executed Abdi-milkutte. Ba›lu of Tyre eventually came to terms and signed a treaty with Assyria, while Esarhaddon tightened his grip on all the kingdoms of the S Levant, including Judah. The expected advance on Egypt came in February 674, but the Assyrian forces were defeated on the E frontier of the Delta and driven back; and pursuant to their retreat Tirhakah was able to secure the Philistine plain around Ashkelon. See Dion 1988; Goossens 1947; Spalinger 1974.

Preparations for a renewed attack came to fruition in 671. While Tirhakah had in the early spring of that year constructed a road in Nubia (in expectation of a defeat?), he seems not to have been prepared in the N. Esarhaddon and his troops with the help of friendly Arab tribes negotiated the difficult terrain across the N Sinai, keeping to an inland route away from the coast; and appeared suddenly before the walls of Migdol in the E Delta. The Assyrians had penetrated SW to the region of modern Fakus before Tirhakah could muster enough troops to oppose their advance. Three weeks of hard fighting brought Esarhaddon to Memphis, which fell to the Assyrian siege machinery within a day. Tirhakah fled S to Thebes, abandoning his wife and family and his war chest to the invaders.

In the aftermath, in spite of Esarhaddon's attempts to hold the Delta by appointing Necho of Sais as governor, Tirhakah had little difficulty in reentering Memphis and exerting his authority over the N once the Assyrian army had departed. He offered no opposition when, under Ashurbanipal, Esarhaddon's successor, another Assyrian expeditionary force invaded Egypt in 666; but in spite of his precipitous flight to the Sudan in the face of enemy columns, his authority continued to be acknowledged throughout Egypt. He died in 664 in Napata, and was succeeded by his nephew Tanutamun. See Leclant 1981–82; Parker 1960.

As a general Tirhakah was competent though not brilliant. His personal bravery is commented on by the Assyrian sources, though Esarhaddon proved far superior to him as a strategist and tactician. The Sudanese army, renowned for its stamina and running ability, was simply surprised and outmaneuvered. See Leclant *LÄ* 6: 156–84.

DONALD B. REDFORD

TIRHANAH (PERSON) [Heb *tirḥănâ* (תִּרְחֲנָה)]. A child of Caleb by Maacah, his concubine (1 Chr 2:48). While it is most likely that the child was a son, it cannot actually be determined whether this proper name is masculine or feminine in gender. Noth (*IPN*, 260) considers it to have been a tribal name. Tirhanah was apparently part of a subordinate branch of Calebite families. It is probable that an early tradition dealing with the area of Calebite settlement was broken up even before the composition of the sources available to the Chronicler. Since vv 42–55 center mainly on Hebron, with several of the settlements lying beyond the borders of the postexilic province of Judah but coinciding with the earlier situation, a date during the united monarchy or shortly thereafter for this original tradition seems plausible (Williamson *1 and 2 Chronicles* NCBC, 54–55). The Babylonian vocalization of the OT text has the form *tarḥannâ* for the name Tirhanah (KB, 1041).
EDWIN C. HOSTETTER

TIRIA (PERSON) [Heb *tîrĕyāʾ* (תִּירְיָא)]. One of the sons of Jehallelel (1 Chr 4:16).

H. C. LO

TIRZAH (PERSON) [Heb *tirṣâ* (תִּרְצָה)]. Daughter of Zelophehad, son of Hepher of the tribe of Manasseh (Num 26:3; 27:1–11; 36:1–12; Josh 17:3–6; cf. 1 Chr 7:15). Zelophehad's five daughters petitioned to inherit their father's land since their father had no sons. Their petition was granted but a proviso was added that they marry within their father's tribal clan in order that the ancestral land stay within the tribe that originally inherited it. Tirzah and her sisters followed the divine ruling on their case and married cousins on their father's side. Hence their inheritance remained in the tribe of Manasseh. See also TIRZAH (PLACE).
MARION ANN TAYLOR
J. GLEN TAYLOR

TIRZAH (PLACE) [Heb *ṭirṣâ* (טִרְצָה)]. A city in the mountains of Manasseh, and the third of Jeroboam's homes (i.e., capitals; after Shechem and Penuel; 1 Kgs 12:25) following his accession as king of Israel (1 Kgs 14:17).

A. Tirzah in the Bible

Joshua is attributed with killing the king of Tirzah when Israel entered Canaan (Josh 12:24), but the city is not mentioned again in historical narrative until the time of Jeroboam. Jeroboam is not explicitly described as having reigned from Tirzah, although it is implied in the text in connection with the death of his son (1 Kgs 14:1–18). It is more clearly implied to be the capital of the N kingdom after Jeroboam's death; all of his immediate successors—Baasha (1 Kgs 15:21, 33), Elah (1 Kgs 16:8), Zimri (1 Kgs 16:15), and Omri (1 Kgs 16:23–24)—reigned there until Omri moved the capital to Samaria. Tirzah was the home of Menahem, who later killed Shallum and seized the throne of Samaria (2 Kgs 15:14–16). The Hebrew word for the city is derived from the root *rṣh*, meaning "pleasure" or "beauty" (BDB, 953), and it is used in the Canticles (6:4) by the bridegroom to describe his beloved: "you are beautiful as Tirzah, my love," which must allude to the beauty of the city of Tirzah, since it is paralleled with "comely as Jerusalem."

B. Identification and Location

The identification of Tirzah has been a matter of some discussion and even now is not certain. On linguistic grounds, Robinson (*BR* 3, 302) identified it with Tulluza, which is located ca. 6 km N of Shechem. Another possibility based upon the same reasoning was to identify it with Teyasir, further NE of Tulluza (*ISBE* [1929 ed] 4: 2987). Albright, however, affirmed that the identification with Tulluza was "based on a fancy similarity of name, and lacks archaeological support" (1931: 244). His reason for rejecting the other site is unclear except that he states that it "has nothing to commend it, toponymically or archaeologically" (1931: 244).

Albright's strategy for identifying the location of the city was based upon several lines of reasoning, which involved a process of elimination. He concluded (1931: 241–42) that for strategic reasons, the city was probably located NE of Shechem to protect against incursion from the N (Damascus) and from the E (Ammon), but would still need to be somewhat centrally located to deal with problems that might arise from the W (Philistines and Phoenicians). Further information is inferred from the Samaria Ostraca, which mention several clans (or districts) of Samaria, one of which is Hepher. Hepher was subdivided into subclans and included Noah and Hoglah, who also are mentioned in the ostraca. According to the biblical texts, Noah and Hoglah were sisters (cf. Josh 17:3), who had another sister named Tirzah. He assumed that it would be reasonable for the territories associated with these related subclans to be contiguous (or at least in close proximity). Through a process of elimination in locating the areas of the other major clans, he finally concluded that the territory of Hepher and its subclans was NE of Samaria, and that Tell el-Far‹ah "falls necessary [sic] into the region of Hefer, and the identification of it with Tirzah is imposed because of the lack of any other archaeological possibility in this region" (1931: 251). Albright identified sherds of the EB, MB, LB, and Iron Age I and II, with the most from Iron Age I (1931: 246).

The subsequent excavations at Tell el-Far‹ah have uncovered no written evidence to identify the site with Tirzah, but have revealed a stratigraphic profile that mirrors what is known about Tirzah from written sources. It is generally accepted that Tell el-Far‹ah (M.R. 182188) is the best candidate to identify with Tirzah.

The only extrabiblical reference to Tirzah was suggested by B. Mazar (see 1986: 145–46). In 1947, he attempted to clarify the route of Shishak's raid into Palestine after Solomon's death, and had reconstructed the reading of one of the cities (No. 59 on the record of Shishak's campaign preserved at Karnak) possibly to be Tirzah (although he states that the reading is doubtful, see 1986: 146, n. 13). Aharoni appears to have accepted the identification, but suggested a different route for the campaign (*LBHG,* 325–29).

Tell el-Far‹ah (North; to be distinguished from Tell el-Far‹ah [South] in the Negeb, which is known also as Sharuhen) is in the mountains of Manasseh on a hill between two springs—‹Ain el Far‹ah on the NE and ‹Ain el Daleib on the SW—at the head of the fertile wadi Far‹ah, which accommodates one of the

more copious rivers of W Palestine (*LBHG*, 34). The hill is fairly easily defensible with slopes falling away on the N, E, and S, and a saddle connecting it to the mountains to the W. It furthermore commands the strategic N-S route from Shechem to Beth-shan, a branch of which leads into the Transjordanian plateau crossing the Jordan river at the fords of Adam (*LBHG*, 57–60). The site would have been a strategic location in Jeroboam's attempt to establish and maintain control of the fledgling kingdom.

C. History of Explorations

Tell el-Far‹ah (ca. 600 × 300 m) is larger than Megiddo and would naturally draw the attention of scholars who have tried to identify it with a biblical site. G. Dalman (*PJ* 8: 31–32) and A. Alt (*PJ* 23: 36–37; 28:40–41) identified it with Ophrah, the home of Gideon (Albright earlier thought the same; 1931: 247). F.-M. Abel (*GP* 2: 268) identified Tell el-Far‹ah with Beth-barah of Judg 7:24. Albright (1931) surveyed the site in 1930, and argued for its identification with Tirzah. R. de Vaux, assisted by A. M. Steve, began systematic excavations in 1946, conducting nine seasons of excavations which ended in 1960.

D. Results of the Excavations

1. Neolithic Period. The Neolithic is poorly represented, but has yielded meager remains, primarily floor surfaces and hearths on virgin soil. The small finds include various flint and basalt tools. The remains represent the Pre-Pottery Neolithic B period and are similar to the materials found at Jericho.

A later phase of the Neolithic is represented and is the same as Pottery Neolithic B (sometimes also called the Early or Middle Chalcolithic). The pottery is handmade and is decorated with raised, incised, or impressed bands; painted decoration is rare. The wares, which are poorly fired, are similar to materials at Beth-shan XVIII and Jericho VIII. From an isolated tomb, de Vaux (1956: 127; 1957: 553–56) identified wares which he believes are contemporary with the PPNB materials, and which are identical to sherds from Horvat Abu Matar near Beer-sheba. From this he infers "communities of people belonging to different ethnic and cultural groups existing side by side and even intermingling" (*EAEHL* 2: 397). The Abu Matar assemblage, however, is usually identified as Late Chalcolithic, and it is probable that the materials that de Vaux identified with them were not contemporary with the PPNB wares, and hence that there was not the comingling that de Vaux postulated.

2. Late Chalcolithic Period. The Late Chalcolithic period has the first evidence of "architecture," in the form of pit dwellings (ca. 2.0–4.5 m diameter and 0.8 m deep) over which mud and rubble superstructures were built. The ceramic repertoire consists of the common gray-burnished ware and red-burnished pottery similar to many of the examples at Megiddo XX–XIX and Meṣer I–II. Tombs were caves, either natural or artificial, and were communal (many of which were reused in later periods). From what appears to be a contemporaneity of Chalcolithic and EB ceramics at Tell el-Far‹ah, de Vaux suggested that there was a lag in development in the central hills after the S part of the land had already progressed into the full EB culture; he attributes the change in the S to the arrival of new peoples (1956: 128).

3. Early Bronze Age. De Vaux contends that during the first phase of the EB development, the inhabitants built a defensive wall constructed of mud brick on a stone foundation. Over 125 m of this wall, which has towers along its course, have been exposed along the W side of the town. The wall measures over 9 m thick, and along the W course of the wall is a city gate, flanked by two huge towers (preserved to a height of 4 m) in which there were steps providing access to the top. See Fig. TIR.01. The gate was a direct access plan, but had a passage which narrowed from ca. 4 m to ca. 2.5 m. The gate went through several phases and eventually was replaced with one at a higher level which in turn was blocked up.

In phase 3, a stone wall was built, which in places was added to the mud-brick wall while in others it replaced the earlier wall, sometimes following a slightly different course. While there is some question of the date of the initial construction of the wall fortifications, they appear to have been some of the earliest in the country and date probably to the very beginning of the EB II (although de Vaux attributes it to the EB IB phase; *EAEHL* 2: 399).

Inside the town, the houses were arranged according to a plan with distinct streets (some of which had drainage systems), and at least one street was 2 m wide. The houses were rectangular and along the central axis had column bases on which pillars were placed to support the roofs. The houses were built of mud brick, which usually was founded on two courses of stone.

A building which appears to have been a sanctuary was located in phase 1, and consists of a long room with benches along the walls and which opens to the E. An enclosed cella is in the back of the building. The building continued through phase 3.

Of special significance was the discovery of two potters' workshops. The first workshop (from phase 2; de Vaux 1961: 579–82) was found near the sanctuary, and among its ruins were tools to shape, scrape, and finish the wares. Quartz and fine red sand temper were also found along with red and yellow ocher, all probably used for paint. From the next phase (de Vaux 1955: 558–59), but in the same area as the earlier workshop, was found a two-chambered kiln. The top of the kiln (the enclosed oven) was missing, but the furnace section was well preserved with a number of vertical flue openings from the lower furnace chamber into the upper oven. The technology of the kiln design remained essentially unchanged, at least to the Roman period.

The EB town continued through three more phases, and although the remains are poorly preserved, there seems to have been no major alterations. The inhabitant apparently abandoned the site about the end of EB II, inferred in part from the total absence of the distinctive EB III Khirbet Kerak Ware. De Vaux suggests (1967: 374) that the desertion of the site may have been connected with the occasional outbreak of malaria which is endemic in the region.

4. Middle Bronze Age. The first settlement in MB I was poor and small, and relied on the decaying EB fortifications. No public buildings or fortifications unique to this period have been located; hence the MB I should not be considered an urban phase.

Around 1700 B.C. a new stone fortification wall was built, which varied in thickness from ca. 1.8–6.0 m. The wall followed the course of the EB wall except on the E, where it excluded part of the earlier EB settlement. Supplementing the fortifications in some places was a glacis and in other places a glacis with a revetment. What appears to have been a citadel was on the NE corner and a new gate was built N of the old EB gate. The new gate had a well-constructed, covered sewage drain exiting the town beneath the roadway.

Somewhat common for this period, infants were buried in jars under the floors of houses. These should not be inferred as evidence for child sacrifices, but simply burial practices. Adults and older children were buried in tombs outside the town, some of which were reactivated Chalcolithic tombs.

In the area just inside the gate was a special basin constructed of several flat slabs of stone, which de Vaux suggests was used for ritual purposes (*EAEHL* 2: 400).

In the SW quarter was what appears to have been a subterranean sanctuary, which de Vaux believes probably had an upper level (1957: 565). It had heavy walls, but no traces of plaster to indicate use as a cistern. Further excavation revealed what may have been a favissa in one corner, and the burials of a pig fetus and a suckling pig, one which had been placed in a jar and the other which had ceramic wares buried with it. These finds, in conjunction with the votive vessels that had been left on the bench, led the excavators to infer that the building was an MB temple.

The MB gate and stratum 5 show burn destruction, which may be attributed to the raids into Canaan by the Egyptians in their expulsion of the Hyksos (ca. 1550 B.C.).

5. Late Bronze Age. The LB (stratum 4) is poorly preserved and the plan of the town cannot be traced. But over the earlier MB shrine were remains of a building which de Vaux suggests might have been a temple (the sanctity of a temple or shrine location often retained its status over long periods of time). The plan of this "temple" (de Vaux 1957: 574–77, fig. 8) resembles the common four-room house of the Iron Age. It had an entrance into a central area and was flanked on each side by an aisle separated by a series of four columns; at the far end was a slightly elevated "holy of holies," which was reached by steps. An additional room was attached to the front of the building on the SW corner. Inside the structure was an exquisitely crafted female figurine cast of bronze with silver leaf. The statue stands about 10 cm and

appears to represent the goddess Hathor. She is clothed to her ankles and a hole in the top of her head was probably intended to hold the horns of her headdress. De Vaux suggests that her form is derived from Syrian craftsmanship rather than Egyptian (1956: 132; 1957: 576–77). In the process of analyzing the materials and plans for final publication, after de Vaux's death, A. Chambon reassigned the "temple" to the early Iron Age I. He also reassessed the function of the building to be simply a domestic four-room house in which was found a cultic artifact (the statue) belonging to the domestic cult (1984: 20).

The end of the LB settlement is unclear, especially with the paucity of remains, but de Vaux suggests that the town lasted until the end of the 14th century B.C. and perhaps as late as the middle of the 13th (*EAEHL* 2: 400). He notes, but offers little comment on, the reference to the Israelites killing the king of Tirzah in Josh 12:24 (1967: 375).

6. Iron Age I. Stratum 3 was built directly on the remains of the LB, from which de Vaux seems to infer fairly immediate reoccupation of the site (the stratigraphic relationship seems to be the more critical evidence in his conclusion than the ceramic evidence). The plan of the Iron Age stratum is generally clear, and consisted of regularly arranged four-room houses along parallel streets.

The fortifications followed the MB and included a citadel on the NW corner, which was separated from the interior of the city by a fosse. The city gate was a modified form of a bent access, necessitating a right-hand turn into the city through the gate.

As was the case with the MB city, just after passing through the gate into the open area inside the city was a basin, which had been carved from one stone. Next to it was a stone pedestal on which stood a *maṣṣebâ*. De Vaux believes the two items to have been part of a "gate temple" (*EAEHL* 2: 401).

Stratum 3 had a long life, from the beginning of the Iron Age to the beginning of the 9th century B.C. The houses and features passed through several phases of repair and minor alterations and the long uninterrupted occupation is indicated by the eventual rise of the street level (ca. 45 cm) in relation to the courtyards and doors of the houses.

The end of stratum 3 apparently came as the result of the move of the capital of Israel from Tirzah to Samaria during the reign of Omri. The incomplete construction of one of the more monumental buildings is interpreted by de Vaux to indicate Omri's abandonment of the site in favor of Samaria (*EAEHL* 2: 403). However, T. McClellan (1987: 85–86), based upon the detailed publication by Chambon (1984), argues that the "incomplete structure" was not connected with Omri, but belonged to the later flourishing of Tell el-Farʿah during stratum 2 (Iron Age II).

Several terra-cotta model shrines were discovered at Tell el-Farʿah (Chambon 1984: 77–78). See Fig. TIR.02. The model has no animal or human representations on it, but probably was designed to accommodate some sort of representation of a deity. Several other examples have been discovered in the Levant, and most, if not all, were apparently associated with the worship of Astarte/Asherah (Weinberg 1979: 44–46).

7. Iron Age II. After the desertion of stratum 3, and before stratum 2, there is what de Vaux calls an interim stratum (1955: 583–86; *EAEHL* 2: 403). It consists of walls which were located in area II, near the gate, but which belong neither to stratum 3 nor 2. The sherds associated with this "level" are of the 9th century B.C.

Stratum 2 presents a resurgence of urban life at Tell el-Farʿah. The houses tend to be larger and better constructed than those of stratum 3 and have carefully dressed wall faces. The city gate has a bench along the inside, and the "gate temple" with its basin and *maṣṣebâ* continues in the open area just inside the gate. The basin is again a stone-slab construction, replacing the single block of the earlier period.

South of the gate are the remains of a large building that de Vaux interprets as an administrative complex. This is inferred from the size of the building (ca. 440 m^2), its different layout compared with the other buildings of the stratum, and its proximity to the gate (de Vaux 1951: 412–13; Chambon 1984: 44).

Immediately S of the administrative building are several large and well-constructed four-room houses which de Vaux (1952: 566) and Chambon (1984: 43–44) describe as houses of the patricians of the city. These are solidly built and laid in straight courses, usually with fairly wide walls that consist of two rows of stones which served as the foundation for the mud-brick superstructure. Just S of these larger buildings

are other buildings which by comparison are poorly built, having narrow walls of only one stone width, and which are often poorly aligned. Both de Vaux and Chambon describe these as houses of the poor people. De Vaux (1952: 566; 1967: 378) infers from these differences in quality and construction techniques that there were two levels of social stratification at Tell el-Far‹ah, and that this inequity is evidence of the kind of social injustice that Amos (5:11), Hosea (8:14), and Isaiah (9:8–9) were decrying. McClellan (1987: 86), however, disputes the basis of his interpretation by suggesting that the comparatively poorer buildings belong instead to stratum 3, which had essentially the same quality standards. He furthermore affirms that neither the elevations nor the ceramic repertoire precludes such a reassignment.

Stratum 2 is dated to the 8th century B.C. and was apparently totally destroyed by the Assyrian campaign in 723 (*EAEHL* 2: 404).

Stratum 1 appears to have been built fairly soon after the end of stratum 2, and has poor remains. The fortifications seem to have gone out of use, but the "gate temple" continued in use with the *maṣṣebâ,* which was found inside a square enclosure (*EAEHL* 2: 404). The ceramics have a distinctively non-Palestinian appearance—in clay, execution, and shape—and similar wares have been identified in the Assyrian fortress at Tell Jemmeh, and in Samaria, in addition to the palace of Sargon in Nineveh (de Vaux 1967: 378; *EAEHL* 2: 404). By about 600 B.C., the city was deserted, and de Vaux attributes part of the reason to another outbreak of malaria (de Vaux 1956: 135).

DALE W. MANOR

TISHBE (PLACE) [Heb *tōšābê* (תִּשְׁבֵּי)]. The putative place of origin of the 9th-century Israelite prophet Elijah (1 Kgs 17:1). See ELIJAH. This identification, which is followed in many modern translations, is based on a traditional reading of the problematic Heb *mn-tšby.* Doubtless influenced by the preceding gentilic, *hattišbî* ("the Tishbite"), early witnesses (LXX, Lucian, Josephus [*Ant* 8.13.2]) read the consonantal text as a corresponding place name, *min-tišbê,* "from Tishbe." See TISHBITE. The specifying phrase, "of Gilead," would distinguish this place from a similarly named site in Galilee, the *thesbē* mentioned in Tob 1:2. See THISBE (PLACE). However, a "Tishbe in Gilead" is mentioned nowhere else in biblical or nonbiblical literature.

An early attempt to identify this Tishbe with Tisiya, S of Busra, founders on philological disparities between the names (Thenius 1873). The frequent and traditional identification with El-Istib, 8 miles N of the Jabbok in Transjordan, is equally unsatisfactory, since the earliest evidence of settlement at El-Istib does not predate Roman times. Glueck (1946: 170) proposed to emend the word to "Jabesh," a well-known Gileadite city in the Jordan valley not far from Abel-meholah (cf. 1 Kgs 19:16); but the several appearances of the gentilic "the Tishbite," all of which would then require similar emendation, make this

unacceptable. If *mn-tšby* in 1 Kgs 17:1 refers to Elijah's place of origin, we must admit that we know nothing of it beyond its location "in Gilead."

Other readings of the consonantal text have been proposed. The NT vocalizes the text *min-tōšābê,* which is itself an anomaly. It is usually emended by scholars to *min-tōšĕbê,* "one of the settlers." This is also the reading of the Targum Jonathan *(mtwtby).* Elijah, then, would be not a native of Gilead, but a permanent settler there (as opposed to a *gēr,* a temporary resident alien). Cohen (*IDB* 4: 653–54) agrees with this reading and proposes further that the gentilic *tišbî* (revocalized *tōšĕbî*) specifies not a place of origin but "settler" *(tšāb)* as a social class. He argues that the settlers from whom Elijah stemmed were the Kenites, nomadic smiths whose work on the royal chariots would have earned them the sobriquet *rēkābîm,* "Rechabites" (cf. 1 Chr 2:55). The Rechabites appear in our texts as fanatical Yahwistic traditionalists (2 Kings 10; Jeremiah 35). See RECHABITES, HISTORY OF. Simons (*GTTOT,* 359–60), on the other hand, rejects the phrase "the settlers of Gilead" as syntactically impossible, and prefers to emend *tšby* to *yšby,* "one of the inhabitants." In short, while almost all scholars are agreed that Elijah belongs to Gilead, whether as a native or as an adoptive son, it is less certain that his roots are to be sought in a site named "Tishbe."

JEROME T. WALSH

TISHBITE [Heb *tišbî* (תִּשְׁבִי)]. A descriptive cognomen of the 9th-century Israelite prophet Elijah (1 Kgs 17:1). It is used frequently of him, but occurs in no other context. In form it is a gentilic, and probably refers to a group or place of origin. Most scholars derive it from a place name "Tishbe"; this, however, is not without problems. See TISHBE (PLACE). The Targum reads it as specifying a place of origin, but vocalizes the place name quite differently: some mss read *dmtšwb,* "from Teshub," others read *dmtwšb,* "from Toshab."

JEROME T. WALSH

TISHRI [Heb *tīšrî* (תִּשְׁרִי)]. The seventh month of the Hebrew calendar, roughly corresponding to September and October. See CALENDARS (ANCIENT ISRAELITE AND EARLY JEWISH).

TITANS [Gk *titanes* (τιτανες)]. The phrase "sons of the Titans" appears in the song of Judith celebrating her victory over Holofernes (Jdt 16:7). In Greek mythology, the Titans are the children of Uranus and Ge, who battle with Zeus for control of the cosmos. The phrase is thus very strange on the lips of the devout Jew Judith. However, the term is occasionally used in the LXX to translate the Hebrew "Rephaim" (2 Kgs 5:18, 22). Here it should be noted that this passage in Judith is poetic, and "sons of the Titans" occurs in parallelism with "tall giants." The Greek word *gigantes* can be used to translate the Hebrew terms "Rephaim," "Nephilim," and "Anakim." If, as is generally supposed, the book of Judith had a Hebrew original, it seems clear that we have two Hebrew words in parallelism, probably "Rephaim" and "Nephilim" (it should be noted in support of this view that Josephus uses *titanes* and *gigantes* as *varia lectia,* in *Ant* 1.174; 7.71.299, 301, 304). "Rephaim" has two definitions. The first, which is also the meaning in Ugaritic, refers to some sort of inhabitant of the Underworld. This meaning is not applicable here, since it is not parallel with the meaning of "Nephilim." The second meaning is an ethnic term designating some of the inhabitants of Canaan before the Israelite conquest. These inhabitants were said to be of gigantic stature (see Deut 3:11 for the size of the bed of Og, the king of Bashan). This would seem to be the meaning required by the passage in Judith. The Nephilim, usually translated, as here, by *gigantes,* were the offspring of the (illicit) union between divine beings and human women, as told in Gen 6:1–4 (see also *1 Enoch*). They too had gigantic stature. The Anakim (another possibility for the translation *gigantes*) were also inhabitants of pre-Israelite Canaan, said to be gigantic in size (Num 13:28,

33). Thus it seems clear that Judith is referring to mythic beings familiar from both the OT and the literature of the Second Temple, whose chief characteristic was their gigantic stature.
SIDNIE ANN WHITE

TITHE [Heb *ʿāśar* (עָשַׂר) (verb), *maʿăśēr* (מַעֲשֵׂר) (noun); Gk *apodekatoō* (ἀποδεκατοω), *dekatoō* (δεκατοω) (verbs), *dekatē* (δεκατη) (noun)]. The religious act of giving a tenth for the support of a religious purpose.

A. Old Testament

The first reference to the tithe in the OT appears in Gen 14:17–20, where Abram (Abraham) gives a tithe of the spoils of his recent battle to Melchizedek, king of Salem and priest of God Most High *(ʾel ʿelyôn).* This passage is extremely difficult to date but would appear to be preexilic. It is known by the author of Psalm 110. The next reference to the tithe in the OT and probably the earliest reference chronologically is Gen 28:18–22, where Jacob, while making the shrine at Bethel, promises a tithe to God. This passage is from the E source (ca. 850 B.C.E.). While these two passages set the tithe in the patriarchal period, they cannot be accepted as historical. Gen 28:18–22, however, does establish that the tithe goes back at least as early as the period of the divided monarchy. This is confirmed by a reference to tithes in Amos 4:4 (ca. 750 B.C.E.).

Substantial information on the tithe comes from the D source (ca. 650 B.C.E.), almost surely "the Book of the Law" discovered by the high priest Hilkiah in the Jerusalem temple in 621 B.C.E. during the reign of King Josiah (2 Kgs 22:3–20). Chapters 12, 14, and 26 of Deuteronomy provide extensive regulations for tithing. The people are instructed to tithe the following resources: seed, grain, wine, oil, and firstlings of herds and flocks (Deut 14:22–23). They are to consume the tithes of grain, wine, oil, and firstlings as a sacrificial meal in a place chosen by God. Since the discovery of the Book of the Law generated a reformation of Israelite worship on the part of Josiah, and since one of Josiah's major reforms was the centralization of worship in Jerusalem, it appears certain that he understood the place chosen by God for the bringing of the tithes to be Jerusalem. The family or extended family is to eat the meal together. The family is also to invite a Levite from the family's town to eat the meal with them, since the Levites possess no land and thus have no tithes of their own to bring (Deut 14:27). If the distance to the place for the sacrificial meal (i.e., Jerusalem) is too great for the family to be able conveniently to bring all their tithes, the tithes are to be sold for money and the money brought to the place for the meal (Deut 14:24–26). The family then uses the money to buy whatever food and drink they desire for the meal. The family is to use their tithes for a sacrificial meal for two consecutive years out of every three. On every third year the tithe is to be kept within the town and given to the Levite, the sojourner, the orphan, and the widow, because they do not possess land (Deut 14:28–29; 26:12).

Two passages from the P source of the Pentateuch discuss tithes. Lev 27:30–33 states that tithes come from the seed of the land, the fruit of the trees, and every tenth animal of the herds and flocks. The owner is simply to take every tenth animal that passes under the herdsman's staff without any inquiry as to whether it is a good animal or a bad animal, and he is not to exchange it for another. But if he exchanges it for another animal, both it and the animal for which he exchanged it become part of the tithe. Animals that are a part of the tithe are considered sacred. If an owner wishes to redeem any of his tithes for money, he may do so, but only if he adds an extra fifth of the animal's full monetary value. The priest makes the valuations (Lev 27:23).

The second Priestly passage dealing with tithes is Num 18:20–32. The central subject of this passage is the role of the Levites in Israelite society. Since the Levites do not possess any land and therefore cannot readily produce their own food, they are given the agricultural tithes of the people for their sustenance and as reward for their service in the tent of meeting. The Levites are to present to the Lord a tithe of the tithes given them; that is, they are not to consume but to sacrifice a tenth of the tithes they receive. This tithe of the tithes is given by the Levites to the priests and is presumably used to support them. One marked difference in the P source's understanding of tithes from that of the D source is that the former regards *all* tithes from the people as going for the support of the Levites, not just the tithes of every third year.

Another difference from D is that P does not stipulate any tithes going to sojourners, orphans, and widows. These differences reflect the sociological viewpoints of D and P. D is a "popular" writing concerned with the whole of Israelite society: it could not easily ignore the plight of the poor. P, on the other hand, was more concerned with the status of the priestly class and less with that of the masses, who were perhaps expected to fend for themselves.

It should be noted that in both D and P tithes are by no means the only offerings of the people of Israel. Other offerings included peace offerings, sin offerings, guilt offering, wave offerings, heave offerings, etc. See also SACRIFICE AND SACRIFICIAL OFFERINGS.

Tithes are also mentioned in the oracles of the prophet Malachi, who protested that the people were robbing the Lord by not bringing their full tithes into the temple storehouse in Jerusalem (3:6–11). He insisted that if the people would bring in their full tithes, God would pour down upon them "an overflowing blessing" and bless their fields with protection from ravaging insects.

In 2 Chr 31:2–12 the Chronicler attributes to Hezekiah (715–687 B.C.E.) the appointment of the divisions of priests and Levites, to whom the people then bring in abundance their tithes. What the priests and Levites cannot use immediately, they store. The Chronicler understands that the people bring their tithes to both the Levites and the priests, unlike the P source, in which the Levites give to the priests tithes out of the tithes they had received from the people. In Neh 10:32–39 the Chronicler writes that the Levites went into all the rural towns of Judah to collect the tithes from the people. They then brought the tithes to the temple storehouse in Jerusalem. In this passage as well as in Neh 12:44–45 it is clear that all tithes go for the support of the priests and Levites.

B. New Testament

Tithes receive very little mention in the NT. In Matt 23:23 (= Luke 11:42) Jesus rebukes the Pharisees for their meticulous tithing on the one hand while on the other neglecting "the weightier matters of the law," namely justice, mercy, and the love of God. In the parable of the Pharisee and the tax collector (Luke 18:9–14) the Pharisee thanks God for his own moral virtue in comparison to the tax collector's sinfulness. Part of that moral virtue is that the Pharisee gives tithes of all that he gets (Luke 11:12).

The only other reference to tithes in the NT is in Hebrews 7:4–10, and here the reference is to tithes in OT times. The author notes that Abraham gave a tithe of the spoils of battle to Melchizedek and that the Levites were authorized by the Law to take tithes from the people. These references are a part of the author's larger purpose of comparing Jesus to Melchizedek.

C. Early Judaism and Christianity

In both early Jewish and early Christian exegesis of the scriptural references to tithes the Deuteronomic sacrificial meal is forgotten. Another characteristic common to both early Jews and early Christians is generalizing of the tithes. Whereas in the OT tithes apply to specific agricultural products, rabbinic and patristic exegesis tends to include all agricultural products and eventually all forms of income as subject to the tithe. In the Mishnaic tractate on tithes *(Maʿaśerot)* is the statement, "Whatsoever is used for food, and is kept watch over, and grows from the soil, is liable to Tithes" (1:1), not just grain, wine, and oil. Later extensive lists are drawn up of every agricultural product subject to the tithe, including even relatively insignificant herbs such as thyme and mustard. This generalizing tendency can already be seen in the 2d century B.C.E. in the book of Tobit: "Of all my produce I would give a tenth to the sons of Levi who ministered at Jerusalem; a second tenth I would sell, and I would go and spend the proceeds each year at Jerusalem, the third tenth I would give to those to whom it was my duty" (1:7–8). Very early in the history of Christianity tithes are extended to include money. This occurs for the first time in *Didache* 13:7 (late first or early 2d century C.E.), then in all subsequent Christian writing on tithes. Despite this generalizing tendency virtually all references in early Judaism and early Christianity are to *tithes* (plural) not to *the tithe. Tithes* do not become *the tithe* until much later in the history of Christianity.

Another widespread tendency of early Christianity is the identification of the OT Levites, the principal beneficiaries of the tithes, with Christian priests. Origen writes, "God orders the priest-Levite who possessed no land himself, to live together with an Israelite who possesses land. And the priest-Levite should receive those earthly things which he does not have from the Israelite; and the Israelite should

correspondingly receive the heavenly and divine things from the priest-Levite. The priest should be completely free to devote himself exclusively to the service of God. He should be supported just as we provide oil for a lamp so that it can give light" (*Homilies on Joshua* 17:3, quoted in Vischer 1966: 27). The Apostolic Constitutions carry this tendency a step further by equating the OT priestly order with church order. The bishops are the equivalent of the high priest; the elders, of the priests; the deacons, of the Levites (ANF 7:410).

Two different lines of interpretation of the OT commandments on tithing may be discerned in the writings of the Church Fathers. Many of the earlier fathers and especially the early monastic writers regarded the OT commandments on tithing as superseded by the teachings of Jesus. The Hebrews were to give a tenth, but Jesus told the rich young ruler to sell all that he had to give to the poor (Matt 19:21 = Mark 10:21 = Luke 18:22). Irenaeus writes that the Jews "had indeed the tithes of their goods consecrated to Him, but those who have received liberty set aside all their possessions for the Lord's purposes, bestowing joyfully and freely" (*haer.* 4:18 in ANF 1:485). Nonetheless Christians did not give all that they had; most did not even give a tithe. The sermons of fathers such as Cyprian and Chrysostom occasionally rebuke Christians by implying that those who do not tithe are inferior to the Jews. Chrysostom writes, "Someone told me with great amazement that so-and-so gives a tithe. How shameful it is that what was taken for granted among the Jews has now become an amazing thing among Christians. And if non-payment of the tithe puts a man in jeopardy with God then, consider how many are in such danger today" (*Homilies on the Epistle to the Ephesians,* chap. 2; quoted in Vischer 1966: 16). A second line of patristic interpretation, more characteristic of the post-Nicene period, sees the OT tithes as an acceptable, though minimal, standard of giving for Christians. Augustine was the chief spokesperson for this viewpoint.

TITLES, DIVINE. See NAMES OF GOD IN THE OT.

TITUS (EMPEROR). Titus (Titus Flavius Vespasianus), elder son of the emperor Vespasian, was born on Dec. 30, A.D. 39 and became emperor on June 24, 79. Because of the Flavian family's prominence during Claudius' reign (41–55), Titus was granted the unusual honor of an education at the imperial court, where he was brought up as the constant companion of Claudius' son, Britannicus. Not long after his twentieth birthday, he served with distinction as military tribune in Germany and in Britain (Tacitus *Hist.* 2.77; Suetonius *Titus* 4.1). Returning to Rome, he married Arrecina Tertulla, upon whose death (ca. 63) he married Marcia Furnilla, whom he divorced because of her family's involvement in the Pisonian conspiracy against Nero (65). Arrecina was probably the mother of Titus' only child, Julia.

Late in 66, Vespasian was sent by Nero to crush a rebellion in Judea. What was unusual was the appointment of Titus to control one of his father's three legions; not only was he too young (most legionary legates were over thirty), but it was unprecedented for a son to command a legion in his father's army. Titus was prominent in four sieges during 67 (Jotapata, Japha, Tarichaeae, and Gamala; Josephus *JW* 3.7.3 §142–4.1.3 §11) and was in sole command of the attack on Gischala (*JW* 4.2.1 §84 ff.). He does not appear in Josephus' battle records of 68, apparently spending much of that year in negotiations with Mucianus, the governor of the neighboring province of Syria, with whom Vespasian was quarreling. Titus' skill in diplomacy brought about a reconciliation (Tacitus *Hist.* 2.5). On Nero's death (June 9, 68), Titus' diplomatic expertise was once again in demand. He was sent to Rome on a delicate mission, ostensibly to pay his respects to Galba, but in fact to assess his family's standing with the new emperor. However, on reaching Corinth, he heard of Galba's death, openly advocated that his father seize power (Tacitus *Hist.* 2.10), and returned to Judea. His role in Vespasian's ultimate success (he was first proclaimed emperor on July 1, 69) was again essentially diplomatic, involving constant negotiations with Flavian supporters in Egypt, Judea, and Syria. As a reward, he was made consul in absentia and replaced Vespasian as supreme commander of the Jewish war. Victory came quickly: by July 70 the Antonia had

fallen and in August the temple was taken and destroyed (Josephus *JW* 6.7.2 §237 ff.). The rebels were not completely defeated, however, until 74 when the fortress of Masada was taken.

On Titus' return to Rome in June 71, Vespasian granted him powers so extensive that he was almost coruler. But he soon acquired a reputation for ruthlessness, extravagance, and licentiousness. As commander of the praetorian guard, he was "somewhat arrogant and tyrannical" (Suetonius *Titus* 6.1), crushing any opposition. Executions were his responsibility, hence the fate of the conspirators Eprius Marcellus and Caecina Alienus (Dio 65.16.3–4; Suetonius *Titus* 6.2). When the Jewish princess Berenice came to Rome ca. 75 (Dio 65.15.3), Titus lived openly with her but was soon forced to dismiss her. Men feared that on his accession, he would be a second Nero (Suetonius *Titus* 7.1).

Their fears proved groundless, according to our sources. On becoming emperor, Titus dismissed Berenice when she returned to Rome (Dio 66.18.1), executed no senators or anyone else (Dio 66.19.1), and declared that a day when he had conferred no favors was a day wasted (Suetonius *Titus* 8). Clearly, he intended to project an image of moderation, affability, and generosity. The truth is far harder to disentangle. His administration was sound and, at times, innovative, as his employment of easterners in posts of military significance suggests. His foreign policy was one of cautious advance, particularly in Britain, where his army was under the control of Tacitus' father-in-law, Agricola. But the eruption of Vesuvius (August 79), the resulting destruction of Pompeii and Herculaneum, a severe epidemic soon after (Suetonius *Titus* 8.3), and a fire that ravaged Rome imposed enormous burdens on the treasury, as did Titus' extensive building program that included the Flavian amphitheater (later called the Colosseum). Yet his fiscal policies must have been sound, for he had received from his predecessor and bequeathed to his successor a balanced budget.

After a brief reign of twenty-six months, Titus died suddenly on Sept. 13, 81, apparently of natural causes, and was immediately deified. Suggestions that he was murdered by Domitian seem unfounded. For Suetonius, Titus was "the darling of the human race" (*Titus* 1), a view shared by non-Jewish writers of antiquity. Brave and intellectually capable, he gathered all the accomplishments of a highly educated Roman noble of his time. His bland charm and diplomatic skill served to conceal both his efficiency and his ruthlessness. His reputation was enhanced by his early death.

BRIAN W. JONES

TITUS (PERSON) [Gk *Titos* (Τιτος)]. Titus was a gentile Christian (Gal 2:3) and one of Paul's chosen travel companions (Gal 2:1) and fellow workers (2 Cor 8:23). He was also Paul's trusted emissary for the Corinthian community (2 Cor 12:18) and one who assisted with the collection for the church in Jerusalem (2 Cor 8:6). In addition, Titus is the intended recipient of the NT pastoral letter bearing his name (Titus 1:4). See TIMOTHY AND TITUS, EPISTLES TO.

In the autobiographical section of Galatians, Paul identifies Titus and Barnabas as his chosen companions for his journey, originating presumably from Antioch and ending at Jerusalem (this journey has been variously identified with either the famine visit narrated in Acts 11:27–30 or the visit regarding the circumcision question related in Acts 15:2). Occurring 14 years after his first visit there with Cephas (Gal 1:18), the second visit (2:1–2) had as its purpose to present to the Jerusalem leaders the gospel that Paul was preaching to the gentiles. The choice of Titus, identified as a Greek (Gal 2:3), that is, a gentile according to the Pauline usage, reflects the wisdom of Paul's strategy.

As a gentile, Titus becomes a prototype for the Galatians and a test case for the entire gentile mission of Paul. For though he was a Greek, Titus "was not compelled to be circumcised" (2:3). The ambiguity of this phrase lends itself to two conflicting interpretations: (1) the circumcision of Titus did take place,

although there was no compulsion, either at his own initiative or by the suggestion of Paul, as a conciliatory gesture to the more conservative Jewish Christians. (In support of this alternative there is the reading in some mss [one Western text and Marcion] that Paul "did yield for a moment" [2:5] to the pressure, and allowed the circumcision to take place.) (2) False brethren (2:4–5) put strong pressure upon Titus (and Paul) for the circumcision, but they did not submit, as Paul emphatically affirms: "To them we did not yield submission even for a moment" (2:5). The first option is highly unlikely, since the circumcision of Titus, if it did in fact take place, would surely have become known publicly, particularly to the Galatian Judaizers who opposed Paul's gospel. To permit this would have compromised Paul's mission. It is more likely that Titus left Jerusalem as an uncircumcised gentile, and as such, served as a powerful witness that a gentile could participate in God's salvation without accepting this prescription of the Torah.

This takes us to the Corinthian situation. Titus figures prominently as Paul's strong right arm in his relationship with the Corinthian community after his founding visit there, as is attested by 2 Corinthians. That there is no mention of Titus in 1 Corinthians, either in the prescript or the rest of the letter, suggests that he became involved with them just after that letter was written, although by this time he had already been one of Paul's co-workers for a number of years. It is also possible that Titus was assigned (by Paul?) to manage the collection from the beginning, and that is why he figures so prominently in 2 Corinthians.

After Paul's initial visit to Corinth and his first letter (cf. 1 Cor 7:1), word came to Paul while he was in Ephesus that at least some Corinthians had turned against him. Rather than go himself (perhaps because of the demands of the pastoral situation in Ephesus, and not because Paul wanted to avoid conflict or could not subdue the revolt), Paul looked to Titus, a co-worker with proven pastoral skill, to travel to Corinth and mediate the difficult situation. Part of his task was to remind the Corinthians of their obedience to the founding apostle (2 Cor 7:15). Surely Titus was no less anxious than Paul about this mission, both of them wondering how Titus might be received and what the outcome might be.

Before Titus was sent, Paul had evidently prearranged to meet him on his return trip in the district around Troas (2 Cor 2:12), probably at the port of Troas, where Titus would arrive by sea. For some reason (Titus' longer than expected stay in Corinth or difficult travel experiences?) Titus did not make this rendezvous. This caused no small disturbance to Paul, who reflects: "My mind could not rest because I did not find my brother Titus there" (2:13). Rather than continue to wait longer, Paul, perhaps thinking that Titus had missed the last sailing of the summer season, headed north by land to the Hellespont, hoping to encounter Titus en route overland. If the shipping lanes were closed by this time for the winter season, Titus would have had to travel this route.

There was no little concern in Paul's mind about meeting Titus, for Paul describes himself as "afflicted at every turn—fighting without and fear within" (7:5). In Macedonia the reunion with Titus finally occurred. Besides the joy brought by seeing his trusted fellow worker again, Paul was further comforted by the news Titus brought. The Corinthians had evidently received Titus as well as his mediating efforts without hostility. The conflict they were experiencing gave rise to grief and their grief produced "a repentance that leads to salvation" (7:10). The Corinthians not only were a comfort to Titus, they also expressed their zeal to see Paul once again (7:7). Paul's so-called severe letter (written between 1 and 2 Corinthians), indeed in the mission of Titus had its desired effect.

No sooner had Paul met Titus than he promptly decided to send Titus back for the specific purpose of assisting in the collection for the saints in Jerusalem (8:6). Since Titus was "very earnest" to go of his own accord (8:17), Paul did not have to use much persuasion. The collection had been announced earlier (1 Cor 16:1–4) and was already under way (2 Cor 8:6, 10–11) as something willingly accepted by the community. Titus was to complete this work.

Sent with Titus were two other companions about whom we know something of their character, if not their names. One is a brother who was "famous among all the churches for his preaching of the gospel" (8:18). He was recognized not by Paul alone, but had been "appointed by the churches" to travel with Paul in the work of the gospel (8:19). The other brother is one whom Paul and his fellow missionaries had "often tested and found earnest in many matters" (8:22). Both of these emissaries are called "apostles" of

the churches (8:23); Titus alone is designated as Paul's partner and fellow worker. In light of the strong recommendation Paul has given to this trio, the question has been raised whether Paul had some misgivings about the Corinthian collection effort. Was Paul's strategy for completing the collection by sending others, one a noncircumcised gentile (Titus), a sign of the craftiness of which Paul was accused (12:12–16)? Paul even asks rhetorically whether he or Titus or the brother (now only one is mentioned) took advantage of them (12:17–18). Beyond this nothing further is known regarding Titus' efforts for the collection, although it appears that Paul eventually brought the collection to its intended recipients, the church in Jerusalem (see Acts 24:26).

Two later references to Titus are found in the NT. The author of 2 Timothy reports that Titus had gone to Dalmatia (4:10), and there is a letter addressed to Titus, who is referred to by the reputed author, Paul, as "my true child in a common faith" (1:4). Some commentators interpret this verse to mean that Titus was one of Paul's converts. According to this same letter, Titus has been left at Crete to correct a deteriorating pastoral situation and to appoint elders. The final instructions urge Titus to join Paul at Nicopolis (3:13), where he has decided to spend the winter. Soon after the letter is received, Titus is to be replaced by either Artemas or Tychicus (3:12).

Somewhat surprisingly, there is no mention of Titus in Acts, although some attempts have been made to identify him with Titius Justus (Acts 18:7). And there is a 9th-century Latin ms that refers to Titus in Acts 13:1. Various possible explanations have been offered for Acts' silence about Titus: he was not well enough known to be included; he may have been a relative or very close friend of Luke, and hence omitted as was the author's name; he may have been Luke's eyewitness for sections of the book. Also it has been argued that any mention of Titus was omitted by the author of Acts because he was involved in the more controversial events of Paul's life, including the circumcision question, the stormy situation with the Corinthian community, and the collection for Jerusalem (Walker 1981: 232–33).

TITUS MANIUS (PERSON). See MANIUS, TITUS (PERSON).

TITUS, EPISTLE TO. See TIMOTHY AND TITUS, EPISTLES TO.

TIZITE [Heb *tîṣî* (תִּיצִי)]. An adjective used to describe one of David's mighty men, Joha, the brother of Jediael the son of Shimri (1 Chr 11:45). In all probability, this gentilic adjective (see GKC, 240 §86h) is a geographical designation and refers to a place in Transjordan. The gentilic occurs in the unparalleled supplement (1 Chr 11:41b–47) to the larger synoptic list (2 Sam 23:8–39 = 1 Chr 11:10–41a) of military personnel supportive of David's rise to kingship in Israel. Of the eight gentilics contained in this brief supplement, four are demonstrably to be located in Transjordan ("the Reubenite," "the Asherathite" [NEB "from Ashtaroth"], "the Aroerite" [NEB "from Aroer"], and "the Moabite") (1 Chr 11:42, 44, 46b), and two are often placed there by textual emendations (thus, "the Mahavite" of 1 Chr 11:46a often becomes [Curtis *Chronicles* ICC, 194] "the Mahanite" or "the Mahanaimite," i.e., from Mahanaim, or "the Meonite," from Beth Meon; and "the Mezobaite" of RSV 1 Chr 11:47b [KJV "the Mesobaite"] is commonly replaced by "the Zobathite," i.e., "from Zobah" = NEB). But the remaining two gentilics, "the Mithnite" (1 Chr 11:43b) and "the Tizite" (1 Chr 11:45b), have resisted explanation and location, in spite of the interesting textual variations in the LXX tradition of the former (Codex Alexandrinus *ho matthani;* Vaticanus *ho baithanei;* Sinaiticus *ho bethanei* = "the Bethanite") and of the latter (Codex Vaticanus *ho ieasei;* Alexandrinus *ho thōsaoi* = "the Thosaite").

ROGER W. UITTI

TOAH (PERSON) [Heb *tôaḥ* (תּוֹחַ)]. An ancestor of Heman, of the levitical line of Kohath (1 Chr 6:19—Eng6:34). The meaning of the name is uncertain. Noth (*IPN,* 221), following others, derived it from the Akk *taḥū,* meaning "child." The previous list (1 Chr 6:1–15—Eng6:16–30) records Nahath as a descendant of Elkanah in place of Toah (1 Chr 6:11—Eng6:26). Rudolph (*Chronikbücher* HAT, 54) suggested that "Nahath" in 1 Chr 6:11 should be read as either "Toah" with v 19 or "Tohu" with 1 Sam 1:1. Two pieces of evidence, however, suggest that perhaps "Nahath" should be read in both 1 Chr 6:11 and 6:19. First, the list in 1 Chr 6:1–15—Eng6:16–30 is apparently the primary list (Curtis and Madsen *Chronicles* ICC, 134–35). Second, the genealogical list in 1 Chr 6:16–33—Eng6:31–48 gives Samuel as a descendant of Toah, making Samuel of levitical lineage. In 1 Sam 1:1, Samuel is listed as of Ephraimite lineage and Tohu is listed as one of his predecessors. The text in 1 Chronicles 6 probably represents either an attempt by the Chronicler to give levitical lineage to Samuel, or an attempt to give prophetic heritage to Heman (cf. 1 Chr 25:1–5, which describes Heman as a seer). Whatever the reason for the inclusion of Samuel in the list, it appears that when Samuel was introduced into the list, Toah was introduced to replace Nahath, perhaps on the basis of the tradition in 1 Sam 1:1.

TOM WAYNE WILLETT

TOB (PLACE) [Heb *ṭôb* (טוֹב)]. Usually taken as the name of a Gileadite city, whose Jewish population had been slaughtered by the gentiles around them (1 Macc 5:13; Gk *Toubion*). Aharoni and Avi-Yonah (*MBA,* map no. 189) and Simons (*GTTOT,* section 257) identify the site as eṭ-Ṭayibeh (M.R. 266218), SE of the city of Der‹a. Simons claims further that the city was the capital of a larger area with the same name. Scholars often identify the site with the city of Tob (Heb *ṭôb;* Gk *Tōb*), mentioned in Judg 11:3, 5; 2 Sam 10:6, 8; and even the city *t-b* in the city list of Thutmose III (*CTAED,* 190–91).

Building on the work of Mazar (1957), Goldstein (*1 Maccabees* AB, 298–99) understands the term as a reference to the Tubias (Tobias) family. Their territory lay well S of the River Jabbok, i.e., outside of Judas' sphere of activity in Gilead. The Tubian Jews of 1 Macc 5:13 would have been separated from their home city. The Greek text of 1 Macc 5:13 is actually somewhat difficult since the noun is obscure which ends the phrase "who were in Tubias' ___." "Places" or "region" is a typical reading, but, based on the use of the military term *chiliarchion* at the end of the verse, Goldstein argues that the text probably referred to Tubias' "troops." Nor is the issue clarified by 2 Macc 12:17, which also speaks of Tubiad Jews (Gk *Toubianoi*). See TOUBIANI. Goldstein (*2 Maccabees* 439–40) thinks that these Jews also belonged to the Tubiad troop and that they held a fort or "palisaded camp" (Gk *charaka*) rather than dwelling in the city of "Charax" or Dathema.

It is not clear, then, whether 1 Macc 5:13 refers to a geographical place (city or region) or a group. Either way, the referent must have been situated in Gilead near the other persecuted Jews in the cities of Dathema, Bozrah, Bosor-in-Alema, Chaspho, Maked, and Carnaim (1 Macc 5:24–26). It is even less clear how the people mentioned in 1 Macc 5:13 related to those mentioned in 2 Macc 12:17. If both verses refer to the same Tubiad group, which seems likely, 1 Macc 5:13 was incorrect in reporting that all of the Tubiad Jews had been slaughtered and some had escaped. On the other hand, there could have been two or more groups of Tubiad Jews. The similarity in names would seem to rule out the last possibility, namely that they were completely separate groups.

PAUL L. REDDITT

TOBADONIJAH (PERSON) [Heb *ṭôb ›ădônîyâ* (טוֹב אֲדוֹנִיָּה)]. Ostensibly one of the levitical teachers commissioned by Jehoshaphat, king of Judah, to instruct the people in the Law (2 Chr 17:8). The name was probably a scribal addition due to two errors of the eye. Although there is no grammatical or exegetical problem with the presence of the name in the list, the LXX, Syr and Ar versions of the Hebrew Bible omit it. The Ar version is too late to have much significance for this problem, while the Syr version

had been revised under the influence of the LXX, making the two witnesses one (Würthwein 1979: 81). The clear consensus of the LXX tradition is in favor of the omission and explains the variant readings. Evidently the scribe reduplicated (dittography) the first parts of the previous two names, *ṭôbîyāhû* and *ʾădônîyāhû,* and omitted the final syllables because of their similarities (homoeoteleuton).

KIRK E. LOWERY

TOBIAH (PERSON) [Heb *ṭôbîyâ* (טוֹבִיָּה)]. Var. TOBIJAH. Name of several (possibly related) men who were influential in Judean internal and regional affairs, especially during the Second Temple period.

1. A member of the exiled community (520 B.C.E.) with a special role in Zechariah's symbolic crowning of Joshua as high priest (Zech 6:9–15, esp. 9–10 and 14). Although it has not been determined whether Zechariah depicts an actual ceremony, the message concerning Tobiah is relatively clear; Tobiah should bring silver and gold for the crown and should also be mindful of the crown in the temple (Zech 6:14). Tobiah (RSV reads "Tobijah," reflecting the Heb name *ṭôbîyāhû,* whereas MT reads "Tobiah," Heb *ṭôbîyāh*), who appears with no patronym, was presumably an affluent returnee from exile. It has been proposed that he represents Yahwist factions from outside the small province of Judah (hence related to the later Tobiads from the Ammonite region; see below) and thereby affirms a widespread commitment to the restoration of the temple and its priesthood (Meyers *Haggai and Zechariah* AB, 343).

2. Head of a family that returned with Zerubbabel and Jeshua from the Babylonian Exile but could not prove its Israelite ancestry (Ezra 2:60; Neh 7:62; 1 Esdr 5:37). The list in Ezra 2 implies that this return took place immediately in response to Cyrus' declaration in 538 B.C.E. But 1 Esdras places this return in its more probable date at the time of King Darius (522–520).

The family of Tobiah, along with that of Delaiah and Nekoda, included 652 persons (642 in Neh 7:62), who came from Babylonian sites which can no longer be identified. They were unable to demonstrate their Israelite descent. Their plight draws attention to the importance of genealogy in the restored community; it also serves to underscore, by way of contrast, the authentic Israelite background of all the other returnees. Although the list of names does not specify the consequences, it is conceivable that the uncertain genealogy of these families forms the backdrop for the later tensions. The recurrence of some of these names as Nehemiah's opponents suggests such a possibility: Tobiah (see below), Sanballat (whose son's name is Delaiah) and Shemaiah son of Delaiah (Neh 6:10–14).

3. An opponent of Nehemiah who plays a major role in the intrigue surrounding Nehemiah's work in Jerusalem (445 and 433), Tobiah could have been either an Ammonite who (through marriage and money) rose to prominence in Jerusalem or a Judean (even Jerusalemite) who rose to prominence in Ammon.

Nehemiah himself implies that Tobiah was a foreigner engaged in several heated confrontations with Nehemiah and the Judeans. Nehemiah introduces Tobiah as "the Ammonite Servant" who, with Sanballat the Horonite and Geshem the Arab, scorns Nehemiah's intention to restore Jerusalem's walls (Neh 2:19). Nehemiah seems to suggest that "Ammonite" refers to Tobiah's ancestry, to be contrasted with "the children of Israel" (Neh 2:10).

According to Nehemiah's memoirs, Tobiah and his associates harass Nehemiah and his supporters at every step. They accuse Nehemiah of rebellion (2:19), demoralize the builders with taunts (Nehemiah 3), militarily threaten the Judean community (Nehemiah 4), further allege rebellion (Neh 6:6), and conspire with prophets (false prophets, according to Nehemiah) to entice Nehemiah to sin by violating cultic precepts (Neh 6:10–13). Once Nehemiah's wall is complete, the opponents' tactics change: Tobiah seems to seek rapprochement even as, according to Nehemiah, he also threatens (Neh 6:19). At this point the reader discovers how well connected Tobiah is to the Judean community: "for many in Judah were bound by oath to him, because he was the son-in-law of Shecaniah the son of Arah; and his son Jehohanan had taken the daughter of Meshullam the son of Berechiah as his wife" (Neh 6:19). We last hear about Tobiah when Nehemiah ejects Tobiah's belongings from the temple precinct. Tobiah apparently had gained a

foothold in the temple precinct with the help of the priest Eliashib (to whom he is related) during Nehemiah's temporary absence 12 years later (Neh 13:4–9). By prefacing this expulsion with a remark on the need to separate from Ammonites and other foreigners (Neh 13:1–3), Nehemiah or the editor suggests again that Tobiah is a foreigner.

Obviously Nehemiah regards Tobiah as a political and religious threat. He implies that Tobiah, like Sanballat, was a foreigner meddling in Judean affairs against Jerusalem's welfare. The actual historical situation is not altogether clear. Tobiah could have opposed Nehemiah because Nehemiah's role as governor of a new and strengthened Judean province encroached upon the neighboring powers such as Samaria and Ammon. The leaders of these provinces (Samaria in particular) may have objected to losing what had been under their control prior to Nehemiah. Such are the implications of Nehemiah's memoirs.

But the conflict could have also been primarily an inner Judean one. Many modern scholars take the "Ammonite servant" to be Tobiah's title as a Persian official over the Ammonite region. As such, Tobiah was a counterpart to Sanballat in Samaria and Nehemiah in Judah. He may have been a Jew who rose to power in the Persian Empire, and a member of a distinguished Jerusalem family connected to the priesthood (Blenkinsopp *Ezra, Nehemiah* OTL, 219). His Yahwist name ("Yahweh is good"), his son's Yahwist name (Jehohanan), and his familial ties with Jerusalem's aristocracy (e.g., Neh 6:18) as well as with the high priest Eliashib (Neh 13:7), all point in that direction. Williamson (*Ezra, Nehemiah* WBC), however, maintains that the adjective "Ammonite" refers to Tobiah's origin and considers Tobiah a junior partner of Sanballat, possibly even identical with the "Tabeel" (an Aramaic form of "Tobiah") of Ezra 4:23.

If this Tobiah is a descendant of the earlier Tobiah of Ezra 2:60 (see #2 above), the uncertain status of his ancestors could explain both his appointment over Ammon and the ensuing conflict with Nehemiah. The converse, however, is also plausible: the later conflict between this Tobiah and Nehemiah may have led to casting doubt on the earlier genealogy.

Several extrabiblical sources testify to an important Tobiah family or families which have been linked with Nehemiah's Tobiah. The Lachish Ostraca (6th century B.C.E.) refer to a Tobiah, the servant of the king. More prominent are the Tobiads of the 3d century B.C.E., named after a Tobiah in the Zeno Papyri and Josephus' *Ant* (11.4). These Tobiads were powerful Jewish landowners in the Ammonite region of Transjordan. According to Josephus, they were connected to the priesthood and wielded power in Jerusalem. They were the supporters of the Ptolemies. Joseph, a leading member of the Tobiad family and nephew of the high priest Onias, was granted tax-collecting privileges. As tax collectors, the Tobiads' economic influence extended as far as Syria and included Samaria and Judah in addition to Ammon (*Ant* 12.4. §4). They were later embroiled in the civil strife leading to the Maccabean revolt in the 2d century (see 2 Macc 3:11 and *Ant* 12.5 §1; see also 1 Macc 5:13 and 12:17 for a possible connection).

These famous Tobiads have been connected with the remains of the "Fortress of the Servant" (Qasr al Abd) in Transjordan (the Ammonite region). This association has been based on the title "servant" and, more importantly, on the large, 3d-century inscription of the word "Tobiah," which is carefully engraved into the cliffs at the entrance to the fortress's caves. The location of the fortress corresponds to Josephus' account of the Tobiads' residence.

Mazar (1957) places all of the references to a Tobiah in a single genealogical chain from 590 (Lachish Ostraca) to 200 B.C.E. He even postulates an earlier link with an 8th-century Tabeel in Isa 7:8 and traces a branch of the family to Nippur during the postexilic era. Most other scholars hesitate to connect all these persons but grant a likely relation between Nehemiah's Tobiah and the later Tobiads of Ammon. The two hundred years' gap in our sources precludes certain identification. See Blenkinsopp *Ezra, Nehemiah* OTL; Meyers *Haggai and Zechariah* AB; Williamson *Ezra, Nehemiah* WBC.

TOBIAS (PERSON) [Gk *Tōbias* (Τωβιας)]. **1.** The son of Tobit and a major figure in the book of Tobit (Tob 1:9 and passim). The book of Tobit is a fictional work in which a number of the names attributed to

the relatives of Tobit are wordplays (Nickelsburg 1981: 40, n. 37). "Tobias," meaning "God's goodness" or "my good is Yahweh," was probably also selected on the basis of its symbolic significance (*IDB* 4: 658).

2. The grandfather of Hyrcanus (2 Macc 3:11; cf. *Ant* 12.4.6–11 §§186–236), Tobias was a landowner and the commander of a garrison in Transjordan. Married to the sister of the high priest Onias II, he is identified as the founder of the influential Tobiad family, notorious for its role as "tax farmers," first for the Ptolemies and later for Antiochus III (Bartlett *Maccabees* CBC, 4–5; Goldstein *2 Maccabees* AB, 207–8).

FREDERICK W. SCHMIDT

TOBIEL (PERSON) [Gk *Tōbiēl* (Τωβιηλ)]. The father of Tobit (Tob 1:1). Tobiel is a "theophoric" variation on the name *ṭôbîyāh* ("Yahweh is good"; see Zimmermann 1958: 44). Like the names of other characters in the book, "Tobiel" may have been selected for its symbolic significance (Nickelsburg 1981: 40, n. 37). In restoring Tobit's blindness and in freeing Sarah from the demon Asmodeus, God will manifest his goodness; and it is that goodness which reinforces the writer's appeal for obedience in the face of senseless suffering (Nickelsburg 1981: 34).

FREDERICK W. SCHMIDT

TOBIJAH (PERSON) [Heb *ṭôbîyāhû* (טוֹבִיָּהוּ)] Var. TOBIAH. **1.** A Levite sent by Jehoshaphat, king of Judah, along with a team of five secular leaders, seven other Levites, and two priests to teach in the towns of Israel (2 Chr 17:8). The context implies that their mission was to instruct the people in their religious duties as well as their civic ones as a part of the king's religious reforms (Myers *II Chronicles* AB, 99; de Vaux *AncIsr* 2: 344, 394). His name means "Yahweh is my good," rather than "Yahweh is good" (against *HALAT,* 357), since there is no other explanation for the presence of the connecting *-î-* of *ṭôbî-* except as the first-person-possessive suffix.

2. An exile from Babylon (Zech 6:10, 14). See TOBIAH (PERSON) #1.

KIRK E. LOWERY

TOBIT, BOOK OF. The Greek book of Tobit (Gk *tōbeit[h]*), named after its alleged author, a Jewish exile living in "the Assyrian capital of Nineveh[!]" in the late 8th and 7th centuries B.C., is regarded as noncanonical or "apocryphal" by Jews and Protestants and, since the decrees of the Council of Trent in 1546, is termed "deuterocanonical" by Roman Catholics.

A. Summary of the Story

Writing in Nineveh, where he had been in exile since the days of the Assyrian king Shalmaneser (V, 727–722 B.C.), Tobit son of Tobiel, a native of Thisbe in Naphtali, tells how he, unlike most Israelites of the N kingdom, had been a righteous and observant Jew, worshipping in Jerusalem as prescribed by the law of Moses. Raised by his grandmother, Tobit married Anna, who was also of his tribe, and by her had a son, Tobiah.

In Nineveh, Tobit had continued to follow God's Law, observing the laws of *kašrût* and doing such charitable acts as feeding the hungry, providing clothing for the naked, and burying Jewish corpses exposed by the king. God rewarded him for all this by making him Shalmaneser's purchasing agent.

But when Sennacherib (705–681 B.C.), Shalmaneser's son and successor, expressly prohibited the burial of those executed by the state, Tobit ignored the edict. His defiance discovered, Tobit's property was confiscated by the crown and, had he not fled for his life, he would have been executed. Two months later, Sennacherib was murdered and succeeded by his son Esarhaddon (681–669 B.C.), who promptly appointed Tobit's nephew, Ahikar son of Anael, as his chief financial minister. Through the latter's intercession Tobit was reinstated (chap. 1).

Sending Tobiah out to invite some poor compatriot to share their festal meal of Pentecost (i.e., Feast of Weeks), Tobit learned from him of another Jewish corpse in the marketplace. Only after Tobit had rescued the corpse did he finish his dinner. Then he buried the man, much to the amusement of his neighbors, who knew that such conduct had once almost cost him his life. Though Tobit had bathed, he spent that night outside by a courtyard wall, where sparrow droppings fell in his eyes, making him completely blind. Provided for by Ahikar until he moved to Elymais, Tobit was reduced to having Anna support them by doing women's work. So depressed was Tobit by his wretched situation that once he actually accused Anna of stealing a kid from her employers. Whereupon she angrily pointed out to him that *his* righteousness and good deeds had gotten him nowhere (chap. 2). Stung to the quick, Tobit prayed that God would take his life.

That same day, Sarah, daughter of Raguel, a Jewess living at Ecbatana in Media, was also praying for death. Married seven times, she was still a virgin, the evil demon Asmodeus having killed each of her bridegrooms just before the consummation of the marriage. Sarah would have committed suicide but for the distress and disgrace it would bring to her father, who had no one except her and her mother. Insisting that she was undeserving of her marital misfortunes, Sarah begged God to take her life. Fortunately, God heard the prayers of Tobit and Sarah and sent the angel Raphael to help them (chap. 3).

Still on that same day, Tobit, convinced that he was dying, remembered some money he had left on deposit with Gabael at Rages in Media. After admonishing Tobiah to treat his mother and his compatriots well, to stay always with his own people and, like his ancestors, not marry outside the tribe, and to be law-abiding and ever generous and considerate toward those less fortunate than himself, even to the point of pouring wine on the graves of the righteous, Tobit then told his son about the money (chap. 4).

Sent out to find a guide who knew the way to Rages, Tobiah quickly came upon the angel Raphael, who was disguised as one Azariah, son of Hananiah of Naphtali, who assured Tobiah that he knew the way to

Gabael's house. In his job interview, "Azariah" not only convinced Tobit that he was of pious, Jewish stock but even assured Tobit that he would soon recover his sight. They then agreed on Raphael's wages as a drachma a day, plus travel expenses and a bonus.

Ironically, while Anna was crying and begging Tobit not to send their only child on such a trip, Tobit tried to reassure her by saying that their son would succeed because "a good angel" would go with him (chap. 5).

Tobiah, accompanied by his dog, left home with "Azariah." By nightfall they were encamped beside the Tigris, where Tobiah hauled in a huge fish that had attacked his foot. On Raphael's instructions, he gutted it, saving its gall, heart, and liver. Only later did Raphael explain that the fish's heart and liver could make a smoke that drove away demons, and that the gall cured blindness.

Nearing Ecbatana, the angel proposed that Tobiah marry the brave and beautiful daughter of Raguel, a relative with whom they would be spending the night. That way, Tobiah would be fulfilling his legal and filial duties as next of kin. At first Tobiah demurred, having heard of what had happened to Sarah's previous husbands. Moreover, he was genuinely concerned about how his elderly parents would ever get along without him should he die. After reminding Tobiah of his father's instructions to marry only within his own people, Raphael explained how Tobiah could escape the fate of Sarah's previous bridegrooms, first, by smoking the demon out of the bridal chamber and, then, by praying to the Lord. Comforted by this information and assured by the angel that their marriage had been made in heaven, Tobiah fell in love with Sarah, sight unseen (chap. 6).

Tobiah and Raphael were received most cordially by Raguel and his family. During dinner Raguel learned of Tobiah's desire to marry Sarah. Genuinely liking the young man and, in principle, willing to agree to the marriage, Raguel dutifully reminded them of the terrible fate of his previous sons-in-law. But at Tobiah's insistence, Raguel wrote out a marriage contract, just as the law of Moses required. But as Edna prepared her daughter in the bridal chamber, both of them were crying (chap. 7).

As soon as Tobiah and Sarah entered the bridal chamber he burned the fish liver and heart, their smoke driving the demon Asmodeus to the most remote part of Egypt. That done, the happy couple prayed to the Lord, thanking him for the institution of marriage and asking that theirs be a long and happy marriage, one based not upon lust but upon friendship and love. Meanwhile, Raguel had his servants secretly dig Tobiah's grave. But on learning that the young man was safe and sound, Raguel praised the Lord and had it filled immediately.

The next morning, Raguel lovingly promised that in fourteen days, Tobiah and Sarah could return to Nineveh, taking half of his property with them, the rest due after he and Edna were dead (chap. 8). To save time, Tobiah had Raphael to go to Gabael's house at Rages to collect the money. A just and righteous man, Gabael not only handed it over but even came to Ecbatana to celebrate the wedding (chap. 9).

Meanwhile, Tobit was very worried about his son, while Anna, convinced that he was dead, found little comfort in Tobit's efforts to reassure her. Yet every day she would go out and look down the road for Tobiah.

True to his word, Raguel gave the newlyweds a royal send-off, giving them exactly what he had promised. Raguel and Edna each counseled the bride and groom separately, charging them to be devoted to one another, to be kind to their respective in-laws, and to raise a fine family (chap. 10).

When the entourage neared Nineveh, Raphael and Tobiah, still accompanied by his dog, went on ahead. When Anna saw Tobiah, she greeted him as if he had returned from the dead. In his joy and excitement, blind Tobit also ran toward them, stumbling and tripping as he went. No sooner did Tobiah apply the fish gall to his father's eyes than the white patches peeled off so that Tobit could see perfectly. Tobit praised the Lord that now he could actually see his son.

Later that day, Tobit welcomed his new daughter-in-law almost as warmly as he had received his son. The Ninevites were amazed at what God had done for Tobit, and all the Jews, including Ahikar and his nephew Nadab, shared in his happiness (chap. 11).

Only after Tobit had agreed to Tobiah's suggestion that in appreciation for services rendered, "Azariah" should be given half of all that Tobiah had brought back, did Raphael reveal his true identity. He explained how, after bringing the prayers of Tobit and Sarah to the Lord, he had been sent to test and help them. After assuring them that they would suffer no danger in his presence and that the entire time he had been but a vision, Raphael instructed them to write down their story for others (chap. 12). Thus, Tobit composed a hymn of thanksgiving, praising the Lord for his mercy and kindness toward the righteous as well as for his punishment of the wicked. Although the Jews were now scattered, Tobit was certain that God would look after them and would eventually reclaim Jerusalem and rebuild his temple (chap 13).

Tobit, who at age 62 was struck with blindness, lived to the ripe old age of 112, continuing to the end to `e very kind and charitable. On his deathbed and convinced of the truth of the prophets' dire predictions, especially those of Nahum against Nineveh, Tobit urged his son to take the family to Media. There, Tobit assured him, they would be safe until the time when God, true to his promises, would restore his people to their land and all nations would worship the one, true God. Meanwhile, one should serve God faithfully and give alms generously and sincerely. After all, Ahikar was saved from Nadab's treachery because of his almsgiving. Having said that, Tobit died and was given a fine funeral.

After his mother's death, Tobiah took his family to Ecbatana and settled there, taking loving care of Raguel and Edna. A very wealthy and charitable man until his death at the age of 117, Tobiah lived to see the destruction of Nineveh by the Median king Ahasuerus as well as the satisfying spectacle of Assyrians being brought prisoners to Ecbatana (chap. 14).

B. Some Preliminary Observations

From this rather detailed summary several points should be evident. First, although the story is quite interesting, its plot has little or no suspense, the reader being assured of the deliverance of both Tobit and Sarah as early as 3:16–17, and then being told *how* this would be accomplished even before the story is half told (6:6–8). This loss of suspense, however, is compensated by increased opportunities for irony, a major literary feature of the book (see below).

Second, the personalities of the six main characters (Tobit, Anna, Tobiah, Raguel, Edna, and Sarah) are not merely two-dimensional but are clearly and individually developed. Despite their individual shortcomings, they are basically good but ordinary people who in no way have the heroic stature or prominence of other exilic characters such as Daniel, Esther, or Judith:

> The Book of Tobit unfolds *the drama of two little people* [italics added], Tobit and Sarah, pitted against a system of apparent fate and a seemingly disinterested God (Craghan, *Esther, Judith, ...* OTM 16: 129).

Third, the influence of a number of OT stories, themes, and images are clearly evident in the book: the patient suffering of Job (Job 1:1–2:10; 42:10b–17), the betrothal scenes of Isaac and Jacob (Genesis 24, 29), the Joseph story (Genesis 37, 39–50), and the theology of Deuteronomy, to name but a few.

Finally, the story contains certain "details of fact"—or rather, geographical and historical errors (see below)—that argue against the story's being essentially historical, although it may very well reflect actual living conditions of Jews of the Eastern Diaspora (Gowan 1980: 152, 354).

What will not be evident to everyone reading the summary of the tale is that its author utilized, in varying degrees, several secular tales that were well known throughout the ancient world, notably, "The Grateful Dead," "The Monster in the Bridal Chamber," and "The Story of Ahiqar."

C. The Story's Fictional Character

Starting with Martin Luther, who characterized the book as "a truly beautiful, wholesome, and profitable fiction" (his preface to the book), biblical scholars have increasingly regarded it as edifying fiction, although a few Roman Catholic scholars of the 20th century have continued to argue for some kernel of historicity (Miller 1940: 8; Clamer 1949: 395; Deselaers 1982: 265–66, although Deselaers, like the Protestant Pfeiffer [1949: 46–52; 264–65], does not see that as the story's raison d'être).

The book's errors of "fact" have been a major reason for scholars denying its historicity: to wit, the tribe of Naphtali was taken into exile by Tiglath-pileser III (745–727 B.C.; so 2 Kings 15:29), not Shalmaneser V (so Tob 1:2); Sargon II (722–705 B.C.), not Sennacherib (so Tob 1:3–22), was the successor to Shalmaneser V (although 2 Kings 17:1–6 and 18:9–13 make the same error); the trek between Rages and

Ecbatana, which Tobiah did in "two full days" (Tob 5:6), is actually a distance of about 185 miles; leaving Nineveh and going eastward, Tobiah and Raphael arrived in the evening at the Tigris river (Tob 6:1–5); yet Nineveh was actually situated *east* of the Tigris unless, of course, a different "Nineveh" is intended (e.g., Seleucia [so Torrey 1922; 1945: 86]).

And while 20th-century scholars are less likely to believe in Persian demons like Asmodeus (Pers *Aeshma-Dawa,* Marshall *HDB* 1: 172–73; Grintz *EncJud* 15: 1185; but see Pfeiffer 1949: 271) or angels in disguise like Raphael, even these elements have not been the principal reason for modern scholars regarding the story as fictional. Moreover, such details as bird feces causing blindness or fish-gall curing it represent, at worst, the primitive medical science of the day and, conceivably, an effective folk remedy for a certain condition of the eye (Lundsgaard 1911; von Soden 1966; Gamer-Wallert 1970).

The recognition by 19th-century scholars that the Tobit story utilized older secular folktales finally persuaded most scholars that the story was not historical.

D. Possible Secular Folktale Components

Part of the continuing appeal of Tobit is explained by the very fact that its author utilized, in varying degrees, several time-tested themes or folktales.

1. The Grateful Dead and the Bride of the Monster. It is frequently argued that the author adapted a tale combining the universal themes of "The Grateful Dead" (i.e., the story of how a man who goes to great expense to bury a corpse is subsequently rewarded by the deceased [Simrock 1856: 131f.; Thompson 1955–58: 2.364]), and of "The Bride of the Monster" (Gerould 1908: 47–75), a variant of "The Dangerous Bride" (although Huet [1915] regards them as separate and distinct).

In contrast to most scholars, who see both tales integrated prior to the author of Tobit utilizing them, Ruppert (1972) would make "The Grateful Dead" the basic tale for Tobit while Deselaers (1982: 280–91) regards "The Bride of the Monster" as primary. Although Miller (1940) and Clamer (1949) think "The Grateful Dead" folktale may be based on Tobit, most scholars disagree and either follow Gerould (1908: 46–47) or conclude that Tobit's relationship to the folktale cannot be established (Grintz *EncJud* 15: 1186; Vermes 1986: 226). The experiences of the hero in "The Grateful Dead" have obviously been divided between Tobit and his son.

2. The Story of Ahiqar. This story was the third secular folktale used by the author of Tobit (Charlesworth 1981: 76), who either modeled his Ahikar after it (Dancy *Tobit* CBC, 6) or, more likely, assumed his reader's familiarity with it (Cazelles 1951: 134; Greenfield 1981: 331). An Aramaic wise man, Ahiqar was an actual person in the Assyrian court of Esarhaddon (van Dijk 1962: 43–52); and his checkered career and proverbs, the latter originally separate and independent (Lindenberger 1983: 17–19), were well known throughout the ANE. See also AHIKAR/AHIQAR (PERSON).

Although the Ahiqar story has not survived in its original form, a number of later versions have survived (for translations of some of them, see Conybeare et al. 1898; Harris et al. 1913; for the Aramaic text and English translation, see Cowley [1923] and Lindenberger [*OTP* 2: 494–507], respectively).

Even if the story of Ahiqar was not well woven into the text (Dancy *Tobit* CBC, 6–7; Ruppert [1976: 232–37] regards Ahikar as the creation of a later redactor), its influence is clearly present (Tob 1:21–22; 2:10; 11:18; 14:10). It is also evident in passages where there is no mention of Ahikar; compare, for example, Tob 4:17 of *Sinaiticus* and Ahiqar 2:10 ("My son, pour out your wine on the graves of the righteous, rather than drink it with evil men"). Compare also Tob 4:10; 4:12, 15, 17, 18 with the Syriac Ahiqar 8:41; 2:5–6, 43, 10; 2:9–11, respectively. However, Ahiqar, unlike Ahikar (Tob 14:10), was not known for his almsgivine. Moreover, Tobiah and Nadab (= Nadin, Ahiqar's nephew and adopted son) are a study in contrasts, the latter serving the former more as a foil for narrative and didactic purposes (Greenfield 1981: 331). See also NADAB.

3. The Tractate of Khons. It is uncertain (Vermes 1986: 226), if not unlikely (so Pfeiffer [1949: 271] and Glasson [1959: 276]; but "probable," according to Schneider 1910: 638 f.; Simpson *APOT* 1: 187–88; and Wikgren *IDB* 4: 16) that the author of Tobit also utilized a well-known Egyptian folktale entitled *The Tractate of Khons* (for English text, see *ANET*, 29–31). This tale, dating to the 5th century B.C., tells of a princess in *Bkhtn,* Egypt, who, possessed by a demon, was exorcised by Khons, an agent of the Healing

God of Thebes. In Tob 8:3, however, Upper Egypt appears to be a most far-distant land rather than the setting for the exorcism (see M below).

4. Others. Although the author of Tobit wove his various folktales together quite skillfully, their seams are occasionally detectable in certain loose or incompatible "threads." For example, his gratuitous mention of Tobiah's dog (Tob 6:1; 11:4), an animal held in low esteem in the Bible, strikes many readers as a vestigial remnant, or "detail of fact," from some other tale. (Zimmermann [1958: 7–12] explores several possibilities, including the theme of the Dragon Slayer; Glasson [1959], who believed the author of Tobit was dependent primarily upon the legend of Admetus, thought Tobit's dog reminiscent of that of Odysseus, while Surburg [1975] regarded it as "reminiscent of the dog who in Zoroastrianism attends Srasha" [p. 105].) And as noted earlier, Tobit's injunction to his son to pour his wine on the graves of the righteous (4:17), which is contrary to biblical teaching, *is* included in the counsels of the nonbiblical Ahiqar. Most improvable, however, is the suggestion of Nowell (1983: 59, n. 19) that a fish's attacking Tobiah is borrowed from the Egyptian folktale entitled "The Two Brothers," for in Egypt the entrails of certain fish were believed to have medicinal qualities (Gamer-Wallert 1970). In any event, Eissfeldt (1965: 584) has rightly observed that the author of Tobit has taken all "this alien material" and filled it with the spirit of Jewish legal piety.

E. Literary Genre

1. Romance. If the secular folktales noted above are the basic materials out of which the author of Tobit created his story, exactly what *kind* of fiction is it? The centuries-long popular allegorical method of interpretation (where Tobiah's safe return to Tobit foreshadows Israel's ultimate return to the Church [Scholz 1889]) is no longer in vogue (Miller 1940: 4–5; Priero 1963: 18–19).

Rather, to such nouns as "tale," "novel," "fairy tale," or "romance," scholars have prefixed a wide variety of adjectives, including "short," "religious," "romantic," "diaspora," "didactic," "sapiential," "Jewish," and the like.

All things considered, however, the book of Tobit best fits the genre of a "romance" (Perry 1967: 44–45):

> an extended narrative … which relates—primarily or wholly for the sake of entertainment or spiritual edification, and for its own sake as a story, rather than for the purpose of instruction in history, science, or philosophical theory—the adventures or experiences of one or more individuals in their private capacities and from the viewpoint of their private interests and emotions.

More specifically, this particular romance takes the form of *the successful quest*, where the perilous journey for money and the even more dangerous quest for a bride result in a deadly struggle and then complete success (i.e., wealth, a bride, and recovered vision).

2. Biblical Elements. A clue as to the proper adjective to modify "romance" when describing the genre of Tobit is to be found in Zimmermann's observation (1958: 12):

> In the loom of the Tobit tale, the woof comes from the folklore of mankind, and the warp and the pattern, the vitality and the color from the religious experience of the Jewish people.

That is, regardless of the extrabiblical sources used by the author of Tobit, biblical ideas and themes and stories permeate his tale, especially as they are reflected "in the needs and preoccupations of the second-century Diaspora" (Nowell 1983: 76).

Tobit's plot and structure were influenced not only by the plot and details of the Joseph story (Ruppert 1972) and the betrothal scenes of Isaac and Jacob, but also by many other elements in the book of Genesis, including its ideals of marriage, the concept of God's providential care, parent-child relationships, the concept of hospitality (Nowell 1983: 254–59), and, especially, burial of the dead as a charitable act (Abrahams 1893; Griffin 1982: 8–10).

It is, however, the book of Deuteronomy (Di Lella 1979), especially with its doctrine of retribution (i.e., God ultimately rewards the just and punishes the wicked [Deuteronomy 28 and 30]), that provides the basic theology for the book of Tobit in general and for Tobit's farewell discourse in particular (Tobit 14). Ultimately, the happy outcome for Tobit, Tobiah, Sarah, and their families (and eventually, for Israel; 13:9b–18; 14:5–8) represents God's rewarding the righteous while his earlier punishment of Israel (3:3–4;

14:4) and his subsequent destruction of Nadab (14:10) and of Nineveh and its kings (Tob 1:18, 21; 14:4, 15) represents God's judgment on the wicked.

Deuteronomy's "concept of God's plan for the nation, and the virtuous life expressed in the relationship between parents and children, respect for women, care for the *personae miserabiles* among kindred, observance of the cultic laws, and the practice of prayer" are also strong influences on the book of Tobit (Nowell 1983: 259–71). With some justice, Craghan (*Esther, Judith, ...* OTM 16: 132) characterized the book of Tobit as "Deuteronomy Revisited," inasmuch as the story of Tobit reflects the living out of the covenantal implications of Deuteronomy, although legal concerns in Tobit (e.g., Tob 1:6–8 and 2:1 and 9) are based upon other pentateuchal books as well (Gamberoni 1977).

Prophetic influences on Tobit include the Minor Prophets (Amos is mentioned by name [Tob 2:6], as are Nahum [*Sinaiticus*] and Jonah [*Vaticanus*] in 14:4) as well as Jeremiah, Ezekiel, and Deutero- and Trito-Isaiah, especially with reference to Israel's Exile (1:3–10; 3:1–5; 14:3–4) and return (Tobit 13–14).

The author of Tobit was strongly influenced by the Wisdom books, notably Job, both in its basic problem and imagery, and Proverbs (Nowell 1983: 276–282). As for the correspondence between Tobit and Ben Sirach's Ecclesiasticus (Tob 4:3 = Sir 3:12; Tob 4:7 = Sir 14:9f. and 4:4 f.; Tob 4:10 = Sir 3:48; Tob 4:17 = Sir 12:1–7; and Tob 4:21 = 21:6b; for a fuller list, see Wikgren *IDB* 4: 661), it is problematic whether one author borrowed from the other or both independently drew upon a common source or mood (Simpson *APOT* 1: 193; Oesterley 1914: 362–64; Zimmermann 1958: 13). All things considered, then, Tobit's literary genre is best described as a short Jewish romance.

F. Integrity

Given the book's mixture of secular and religious elements, one should not be surprised that its integrity had been strongly questioned as early as Ilgen (1800) and as recently as Deselaers (1982), especially with reference to chapters 13 (an eschatological psalm [Flusser 1984: 556]) and 14 (Wikgren *IDB* 4: 661; Rost [1976: 62–63]; while Zimmermann [1958: 24–27] dated both chapters after A.D. 70, a view now discredited by their presence at Qumran).

Most scholars, however, have regarded Tobit as the product of just one author. Moreover, the shift from first-person narrator to third (3:7) is prompted by literary considerations, i.e., the narrator had to describe actions and thoughts to which he was not privy at the time of the action. Finally, the rhetorical analysis of Tobit by Nowell (1983) has shown that despite the book's diverse secular and religious elements, it is the product of one author.

G. Purpose

The author's adaptation of various secular folktales and his pronounced biblical patterns and content clearly indicate that broadly speaking, he intended to entertain and to edify his readers. But scholarly efforts, early and late, to restrict the author's primary purpose to a more specific intention such as advocating the burial of the dead (Grätz 1879), posing the question of theodicy (Rosenthal 1885: 104; Nickelsburg 1981: 32–33), or providing a model or paradigm for the Diaspora (Ruppert 1972: 117), have not gained general acceptance.

H. Ironic Character

A major literary technique employed by the author to entertain his audience is irony. In narratives, irony is often at the price of suspense (Booth 1961: 255; on irony in the OT, see Good 1965). Thus, on the one hand, from Tob 3:16 ol the reader knows that there will be a happy ending for Tobit, Sarah, and Tobiah; and by 6:6–8 the reader even knows how. On the other hand, the reader (but not the characters in the story!) can appreciate the book's general irony and, in particular, such passages as 5:21 and 8:9b.

Like its author's name, Tobit (= *ṭôbî*, a Semitic hypocoristic for "God/Yahweh is my good"), the entire book—its plot, characters, and message—is profoundly ironic in character (Nowell 1983: 192–200). It was Tobit's good deeds, especially his burying the dead—which should protect one from evil (so 4:10)—that brought his blindness and poverty upon him. Yet he continued to trust in God (5:10). Likewise, the generous nature of the noble Ahikar (Tob 1:22; 2:10; 11:18) was, at least for a while, successfully exploited by Nadab (14:10–11). Moreover, Tobit's most useful *human* guide during his quest turned out to be the supernatural "Azariah."

Then too, it is Raphael who was sent to cure Tobit and Sarah (3:17), but it is Tobiah who was the willing but indispensable means, willingly obeying his father to undertake a difficult, if not dangerous, journey (5:1–2, 16), willingly following "Azariah's" suggestions (6:2–8, 11–17), and bravely confronting the demon Asmodeus (7:8–12; 8:1–9). A Proppian analysis of the story argues the same conclusion (so Blenkinsopp 1981: 38). However, Sandmel (1978: 61) views Tobit as the "chief attraction of the story," while Alonso-Schökel (1973: 56) is virtually alone among scholars in viewing Tobiah as being ever passive, almost "an antiperson."

The names of most of the characters, especially at the height of their particular anguish, are also ironic: Tobiah ("Yahweh is my good"), the sharp-tongued Anna ("Grace"), and the beleaguered Raguel ("Friend of God"). The virtuous and lovable Sarah ("Mistress") hardly seems in control, plagued as she is by a demon and thoughts of suicide; and her mother Edna ("Pleasure") seems anything but happy. Even the name of Tobit's father, Tobiel ("God is my good"), is ironic inasmuch as both he and his wife died while Tobit was just a child (1:9).

In fact, *only* the supernatural "personages" have appropriate names throughout, namely, Raphael ("God heals"), Azariah ("Yahweh is merciful"), and the demon Asmodeus (meaning, if the name is Hebrew, "The Destroyer" [from Heb *šmd,* so Midrashim], or, if Iranian, as seems more likely, *Aeshma Daeva,* the Persian demon of lust [Marshall *HDB* 1: 172–73]). By the end of the tale, however, the theological affirmations in all the names are quite appropriate.

Comedic elements of an ironic character are also present in Tob 2:11–14; 8:9b–10, and, depending upon one's sense of humor, also in 2:10 and 8:8–9a. For a discussion of comedy in general, see Corrigan 1965; also Miles 1975.

I. Religious Ideas

Notwithstanding the very strong emphasis on cultic concerns at the beginning of Tobit in regard to tithes and worship at Jerusalem (1:3–13), and at its end with a vision of a new and greater Jerusalem and temple (13:9–18; 14:5–7), the book's primary emphasis is on noncultic matters, i.e., on the everyday practical, moral, and sapiential aspects of being and doing good (Dancy *Tobit* CBC 9; Gamberoni 1977). In Tobit, true religion is centered in the heart and home, in the day-to-day faith and pious living of the families of Tobit and Raguel (1:16–17; 4:3–19; 12:6–14). Feeding the hungry, clothing the naked, giving the condemned a decent burial, preserving dutiful and loving relationships between parents and children—these are the author's primary concerns.

Even if suffering is not *the* problem in Tobit (but so Nickelsburg 1981: 30), the author does address himself to it, showing that while a person can be free of sin and yet suffer (as in the case of Sarah) or can even bring suffering upon oneself through a charitable and courageous act (as in Tobit's burial of the corpse) so, in God's providence, man's cooperation with God (in this case, Tobiah's obedience to his father and his courageous following of the advice of Raphael) can bring the matter to a successful resolution. Jewish faith and courage can be of either an active or passive character: that of Tobit and Sarah consisted of passively accepting their suffering, Tobiah's involved actively confronting the demon Asmodeus.

There is also a *heilsgeschichte* colorization to the book. For as God has looked out for these individuals, so, the author argues, will he respond to the present suffering of his dispersed people (Tobit 13–14): "The author … seeks to embody the history of Israel in the lives of these two principal characters, Tobit and Sarah. He traces salvation history in the ups and down of these committed people" (Craghan *Esther, Judith, …* OTM 16: 134).

The book of Tobit represents a major step in the evolution of the biblical understanding of demons and, especially, of angels (on angels, see Bamburger et al., *EncJud* 2: 956–71, and Talbert 1976; for demons, see Kohler, *EncJud* 4:514–20 and Rabinowitz, *EncJud* 5: 1522–28). Here, in Tobit, are mentioned for the first time two supernatural creatures who will figure quite prominently in subsequent Jewish and Christian traditions: the archangel Raphael and the demon Asmodeus. Raphael, who is proof that Israel's transcendent God is with Tobit and Sarah and who is described in Tobit as one of the seven most

important angels (Tob 4:16–17; 12:12–15, 19–20), will loom even larger in intertestamental (e.g., Enoch 9:1, 10:4; 20:3; 40:9) and Talmudic (*Yoma* 37a) literature.

As for Asmodeus, he also appears in intertestamental (e.g., *Jubilees*), Talmudic (e.g., *Git.* 68a–b; *Pes.* 110a), and Christian literature (e.g., *T. of Sol.* 5:1–13 [Whittaker 1984: 735, 741–42]). On the magical use of the names of Yahweh, Raphael, and various demons among Jews, Christians, and Mandaeans in late antiquity, see Montgomery 1913; also Naveh and Shaked 1985.

The author effectively used within his relatively short narrative a wide variety of contemporary literary forms to express his religious ideas: monologue (e.g., 1:3–2:14; 3:10) and dialogue (2:13–14; 5:9–22; 6:6–17); prayers (3:2–6, 11–15; see Mayer 1970–72: 19–24) and hymns of thanksgiving (8:5–9, 15–17; 11:14–15a; 13:1–18); biblical quotes (Amos 8:10a in Tob 2:6) and wisdom sayings (4:2–21; 12:6–10); demonology (3:8; 6:13–17; 8:1–3) and angelophany (3:16–17; 12:11–22); and deathbed testimony (14:3–11). In her rhetorical analysis of Tobit, Nowell (1983) has effectively shown the nature and inner-relatedness of these various literary forms.

J. Original Language

With the discovery of one Hebrew and four Aramaic copies of Tobit in Cave 4 at Qumran (Milik 1966: 522), the century-long debate as to whether Tobit was originally composed in Greek (Fritzsche 1853: 8; Nöldeke 1879: 61; André 1903: 181; Löhr 1921: 136) or a Semitic language has now been settled in favor of the latter (Doran [1986: 296–97] seems less than convinced; Deselaers [1982: 19, 335, 342–43] still champions the Greek).

But it remains an open question whether that original Semitic language would have been Hebrew (Grätz 1879; Lévi 1902: 288–91; Joüon 1923: 168–74; Oesterley 1935: 161; Saydon 1952: 363) or Aramaic (Marshall, *HDB* 4: 788; Torrey 1945: 86–87; Pfeiffer 1949: 272; Zimmermann 1958: 139–49), although support for the Aramaic has been increasing (Simpson, *APOT* 1: 180–82; Eissfeldt 1965: 585; Milik 1966; and Nickelsburg 1984a: 45).

Part of the difficulty lies in scholars disagreeing as to which Greek text should be the basis for purposes of analysis. Of the three Greek recensions of Tobit, the one represented by *Sinaiticus* and the Old Latin (see below) contains the greater number of Semiticisms; but, unfortunately for the particular issue in question, the Greek translation of Tobit contains few, if any, egregious translation errors that indisputably presuppose either a Hebrew or Aramaic *Vorlage* (for lists of Semiticisms, see Müller 1908: 28–33; Joüon 1923: 170–74; Pdeiffer 1949: 272–73; Thomas 1972: 471). Even such Aramaisms as *ʾAthēr,* "Assyria" (14:4), and *ʾAthoureias* (14:15) do not settle the question, for they may simply reflect an Aramaic environment (Simpson *APOT* 1: 182; Rost 1976: 61). Some scholars maintain that the absence of a Hebrew text in Jerome's day (340?–420) also argues for the priority of the Aramaic.

K. Author

The author of Tobit was a Jew. More than that cannot be said with any confidence. That he was a Samaritan (Milik 1966), a Sadducee (Simpson *APOT* 1: 182, n. 3), or a member of the Dead Sea Community at Qumran (Dupont-Sommer 1968) has not gained popular acceptance.

L. Date

Although the book of Tobit has been dated as early as the 7th century B.C. (Gutberlet 1877) and as late as the 3d century A.D. (Kohut 1872), most scholars of the past two centuries have dated it to somewhere between 225–175 B.C., that is, after the canonization of the Prophets as the word of God (Tob 14:4) but before the Maccabean period with its turmoil and strongly antigentile spirit (Tob 13:11; 14:6–7).

The book's geographical and historical errors certainly argue against a 7th- or even 5th-century date for the book, as do such phrases as "the law of Moses" and "the book of Moses" (Tob 6:13; 7:11, 12, 13), which postdate the writing of Chronicles (2 Chr 23:18). Moreover, the author would scarcely have spoken about the temple of Jerusalem in the way he did (Tob 13:9–18; 14:5–6) had he been familiar with the magnificent temple built by Herod in the late 1st century B.C. Then too, the author's emphasis on agnatic marriage (a practice that could no longer be reasonably expected by the 1st century B.C.) and the absence of any expression of belief in personal resurrection also are more in keeping with a compositional date in the late 3d or early 2d century B.C. The book's Aramaic text at Qumran, and especially its *presumed*

affinities with Imperial Aramaic, prompted Grintz (1969: 66, n. 46) and Flusser (1984: 556) to date Tobit to the 4th or even late 5th century B.C. Greenfield (1962) too would put Tobit's composition in the Persian period.

M. Place of Composition

Egypt, Persia, Media, Assyria, Palestine—over the years virtually every geographical area has had its strong advocates as well as its equally convinced critics. And even today there is no consensus among students of Tobit (Nowell 1983: 31–32). For many scholars, Tobit's geographical and historical errors rule out a Mesopotamian origin, and yet the book may well reflect Diaspora conditions and be designed for a Diaspora audience.

Although an Egyptian provenance was the dominant theory for the first half of the 20th century (primarily because of the view that the story of Ahiqar was Egyptian in origin and that the Egyptian *The Tractate of Khons* had been utilized by the author of Tobit), in the second half of the present century the weight of scholarly opinion has shifted slightly in favor of an Eastern Diaspora provenance (Lebram 1964: 331; Grintz, *EncJud* 15: 1185; Nickelsburg 1984a: 45, n. 62), even though Milik (1966) favored a Samaritan provenance and Deselaers (1982: 333–43) favored Alexandria, Egypt.

N. The Greek Text

The nature and relative merits of Tobit's three Greek text forms have been a major preoccupation of Tobit scholars since Tischendorf's discovery of *Codex Sinaiticus* in 1844. Often referred to as R^S (= a recension based on *Sinaiticus* and, in the main, attested to by the Old Latin), R^V (a recension represented by codices *Vaticanus/Alexandrinus/Venetus* and most minuscules), and R^C (which is a mixed text containing only 6:9–12:22), their varied assessments by recent scholars are attested by the fact that the Authorized Version (KJV) and the RSV were based upon R^V, or the so-called "shorter text" (shorter by 1,700 words), while the JB, NEB, and NAB used R^S. Moreover, the larger Cambridge Bible (Brooke, McLean, and Thackeray *Esther, Judith, Tobit* OTG 3/1: 85–144) used *Codex Vaticanus* as its standard of comparison while the Göttingen Bible (Hanhart 1983; 1984), in keeping with its standard procedure, produced for R^V an eclectic text.

Although many 19th-century scholars preferred R^V to R^S, especially in Germany (Fritzsche 1853; Nöldeke 1879; Löhr 1900; 1921; and Müller 1908), the more detailed and prolix R^S now seems to be the preferred text, thanks to the work of Nestle (1899), Simpson (1913), Thomas (1972), and Hanhart (1984: 11–48). Utilizing both linguistic and literary analyses, Simpson showed that R^V's content reflects ideas, historical conditions, and theological developments later than those of R^S. *Sinaiticus* itself, however, is not without its shortcomings, for two major lacunae (4:7–18 and 13:6b–9) must be supplied from the Old Latin. That the five Semitic copies of Tobit at Qumran (albeit fragmentary) reportedly agree with R^S (Milik 1966: 522, n. 3) also strongly argues for the priority of R^S.

O. Other Ancient Versions

Like many books of the Bible, Tobit has only a couple of versions which can legitimately lay claim to being "critical editions" (for most versions their *apparatus criticus* is either fragmentary, mixed, or unscientific). Tobit has two Latin translations: the *Vetus Latina,* or OL (reprinted in Brooke et al. *Esther, Judith, Tobit* OTG, 3/1: 123–44), which rendered a Greek text similar but not identical to Codex *Sinaiticus,* and Jerome's Vg *(Libri Ezrae, Tobiae, Iudith),* which, in the case of Tobit, was a hasty reworking of the OL on the basis of an Aramaic text. Unfortunately, then, the Vg is of only limited value for establishing either the Old Latin or the older Aramaic text of Tobit.

There is an Aramaic version (Neubauer 1878) which agrees essentially with R^S, but it or its underlying text may ultimately be based upon a Greek text (Nöldeke 1879: 45–69); e.g., the Aramaic speaks of the city of *rʾgyš* or *rgš,* which seems to reflect the Gk *ragois* or *ragais* rather than the Semitic *rg* or *rgʾ;* likewise, Aram *ʾgbtnym,* "Ecbatana," would appear to render the Gk *ekbatanois* rather than the expected Semitic *ʾḥmtʾ* (Simpson *APOT* 1: 176–77).

Although there is a critical edition for the Syriac *(Vetus Testamentum Syriace iuxta simplicem Syrorum versionem),* the book of Tobit is not part of the Peshitta (for an introduction to the Peshitta as well as other ancient versions, see Roberts 1951). Rather, the Syriac version is based upon a defective *Vorlage,* its first

half (Tob 1:1–7:10) preserving the Syro-Hexaplaric version of Paul of Tello made in A.D. 616–17 while the second half (Tob 7:11–14:15) witnesses to R^C of the Greek (Lebram 1957: 210–11; 1972: ii–iii).

The Sahidic and Ethiopic versions of Tobit are essentially based on R^V, although it should be noted that no genuinely critical or scientific text exists for either. Finally, several late Hebrew versions exist, notably, that of Münster (Neubauer 1878), which was probably translated from the same source as Neubauer's Aramaic text; Fagius' manuscript (ca. 1542), which seems based upon R^V; and two London manuscripts (Gaster 1925–28), which are really based upon the Vg (Simpson *APOT* 1: 180).

P. Influence on Subsequent Literature

The well-known problem of dating the various apocryphal and pseudepigraphical works (or their disparate parts) often makes it quite debatable whether a book such as Tobit influenced or was influenced by another book, or whether both were inspired by a common source. It would appear that the book of *Jubilees* (cf. Tob 10:4–6 and *Jubilees* 27; and especially Tob 5:17–21 and *Jub.* 27: 13–18 [Endres 1987: 95–96; 223–24]), the *Testament of Job* (e.g., its emphasis on charity and burial of the dead in 39:1–10; 40:6–14; 53:5–7), and the *Testimony of Solomon* (5:1–13) were influenced by the book of Tobit.

By contrast, it is debatable whether Tob 8:5 inspired or was based upon Dan 3:52–56 (i.e. LXX's "The Prayer of Azariah and the Hymn of the Three Young Men" [see Nickelsburg 1984b: 151, n. 363]). So too, one's dating of 1 Enoch, a matter of considerable controversy (Vermes 1986: 250–64), determines the proper explanation for the many elements 1 Enoch shares with Tobit (e.g., the divine throne room where seven archangels mediate prayers in God's presence [9:1–4; 99:3; 104:1]; a contest between an angel and a demon culminating in the former's binding of the latter [10:4–15]; for more examples, see Nickelsburg 1984a: 45–46). For further Jewish references to the book of Tobit, see Ginzberg (1909–38: *passim*).

Although the book of Tobit is not quoted in the NT, several phrases or ideas there suggest their writers *may* have been influenced by it: e.g., 2 Cor 9:7a (cf. Tob 4:7, 16); Gal 6:10 (cf. Tob 4:10 [see Harris 1899: 545]); 1 Thess 4:3–5 cf. Tob 4:12; 8:7–8); and 1 Tim 6:19 (Tob 13:6). For further possibilities, see Harris 1928 and Simpson (*APOT* 1: 198–99); the latter thought that "the linguistic affinities [cf. Tob 12:16–22] with the records of the Transfiguration, Resurrection, and Ascension of Christ … [were] remarkable" (p. 234).

Q. Canonicity

1. Among Jews. Given the religious character and message of the book of Tobit, scholars have offered a variety of reasons for why it is not part of the Jewish canon. The Jews of Origen's day did not accept it as canonical (Origen *de orat.* 14), and Jerome had to base his Vg translation on an Aramaic version of it.

Earlier scholarly explanations for the book's not being in the Hebrew canon (e.g., that it was composed originally in Greek or was written after the closing of the Hebrew canon) have been made less probable by the discovery of Semitic copies of it among the Qumran scrolls. An equally improbable explanation is Milik's view that the book was of Samaritan origin, and "was designed to enhance the prestige of one family of national aristocracy whose people spoke Aramaic" (1966: 530).

Zeitlin (1964) and Orlinsky (1974: 284) have argued that the book was denied canonicity by Pharisee Councils such as the one at Jamnia (ca. A.D. 90) because it contradicted Pharisee *halakhah* (the oral Jewish law) on marriage. That is, in acceptable Hellenistic practice, the bride's father, Raguel, wrote out the marriage contract for Tobiah (Tob 7:14; for such an actual contract, see that of Mibtahiah in *ANET*, 222–23), but in the 1st century B.C. the law was changed by Simon ben Shetaḥ (*Shab.* 14) so that only the *bridegroom* wrote it out, thus giving the bride greater protection.

Increasingly, however, scholars are questioning the traditional view that ca. A.D. 90 the rabbinic "synod" at Yavneh (or Jamnia) finalized the Hebrew canon (Cohen 1987: 186). Rather, they see canonization as more of a process than an event. Moreover, Cohen rightly observes that "there are no objective and absolute criteria that will distinguish the works that were included [in the canon] from those which were not" (p. 190). In short, we simply do not know why Tobit was not canonized.

2. Among Christians. More often than not, Eastern Church Fathers denied canonical status to Tobit, cases in point being Melito of Sardis (fl. ca. 1967); Athanasius of Alexandria (293?–373); Cyril of Jerusalem (315?–386); Epiphanius, bishop of Constantia (315?–403); Gregory of Nazianzus (330?–?389);

Amphilochius of Iconium (339?–?394); Pseudo-Chrysostom; Pseudo-Athanasius (fl. 4th cent.); Leontius of Byzantium (485?–?543); John of Damascus (654?–?749); Nicephorus of Constantinople (758?–829); Ebedjesu (ca. 1300); and the Laodicean Canons (343–81). The book was accepted by Origen (185?–?254; his *Epistle to Africanus*), Anonymi *dia Timothei et Aquilae* (ca. 400), and Junilius (fl. 542), who gave it a qualified acceptance.

Although Hilary of Poitiers (315?–?367) gave Tobit only a qualified acceptance, Western Fathers evidently accepted the book; notably, Rufinus (345–410); Augustine (354–430); Innocent I (reigned 401–417); Pseudo-Gelasius (ca. 500); Cassiodorus (478–573); Isidorus (560–636); the list in *Codex Claromontanus, Liber sacramentorum* (6th–7th century); and the Council of Carthage (397).

Passages in Tobit are either cited or referred to by Pseudo-Clement (2 Cor 16:4); Polycarp (A.D. 112) in *ad Smyrn.* 10.2; Clement of Alexandria (150?–?215) in *Strom.* ii. 23, vi. 12; Origen (185?–?254) in *de orat.* 11, *in Rom.* viii. 11, *contra Cels.* 5:19; and Cyprian of Carthage (d. 258) in *testim.* 1, 6, 62. For introductions to the Church Fathers, see Altaner 1960; for the Greek and Latin texts themselves, see *PG* and *PL*. For further information on the history of the Christian interpretation of Tobit, see Schumpp (*Tobit* EHAT, 62–67) and Gamberoni (1969).

CAREY A. MOORE

TOCHEN (PLACE) [Heb *tōken* (תֹּכֶן)]. A village occupied by the descendants of Simeon (1 Chr 4:32). It appears in the list of Simeonite villages included by the editor of 1 Chronicles in his treatment of various aspects of tribal genealogy (1 Chr 4:24–43). The differences between this list and that of Josh 19:1–9 seem to be merely editorial in nature, suggesting that both are derived from a single document describing the territory of Simeon sometime early in the period of the monarchy, presumably before Simeon was consolidated with the tribe of Judah (Myers *1 Chronicles* AB, 25–31). The absence of Tochen from the list in Joshua 19 may simply be a scribal error, or it may perhaps reflect the process of adjustment resulting from the absorption by Judah of the territory originally assigned to Simeon. The location of this ancient settlement is unknown, although it presumably lay somewhere within the transition zone between the S Shephelah and the N Negeb.
WADE R. KOTTER

TOGA. See DRESS AND ORNAMENTATION.

TOGARMAH (PERSON) [Heb *tōgarmâ* (תֹּגַרְמָה)]. According to the Table of Nations (Gen 10:3) and the parallel genealogy in 1 Chr 1:6, Togarmah is one of three sons of Gomer, who himself is a son of Japheth, Noah's son. His descendants, or at least those called by the same name, are mentioned twice in the book of Ezekiel. In an oracle against Tyre, Beth-togarmah or "the house of Togarmah" is described as exchanging war horses and draft horses and mules with Tyre for her merchandise (27:4). The geographical location of other trading nations from the same biblical context (Ezek 27:1–13; Greece, Meshech, Tarshish, Tubal) would place Togarmah to Israel's N. The same N direction is found in 38:6. There Togarmah is specifically said to come from the far N in her support of Gog, who would ultimately suffer defeat along with all of her allies.

Neo-Assyrian texts apparently refer to this location as *Til-garimmu,* which is on the E border of Tubal. Sennacherib campaigned against the city in 695 B.C. (*LAR* 2: 138, 148; cf. 154; Parpola 1970: 353–54). Hittite texts refer to a city and district of *Tegarama* in the area of the upper Euphrates which was captured by Suppiluliumas (*ANET,* 318) along with other parts of the kingdom of Mitanni, in the mid-14th century B.C. The Assyrian and Hittite sources apparently refer to the same site, which has been identified with the modern Gurun (*CAH*^{3} 2/2: 422; Wenham *Genesis 1–15* WBC, 218).

This people which had an historical role in its contacts with Tyre in Ezek 27:14 seems to take on an eschatological connotation in 38:6 when the mighty fall of Gog is described.

DAVID W. BAKER

TOGGLE-PIN. See JEWELRY, ANCIENT ISRAELITE.

TOHU (PERSON) [Heb *tōḥû* (תֹּחוּ)]. Var. TOAH; NAHATH. An ancestor of Samuel (1 Sam 1:1). He was an Ephraimite; his father's name was Zuph; he had at least one son, Elihu. Nothing more is known about him. The variant "Toah" occurs in 1 Chr 6:19—Eng6:34, the puzzling variant "Nahath" in 1 Chr 6:11—Eng6:26. Some commentators have difficulty recognizing in Nahath a variant of "Tohu" and, accordingly (e.g., Rudolph *Chronikbücher* 54), replace "Nahath" by "Tohu" or "Toah."BHS includes "Tohu" and "Toah" as variant readings for "Nahath" in this verse.

GERALD J. PETTER

TOI (PERSON) [Heb *tō‹î* (תֹּעִי)]. Var. TOU. King of the central Syrian city-state of Hamath and a contemporary of King David. In 2 Sam 8:9–10 (= 1 Chr 18:9–10), Toi is described as sending his son to David with a substantial gift to congratulate him for defeating Hadadezer, king of Zobah in battle. Zobah had been a major Aramean political power and a rival with David for hegemony over Palestine and S Syria. In the course of two battles described in 2 Samuel 8, David effectively eliminated Hadadezer as a political force in Syria. Toi, who according to 2 Sam 8:10 had been at war with Hadadezer as well, immediately moved to assure good relations between himself and David by sending the gift.

The exact political significance of Toi's congratulatory gift is not entirely discernible from the text. Many scholars have interpreted it as an indication that Toi became a vassal of David (Malamat 1963: 6–7; Mazar 1962: 103–4). Others suggest that Hamath and Israel may merely have become allies by this gesture (Herrmann 1981: 158). The text is too vague to make a clear determination on this point, and both interpretations are quite possible.

The name, Toi or Tou, is a well-attested Hurrian name (Liverani 1962: 70), although his son's name, given as Joram in 2 Sam 8:10 and as Hadoram in 1 Chr 18:10, is Semitic. This suggests a complex cultural situation in Hamath during this period.

WAYNE T. PITARD

TOKHATH (PERSON) [Heb *toqhat* (תָּקְהַת)]. See KOHATH (PERSON).

TOLA (PERSON) [Heb *tōlā‹* (תֹּלָע)]. Two individuals (or an individual and a clan) mentioned in the OT bear this name, which means "worm" in Hebrew. The name probably carried a complimentary sense. RSV renders the identical nominal form as "crimson" in Isa 1:18, and "purple" in Lam 4:5, referring to cloth colored crimson or purple, with dye manufactured from a cochineal. Cf. also Heb *tôlē‹a, tollā‹at,* meaning either "worm" (Exod 16:20; Deut 28:39; Isa 14:11; 41:14; 66:24; Jonah 4:7) or "worm of scarlet," that is, scarlet (stuff), as used to describe furnishings of the wilderness tabernacle (Exod 25:4; 26:1, 31, 36; 27:16; 28:8, 15, 33; 35:6).

1. The first of the four sons of Issachar, according to the genealogy (Gen 46:13; Num 26:23; 1 Chr 7:1–2). The other sons were Puvah, Jashub (Iob in Gen 46:13), and Shimron. Each of the four is specified as head of a clan (Heb *mišpāḥâ*): Tolaites, Punites, Jashubites, and Shimronites (in each case using the gentilic formation, while the four together comprise the *bĕnê,* "members," of Issachar). Altogether, at the time of the census in Numbers, they totaled 64 muster units, totaling 300 adult males, not 64,300 (Mendenhall 1958). The recalculation is based on recognition of the Hebrew word *›alēp* as often standing for the smallest muster unit (anywhere from 4 to 12 men, depending on prior negotiations). The results

vastly improve the credibility of many numbers in the book of Numbers, in light of the limited population of Israel in the premonarchic period.

Tola had six sons, listed by name in 1 Chr 7:2, described there as "mighty warriors of their generations." The latter must include their offspring, in clans totaling 22 muster units, that is, 600 men (not 22,600!). Nothing more is known of Tola's six sons.

2. One of those who "judged Israel" in the premonarchy period (Judg 10:1–2). He is introduced immediately after the story of Abimelech's rise and downfall. Tola is the first of the so-called minor judges, notices of whom bracket the account of Jephthah's career (Jair, Ibzan, Elon, and Abdon complete the list).

Tola is identified as son (rather than brother) of Puah and grandson of Dodo. Puah (Judg 10:1; 1 Chr 3:1) appears to be an alternative spelling of Puvah (Gen 46:13; Num 26:33). Instead of reading a proper name, the versions translate Heb *dôdô* as "his uncle," which seems highly improbable.

Tola exercised leadership ("judged Israel") for 23 years. The different location of the length of service within the minor judge pericopes, as well as the fact that these are not "round numbers," indicates that such numbers derive from a source or process other than mere editorial approximation.

Tola resided and finally was buried at Shamir. Samaria seems unlikely as seat of the chief subdivision of Issachar. But there are other references which suggest a connection between certain clans of Issachar and Ephraimite hill country (Aharoni *LBHG*). Shamir may lie not far S of the Jezreel plain, still to be precisely located.

Of all the "minor judges," Tola is the only one of whom it is said that he rose up "to save" Israel. In the book of Judges, "to save" generally involves fighting. Perhaps it means here that in the chaos that remained "after Abimelech" (10:1), Tola saved Israel by presiding over a peaceful interlude in the N hill country and central Jezreel valley.

That the Tola who judged Israel is identified as *son* of Puah, and that he lived at Shamir, evokes comparison with the names of Issachar's four sons (Tola, Puvah, Jashub, and Shimron). There must be some connection. Does it indicate that the four names belong to a later branch grafted on to the genealogical tradition and derived from what was remembered about the one who "judged Israel"?

The interpretation which sees the minor judge notices as wholly unhistorical, creations by an editor who needed to fill some chronological gaps, is far too severe. But neither is the opposite view faring well, which sees these units as historically accurate in every detail, snippets from an early archive. The "minor judges" appear to have functioned locally, for the most part, during periods which generated no warfare stories to be connected with them (Boling *Judges* AB, 186–89).

ROBERT G. BOLING

TOLAD (PLACE) [Heb *tôlād* (תּוֹלָד)]. An alternate form of ELTOLAD.

TONGUES, GIFT OF. Ecstatic utterance associated with possession of the Holy Spirit. With this meaning, the Greek *glōssa,* which otherwise in the NT refers to the physical tongue (Luke 16:24), speech (1 John 3:18) or human language (Rev 5:9), is found in Mark 16:17; Acts 2:3, 4, 11; 10:46; 19:6; and in 1 Corinthians 12–14. It is often called glossolalia, from *glōssais lalein.*

———

A. Nature of the Phenomenon
  1. Angelic Language
  2. Unknown Human Languages
  3. Ecstatic Utterance
B. Prevalence and Importance
C. Evaluation of Glossolalia by NT Writers
  1. Acts
  2. 1 Corinthians 12–14

A. Nature of the Phenomenon

What was glossolalia? The NT evidence is sparse and is not entirely consistent. In Acts tongues are treated as real languages (Galileans speak "other tongues," Acts 2:4), each heard and understood as such (2:6–8). Tongues are also identified as a form of prophecy (2:16–18). In contrast, Paul emphasizes the unintelligibility of tongues (I Cor 14:2, 6–11), and carefully distinguishes this practice from prophecy (14:3–5).

Resolving the obvious conflicts between the sources requires a series of decisions concerning proper method. A first question concerns the assumption that tongues must be a single uniform phenomenon with clear characteristics. If this is our assumption, we may want to give greater credit to one source than another. Often, for example, Paul's report is regarded as firsthand and unadorned (and therefore more reliable), whereas Acts is taken as an interpretation which may camouflage the "real" event. On the other hand, even in the NT period itself, glossolalia may have appeared in several forms, not as one phenomenon but as several. In this case, both Acts and Paul could be read as witnesses to a diversity of practice as well as understanding.

Another decision concerns which evidence counts in clarifying the nature of NT glossolalia. What weight should be given to similar phenomena in the ancient world, such as early Hebrew prophecy or Hellenistic mantic prophecy? How seriously should the experiences of modern glossolalists be taken, or their claim that they represent the same "gift of the Spirit" as described in the NT? Can the extensive studies of contemporary practice by linguists, ethnographers, and psychologists be used to clarify the NT texts?

If there were a consensus on the nature of ancient and modern phenomena the helpfulness of such information would be obvious. In fact, however, research into modern glossolalia is not unanimous in its judgment on a number of critical issues, including whether glossolalia is "one thing" or several (Samarin 1972: 129–49), and whether it is invariably accompanied by or even to be identified with states of psychological dissociation (Goodman 1972: 124). Nor is there agreement on what parallel phenomena such as the speech acts of shamanism can even be considered glossolalic. Concerning the evidence from antiquity as well, debate continues on the ecstaticism of the Hebrew prophets and the manifestations of mantic prophecy (Williams 1974: 328–38; Aune 1983: 36–48).

Given this state of affairs, any definition of glossolalia in the NT must necessarily be more tentative than even in the mid-20th century. In the present discussion, current research into both ancient and modern phenomena are used, but largely as a means of excluding certain possibilities rather than providing a definitive understanding.

It is generally assumed that glossolalia is a single phenomenon. Three definitions have been suggested.

1. Angelic Language. A rather odd hypothesis is that tongues are, literally, heavenly language. The basis of this position, which is patently folkloric rather than scientific, is Paul's phrase "If I speak with the tongues of angels" in 1 Cor 13:1, his references to revealing mysteries (14:2) and speaking with God (14:28), and his cryptic mention in 2 Cor 12:4 to heavenly visions which he is incapable of expressing in human terms. Perhaps surprisingly, there is supporting evidence for the concept of angelic language in Jewish apocalyptic literature, and even for the speaking of it by a human in ecstasy (cf. especially in the *Testament of Job* 48.1–50.3). The obvious problem with this hypothesis is that it is unhelpful for determining the linguistic or psychological dimensions of the speech as it was practiced by early Christians.

2. Unknown Human Languages. A second explanation is that tongues refers to the speaking of actual but unknown human languages. This is technically known as *xenoglossia.* The report in Acts 2:4–11 is here taken as determinative. The disciples speak "other languages" and were understood by the visitors to Jerusalem from the Diaspora who spoke those languages. Appeal is also made to Mark 16:17, which refers to the "new tongues (or: languages)" which will be spoken by believers. Some aspects of Paul's discussion are also isolated to support this hypothesis. He appears to compare tongues with known human languages of the earth, for example (1 Cor 14:10–11) (Gundry 1966: 306). Most of all, Paul lists with

"tongues" another spiritual gift called "interpretation of tongues" (*hermēneia glōssōn,* 1 Cor 12:10). In light of 1 Cor 14:13, and especially 14:27–28, interpretation is taken to mean "translating" (Davies 1952: 231). Modern glossolalists sometimes consider their speech to be a language unknown to them. A substantial oral tradition contains cases in which these languages are spontaneously identified by witnesses who recognize in them languages which they themselves speak (Samarin 1968: 55–57).

The weight of evidence, however, does not support this position. Even though the Pentecost story in Acts emphasizes the intelligibility of the tongues, a careful reading indicates that the miracle consisted precisely in the *hearing,* not the mode of speaking (*pace TDNT* 1:725). The bystanders do not ask, "how can they all be speaking our own languages," but rather, "since all who are speaking are Galileans, how is it we *hear* them in our own native languages?" (2:8). This perception was also not given to all the bystanders. Some who did not hear that way concluded that the tongues were a drunken raving (2:13). According to the pattern of "tongues, then interpretation," furthermore, Peter's "clear statement" (*apophthengomai,* Acts 2:14) on that occasion ought to have "translated" the "great things of God" expressed by the tongues. What he interprets, however, is the *ecstatic state* of the speakers, not their *discourse* (2:14–16). Finally, Acts' other accounts of tongues make no mention of their intelligibility. The isolation of the Pentecost event suggests that the element of communication was emphasized by Luke to suit his narrative purposes.

The reference to "new tongues" in Mark 16:17 is too obscure to be helpful in defining the nature of the phenomenon. The "longer ending" of Mark in which it occurs is certainly not part of the original gospel. At best, the phrase provides another witness to the perception that tongues were practiced by Christians, but it is impossible to date the text before the middle of the 2d century. The textual evidence for the adjective "new," furthermore, is weaker still.

As for Paul, he could hardly make clearer his conviction that tongues are an intrinsically noncommunicative form of utterance (1 Cor 13:1; 14:2, 4, 7–9, 16–17, 23). What, then, does he mean by "interpret"? Recent research into the contemporary use of Paul's term *diermēneuo* by Philo and Josephus suggests that the term often means simply, "to put into words," or "bring to articulate expression." When Paul tells the tongue-speaker to pray that he might "interpret," therefore, he does not mean "provide a translation," but that the tongue-speaker make the transition from glossolalia to a mode of speech intelligible in the assembly (14:13) (Thiselton 1979: 15–36).

The evidence from modern glossolalists that their speech is real language, finally, is spurious. Careful linguistic study has demonstrated that glossolalia is not a "real but unknown" language, but rather "language-like" in its patterning of sounds (Samarin 1972: 74–128). Observation of the "interpretation of tongues" in practice, furthermore, shows that it is not the translation of a language but a separate utterance altogether. The stereotypical character of the reports of real languages being heard by native speakers, and the impossibility of verifying these reports, suggest that they are simply folklore (Christie-Murray 1978: 248–52).

3. Ecstatic Utterance. The textual and comparative evidence supports the definition of tongues as an utterance which is a form of ordered babbling. As we have seen, Paul does not consider tongues to be intelligible, and he clearly contrasts speech which is "in the Spirit" *(en tō pneumati*) but does not use the mind *(nous),* with speech which does use the mind and therefore can build up the community (1 Cor 14:14–15, 19). Glossolalia is private and noncommunicative. God is praised and the person who prays edified, but neither the mind nor the community bear any fruit from this activity (14:2–3, 14, 17, 28).

This definition of glossolalia also corresponds to the greater part of the ancient and contemporary parallel phenomena. In at least the older manifestations of Israelite prophecy, we find a combination of "inspiration" by God's Spirit, trance-like states with the physical signs of dissociation, and the uttering of inarticulate cries (cf. 1 Sam 10:5–13; 19:18–24). There remains considerable debate on the question of whether classical prophecy was also accompanied by such ecstatic states (Wilson 1980: 21–35). Something akin to glossolalia is also found in the Hellenistic popular religious phenomenon known as mantic prophecy, usually distinguished from "technical" prophecy, which was nonecstatic (cf. Cic. *Div.* 18. 34). The divine spirit was thought to possess the prophet *(mantis)* taking over his or her mind

(enthousiasmos) and directing the utterance of oracles. Sometimes, as at the shrines of Dodonna and Delphi, the oracles were linguistically clear, if ambiguous in meaning. Even these, however, often required "interpretation" by qualified cultic personnel, called "prophets" *(prophētai).* Such prophecy was highly esteemed, even by the sophisticated (cf. Plato, *Ion* 534 A–D; *Phdr.* 244A, *Ti.* 71 E–72B and Plut. *The E at Delphi* 387 B). It is not certain how inevitable was the state of trance or ecstasy *(furor, mania)* in such prophecy, although it is frequently mentioned (cf. e.g. Plut. *De def. or.* 417C; Cic. *Div.* 32. 70). Still less certain is the presence of glossolalia-like speech (Aune 1983: 30–35). There are scattered reports of strange sounds and garbled or foreign words (cf. Herodotus, *History* 8. 135; Plut. *De def. or.* 412 A), but these tend to be associated with wandering prophets (especially the priests of Cybele) and soothsayers (cf. e.g. Dio Chrysostom, *Oration* 10.23–24, Apuleius, *The Golden Ass* 8.27) or with those attacked as charlatans (cf. esp. Lucian's *Alexander the False Prophet* 13, 22, 49, 51, 53). It is obviously in the nature of the phenomenon (ecstatic oral babbling in a cultic setting) that accurate literary transcriptions of the speech for comparative study would rarely if ever be carried out. That Paul himself saw tongues as equivalent in appearance at least to such mantic prophecy seems certain from his word-choice in 1 Cor 14:23. He proposes the hypothetical case of the whole church speaking in tongues, and their being observed by "ignorant and unbelieving" people who would conclude, "You are raving" *(hoti mainesthe).* In context, this can only mean, "you are prophesying the way all other cults do, in a frenzy."

The understanding of glossolalia as a structured babbling, furthermore, corresponds with the best evidence derived from the linguistic study of modern tongue-speaking (Samarin 1968: 55–73). There is less agreement concerning the degree of ecstasy involved in the contemporary phenomenon. Problems of definition here are obvious. Some observers define glossolalia in terms of psychological dissociation, virtually making it the oral expression of trance (Goodman 1972: 26–34). Others deny the necessary precondition of trance for the use of tongues, or point out that the *initial* experience is frequently accompanied by dissociation, but that subsequent tongue-speaking often is without any visibly altered state (Samarin 1972: 26–34). Psychological studies reject the older view that glossolalia is intrinsically connected to psychopathology (Richardson 1973: 199–207). Nor is there any psychological type which appears to be predisposed to the experience. On the other hand, it appears that the ability to be hypnotized, and to submit to authority, are positively correlated with the experience (Kildahl 1972: 50–53). In this light, the divided allegiances of the Corinthian community (cf. 1 Cor 1:12) could be correlated with the experience of tongues, since both Cephas and Paul were also glossolalists, Paul by self-acknowledgment (1 Cor 14:18), Cephas by reputation (Acts 2:4–11). Glossolalia has for the most part a positive integrating effect for the individuals who experience it, although (as also in Corinth) it tends to foster a sense of elitism among those who have had the experience which proves disruptive in communities (Kildahl 1972: 66–75). First person accounts of the experience of glossolalia emphasize—especially for the first occurrence—positive feelings of release, freedom, and joy (Goodman 1972: 24–57). Glossolalia can be characterized in shorthand, therefore, as the linguistic symbol of spiritual release.

Although some modern glossolalia occurs in private (Hutch 1980: 255–66), it is ordinarily a public, cultic, phenomenon. It is connected above all to experiences of conversion (the connection with Acts 10:46 and 19:6 is clear), and to the practice of prayer (as in 1 Cor 14:2, 28). The understanding of glossolalia as a form of prophecy is rarer (Acts 2:4–11), as is the interpretation of tongues.

B. Prevalence and Importance

How prevalent was the practice of glossolalia in earliest Christianity? Estimates must be modest. All the evidence supports is that tongues were spoken by some members of the Corinthian congregation in the early 50s of the 1st century (Clement makes no mention of it writing to them 40 years later), and was thought by the author of Luke-Acts to have been a feature of some early conversion experiences.

Other NT texts sometimes cited as referring to glossolalia probably do not. Apart from Mark 16:17 there is nothing in the gospel tradition about tongues. Indeed, Jesus' condemnation of the "babbling" of gentiles in prayer could only be read by Christians as an implied criticism of any such practices among themselves (Matt 6:7). Paul speaks of "spiritual hymns" by which Christians could praise God "in their hearts" (Col 3:16 and Eph 4:19). He says that the Spirit helps Christians when they do not know how to

pray, with "unutterable groanings" (*stenagmois alalētois,* Rom 8:26). He tells the Thessalonians not to "quench the Spirit" (1 Thess 5:19). All these are too general or vague to conclude that they refer to glossolalia.

More significantly, Paul does not list "tongues" or the "interpretation of tongues" among the spiritual gifts in two other lists outside 1 Corinthians (Rom 12:3–8 and Eph 4:11). He does not mention tongues in connection with his own conversion experience or that of others (cf. e.g. Gal 3:1–5). In fact, as we shall see, Paul is ambivalent in his attitude toward glossolalia. But not even Luke connects tongues to his account of Paul's conversion (Acts 9:3–8), although a bright light figures prominently in that event, as it does also in many modern accounts of initial glossolalic experiences. Nor is tongues ever connected with the "laying on of hands" (as in modern practice), except in Acts 19:6 (cf. in contrast Acts 9:12). Finally, there is no hint of the practice of glossolalia in any other Christian writing before the middle of the 2d century.

Even for the earliest period of Christianity, therefore, glossolalia appears to be at best a sporadic and ambiguous occurrence. Two inferences about that first period are therefore inadequately supported by the data: that tongues was a normal and expected accompaniment of the Spirit (and therefore, by implication, an essential component of authentic Christianity), or that tongues demonstrates how the first Christians lived in a charismatic fog of trance or dissociation.

In the 2d and 3d century, glossolalia is mentioned by several Christian writers. The most noteworthy outburst is associated with Montanus (ca. 160) and the two women prophets who accompanied him. Montanus was a former priest of Cybele, a goddess whose worship also involved *mania* (cf. Apuleius, *The Golden Ass* 8.27). He apparently regarded himself as a passive instrument of the Holy Spirit, "like a lyre struck with a plecton" (Epiphanius, *Panarion* 48.4.1). His "strange talk" *(xenophonein)* was understood by him to be a form of prophecy, and his speech was accompanied by the frenzy associated with mantic prophecy (cf. Eusebius, *Hist. Eccl.* 5.16. 7–10). Even in Montanism, such inspired utterance did not seem to survive the founders (5.17.4), although Tertullian could refer to the presence of ecstatic utterance in his group as a proof of its truth, against Marcion (Tert. *Adv. Marc.* 5.8). Irenaeus of Lyons (ca. 200) also claims to be acquainted with the phenomenon of tongues, although his report is succinct: "We have heard many brethren in the church having prophetic gifts and speaking through the spirit in all tongues and bringing to light men's secrets for the common good and explaining the mysteries of God. Such persons the apostle calls spiritual" (*Haer.* 5.6.1; cf. also Eus. *Hist. Eccl.* 5. 7. 6). Irenaeus appears to understand tongues to be the speaking of "different languages." He also reports, however, on the activity of a Valentinian Gnostic called Marcus, whom Irenaeus regards as a magician and charlatan, but whose repertoire includes prophecy. He also seduces women and coaxes them to prophesy, and the manner of their speaking again suggests glossolalia or mantic prophecy (*Haer.* 1.14–16). There are occasional passages in gnostic writings, furthermore, in which a series of such syllables strung together looks very much like transcribed glossolalia (cf. *Pistis Sophia* 4.142). The Paris Magical Papyrus also contains concatenations of numinous "names." In these cases, however, it is impossible to say whether glossolalia generated the literary product. At least some Christian preachers used babbling speech even in public, according to the anti-Christian polemicist Celsus (ca. 180), who characterized their utterances as being "without form or meaning" (Or. *Cels.* 7.9).

Arguments from silence are notoriously suspect, but the paucity of evidence for glossolalia in the second 200 years of Christianity suggests that it became an increasingly marginal activity. Most of the occurrences come from Montanists or Gnostics, groups which were rejected by the Orthodox party. The silence itself, however, can variously be weighed. It may indicate that tongues was practiced rarely and then by dissident groups. Or, it may suggest that the orthodox writers, suspicious of charismatic activity, ignored manifestations of popular religion such as glossolalia which did not meet their increasingly high standards (Eus. *Hist. Eccl.* 5.17. 2–4). In either case our information comes from the orthodox side, and the historian can at this distance only observe that by the 4th century, John Chrysostom confesses himself at a loss to interpret the passages about tongues in 1 Corinthians, guessing that Paul must be referring to the ability to speak different languages (*Hom. in 1 Cor.* 29, 32, 35). In the 5th century, Augustine

dismisses tongues as a special dispensation of the primitive church which is no longer of pertinence (*Hom. in 1 John* 6.10).

C. Evaluation of Glossolalia by NT Writers

1. Acts. Luke gives a completely positive valuation to glossolalia. As the tongues of fire at Pentecost are the *visual* sign of the Spirit's presence, which transforms followers into ministers of the word (cf. Luke 1:4), so the speaking in tongues is the *auditory* sign. It is the Holy Spirit who "gives them utterance" (2:4). In the Pentecost account, the first experience of tongues is an expression of praise: the disciples tell the "great things of God" (2:11).

As so often in Luke-Acts, the speech following this scene gives Luke's own interpretation of the phenomenon. Peter's "open declaration" (2:14) does not translate the tongues, but interprets the ecstatic event itself. He begins by citing Joel 2:28–32 (LXX 3:1–5), thereby indicating that this gift of the Spirit is in fulfillment of prophecy. In the Joel citation, Luke changes the LXX "after these things" to "in the last days," making Pentecost an eschatological event. He also alters the citation in two further ways. In 2:18 he adds the phrase, "and they shall prophesy," which makes the promise of 2:17 explicit, and also identifies tongues as a form of prophetic utterance. He also adds the words "signs on the earth below" to the Joel citation (2:19), further emphasizing these visible manifestations of God's Spirit.

All these touches serve to make Pentecost a programmatic statement for the rest of the Acts narrative, in which the apostles are depicted as the prophetic successors of Jesus, filled with the same Holy Spirit that he was, and working signs and wonders among the people. By making the diverse tongues intelligible to Jewish pilgrims from all over the Diaspora, furthermore, Luke indicates that the prophetic spirit is the fulfillment of the promises God made to Abraham, extended first to Abraham's descendants and only then to the nations of the earth (cf. 2:39).

Glossolalia functions as a sign of the Spirit in the two other Acts passages as well. Each time it marks a new stage in the mission. When the Spirit falls on the household of the gentile Cornelius, the Jewish Christians present at the scene can hear the tongues and conclude that the gentiles had received the same gift they had (10:45). Likewise when Paul lays hands on the former followers of John the Baptist in Ephesus, and they begin "to speak in tongues and prophesy" (19:6), it shows both that people in Asia have also received the Holy Spirit, and that this baptism in Jesus is greater than that of John's (19:2–3; cf. also Luke 3:16; Acts 1:5; 11:16).

In short, Acts treats glossolalia as a nonambiguous symbol of the Spirit's presence and a sign of the mission's success. Precisely the same function is suggested by Mark 16:17.

2. 1 Corinthians 12–14. Paul's attitude toward glossolalia is more complex. At least in part, this is due to the problems it caused in the Corinthian congregation. The elitist tendency of that church led some of them to regard all spiritual powers (*ta pneumatika,* 12:1) as a means of self-aggrandizement. Just as they used "knowledge" and "liberty" in ways careless of community identity (8:1–2; 10:23), so the spectacular gift of tongues seems to be claimed as a superior "sign of the Spirit." Indeed, some may have been claiming that only tongues truly certifies the presence of the Spirit: "tongues is a sign for believers" (cf. 1 Cor 14:22).

Paul typically finds as much common ground as possible between himself and those he must correct. But he broadens their perspective by placing all the gifts in the context of community service. Already in the letter's Thanksgiving he agrees that they have been "enriched with all speech and all knowledge" (1:5), but he also reminds them that this is a gift from God "in him" (i.e., Christ), and in "fellowship" with him, as well as the fact that their exercise of the gifts stands under God's eschatological judgment (1:7–9).

When he turns to an explicit discussion of spiritual gifts (1 Corinthians 12–14), he continues to adjust their perspective. He reminds his readers that there is a great difference between *ta pneumatika* (spiritual powers in general), and *ta charismata* (spiritual gifts from God). The former are real enough but are also ambiguous: their pagan past should have taught them that ecstasy can lead to disastrous results (12:2). The gifts of the Holy Spirit, in contrast, lead to the confession, "Jesus is Lord" (12:3), and their use must be shaped according to the messianic pattern, that is, in service to the messianic community (12:4–11). Each part of the body works toward the common good rather than to the benefit of the individual member

(12:7). Although he acknowledges "tongues" and the "interpretation of tongues" as gifts (12:10), therefore, he relativizes their importance by listing them last, after the more essential and "foundational" gifts which build up community identity (12:8–10), and by emphasizing that private experience is secondary to the good of the whole body (12:12–31).

In chap. 13, Paul relativizes tongues even further—as indeed, he does all the gifts—by asserting the supremacy of *agapē* as the most fundamental expression of God's Spirit. *Agapē* is defined in terms of service to others rather than in terms of individual gain. Using himself as an exemplar, Paul asserts that "the tongues of men and the angels" are meaningless without *agapē* (13:1). Tongues is a gift that will cease (13:8), and Paul clearly suggests that it is among the "childish" things that must be put aside if maturity is to be reached (13:11). He returns to this estimation in 14:20.

When Paul discusses the "higher gifts" which the community should pursue (12:31), tongues becomes the foil for the more important gift of prophecy, which Paul considers in every respect superior (14:5). Prophecy uses the mind, whereas tongues does not (14:14–15). It builds up the identity of the community, whereas tongues improves only the speaker (14:3–4). It is intelligible, and tongues is not (14:6–10). Paul sees tongues as an optional mode of prayer, but one which may need to be outgrown. Although he speaks them himself, he would gladly give them up for the sake of the edification of the community (14:18–19). He can leave the impulses of prophets to the prophets themselves, since they are under rational control (14:31–32). But tongues he restricts to its role as private prayer (14:13–16). The only time it can come to public expression is when it is followed by "interpretation" (14:27–28; cf. above). Tongues also escapes the discernment of the entire community, which Paul considers essential for the healthy working of the spiritual gifts (12:10; 14:29).

Paul's perception of glossolalia is best summarized in 14:20–25. He reverses the glossolalists' claim, by showing that tongues are not an unambiguous sign of belief: they can mean anything, can come from anywhere. If the assembly has glossolalia as its dominant form of expression, outsiders can legitimately conclude that this assembly is simply another cult like every other (14:23). Only if prophecy is active can they be brought to see that God is at work here (14:25). To make tongues more than an interesting variety of private prayer is to think like a child and not like an adult (14:20).

LUKE TIMOTHY JOHNSON

TOPHEL (PLACE) [Heb *tōpel* (תֹּפֶל)]. One of the sites used to define the general locality where Moses expounded the law before the Israelites (Deut 1:1). This text indicates that Moses' speech was given in the "desert, east of the Jordan—that is, in the Arabah—opposite Suph, between Paran and Tophel, Laban, Hazeroth and Dizahab." Verse 5 further defines the place as "in the territory of Moab."

The precise location of Tophel is presently uncertain. Some have suggested that Tophel be identified with et-Tafileh (M.R. 208027; a village located on the road between Kerak and Petra), based on the similarity of sound. However, the Arab *t* does not correspond to the Heb *t* and the vowel patterns of the two names are different. Y. Aharoni *(LBHG,* 203) placed Tophel between Punon and Wadi Zered, but this location is S of the land of Moab.

RANDALL W. YOUNKER

TOPHETH (PLACE) [Heb *tōpet* (תֹּפֶת)]. A cult site in the vicinity of Jerusalem. The word *tōpet* occurs only in Biblical Hebrew (and in rabbinic commentaries on the biblical passages). Its distribution is restricted to a single verse of 2 Kings (23:10) in a section recognized as the work of the Deuteronomistic Historian (DH), and to two formally similar sermonic oracles in the book of Jeremiah (7:31, 32 [2x]; 19:6, 11, 12, 13, 14). These portions of the book of Jeremiah show certain affinities with the language of DH (Carroll *Jeremiah* OTL, 38–50; Holladay *Jeremiah 1* Hermeneia, 264–70; 534–46; McKane *Jeremiah* ICC 1: 158–69; 178–80; 443–59; on the chronological proximity of Jeremiah and DH, see Freedman 1983).

The word appears to be the name of a place (Jer 7:32; 19:6), as indicated by the presence of the definite article in all but three instances, but its originality in the context is open to question. The word has no transparent etymology (older speculations are discussed by Salmond *HDB* 4: 799; more recent discussion is surveyed by Heider [1985: 347–49]. The word *tōpet* in Job 18:6 is a homonym meaning "spit"). The view that it is a loanword from Aramaic can be traced to W. R. Smith (1894: 357), and is still cited (e.g., Holladay, pp. 264–65; *ISBE* 4: 876). The vowels of *tōpet* are probably the result of alteration to make the word sound like *bōšet,* "shame" (and perhaps also the homonym meaning "spit"). The versions are inconsistent in their representations of the word: LXX, Aquila, Symmachus give *Tapheth;* Vulg *Thopheth.*

The *Onomasticon* of Eusebius, under the entry *Thapheth,* regards it as a place in the suburbs of Jerusalem lying along the fullers' pool and the field Akeldama. This would place it S of the city near the juncture of the valley of the son of Hinnom and the brook Kidron in the vicinity of En-rogel (M.R. 172130). See AKELDAMA; FULLER'S FIELD . This tradition is roughly consistent with the location of the Topheth implicit in Jeremiah's references to it, but the locational details of Jeremiah's prose sermons are themselves unsettled, so considerable uncertainty attends any attempt at more precise specification (see G. A. Smith 1907: 1.173–76 on the location of the valley of Hinnom; Heider 1985: 349–65 on the Topheth's location).

The Topheth in the valley of Hinnom was a site of rites that appear to have involved the burning of children as sacrifices, perhaps to a deity called MOLECH (2 Kgs 23:10; M. S. Smith 1990: 132–38). The reform of religion undertaken by Josiah included defilement of the Topheth (the text says nothing of human bones being used in this process, *contra* André *TDOT* 5: 340), but there is no mention of his having destroyed the installation (Holladay [p. 268] overstates this point). Two decades after the Josianic reform, Jeremiah contended against the cult of the Topheth as an ongoing institution. He envisions for the place not destruction but renaming, and corresponding use as a burial site (Jer 7:32; 19:6, 11). Its defilement will become an index of the defilement of the city of Jerusalem (19:13).

There is no physical description of the Topheth in the valley of Hinnom, but several inferences are possible. The construction of cultic installations called in Hebrew *bāmôt* (see HIGH PLACE) took place there (Jer 7:31). The reference to burning children implies a hearth, furnace, oven, or pyre in or upon which combustion was contained. A permanent or intermittently employed staff would have been necessary to carry out the tasks involved in the rites (as can be deduced from 2 Kgs 23:9).

The sole instance of the Hebrew noun *tāpteh* (Isa 30:33) is found in a depiction of a crematory. Exegetes have universally linked the word and the image with the Deuteronomist's Topheth (Heider 1985: 319–24). At the conclusion of a theophany of a fiery and wrathful Yahweh (Isa 30:27–30) is described an installation upon which the (Assyrian?) "king" is to be immolated. A large pile (Heb *mĕdurâ*) of wood is arranged for burning (RSV's "pyre" is overly specific; note the similar preparations for a pot in which Jerusalem is to be cooked [Ezek 24:8]). Many exegetes have inferred from the use of the verb *ʿāmōq* in the causative stem ("make deep") that the image includes an excavation to contain the fire; but the verb's implication of profundity need not mean literal depth: note the same verb used in Isa 31:6. The music of timbrels and lyres accompanies the ceremony (Isa 30:32), and the divine breath itself ignites the blaze.

The cult of Molech continued after the Babylonian Exile (Isa 57:9), but there is no indication whether the Topheth in the valley of Hinnom remained one of the sites (note the plural "valleys" in Isa 57:5) where ritual infanticide continued.

TOPONYMS AND TOPONYMY. In the OT, toponyms (place names) figure prominently: in many cases, they are "explained" (e.g., Gen 11:9; 16:14; 19:22; etc.). Although modern scholarship regards most of these explanations as spurious (so-called folk etymologies), the fact that they were often explained indicates that for the biblical writers place names conveyed meanings (or were expected to do so). From the 2d century A.D. onwards, Christian (and later Jewish) pilgrims came to the Holy Land with the purpose of establishing physical contact with the places of Sacred History, an act that presupposes the identification of contemporary places and their names with ancient ones. Place names, actually or supposedly thought to continue the tradition of biblical names, were and are the main (and frequently the only) source for site identifications. By the end of the 19th century, the religiously inspired interest in the Holy Land had led to the recording of Palestinian toponymy unparalleled in the Near East in its breadth and depth (Rainey 1978).

———

A. The Nature of Toponyms
B. The Study of Toponymy
    1. Synchronic Studies
    2. Diachronic Studies
C. Site Identification

———

A. The Nature of Toponyms

The semantic structures of toponyms seem to be a transcultural universal. Place names are usually transparent within the name-giving community, often reflecting physical aspects of the site and/or social, ideological, and religious attitudes of the name-giving culture (see B.1 below). But when transmitted beyond that culture (as frequently happens), the meanings of the names become lost. For example, "Styuk-zōn"meant "foot of the dark hill" to the Papago Indians, but its modern equivalent, "Tucson" (Arizona), is a name without an English etymology (Barnes 1988: 455). Thus, the existence of place names which cannot be interpreted by the language of their present inhabitants makes *historical* studies of toponymy feasible.

B. The Study of Toponymy

When place names are transmitted beyond their language of origin they are usually adapted *phonologically* to the phonetic system of the receiving language (e.g., Tucson; cf. also al-Iskandarîyah [< Alexandria] in Egypt), a fact that makes the reconstruction and interpretation of the original form often difficult and sometimes impossible.

Place names can also be adapted *morphologically* and *lexically* to the system of the new language, and thus be "reetymologized." In this case, their origin can only be traced when earlier forms of the name are extant: *Jbayl* means "little mountain" in Arabic; if we would not know for sure that it is derived from the name Gubla, attested as early as the 3d millennium B.C., the Arabic name would not tell us. Here, toponymical studies encounter all the problems of site-identification (see C below; we have to know that Jbayl is Gubla in order to explain "Jbayl" as the present equivalent of "Gubla"). Place names can also be adapted *semantically* (i.e., they can be "translated") into the receiving language (e.g., Heb "Dan" ["judge"] becomes Ar Tell el-Qāḍī ["the debris-heap of the Judge"]).

However, continuity and discontinuity of toponyms do not say very much about the continuity or discontinuity of population or settlement. It would be wrong to assume that Tucson still has a majority of Papago Indian inhabitants, just as it would be wrong to assume that all the citizens of St. Petersburg were slaughtered or removed when the place was renamed Leningrad. Widespread *politically motivated* renaming of sites has recently affected both banks of the Jordan river (Knauf 1991). Because toponyms do contain valuable historical, linguistic, and cultural information, the recording and cataloging of Near Eastern toponyms is still an urgent task (Thompson et al. 1988). The study of why, and when, names are (or are not) preserved is still in its infancy (Negev 1976).

1. Synchronic Studies. Place name corpora can be investigated for the features that governed name formation in order to arrive at conclusions concerning the social and ideological structure of the naming community and its environment (Borée 1968: 104–12; Wild 1973: 287–322). The most frequent features are the following:

a. Land Formation. Biblical Geba, Gibeah, Gibeon derive from Heb *geba‹,* "hill"; biblical Shechem (Heb *šĕkem;* Canaanite **Ṯikmum*) means "shoulder," and Arabic Mughayyir means "small cave."

b. Flora. Biblical Gath-rimmon means "Wine Press of the Pomegranate Tree," Luz means "Almond Tree," Tamar means "Palm Tree," and Tappuah means "Apple Tree." In Arabic Umm er-Rummânah means "Mother (i.e., Site) of the Pomegranate Tree," while Fuqayqis means "Little Cucumbers." It can be assumed that tree names in now-barren regions attest to widespread deforestation in subsequent periods. Such names may attest to the previous distribution of a species beyond its present habitat (Kislev 1985). Place names like "Tres Alamos" ("three cottonwoods"; Kislev 1985: 451) or "Sycamore Creek" (p. 435) show that the ancient mechanisms of place-name formation are still operational even outside the Near East, and still provide information beyond the linguistic level (e.g., on the environment; Bailey 1984).

c. Fauna. Biblical Aijalon means "Deer Place," Beth-nimrah means "Pantherville," Hazar-shual means "Fox Hamlet," Laish (Heb *layiš,* Canaanite **Layṯ*) means "Lion," En-gedi means "Kid Spring," while Arabic Khanâzîr means "Pigs" and Qal‹at aḍ-Ḍab‹ah means "Fortress of the Hyena." These names may also testify to species which are now extinct but which in antiquity roamed the vicinity of the sites (e.g., lions). However, animal names are more difficult to interpret with certainty than are plant names since animal names often form personal and tribal names as well. For example, the EB site of Numeirah ("Little Panther") may derive its name from the *Banu Numair* tribe which occupied the region in the Middle Ages. Also, Eglon ("Calve Place") may not be named after an abundance of cattle, but because the shape of the site reminded the name-givers of the form of a bull, or because the bull was the sacred animal of their god.

d. Land Usage. Biblical Abel (already in Canaanite) means "Meadow, Pasturage," Adamah means "Soil," Gath (also in Canaanite) means "Winepress," Geder/Gedor/Gederah (also Gadara, Gadora) means "Terrace Walls," Helkath means "Section/Strip of Land/Field," and Migdal Eder means "Tower of the Herds" (i.e., shepherds). In Arabic Zarrā‹ah and Mazra‹ah mean "Plantation," Marj ‹Ayūn means "Meadow of the Springs," and Tell el-Jurn means "Heap of Debris of the Threshing Floor."

e. Social and Political Status. Place names which structurally are personal and/or clan names (or contain such names) may either refer to the site's first settler(s), or to persons who made that place famous (or infamous). Such names include biblical Beth-Arbel, Migdal-Hanaiah, Bene-Berak, and Ataroth-Beth-Joab, as well as Arabic Abu Ghosh, Humud, and Shihabiyah. Socio-political status is expressed in biblical names such as Hazeroth, "Hamlet(s)"; Succoth, "Hut(s)"; Ataroth, "Corral(s)" (the plural morpheme in these cases may be a toponymic formative); Mahanaim, "Camp" (vs. Dannah, "Stronghold," and Migdol, "Tower, Fortress"); Zephat and Mizpah, "Vantage Point"; Kerioth (Moabite), "City"; and Rabbath-Bene-Ammon, "Metropolis of the Ammonites." Due to various different viewpoints, the transmission of a name may split along demographic fissures: for example, the Roman-Byzantine Rabbathmoba continued to be known locally as ar-Rabbah ("The Metropolis" [of the region]), hence its present name (M.R. 220075), whereas supraregionally (i.e., in classical Arabic literature) the place figures as Maʾâb ("Moab"). In present-day Jordan scores of villages recently abandoned their inherited names in favor of such names as Ḥusainīyah or Hâshemīyah, thereby expressing their loyalty to the ruling king (Hussein) and his (Hashemite) dynasty.

f. Religious Status. Biblical place names like Anathoth, Baalath-Judah, Ashtaroth, Bethel, Beth-Dagon, Beth-Horon, Baal-Hazor, Baal-Meon, Baal-Shalisha, Baal-Gad, Jericho ("Place of the Moon God"), Ir-Shemesh ("City of the Sun-God") reflect the name of the deity that was once worshipped in these settlements (Rosen 1988). In Arabic, saints substitute for the ancient gods: Tell el-Mazār (i.e., Mazār Abū ʿUbaida), "Tell of the Tomb (of Abū ʿUbaida)"; Khirbet Sheikh ʿĪsā, "The Ruin of St. Jesus"; Nebī Yūnis, " (Sanctuary of) the Prophet Jonah." Because at least some of the place names containing the names of gods and goddesses originated *after* the emergence of Israel, they are an important witness for the religious diversity within "Israelite" territory.

g. Historical Events. Place names containing personal names may refer to historical events, although it is very difficult to ascertain to what kind of event (if additional data are lacking). Also, to provide an "historical" explanation for a place name does not necessarily prejudice the historicity of the event that (at least in the mind of the name-giving community) was connected with the place. In addition, names from all categories may have an historical origin that is simply beyond reconstructing. For example, a Buena Vista in Illinois most probably commemorates the 1847 battle during the Mexican War, whereas the same name in New Mexico may only refer to the "beautiful scenery" of its environs. Biblical Meribah probably preserves the memory of a quarrel, but we will likely never know when and between whom it originally occurred.

2. Diachronic Studies. a. Semitic Names. The diachronical study of contemporary Near Eastern place names reveals three main Semitic linguistic strata: Canaanite, Aramaic, and Arabic (Wild 1973). In terms of toponymical studies, all the Palestinian place names which originated from the 3d millennium B.C. (or even earlier) to the first half of the 1st millennium B.C. are classified "Canaanite." For example, names ending in *-ôn* (in Arabic, *-ân* and *-ûn*) can generally be identified as "Canaanite," and can be shown to have originated between the 3d and the 1st millennium B.C. (Plotting the places with Canaanite names on a map, for example, helps to delineate the *hinterland* of the individual Phoenician coastal cities [Kuschke 1977]). Environmental conditions conducive to permanent settlement seem to produce a higher rate of toponymical survival than marginal areas (Negev 1976; Knauf 1991): places which have been settled continuously throughout the past 5,000 years are more likely to have preserved Canaanite names than places which were abandoned for several centuries and then resettled. In toponymical studies, "Canaanite" comprises all the pre-Aramaic Semitic languages of Syria and Palestine from Amorite through Ugaritic, Phoenician, and Hebrew. The fact that these languages—or rather stages in the development of the Semitic languages in Southern Syria—are not corroborated by a clear-cut toponymic stratigraphy within the ca. 2,000 years covered by their development indicates that we are dealing with a continuous process of linguistic change similar to the process which led from Old English to present Southern Coastal American English as spoken in Georgia and the Carolinas. Linguistically, no Semitic "newcomers" or "intruders" can be identified prior to the Assyrians.

A major linguistic break occurred only with the introduction of Aramaic as the official language in the middle of the 1st millennium B.C., and later with the introduction of Arabic (comparable to the introduction of Latin into the Roman province of Gallia which subsequently became the mother of modern French). Within the Arabic stratum, several substrata (Pre-Standard, Standard, and Post-Standard Arabic) can be distinguished (Isserlin 1986a; Knauf 1991).

b. Non-Semitic Names. Non-semitic place names are rare in S Syria and Palestine. Only a few names have survived from the Hellenistic, Roman, and Byzantine periods. These tend to be the names of *newly founded* settlements which served as central places for considerable areas: e.g., modern Qêsâriyah (M.R. 140212) reflects "Caesarea" (Maritima); Nāblus (M.R. 175180) reflects Neapolis; Bânyâs (M.R. 215294) reflects Paneas. However, existing places that were simply *renamed* in the Hellenistic period, usually also retained their pre-Hellenistic names: e.g., ʿAkkâ reflects Ptolemais/Acco; ʿAmmān reflects Philadelphia/ (Rabbath Bene) Ammon; and (Tabaqat) Faḥl reflects Pella/Piḥl. In many cases the "official" Greek name was not even widely used in the Hellenistic-Roman period; a Hellenized form of the Semitic name was used instead (e.g., Gadara, Gerasa). Here is a clear indication of the impact of Greek culture on the local population, or the lack thereof.

Some places continue to have names originating in Old French or Italian at the time of the Crusades: e.g., Laṭrûn (M.R. 148138) from La Toron ("The Tower") and Tell Sandaḥanna (M.R. 140111) from "St. Anna." Such names are generally not attested in Transjordan, an area where European immigrants did not settle; there are only Ifrinj (M.R. 148138), "Franks" (now Shihâbiyah, near Kerak) and Kufrinji (M.R. 217190), "Village of the Franks" (near ʿAjlūn). In both cases the name does not tell whether the Franks who settled there were prisoners of wars or landlords (regional history, however, can suggest answers to this question).

Future studies may compare the semantic categories of various strata, and arrive at further conclusions for the history of settlement (e.g., the shift from "tribe" to "state" and back again can be expected to have consequences for place-name giving). Such studies would, however, presuppose that we know more about the time when certain place-name types were productive. Important research towards this goal has been conducted by B. S. J. Isserlin (1956; 1986a and b; cf. also Knauf 1988), but much more needs to be done. Within the study of long-term processes in history, toponymical studies will become increasingly significant.

C. Site Identification

Because the study of Palestinian toponymy remains primarily concerned with the identification of biblical sites, the problems of site identification must be discussed briefly. Site identification tries to reconcile the traditional historical record, the present topography and toponymy of the Holy Land, and the archaeological evidence. When it comes to site identification, the different interests of the scholar and the public are often irreconcilable: the average Bible reader wants as many entries as possible on the maps at the back of his/her Bible, while scholars want to distinguish between what they can know from what they can only guess (Miller 1983). Because both the historical record and the archaeological evidence are open to a broad spectrum of interpretations, site identifications are rarely agreed upon unanimously.

Toponymic evidence for a site identification operates on different levels. First, the current name of a site may be undeniably recent (e.g., Arabic); however, this does not preclude the possibility that the site itself is ancient, but simply requires the historian and the archaeologist to resolve its ancient identity. For example, Tell el-Mutesellim, Arabic for "the lieutenant governor's heap of debris," is indisputably biblical Megiddo.

Second, the name of a site may appear to be recent, but may actually preserve an older form in modern guise. For example, Tell el-Qāḍī (M.R. 211294), which is perfectly understandable in modern Arabic ("the Judge's heap of debris"), actually is a translation of the site's previous name, biblical Dan. Similarly, Jbayl (34°07′N; 35°39′E), a perfectly correct Lebanese Arabic word ("little mountain"), is actually the Arabization of the site's name since the 3d millennium B.C., Gubla (Gk Byblos). In these cases the current place name supports the identification, but would not sustain it without additional evidence.

Third, the name of a site may appear to be archaic, but may well be more recent. For example, Rās er-Riḥāb (M.R. 208038) overlooking the Wādī el-Ḥasā is identified with Rehoboth ha-Nahar (Gen 36:37; RSV "Rehoboth on the Euphrates" [!]) by those scholars who assume that an Edomite culture already existed in the Early Iron Age. See REHOBOTH (PLACE). Admittedly, Heb *rĕḥôb* and Ar *riḥâb* are cognates. The name cannot sustain an identification, however, since there are even more Riḥābs (literally, "vastness") in the Arabic world than there were Rehoboths in the Canaanite Near East. The root *RḤB* produces meaningful place names in both cultures, and there is no guarantee that an Arabic *Riḥâb* (or compound thereof) actually derives from a Canaanite Reḥôb (or compound thereof).

Fourth, the ancient name of a site may not have been preserved; however, one can still reconstruct a plausible and logical sequence of names which are attested in sources from various periods for either the site or topographical features in its immediate vicinity. The likelihood that such a sequence actually links the lost ancient name with a name recorded in the last or the present centuries depends, however, on the topographical precision and pertinence of the various sources which are involved. For example, one can work backward from *Khân az-Zayt* to *Âbil az-Zayt* to Abela to Abel Keramim (Judg 11:33) to *Karamên* (see also ABEL-KERAMIM), or from ar-Rabbah and Ma'âb to Rabbathmôbâ to Kir Moab (Isa 16:1).

Fifth, a site may actually preserve its ancient name (i.e., a name which has no recent etymology), or the ancient name of the site may be preserved in the name of a nearby spring, field, rock, wadi, or mountain. In this case, the identification can be established on the basis of the name itself. A good example is modern Ḥisbān (M.R. 226134), which indisputably is the site of ancient Heshbon (Knauf 1990). (How the historical record on Heshbon is to be reconciled with the archaeological results from Tell Ḥisbān is another problem altogether.) See HESHBON.

Sixth, and most interesting, however, is the case where the name of a site is undoubtedly old but does not occur in ancient sources. For example, modern Kathrabbā (M.R. 293060) presupposes an Aramaic **Kfar rabbā* ("big village"; cf. Gk Megalokome), but this is nowhere attested in antiquity.

As demonstrated by the last example, toponymical studies have the potential of contributing to our knowledge of the past beyond site identification insofar as they may add ancient places to historical maps which are not mentioned in any written source. Toponymy may even suggest a site identification in cases where the biblical name has already been lost in antiquity. For example, Jinṣāfūṭ (M.R. 162176) is a modern place name reflecting a Canaanite/Hebrew **gan [ha-]šōpēṭ* ("Garden of the Judge"). Because the place is situated within the settlement area of the Manassite clan Abiezer, it is a candidate—hitherto unrecognized—for Gideon's Ophrah (Knauf fc.). Given the problems concerning each of the three parameters that constitute a site identification (history, archaeology, and toponymy), there will always be a high number of Iron Age sites known from archaeology without a biblical identification, and many sites known from the Bible that cannot be located on the map.

ERNST AXEL KNAUF

TORAH (PENTATEUCH). The Torah is the section of the Bible composed of the first five books: Genesis, Exodus, Leviticus, Numbers, and Deuteronomy. The name Torah derives from Hebrew *tôrâ,* meaning "instruction." The work is also known as the Pentateuch, from Greek *pentateuchos,* meaning a five-book work, and as the Five Books of Moses. It is also known in traditional Jewish circles by the Hebrew name *ḥumaš,* which likewise is a form of the number five. It combines prose, poetry, and law in a chronological narrative spanning thousands of years. With the exception of a few words, it is written entirely in Hebrew. It holds a special place in relation to the other biblical books in that, first, the events it narrates are central to and assumed by most of the other books, and, second, many of these other books refer to it (e.g., Ezra 8:1–3) or allude to passages in it (e.g., Jonah 4:2). The Torah also has a special status in subsequent religious tradition, both because of the significance of the events narrated and because it contains the body of law that became normative in Judaism. Its singular place has continued in modern biblical scholarship as well in that the questions that were raised concerning its history and authorship played a foundational role historically in the development of the field (see below).

A. Contents and Structure

1. Overview. The Torah narrative moves from the creation of the universe to the establishment of the people of Israel as a free nation about to enter the land promised to its ancestors. It begins with an account of the relations between the God Yahweh and the human community in the world that he has created. It

gradually narrows its focus to a particular family, the family of the patriarch Abraham and his descendants. It then broadens its scope once more as the family grows into a nation, Israel, and is subjugated by Egypt. The narrative then recounts Yahweh's making himself known in the world by means of his liberating Israel from Egyptian bondage through miraculous acts that demonstrate his control of the forces of nature. Yahweh then makes an extraordinary revelation to the people of Israel and an even more intimate revelation to their leader, Moses, at Mount Sinai, also known as Horeb or the mountain of God. The deity makes a covenant with Israel and gives them a corpus of law. The narrative then recounts the events of their journey to the land that the deity had promised to Abraham. It culminates with their arrival at its border, concluding with Moses' farewell to the people and his death on a mountain overlooking the promised land.

The Pentateuch thus has six major parts:

1. The primeval history	Genesis 1–11
2. The patriarchs	Genesis 12–50
3. The liberation from Egypt	Exodus 1:1–15:21 (interim: 15:22–16:36)
4. The stay at Sinai/Horeb	Exodus 17–40; Leviticus
5. The journey	Numbers
6. Moses' farewell	Deuteronomy

There is some variation in the ways in which scholars conceive these groupings into major parts; e.g., some see Numbers 1–10 as belonging to the Sinai/Horeb section since it describes preparations for the journey that still take place at Mount Sinai, and some connect Exodus 16–18 to the Egypt section since it is regarded as preceding the arrival at Sinai. Exodus 15:22–16:36 is identified as interim here because it fits neither the Egypt nor the Sinai section but rather depicts events that occur on the journey between the two settings. Exodus 17–18 is ascribed to the Sinai/Horeb section because its episodes contain explicit reports of events taking place in the region of Horeb and at the mountain of God (17:6; 18:5). These differences of scholars' conceptions of the narrative are minor, though, and the major units of the work are essentially clear and widely recognized.

2. Primeval History. The units and their contents are presented in a chronological flow of events through time. The ANE literary environment in which they were composed was characterized by myth, which has no such linear characterizations of progressions of events through generations. The Torah thus contains some of the world's first-known history writing. In the first part, the primeval history, it pictures the deity's creation of the universe, climaxing with the creation of humans, and culminating with the deity's ceasing work and resting, seeing that the creation is "very good." The narrative proceeds to track the development of the relationship between God and the humans, a relationship that involves conflict practically from beginning to end. In the story of the Garden of Eden, the first two humans acquire for their species the ability to make their own judgments of good and evil, but at the price of work, pain, a hostile environment, and death. In the story of Cain and Abel, the second generation of humans seemingly compete for divine favor, climaxing in hostility between them and the introduction of murder into the world. During the course of the flow of generations, human women are united with beings identified as the sons of God (*bĕnê ʾĕlōhîm*, the meaning of which is uncertain) and give birth to mighty offspring. Whereas the deity originally had seen that the creation was very good, now "Yahweh saw that human bad was great in the earth" (Gen 6:5). The flood story therefore follows, in which the deity wipes out life on earth, which has become corrupt, and he starts anew to repopulate it from the seed of an exceptionally righteous man, Noah. This story culminates in the account of the Noahic covenant, the first of three covenants that provide the structure in which the Pentateuchal history is housed. The Noahic covenant guarantees the preservation of the earth from recurrence of the flood, which does not mean mere rain but a cosmic crisis in which the structure of the universe is threatened by the breaking of the "fountains of the great deep" and the opening of the "windows of the heavens." The covenant sign is the rainbow.

The stories that follow indicate that there continues to be conflict in the earth despite the universal descent from a righteous man. First there is the enigmatic account of a conflict between Noah and one of his sons, Ham. This is followed by the story of the tower of Babel, culminating in the dispersion of humans throughout the earth and their separation from one another by the development of languages. The primeval history thus sets the world stage for the story to come, depicting etiologically the state of the world and how it came to be the way it is. This first section also sets the historical narrative in a cosmic mooring, picturing the divine power to create and act upon the heavens and earth, and this power then looms behind the scenes of the narrative that follows and occasionally bursts through onto the scene of history.

3. Patriarchs. Against this broad and powerful background the second section, the patriarchs, brings a striking narrowing of focus. The deity takes an interest in a particular man, Abraham, with no reasons given for this choice. Abraham is pictured as living in the period now known as the Middle Bronze Age. The deity commands Abraham to migrate from Mesopotamia to Canaan, tests him, takes an interest in the affairs and persons of Abraham's household, and makes promises and a covenant with him. The promises include immediate offspring and ultimately that nations and kings will be descended from him. In the Abrahamic covenant, the deity further promises (1) that the land in which Abraham resides will belong to him and his descendants, and (2) that Yahweh will be his and his descendants' God. The covenant sign is circumcision. In the story of Abraham's near sacrifice of his son Isaac and in the story of Abraham's dialogue with the deity over the fate of Sodom and Gomorrah, the complexity and conflict in the divine-human relationship is further and more subtly developed.

The patriarchal stories are disproportionately concerned with Abraham and with his grandson Jacob/Israel. Between these two is a briefer treatment of Abraham's son Isaac. In the best known stories of Isaac, he is largely passive, acted upon by his father Abraham or his son Jacob. Isaac is nonetheless important as the link in the developing chain of tradition, as the bearer of the covenant promise, which the deity renews with him. He is also important as a figure in his own right, different from his father and his son in that he never fights, never leaves the land of the covenant, and has only one wife—characteristics which, together with his passive position, are perhaps to be tied to the fact that he had once lain upon the altar as a sacrifice to God.

The covenant promises are renewed in Jacob through a chain of stories of deception, sibling rivalry, jealousies, and romantic and sexual encounters. The stories move from Canaan toward Mesopotamia and back, then to Egypt. Jacob supplants his twin brother Esau/Edom for preeminent status, marries two sisters, takes their two maids as his concubines, fathers twelve sons and a daughter, loses his favorite son Joseph due to the enmity of his other sons, and in the end is reunited with Joseph together with all the rest of his family in Egypt, where he dies. The patriarchal stories thus conclude with the family residing away from its land, but in possession of a covenant promising them nationhood, a land, and a relationship with the deity.

The primary themes of the patriarchal section then are the continuity of the Abrahamic line, the birthright in each of the generations of that line, and the covenant and its promises. These themes are developed through a series of stories of relations among the family members, layered with stories of the family's encounters with foreigners. The stories can be read individually or as a meaningfully connected, continuous account, reflecting these common themes and further united by connected chains of events, recurring terms, allusions, and ironies.

4. Liberation from Egypt. With the account of the liberation and exodus from Egypt, the narrative focus broadens again and becomes the story of a nation and its conflict with another nation. The family of Jacob/Israel that has migrated to Egypt at the end of Genesis has grown into a people, the children of Israel, at the beginning of Exodus. This broadening of the account into being the story of the nation, though, is intimately bound to the account's becoming at the same time the story of an individual man, Moses. Both of these narrative lines, further, are bound to a central and pervasive element of the narrative, the knowledge of God. The three foci—the deity, the nation, the man—are embroidered together in a complex and powerful dynamic in the text. Moses is the Israelite whose destiny is distinguished from that

of his enslaved brothers and sisters by a quickly recounted sequence of events at his birth and early manhood: born a slave, raised in the royal house of Egypt, forced to flee after killing an Egyptian in defense of an Israelite, settled as a shepherd in Midian. His encounter with his father's God at the burning bush leads him reluctantly back to Egypt to free his people. Wielding enormous power over the natural realm, Moses announces or initiates each of the ten plagues and the parting of the Red Sea by which the deity overwhelms the Egyptians and frees Israel. By the end of this section and in the interim accounts of events prior to reaching Sinai, Moses finds himself the leader of a frightened, unhappy, rebellious community of former slaves who have not yet learned to think and act as a free people. They direct their complaints at him rather than at the deity who is in fact responsible for their liberation and their continuing survival. The deity meanwhile is acting not only to liberate these descendants of Abraham but also to make himself known in the world. He reveals his personal name, Yahweh, to a human, Moses, for the first time. He plans to free Israel and make them his people, and then they "will know that I, Yahweh, am your God" (6:7). By his acts in Egypt he enters the stage of world history in ways that are empirically observable by all, even "hardening the heart" of the Pharaoh so as to multiply the plagues that demonstrate that Yahweh controls the forces of nature. He states explicitly to Pharaoh, "Indeed, it was for this purpose that I established you, and for the purpose of showing you my power, and in order to tell my name in all the earth" (9:16). And in the wake of the miraculous liberation, Moses' father-in-law Jethro/Reuel, a Midianite priest, acknowledges, "Now I know that Yahweh is greater than all the gods" (18:11).

5. Sinai/Horeb. This fundamental theme of Yahweh's becoming known continues into the next section, the largest unit of the Torah: the stay at Sinai/Horeb. In the greatest theophany of the Bible, Yahweh speaks aloud to all of the people at Sinai (Exodus 19–20). Then seventy-four persons envision him on the mountain (24:9–11). Then Moses experiences the ultimate revelation of God of the entire Hebrew Bible, seeing the form of Yahweh himself (33:18–23). The ark, the tabernacle, the priesthood, and the sabbath are all associated with knowledge of Yahweh in this section: the book of Exodus culminates in the tabernacle's consecration (Exodus 40), and Exodus notes explicitly that the function of the tabernacle is: "I shall be *known* there to the children of Israel …" (29:43). With regard to the most sacred object, the ark containing the tablets of the Decalog, Exodus notes explicitly: "I shall be known to you there …" (25:22). There are chapters of details concerning the establishment of the priesthood and its accoutrements, and the text includes the explicit statement that the function of the priesthood and the tabernacle is: "And they will know that I, Yahweh, am their God …" (29:46). The text also specifies that the function of the sabbath is: "It is a sign between me and you for your generations, to know that I, Yahweh, sanctify you" (31:13).

This section of the Five Books of Moses also develops further the three-way dynamic of the deity, the nation, and Moses. It reaches perhaps its quintessential expression in the episode of the golden calf, in which Moses pleads with the deity not to destroy the rebellious people, in response to which the deity mercifully forgives them, but then Moses descends the mountain and unleashes his own anger at them. That is, Moses represents the people when he speaks to God, and he represents God when he speaks to the people. This dramatizes the role of the prophet, a role that begins with this man in this generation in the biblical presentation of history. Others communicate with the deity prior to Moses, but Moses is the first to fulfil the formal prophetic role of receiving the divine messages and carrying them to the community.

Another formal role established in this section is that of the priest. The priesthood is bestowed upon Aaron, Moses' Levite brother, and upon his male descendants after him. This bestowal is commanded in Exodus and inaugurated in the only lengthy narrative in Leviticus (8–10).

The Sinai section introduces the third major covenant of the Torah, called the Sinai or Mosaic or Israelite covenant, the text of which is the Decalog. Unlike the Noahic and Abrahamic covenants, it is not a reward for the past loyalty of the patriarch of a line, but rather is based on the past act of the deity: "who brought you out of the land of Egypt, out of the house of bondage." It therefore requires future actions from the human parties of the covenant, viz they are bound to observe the commandments thereof. In return, Yahweh promises well-being in the land. The covenant sign is the sabbath.

The Sinai section includes the corpus of law in Exodus 21–23, known as the Covenant Code, as well as the full book of Leviticus which is almost entirely concerned with law. Like the Decalog, the laws are divided between those that relate to the ethical realm and those that relate to ritual. Ritual laws are those that are concerned with relations between humans and God, such as the first four of the Ten Commandments and the laws concerning priests, purity, sacrifice, holidays, dietary laws, and apostasy. Laws of ethics are those that are concerned with relations between humans, such as the latter six commandments; economic laws; laws of sexual relations; rules of courts and justice, injuries, treatment of slaves; and sundry other statutes that do not readily fall into broad categories (e.g., laws against injuring the blind or deaf, or making one's daughter a prostitute). The law is divided between apodictic law ("Thou shalt …, Thou shalt not …") and casuistic law ("If a man does X, then he shall …"). Most of the laws are given without specific reasons or justifications, though one can often deduce the values they reflect. Pervading much of the ritual law is a concept of distinction: between pure and impure, holy and secular, permitted and forbidden (Lev 10:10). Pervading much of the ethical law is a concept of empathy for one's fellow humans and equal treatment before the law. Underlying all of the law is the concept of covenant. Covenant binds the legal and narrative texts together. The laws are pictured as given by Yahweh to Israel in the context of a covenant between them, established in light of past events and with implications for the future. That is, in the Torah, law is never understood apart from history; and indeed no Israelite law code has survived outside of the context of an historical account.

6. Journey. The historical account continues in the fifth section, the journey from Sinai/Horeb to the promised land. Though generally regarded in scholarship as a series of heterogeneous episodes, this narrative, comprising all of the book of Numbers, is unified and flows in a meaningful chronological progression. It begins with ten chapters of preparations for the journey, including a census and matters having to do with purity. (The purity of the camp, where the divine presence is at hand, is a major concern for the journey.) It then recounts the people's setting out on the journey and their initial complaints as they face hardships with regard to food and water. Miraculous solutions are provided by Yahweh, but Moses passionately declares his inability to bear the burden of the entire nation alone (11:11–15). His prophetic gift is therefore extended to others, but in the next episode Aaron and his sister Miriam criticize Moses, saying, "Has Yahweh spoken only just through Moses? Has he not also spoken through us?" (12:2). Yahweh rejects their claim as Miriam is left leprous, and Yahweh confirms explicitly that Moses does in fact have a singular prophetic status, being the only human to see the divine form. Moses' singular status then figures integrally in the next episode, the story of the spies (Numbers 13–14), in which the people reject the opportunity to enter the promised land because of their fear of the might of the residents. They seek to replace Moses with a new leader and return to Egypt. Yahweh says that he will destroy them and start a new people once more, a people descended from Moses. Moses dissuades the deity by citing, among other arguments, Yahweh's own declaration of his mercy on the occasion that Moses saw the divine form. The resulting modification in the divine judgment comes to explain why the Israelites spend forty years in the wilderness when the journey should have taken less than two: the generation that has rejected the land is to die in the wilderness, and their children are to live to take possession of the land.

The following chapter, a legal corpus, includes the reminder to the people that "You shall be holy to your God" (15:40); and the next episode brings together all of these matters: Moses' status, the people's holiness, and the condemnation that they will not live to possess the land. Korah, Dathan, and Abiram accuse Moses (and Aaron) of failing to bring them to the land (16:14) and of raising himself above the people (16:3, 13) when "all of the congregation, all of them, are holy" (16:3). Yahweh rejects these claims with fire and earthquake, and he confirms the singular religious status of the Levites in general and of Aaron in particular by causing Aaron's rod to blossom. He commands that the rod be saved in the tabernacle "as a sign to rebels" (17:25), and in the next episode, the rebellion at Meribah, Moses takes the rod "from before Yahweh" (20:9) and strikes the water-yielding rock with it. This misuse of Aaron's rod figures along with the other components of Moses' offense to result in Moses' own condemnation to die without seeing the land, and it implicates Aaron, who shares Moses' fate.

Another consequence of the condemnation to a forty-year journey is a roundabout route through the wilderness and then through the territories to the E of the Jordan river. This results in a series of confrontations with the Edomites, whom Israel avoids; with the Amorites, whom Israel defeats and dispossesses; with the Moabites, who fail in their attempt to curse Israel through Balaam; and the Midianites, whom Israel defeats. The confrontations with the Moabites and Midianites also include the heresy at Baal Peor (Numbers 28). This and the matter of Moses' bronze snake (21:4–9) continue the themes of rebellion and of Moses' status as the people finally acknowledge that they are rebelling not only against the human leader whom they can see but against the deity as well (21:5, 7). The book concludes with a list of the stations of the journey, with a new census, confirming that everyone in the older generation has died, with additional law, and with accounts relating to the distribution of the land that they are now approaching.

This section of the Torah is thus a unified narrative, recounting a meaningful progression of events, and depicting the incubation and preparation of the people before becoming a free nation in the land promised to their patriarchs, while also depicting the developing relations between the people and Yahweh. The period of the journey, also frequently called the wilderness period, is thus pictured as an age of rebellion and disasters, but at the same time it is pictured as an ideal age of incubation and closeness to God, the only age in which miracle is a daily fact of life (the column of cloud and fire; the feeding of manna and quail).

7. Moses' Farewell. The final section, Moses' farewell, constitutes the entire book of Deuteronomy. The book pictures Moses making a lengthy speech to the people in the plains of Moab, E of the Jordan river. He gives a history of his and the people's experience together since leaving Egypt. He admonishes them for their past failings, and he encourages them to fulfill their covenant with Yahweh and thus be successful in their new land. He gives them an additional corpus of laws (Deuteronomy 12–26), and additional blessings and curses for respectively keeping or violating the covenant. He writes "this *tôrâ*" in a book and gives it to the Levites to keep beside the ark and periodically to read publicly. He then formally designates Joshua as his successor, and he leaves Israel with two songs, concluding with a blessing: "Happy are you, Israel. Who is like you, a people redeemed by God?" (33:29). He climbs a mountain alone, from which he sees the land of the promise, and he dies.

The concluding section of the Torah thus merges prose, poetry, and law. It summarizes the events of the preceding sections, recapitulates and emphasizes major themes, especially covenant, and builds upon the body of law. It is thus an effective conclusion to the full Pentateuch. The work thus ends with an optimistic view toward the people's imminent return to the land of their ancestors and the fulfilment of the Abrahamic and Israelite (Mosaic/Sinai) covenants.

As the Torah can be viewed via its sections, it can also be reasonably analyzed and appreciated according to the traditional division into five books. The theme of knowledge of God, for example, pervades the book of Exodus, thus crossing two sections (the liberation from Egypt and the stay at Sinai). It hardly figures explicitly at all in the book of Leviticus (which continues the Sinai section), however, and so in this case division by books is more suitable than by sections. The two points of view are not alternative to one another in any case, but can be pursued compatibly—reflecting the depth of the material thus analyzed.

B. Literary History

The Torah was composed by a number of authors. The originally separate works of these authors were combined in a series of editorial steps into a continuous, united work. The full process of composition and editing, from the earliest passage in the Pentateuch to the completion of the work, took approximately six centuries (11th to 5th century B.C.).

The primary evidence for multiple authorship and for identification of the respective component works of the Torah is the convergence of several large categories of data. They are:

1. Doublets. Doublets are cases of two variations of the same story occurring in the Pentateuch. The possibility of such an occurrence in a single-author work exists, but the number of doublets in the

Pentateuch is so large as to be an indicator of a more complex history of composition. These doublets include:

1. Creation. An account of a seven-day creation in Gen 1:1–2:3 is followed by a different version of how the creation took place in Gen 2:4b–25. The two versions duplicate each other on some facts (e.g., the creation of plants, animals, and humans) but contradict each other on other facts (see B.3 below).
2. Genealogy from Adam. Gen 4:17–26 and 5:1–28, 30–32 (parallels of names in the Seth and Cain genealogies, including Cain/Cainan, Enoch, Irad/Jered, Methushael/Methuselah, Lamech).
3. The flood. Two complete versions of the flood story are intertwined. The first is in Gen 6:5–8; 7:1–5, 7, 10, 12, 16b–20, 22–23; 8:2b– 3a, 6, 8–12, 13b, 20–22. The second is in 6:9–22; 7:8–9, 11, 13–16a, 21, 24; 8:1–2a, 3b–5, 7, 13a, 14–19; 9:1–17.
4. Genealogy from Shem. Gen 10:21–31 and 11:10–26.
5. Abraham's migration. Gen 12:1–4a and 12:4b–5.
6. Wife/sister. In two separate stories Abraham identifies his wife Sarah as his sister, a foreign king takes her (Pharaoh in one version; Abimelech in another), the deception becomes known, the king confronts Abraham, Sarah is returned, Abraham is rewarded materially: Gen 12:10–20 and 20:1–18. In a third version a similar scenario is pictured with Isaac, Rebekah, and Abimelech: 26:6–11–14. (This is termed a triplet.)
7. Abraham and Lot part company. Gen 13:5, 7–11a, 12b–14; 13:6, 11b–12a.
8. The Abrahamic covenant. Genesis 15 and 17.
9. Hagar and Ishmael. (Triplet) Gen 16:1–2, 4–14; 16:3, 15–16; 21:8–19.
10. Prophecy of birth of Isaac. Gen 17:16–19; 18:10–14.
11. Naming of Beer Sheba. Gen 21:22–31; 26:15–33.
12. Jacob, Esau, and the departure to the east. Gen 27:1–45; 28:10 and 26:34–35; 27:46; 28:1–9.
13. Jacob at Beth-El. (Triplet) Gen 28:10, 11a, 13–16, 19 and 28:11b–12, 17–18, 20–22 and 35:9–15.
14. Jacob's name changed to Israel. Gen 32:25–33:20; 35:9–10.
15. Joseph sold into Egypt. Gen 37:2b, 3b, 5–11, 19–20, 23, 25b–27, 28b, 31–35; 39:1 and 37:3a, 4, 12–18, 21–22, 24, 25a, 28a, 29–30.
16. Yahweh summons Moses. (Triplet) Exod 3:2–4a, 5, 7–8 and 3:1, 4b, 6, 9–15 and 6:2–12.
17. Moses and Pharaoh. Exod 5:1–6:1; 7:14–18, 20b–21a, 23–29[—Eng 7:23–8:4]; 8:3b–11a, 16–28; 9:1–7, 13–34; 10:1–19, 21–26, 28–29; 11:1–9 and 7:10–13, 19–20a, 22b; 8:1–3a, 12–15; 9:8–12.
18. The Red Sea. Exod 13:21–22; 14:5a, 6, 9a, 10b, 13–14, 19b, 20b, 21b, 24, 27b, 30–31 and 14:1–4, 8, 9b, 10a, 10c, 15–18, 21a, 21c, 22–23, 26–27a, 28–29.
19. Manna and quail in the wilderness. Exod 16:2–3, 6–35a; Num 11:4–34.
20. Water from a rock at Meribah. Exod 17:2–7; Num 20:2–13.
21. Theophany at Sinai/Horeb. (Triplet) Exod 19:1–2a; 24:15b–18a and 19:2b– 9, 16b–17, 19; 20:18–21 and 19:10–16a, 18, 20–25.
22. The Decalog. (Triplet) Exod 20:1–17 and 34:10–28 and Deut 5:6–18.
23. The spies. Num 13:1–16, 21, 25–26, 32; 14:1a, 2–3, 5–10, 26–29 and 13:17–20, 22–24, 27–31, 33; 14:1b, 4, 11–25, 39–45.
24. Heresy at Peor. Num 25:1–5 and 25:6–19 [Eng 25:6–26:1a].
25. Appointment of Joshua. Num 27:12–23; Deut 31:14–15, 23.
26. Centralization of sacrifice. Leviticus 17 and Deuteronomy 12.
27. Forbidden animals. Leviticus 11 and Deuteronomy 14.

2. Terminology. Different passages in the Torah reflect different terminology, including proper names. Some passages use a particular name for the deity, for example, while other passages use another name. Some use a particular name for a person in the story while others use a different name for the same person. This is of interest in itself, but, most importantly, *these differences of terminology fall consistently into one or another group of the doublets.* That is, when there is a doublet of a story, one of the two versions uses one set of names and terms, and the other version uses a different set. The doublets then line

up into consistent groups of stories, each with its own characteristic language. For example, in the doublet of the creation account, one of the versions (Gen 1:1–2:3) consistently identifies the deity as "God" (thirty-five times); and the other version consistently identifies the deity as "Yahweh God" (eleven times). Then in the doublet of the flood account, one version likewise consistently says "God," and the other consistently says "Yahweh." When we divide the full text of the Pentateuch along these lines of consistent language, we find that virtually all of the doublets divide along these lines into one group or another. Thus the two bodies of evidence converge to point toward a common explanation.

As collected and refined during the last two centuries of scholarship, these divisions of the text have come to be identified. There are four major divisions and some smaller passages joined to them. The four major texts are classified as follows: **J** (Jahwistic), a group of passages so named because they consistently identify the deity *in narration* (not in dialogue) as Yahweh (the siglum J following the German spelling); **E** (Elohistic), a group of passages that identify the deity only as God (Hebrew *'ĕlōhîm* or *ēl*) until the time of Moses, at which time the name Yahweh is revealed (Exod 3:13–15) and is used in this group thereafter; **P** (Priestly), a group that also identifies the deity as El or Elohim until the name Yahweh is revealed (Exod 6:2–3), the siglum P reflecting its exceptional interest in priestly matters; **D** (Deuteronomic), comprising nearly all of the book of Deuteronomy, whose bank of terminology is blatantly different from the other three divisions. See also ELOHIST ("E") SOURCE; PRIESTLY ("P") SOURCE; YAHWIST ("J") SOURCE; DEUTERONOMY, BOOK OF. The cases of characteristic terms and names that can be disproportionately or even unexceptionally identified with a particular division include:

1. The names of the deity. Though periodically challenged in scholarship, this remains a strong indication of authorship. J excludes the word "God" in narration, with perhaps one or two exceptions out of all the occurrences in the Pentateuch; P maintains its distinction of the divine names with one possible exception in hundreds of occurrences; E maintains the distinction with two possible exceptions. (The LXX and Samaritan Pentateuch have minimal differences from the MT in divine names and have been shown by Skinner to confirm these authorial identifications.)
2. Sinai is the name of the mountain where the theophany and covenant occur in J and P. Horeb and "the Mountain of God" are the terms used in E and D.
3. The expression "the place where Yahweh sets his name" or "the place where Yahweh causes his name to dwell" or "the place where Yahweh causes his name to be mentioned" occurs in D and E, never in J or P.
4. *gwʿ*—to die—eleven occurrences in the Torah, all in P.
5. *ngp*—plague—fifteen occurrences in the Torah, fourteen of them in P.
6. *ʿēdâ*—congregation—over one hundred occurrences, all in P.
7. *nāsîʾ*—tribal leader—one occurrence in J, one in E; but sixty-seven in P.
8. *rkš*—property—all occurrences except those in Genesis 14 (an independent text, not identified with J, E, P, or D) are in P. (Gen 15:14=R; see below.)
9. *lwn*—to complain (also in nominal form, *tĕlûnôt*)—twenty-two of twenty-three occurrences are in P.
10. *ʾmh*—cubit—two occurrences in D, one in E, but fifty-six in P.
11. *škb*—to lie with—of thirteen occurrences of this term as a euphemism for sex, eleven are in J. (The other two are in a single case in E—Gen 30:15–16.)
12. *>s\b*—to be sad—seven occurrences, all in J.
13. The expression "gathered unto his people" as a euphemism for death is characteristic of P (all of eleven occurrences).
14. The expression "fire went out from before Yahweh" is characteristic of P.
15. The expression "and he [or they] fell on his face" is characteristic of P.
16. The expression "be fruitful and multiply" is characteristic of P.
17. The phrase *kĕbōd yhwh*—Yahweh's glory—occurs thirteen times, twelve of which are in P.
18. In the plagues narrative in Exodus, the hardening of Pharaoh's heart is consistently expressed by the term *ḥzq* (or *qšh*) in P but by the term *kbd* in E.

19. In the plagues narrative, *tannîn* is the term used in P and *naḥaš* in E for the snake before Pharaoh.
20. The word prophet is foreign to P. The single occurrence (Exod 7:1) uses the term figuratively.
21. The expression "with all your heart and with all your soul" is characteristic of D (all of nine occurrences in the Torah).
22. The expression "lengthen your days in the land" is characteristic of D (eleven of twelve occurrences).
23. The expressions "to go after other gods" or "to turn to other gods" or "to worship other gods" are characteristic of D (all of thirteen occurrences).
24. The expression *šmʿ bqwl yhwh*—"listen to the voice of Yahweh" is characteristic of D (all of twelve occurrences).

The number of cases of characteristic language beyond this sampling is substantial. Driver (1891: 131–35) listed fifty examples of language characteristic of P. Weinfeld (1972: 320–65) provides an extensive list of language characteristic of D and other works of Deuteronomistic literature.

3. Contradictions. Numerous contradictions appear in the text of the Torah which are explained by the fact that they are the result of the combination of the originally independent groups of stories. *The contradictions fall along the same lines identified by doublets and terminology.* They include:

1. The order of creation in the P account is plants, then animals, then man and woman; but in the J creation account the order is man, then plants, then animals, then woman.
2. The number of animals taken on the ark in the flood account is seven pairs of clean and one pair of unclean animals in Gen 7:2, 3 (J); but it is only two of each in 6:19; 7:8, 9, 15 (P).
3. The deity limits the lifespan of humans to 120 years in Gen 6:3 (J); but many persons are reported thereafter to have lived longer than this (9:29; 11:10–23, 32 [P]). (In J only Moses lives to the full age of 120; Deut 34:7.)
4. Abraham's homeland. Abraham moves from Ur to Haran, and from Haran to Canaan (P). When Abraham is already in *Haran,* the deity tells him to "Leave your land and your birthplace …" but Abraham has already left his land and birthplace, viz. Ur. Also, Abraham later sends his servant "to my land and my birthplace" to get Isaac a wife (24:4), and the servant goes to *Haran.* (See also 15:7, referring to Abraham's coming from Ur.)
5. Benjamin's birthplace is Bethlehem in Gen 35:16–19 (E), but it is Paddan Aram in 35:23–26 (P).
6. The sale of Joseph. Joseph's brothers plan to kill him, Reuben persuades them not to do this, they cast him into a pit, Reuben plans to save him, but Midianites take him from the pit and sell him as a slave in Egypt (E). But, at the same time, it is reported that the brothers plan to kill him, *Judah* persuades them not to, and they sell him to *Ishmaelites,* who sell him as a slave in Egypt (J). (See B.5 below.)
7. Moses' father-in-law is the priest of Midian Jethro in Exod 3:1, 18; 18:1–27 (E); but his father-in-law is the priest of Midian Reuel in Exod 2:16–18; Num 10:29 (J).
8. The name of the deity. Yahweh tells Moses in Exod 6:3 (P) that his divine name was unknown to the patriarchs, but the patriarchs do know the name (Gen 18:14; 24:3; 26:22; 27:20, 27; 28:16; and see Gen 4:26—all J).
9. The construction and location of the Tent of Meeting. Moses moves the tent outside the camp in Exod 33:7–11 (E), but the Tent is not built until Exodus 36 (P). The tabernacle is erected inside the camp in Numbers 2 (P), but it is still outside the camp in Num 12:4–15 (E).
10. The Decalog. When Moses quotes the Ten Commandments in Deuteronomy there are numerous small differences in wording from the text of the Ten Commandments in Exodus 20, most strikingly the different reason given for the sabbath commandment in Exod 20:11 (P) and Deut 5:15 (D). Meanwhile the text of the Ten Commandments in Exodus 34:14–26 (J) has seven of the ten commandments completely different, and the wording is different even on the three comparable commandments.

11. In Numbers 11 (E) the people are tired of eating only manna, and so they are fed birds; but in Exodus 16 (P) it is reported that they had been getting birds along with the manna from the beginning.
12. The faithful spies. Caleb alone stands against the spies who give a discouraging report in Num 13:30; 14:24 (J), but it is both Caleb and Joshua in 14:6–9, 38 (P).
13. The location of the Amalekites. The Amalekites reside with the Canaanites in the land in Num 14:25, 45 (J); but they reside in the wilderness in Exod 17:8–16.
14. Korah's congregation is swallowed by the earth, which closes over them, along with Dathan and Abiram in Num 16:31–33 (J); but they are consumed by fire two verses later in 16:35 (P).
15. The seduction of Israel at Peor. Moabite women seduce the Israelites in Num 25:1 (J), but they are Midianite women in 25:6; 31:1–16 (P).

4. Consistent Characteristics of Each Group of Texts.

1. There are no angels in P.
2. There are no talking animals in P.
3. There are no dreams in P.
4. Blatant anthropomorphisms such as God's walking in the garden of Eden (J), making Adam's and Eve's clothes (J), closing Noah's ark (J), smelling Noah's sacrifice (J), wrestling with Jacob (E), standing on the rock at Meribah (E), and being seen by Moses at Sinai/Horeb (J and E) are absent in P.
5. The word mercy/merciful (Hebrew *rḥm*) never occurs in P.
6. The word grace/gracious (Hebrew *ḥnn*) never occurs in P.
7. The word repent/repentance (Hebrew *šwb*) never occurs in P.
8. The word faithfulness (Hebrew *ḥsd*) never occurs in P.
9. Sacrifices are never portrayed in P prior to the consecration of the tabernacle and priesthood in Exodus 40.
10. In P only descendants of Aaron are priests, while all other Levites are designated as lower level clergy. In the other accounts, all Levites are priests.
11. P regularly adds two major autumn holidays (Lev 16:29–34; 23:23–32; Num 29:1–11) to the standard list of three seasonal holidays contained in the other groups of texts.
12. In P Aaron and Miriam are identified as the brother and sister of Moses (Exod 6:20; Num 26:59), but they are never identified as his siblings in J, E, or D. Indeed, the identification of Aaron as Moses' "Levite brother" in Exod 4:14 (E) and the identification of Miriam only as "the sister of Aaron" in Exod 15:20 (E) indicate that Aaron and Miriam are not his siblings in these texts.
13. The tabernacle is mentioned three times in E and never in J or D, but it is of central importance, mentioned over two hundred times, in P.
14. In the plagues narrative, the P version develops the role of the Egyptian magicians; the E version does not.
15. In the plagues narrative, the E version develops a process of negotiations between Moses and the Pharaoh; the P version does not.
16. In the plagues account in P the signs are performed with the rod of Aaron; in E they are performed with the rod of Moses.
17. In the creation account in P, the deity creates a giant vault (firmament) that holds back waters that are above it; there are also waters below the dry ground. The world is thus, in this conception, a habitable air space surrounded by water. This same conception is assumed in the P account of the flood, in which the "windows of the heavens" and the "fountains of the deep" are broken up so that the waters flow in. The J creation account has no such picture, and in the J flood story it merely rains.
18. Matters such as ages, dates, measurements, numbers, and precise instructions are a substantial and continuing interest in P, with nothing to a remotely comparable degree appearing in J, E, or D.

19. In the J version of the spies story, Moses quotes the divine formula (Num 14:17–18) that had been revealed to him in the J version of his revelation at Sinai (Exod 34:6–7).
20. Paronomasia occurs relatively frequently in J and E but is very rare in P and D.

5. Narrative Flow.

1. The story of Dathan's and Abiram's rebellion against Moses (J) flows as a complete story when separated from the story of Korah's rebellion (P) with which it is intertwined. The Korah story also flows complete. Either can be read as a continuous story, with no intolerable gaps in wording or action. (J = 16:1b–2a, 12–14, 25–26, 27b–32a, 33–34. P = 1a, 2b–11, 15–24, 27a, 32b, 35). The only two clauses that merge the two stories—and which thus break the flow—are editorial additions (Num 16:24, 27), as evidenced by the fact that the extra words do not occur in the LXX. Other intertwined accounts that each flow complete, with virtually no breaks in the flow of the narrative include:
2. The flood story (J = Gen 6:5–8; 7:1–5, 7, 10, 12, 16b–20, 22–23; 8:2b– 3a, 6, 8–12, 13b, 20–22. P = 6:9–22; 7:8–10, 11, 13–16a, 21, 24; 8:1–2a, 3b–5, 7, 13a, 14–19; 9:1–17).
3. Hagar and Ishmael (J = Gen 1–2, 4–14. P=16:3, 15–16).
4. Jacob and Esau (J = Gen 25:21–34; 27:1–45; 28:10. P = 26:34–35; 27:46; 28:1–9).
5. Jacob at Beth-El (J = Gen 28:11a, 13–16, 19. E = 28:11b–12, 17–18, 20–22).
6. Joseph and his brothers (J = Gen 37:2b, 3b, 5–11, 19–20, 23, 25b–27, 28b, 31–35; 39:1. E = 37:3a, 4, 12–18, 21–22, 24, 25a, 28a, 29, 36).
7. Yahweh summons Moses (J = Exod 3:2–4a, 5, 7–8. E=3:1, 4b, 6, 9–15).
8. Moses and Pharaoh (E = Exod 5:3–6:1; 7:14–18, 20b– 21a, 23–29 [Eng 7:23–8:4; 8:3b–11a, 16–28; 9:1–7, 13–34; 10:1–19, 21–26, 28–29; 11:1–9. P = 7:10–13, 19–20a, 21b–22; 8:1–3a, 12–15; 9:8–12).
9. The Red Sea (J = Exod 13:21–22; 14:5a, 6a, 9a, 10b, 13–14, 19b, 20b, 21b, 24, 25b, 27b, 30–31. P = 14:1–4, 8, 9b, 10a, 10c, 15–18, 21a, 21c, 22–23, 26–27a, 28–29).
10. The spies (J = 13:17–20, 22–24, 27–31, 33; 14:1b, 4, 11–25, 39–45. P = 13:1–16, 21, 25–26, 32; 14:1a, 2–3, 5–10, 26–29).
11. Peor. The P account (Num 25:6–19 [Eng 25:6–26:1a]) appears to begin in medias res, with the Israelite man and Midianite woman acting in the sight of Moses and the people, who "were weeping at the entrance of the tent of meeting." The weeping appears to be unexplained, but if we turn back to the preceding P account and eliminate the intervening J and E material we find that this last P account, the death of Aaron, ends with the people *weeping* for Aaron in the last verse (20:29). The P narrative flow thus appears to be consistent and intact.

6. Historical Referents. Each of the four component texts of the Torah contains a number of elements that reflect the place and time in history in which it was composed. The J and E texts contain elements whose historical referents lie in the period of the divided kingdoms of Israel and Judah, ca. 922–722 B.C. The historical referents of J indicate derivation from the S kingdom, Judah. The historical referents of E reflect the conditions and interests of the N kingdom, Israel. The elements of J that indicate a Judean provenance are:

1. In J Abraham resides in Hebron/Mamre (Gen 13:18; 18:1). Hebron was the capital of Judah, the home city of Zadok, the Judean high priest of David and Solomon.
2. In J the Abrahamic covenant promises the land "from the river of Egypt to the great river, the river Euphrates (Gen 15:18). These were the boundaries of the empire of David, the founding king of the Judean dynasty.
3. The J account of Israel's acquisition of Shechem is derogatory, involving the taking of Dinah by Shechem and the massacre of the city by Simeon and Levi (Genesis 34). Shechem was the capital city of N Israel, built by Jeroboam I, the king who had rebelled against Judah; and its background is here deprecated.
4. The J birth accounts of the eponymous ancestors of the tribes include: Reuben, Simeon, Levi, and Judah. (a) Only Judah, among these tribes, existed with a territorial identity in the era of the

monarchy. (b) J includes the story of Reuben's taking Jacob's concubine and the story of Simeon's and Levi's massacre of Shechem. As confirmed in Jacob's deathbed blessing in Genesis 49—a poetic text embedded in J—these acts result in the preeminence passing to the fourth son, Judah.

5. In the J story of Joseph, Judah is the brother who saves Joseph from the other brothers' plans to kill him (Gen 37:26–27; 42:22).
6. In the J Joseph story it is Judah who promises Jacob that Benjamin will survive the journey to Egypt (Gen 43:8–9).
7. J alone includes a lengthy story from the life of Judah (Genesis 38), culminating in the birth of Peres, the eponymous ancestor of the clan from which the Judean royal family was traced. Judah's wife is identified as *bat šûaʿ*, a name so similar to the name of David's wife *bat šebaʿ* that the two are interchanged in 1 Chr 3:5.
8. In the J spies story, the scouts whom Moses sends spy out only the territory of Judah (Num 17–20, 22–24).
9. In the J spies story, the one favorable spy is Caleb. The Calebite territory was located in Judah and included Hebron.
10. J includes a lengthy account of the birth, youthful relations, and break between Jacob and Esau/Edom. These stories reflect the kinship and historical relations with Edom on several points. J also includes the list of the kings of Edom (Genesis 36). There are no equivalent stories or records in E. Judah bordered Edom and dominated it from David to Jehoram.
11. The iconography of J corresponds to the situation in Judah. (a) J includes a description of the ark's movements in the wilderness (Num 10:33–36), and J associates the presence of the ark with military success (Num 14:41–44); but the ark is never mentioned in E. The ark was located in Judah. (b) The J Decalog only prohibits making molten gods (Exod 34:17). This denounces the golden calves of N Israel, which were molten, without denigrating the golden cherubs of the Temple in Judah, which were wooden and gold-plated. (c) In J, cherubs are used to guard the path to the tree of life, also consistent with the cherub iconography of Judah. Cherubs are not mentioned in E.
12. In J, the Hebrew root *rḥb*—of the name Rehoboam, first king of the divided kingdom of Judah—occurs six times, connoting the nation's expansion. (It does not occur in E.)

The elements of E that indicate a (northern) Israelite provenance are:

1. In E Jacob struggles with God (or an angel) and, etiologically, names the site of this event Peniel (Gen 32:31). The city of Peniel was built by Jeroboam I, the founding king of the N Israelite kingdom (1 Kgs 12:25).
2. In E there is an account of Joseph's deathbed wish to be buried in his homeland and an account of the Israelites taking his remains during the exodus. The traditional site of Joseph's grave was at the city of Shechem, which was also built by Jeroboam and capital of Israel for a time.
3. In E, territory around the city of Shechem is acquired by peaceful purchase (Gen 33:18–19). (Contrast item 3 in the preceding section.)
4. The E birth accounts of the eponymous ancestors of the tribes include: Dan, Naphtali, Gad, Asher, Issachar, Zebulon, Ephraim, Manasseh, and Benjamin—i.e., all of the tribes of Israel, but not Judah. Further, (a) in E the birthright goes to Joseph, thus creating the (northern) tribes of Ephraim and Manasseh. (b) In E Ephraim is favored over Manasseh (Gen 48:13–20), corresponding to the historical preeminence of Ephraim (Jeroboam's tribe; the name Ephraim is frequently used in the Hebrew Bible as a *pars pro toto* name for Israel). (c) The term for the additional portion thus awarded to Joseph is the unusual *šekem* (Shechem; 48:22), a perfect pun on the name of the Israelite capital city, which was in fact located in the hills of Ephraim.
5. In the E story of Joseph, Reuben, rather than Judah, is the brother who saves Joseph from the other brothers' plans to kill him (Gen 37:21–22).
6. In the E Joseph story, it is Reuben, rather than Judah, who promises Jacob that Benjamin will survive the journey to Egypt (Gen 42:37).

7. In E, the Egyptian taskmasters are identified as "officers of corvee" (*śārê missîm*—Exod 1:11). The N Israelite tribes' dissatisfaction with the Solomonic policy of *missîm* was an explicit ground for their secession, which was initiated by the stoning of Rehoboam's officer of the *missîm*.
8. The heroic role of Joshua is developed in E, but not in J. Joshua was of N Israelite origins, of the tribe of Ephraim.
9. The elements of E particularly coincide with the interests of the Levites of N Israel who were of the priestly group from Shiloh. Only E includes the story of the golden calf heresy, which is led by Aaron. The Shiloh Levites' high priest Abiathar had been expelled from the Jerusalem priestly hierarchy by Solomon, his prerogatives thus passing to an Aaronid high priest (Zadok). The Shiloh prophet Ahijah had first supported the kingship of Jeroboam but later rejected it in the wake of the establishment of the golden calves at Bethel and Dan. The E golden calf story thus merges and denigrates the two symbols of the exclusion of the Shiloh Levites: Aaron and the golden calf. Meanwhile, it is the Levites in this story who violently purge the people of the heresy. (But Levite violence is criticized in J. See B.6.a (3) and (4) above.)
10. The E story of Aaron's and Miriam's criticism of Moses over Moses' Cushite wife (Numbers 12), like the golden calf story, denigrates Aaron, who is reprimanded directly by the deity. The story explicitly declares Moses' revelation to be superior to Aaron's (and to anyone else's). As in the golden calf story, Aaron submissively addresses Moses as "my lord."
11. The iconography of E corresponds to the situation in Israel—and especially to the concerns of the Shiloh Levites. (a) E includes a description of the tabernacle's establishment in relation to the camp in the wilderness, emphasizing its importance for revelation (Num 10:33–36); but the tabernacle is never mentioned in J. The tabernacle was originally associated with the N Israelite religious center at Shiloh. (b) E denigrates the golden calves. (See item 9 above.) (c) As opposed to J's prohibition of making molten gods, which attacked only the N golden calves, E prohibits making any "gods of silver and gods of gold" (Exod 20:23), thus applying to both the Israelite golden calves and the Judean golden cherubs. (d) In the E story of the golden calf, Moses smashes the tablets of the Decalog, and there is no E account of a second set of tablets being made. This casts aspersions on the ark in Judah, which would thus either be empty or contain inauthentic tablets.
12. Another sign that E derives from priestly origins is the fact that it includes a lengthy law code, the Covenant Code. All other corpora of law in the Hebrew Bible are found in texts that come from priestly circles: viz. D, P, and Ezekiel.

Both J and E contain a story of the establishment of Bethel (Gen 28:10–22); and both kingdoms, Judah and Israel, had claims and interests in Bethel. J lacks the law codes that are characteristic of priestly texts and shows no explicit signs of composition in such circles. Neither source shows any awareness of the fall of the kingdom of Israel nor of the dispersion of the N tribes, which strongly suggests composition before the fall of Israel in 722 B.C. The very character of the two sources, each fitting one of the two divided kingdoms, likewise points to composition in the period of the division. J's reference to Esau/Edom's breaking Israel's yoke from its shoulder (Gen 27:40) probably places its composition at least after Hadad's rebellion against Solomon or even after Edom's full independence from Judah in the reign of the Judean king Jehoram (849–842 B.C.). E offers few clues to narrow its composition further within the two-century period of division.

The P text contains elements whose historical referents lie in the period following the fall of the kingdom of Israel (722 B.C.) but prior to the fall of the kingdom of Judah (587 B.C.), with particularly significant elements indicative of the reign of the Judean king Hezekiah (715–687 B.C.). The majority of scholarly opinion has held since the latter part of the 19th century that P was composed in the exilic or postexilic period, but several discoveries in recent scholarship call for the preexilic provenance. These include references in other biblical books and, particularly, linguistic classification (see B.7 and B.8 below). The historical referents that indicate a preexilic and probably Hezekian provenance are:

1. The tabernacle. The P narrative spends a disproportionately large amount of space on the tabernacle, also known as the Tent of Meeting. It devotes whole chapters to the record of the tabernacle's

construction and contents, and it sets numerous episodes in the tabernacle's precincts, including the consecration of the priesthood, the deaths of Nadab and Abihu, the theophany in the spies episode, the Korah rebellion, the blossoming of Aaron's rod, the theophany at Meribah, the offense and Phinehas' zeal at Peor, and the dedication of the Midianite spoil. It identifies the tabernacle as the site of the revelation of the entire body of law recorded in Leviticus. The P laws themselves, too, are centrally concerned with the tabernacle. The P legal sections require the presence of the tabernacle for the fulfillment of numerous laws and especially for the practice of sacrifice, which according to P can be carried out nowhere but at the tabernacle (Lev 1:3, 5; 3:2, 8, 13; 4:5–7, 14–18; 6:9, 19, 23; 14:11; 16:1–34; 17:1–9; Num 5:17; 6:10; 19:4). The P legal sections declare repeatedly that execution of these laws at the tabernacle is the rule *forever* (Exod 27:21; 28:43; 30:21; Lev 3:17; 6:11; 10:9; 16:29, 34; 17:7; 24:3, 8; Num 18:23; 19:10).

The tabernacle was long regarded as a fiction in scholarly consensus, but evidence has been collected since the 1940s that the tabernacle was historical. Architectural, scriptural, archaeological, and extrabiblical textual evidence indicate that the tabernacle was housed (either stored or actually erected) in the Temple of Solomon. See TABERNACLE. It probably was destroyed when the temple was burned, at the time of the destruction and exile in 587 B.C. (Ps 74:7; Lam 2:6–7), and it certainly was not present in the Second Temple. Therefore, the interwoven centrality of the tabernacle in P law and narrative, together with the numerous declarations in P that this is the law forever, had to have been written before the Solomonic Temple was destroyed. (The older view, that the tabernacle was a fiction, was conceived to defend the Graf-Wellhausen hypothesis that P was a Second-Temple composition. In this view the tabernacle had been invented to symbolize the Second Temple, thus accounting for the absence of any reference to the temple in P. But see other problems with this dating of P below.)

2. The ark, tablets, cherubs, and Urim and Thummim. These sacred objects are also centrally important in P, treated at some length, and directly connected to the tabernacle. They, too, were associated solely with the Temple of Solomon, not with the Second Temple, and therefore are compatible with preexilic interests.
3. Priests and Levites. P alone among the four source works of the Torah calls for hierarchical divisions among the clergy. Both in the P legal sections and in its narrative, this is a pervasive concern. Not all Levites are priests. Only those Levites who are descended from Aaron are priests. All other Levites are second-level clergy. The specific tasks of each group are assigned. According to the explicit report of the book of 2 Chronicles, Hezekiah was the king who established these divisions and assigned these tasks (2 Chr 31:2). The majority view in scholarship has connected the origin of these divisions to a statement by the prophet Ezekiel (44:9–16), but: (a) Ezekiel distinguishes not the Aaronids but only the Zadokite Aaronids from other Levites. (b) There is no evidence that the author(s) of P accepted Ezekiel's visions as legally authoritative. On the contrary, the P model of the tabernacle is structurally incompatible with Ezekiel's vision of the temple. (c) New linguistic evidence indicates that P was composed prior to Ezekiel. (See below.)
4. The house of Aaron. P is exceptionally concerned with the house of Aaron and visibly favors it over other levitical groups, whom P excludes from the priesthood. P places Aaron alongside Moses from the beginning in Exodus, identifies Asron as Moses' older brother, provides for Aaron's consecration and for the consecration of his sons to the priesthood; P depicts the Aaronid succession, including the death of his eldest two sons, his own death, his replacement by his third son Eliezer, and the eternal promise of priesthood through Eliezer's son Phinehas. The other Pentateuchal sources, meanwhile, understand all Levites to be priests. The other biblical work that clearly identifies only Aaronids as priests is the Chronicler's work; and the books of Chronicles praise Hezekiah as foremost among the kings of Israel and Judah. The only other king who compares with Hezekiah according to Chronicles is Solomon, and it was Solomon who first gave the Aaronid priest their exclusive hold on the Jerusalem priesthood. It was Solomon who removed the non-Aaronid priest Abiathar from his shared high priesthood with the Aaronid priest Zadok. That is,

the biblical books that hold the same view of the priesthood as P focus upon the two kings who supported P's priestly distinctions: Solomon and Hezekiah. Since P had to have been written long after Solomon's time (see below) the reign of Hezekiah is the provenance that appears to be reflected in P.

5. P's insistence on centralization of sacrifice also points to the reign of Hezekiah, who, according to both the books of Kings and Chronicles, was the king who initiated centralization. Moreover, his centralization of worship at the Temple in Jerusalem placed all sacrifice under the aegis of the Aaronid priesthood, which had held the leadership in Jerusalem since the reign of Solomon and which Hezekiah further supported. (The other Pentateuchal source text that calls for centralization is D, but D is virtually unanimously recognized by scholars to be associated with the reign of the other centralizing king, Josiah. See below.)
6. Hezekiah is also the king who, according to Chronicles, destroyed the bronze serpent of Moses, known as Nehushtan. The destruction of a sacred object that was strictly associated with Moses (in E, the source that is most favorable to Moses and the most harshly critical of Aaron, Num 21:4b–10) further fits with Hezekiah's support of the Aaronid priests over those Levites who saw themselves as the heirs of Moses rather than of Aaron.
7. The house of Aaron and the house of David. These close connections between the Aaronid priests and the royal house of David, which excelled in the time of Hezekiah, are reflected also in the notice in P that Aaron is married to the sister of Nahshon ben Amminadab, the prince of the tribe of Judah and the ancestor of David (Exod 6:23; Num 2:3; Ruth 4:20–22

The D text contains elements whose historical referents lie in the reign of Josiah, the great-grandson of Hezekiah. These include:

1. The scroll of the *tôrâ.* At the conclusion of the book of Deuteronomy Moses is said to have written a "scroll of the *tôrâ*," a document that is to be placed by the ark for reference at some future time. The book of Joshua then reminds us of the existence of this scroll three times (1:8; 8:31, 34; 23:6). The "scroll of the *tôrâ*" is then never mentioned again in the history until it is reported to have been brought out from the temple and read to King Josiah (2 Kgs 22:8).
2. Centralization of sacrifice. Josiah is then reported to have initiated a religious reform based on the text of the scroll. The components of the Josianic reform conform to the requirements of the Deuteronomic law code (Deuteronomy 12–26), particularly the centralization of religion, which is the first requirement of the code. Josiah destroys all places of worship outside of Jerusalem. It is clear that the Josianic reform is tied to the Deuteronomic law code and not to the P law code, because: (a) there is the explicit connection to Moses' scroll. (b) Josiah destroys the golden calf altar of Jeroboam at Bethel. 2 Kings 23 describes this act with the same terms used in Deuteronomy for Moses' destruction of the golden calf of Aaron, a story which obviously does not appear in the pro-Aaron P text. (c) Josiah's treatment of the Asherah of Jerusalem and other altars likewise reflects specific commands of the D law code.
3. The history of the kings of Israel in the books of Kings, as opposed to the history in the books of Chronicles, is constructed to culminate in the reign and reform of Josiah, the only king who receives a completely positive rating; and this history is written in language that manifestly mirrors the characteristic phraseology of Deuteronomy.
4. Deuteronomy is diametrically opposed to the P view of Israel's priesthood. Deuteronomy makes no distinction between priests and Levites, and it is negative with regard to Aaron. It mentions Aaron only twice, once to say that he died and once to identify him as the maker of the golden calf. It also refers to Miriam's leprosy, an episode in which Aaron is denigrated. Hezekiah's reign is compared by the Chronicler to the reign of Solomon, who favored the Aaronid priesthood, but Josiah's reform includes the destruction of Solomon's altars. Hezekiah destroyed the brass snake Nehushtan of Moses, but Josiah married his son to a woman named Nehushta.
5. There are numerous parallels of wording and action between the characterization of Moses in Deuteronomy and of Josiah in 2 Kings (e.g., the words "none arose like …" are applied only to

these two persons, both grind a golden calf—or its altar—"thin as dust," in both cases at a wadi). In recent scholarship the biblical books of Deuteronomy through 2 Kings have been identified as a continuous work, termed the DEUTERONOMISTIC HISTORY. The Moses-to-Josiah construction of this work is further made manifest by changes in major themes following the Josiah pericope: the concern with centralization of sacrifice and the comparison of the Judean kings to David cease after this pericope.

6. The Josianic provenance applies to the composition and original promulgation of D as a work. Much of the material within D nonetheless shows signs of having been composed in an earlier period and then included in the Josianic Deuteronomist's work. The core of the Decalog in Deuteronomy 5 and most of the Deuteronomic law code (Deuteronomy 12–26) falls in this group. Elements in the law code whose historical referents lie in an earlier period include: (a) the laws of war in Deuteronomy 20–21. The required assembling and admonishing of the people in these laws reflect the period of general conscription, when the Israelite tribes were summoned to battle. The rise of the monarchy led to replacement of the tribal musters by professional armies. These laws of war, therefore, represent the earliest, i.e., premonarchic, period of Israel's history. (b) The law of the king in Deuteronomy 17 and (c) the laws giving legal jurisdiction to the Levites, too, do not appear to derive from Josiah's court, because they limit or ignore royal prerogatives. They therefore appear to have been older than the Josianic composition but sufficiently authoritative to have been included in it. These laws, as well as others written in the interests of the Levites, indicate composition by Levites. The nonrecognition of Aaronid distinction excludes that group as possible authors of this work. The demand of centralization excludes the Levites of the various high places outside of Jerusalem. The most likely provenance of this work, therefore, is among the Levites of the pre-Jerusalem center of Israelite religion: Shiloh.
7. Also, portions of D (and of the Deuteronomistic History) show signs of having been added to the Josianic edition of the work in a subsequent editorial operation. These portions show signs of having been composed after the destruction and exile of Judah in 587 B.C. They include Deut 4:25–31; 8:19–20; 28:36–37, 63–68; 29:21–27; 30:1–10, 14–20. Each of these passages is identified as an exilic addition by a combination of several factors: terminology, theme, grammar, syntax, literary structure, and comparative data. There is also a thematic commonality among them; all refer to apostasy, destruction, exile, and dispersion. Their wording and themes match with demonstrably exilic portions of the Deuteronomistic History (cf. 1 Kgs 9:6–9; 2 Kgs 21:8–15).

7. Linguistic Classification. Since the 1970s, advances in linguistic analysis have made it possible to trace the stages in the development of Hebrew prose to which the source texts each belong (Polzin 1976). Through a series of studies, J and E have been shown to represent the earliest stage of biblical Hebrew prose. P and D (the Deuteronomistic texts) have been shown to represent a later stage than J and E, but a stage with still more in common with the early biblical Hebrew of J and E than with the late biblical Hebrew of postexilic texts. In a separate comparative study (Hurvitz 1982), P was found to represent an earlier stage than the book of the prophet Ezekiel. This linguistic evidence is consistent with the evidence of the historical referents and with the evidence of references in other biblical books. It is a powerful confirmation both of the division into source works and the relative dating of the sources.

8. Identifiable Relationships Among Sources. Another factor that contributes to the cumulative force of these bodies of evidence is the presence of signs in sources that reflect their relationship with other sources. These include:

1. P's account follows the chronology and events of the combined J and E. The parallels of persons, events, and order between P and JE are so close as to indicate that J and E were edited together and then were known to and followed by the person(s) who composed P. Consistent differences between P and JE are observable as enumerated above (see B.4 above). This fits with the view that E, the text composed in the N kingdom of Israel, was combined with J, the text from Judah, following the fall of Israel. This further fits with the evidence of P's having been composed in the time of Hezekiah, whose reign in Judah covered the years following the fall of Israel. P's tie with the Aaronid

priesthood explains the motivation for the composition of P in that period. The combination of J and E resulted in a *tôrâ* in Judah that was derogatory toward Aaron—identifying him as the maker of the golden calf—and unacceptable to Jerusalem's Aaronid priests on various other grounds as well. The P account appears to have been composed as an alternative to this work. P follows the order of JE, but it

a. promotes Aaron;
b. denigrates Moses (for striking the rock at Meribah, among other things);
c. leaves out the stories of the golden calf and Aaron's criticism over Moses' wife;
d. eliminates stories of dreams, angels, talking animals, and all references to prophets (except Aaron), thus picturing only the Aaronid priesthood as the channel to the deity;
e. eliminates all references to repentance and divine mercy, thus strictly picturing sacrifice as the means of atonement and forgiveness; and
f. eliminates all depictions of sacrifice prior to the consecration of Aaron and the tabernacle, thus identifying the Aaronid priesthood as the only divinely sanctioned conductors of sacrifice.

In virtually every P story it is possible to identify components that reflect an overall design of composition of P as an alternative work to JE. Thus the differences between the P versions and the JE versions of stories are not only observable but, in nearly every case, explainable. For example, we can explain the fact that in J Noah takes seven pairs of clean (i.e., sacrificeable) animals on the ark while in P he takes only one pair, because in J Noah offers a sacrifice at the end and therefore needs more than one pair of the sacrificeable animals or else his sacrifice would end a species. In P, however, no sacrifices are pictured prior to Aaron, and therefore Noah needs no extra animals. Similarly, we can explain P's addition of Joshua alongside Caleb in the spies story, because P cannot follow JE in establishing the merit of Joshua by his disassociation from the golden calf incident, for P eliminates the golden calf incident since it obviously denigrates Aaron.

2. D begins with Moses' review of the years he has spent with the people on the journey from Sinai. In his speech are references to passages in J, E, and, in one case, P:

a. E.g., Deut 2:26–33; cf. Num 21:21–23 = J.
b. E.g., Deut 9:12–14; cf. Exod 32:7–9 = E.
c. Deut 1:39 ("And your little ones whom you said would be a prey"); cf. Num 14:3, 31 = P.

This is further confirmation that the J, E, and P narratives were composed prior to D. The greater number of references to JE than to P (only one) in Deuteronomy also suggest that D was written in sympathy with the former but with less respect to the latter. This is confirmed by D's inclusion of the E stories that are hostile to P, by D's blatantly opposite view of priests and Levites from that of P, and by D 's reference to the Dathan and Abiram episode without reference to Korah.

9. References in Other Biblical Books.

1. In the book of the prophet Jeremiah there are allusions to passages in P. These allusions are found in both the poetic and prose layers of Jeremiah (the poetry usually ascribed to Jeremiah himself and the prose to his contemporary, the scribe Baruch ben Neriah, or to a "Deuteronomistic" biographer). In every case, Jeremiah's allusions to P are negative, reversing P's language and taking an opposite point of view in what are visibly deliberate plays upon P's characteristic language—which is consistent with a virtually universally recognized bond between Jeremiah and the Deuteronomistic texts. The allusions to P in the various layers of Jeremiah are consistent with the linguistic and other evidence for a preexilic date for the composition of P. They also fit with the other signs of the alternative/polemical relationship between P and the non-Aaronid Levitical sources (E and D). A poetic allusion is Jer 4:23:

I looked at the earth, and here it was unformed and void, And to the heavens, and their light was gone.

The allusion to Gen 1:1–3 (P) is patent.

2. A prose allusion is Jer 3:16, "It will be, when you multiply and be fruitful in the land in those days, says Yahweh, that they will no longer say, 'the ark of the covenant of Yahweh,' and it will not come

to mind, and it will not be made anymore." Cf. P's characteristic use of "be fruitful and multiply," and also P's focus on the ark.

3. Jeremiah says in 7:22, "For I did not speak to your fathers and I did not command them in the day that I brought them out of the land of Egypt about matters of offering and sacrifice." Cf. P's wording in Lev 7:37–38.
4. The book of Ezekiel also alludes to passages in P. Biblical scholarship commonly regarded Ezekiel as the source for P, but the linguistic evidence (see B.7 above) has now established the priority of P. Also, the character of the texts in Ezekiel is identifiable as allusive rather than primary. Ezekiel 5–6, for example, is form-critically a genre known as a "covenant lawsuit"; and the covenant text on which the lawsuit is based is found in P. The charge in the covenant litigation in Ezek 5:7 is "You did not walk according to my statutes, and you did not do my judgments." Cf. P in Lev 26:3, 15. The allusions to P in Ezekiel conform with the other evidence for preexilic composition of P. Ezekiel's favorable attitude toward P (as opposed to Jeremiah's) together with his favorable regard for the Aaronid/Zadokite priesthood is also consistent with other evidence that the source texts reflect the positions of opposing priestly houses in ancient Israel.
5. The judgment in Ezekiel's covenant litigation includes in 5:10, "Fathers will eat sons in your midst." This alludes to a passage in P; cf. Lev 26:29.
6. The judgment continues in Ezek 5:17. Cf. P in Lev 26:22, 25. The wordings are clearly related—practically identical.
7. Likewise Ezek 6:3b–6a continues in wording that is based on the wording of P in Lev 26:30, 31a.
8. Ezekiel's criticism of priests in 22:26 is, in the precise wording of P, for their failure to fulfil the requirements of priests as stated in Lev 10:10.
9. Ezekiel's review of the Exodus in Ezekiel 20 also is based on the story in the P version in Exodus 6. (It is clearly a retelling, based on P's telling, and not the reverse.) Ezek 20:28; cf. Exod 6:8. Ezek 20:5; cf. Exod 6:3. Ezek 20:33–34; cf. Exod 6:6. Ezek 20:8; cf. Lev 26:21. Ezek 20:13, 16, 24; cf. Lev 26:43.

10. Marks of Editorial Work. There are observable editorial devices in the Torah that further confirm that there were originally separate works that were combined by editors ("redactors"). These evidences of editorial work, together with other evidence enumerated above, also reveal that the combining of J, E, P, and D into the united Torah was accomplished in several stages of redaction.

a. Epanalepsis (resumptive repetition). This is an editorial device in which a line is repeated following an insertion of one text into the body of another text. E.g., in Exod 6:12 Moses says, "How will Pharaoh listen to me, when I am uncircumcised of lips?" Then a partial Israelite genealogy that culminates in Aaron's family interrupts the account, followed by a transitional summary of what had been said prior to the interruption, and then Moses says in v 30, "I am uncircumcised of lips, and how will Pharaoh listen to me?" The epanalepsis in this case does not appear to be the author's own resumption after clumsily interrupting himself, but rather it has the character of an editor's mechanism for inserting a text into a preexisting account and then returning to the flow of the account.

b. Reconciling Phrases. The combining of texts that were similar but still not identical in their order and location of events inevitably resulted in some inconsistencies. Certain phrases are superfluous to the narrative but make perfect sense as editorial insertions for the purpose of reconciling such inconsistencies. For example, the J and E accounts of Jacob's return from Haran to Canaan picture him arriving at Shechem, then returning to Bethel, where God had appeared to him years earlier. The P account has him coming from Paddan Aram directly to Bethel. The P account of his arrival at Bethel begins, "And God appeared to Jacob when he was coming from Paddan Aram" (Gen 35:9). This makes no sense now that J and E texts precede it stating that Jacob had already returned and dwelled in the land. The redactor (R) therefore added a reconciling phrase to these J and E accounts of Jacob's prior arrival at Shechem, stating, "which was in the land of Canaan when he was coming from Paddan Aram" (33:18b). The Redactor also added the word "again" to the P verse quoted above (35:9), thus rendering the P report of the divine appearance at Bethel an additional theophany to that of E.

c. Framing Devices. The originally separate texts are united into a sensible chronological flow by three literary frames. The first is the series of "These are the generations (Heb *tôlĕdōt*) of …" passages, which arrange the book of Genesis in an unbroken chronological flow of the generations from Adam to Joseph. The second is the "Pharaoh hardened his heart" element, which frames the accounts of the plagues, Exodus, and Red Sea events. The third is the series of chronological-geographical notices of the stations of Israel's journey from Egypt to the border of the promised land. Each of these three sets of framing passages derives from a preexisting text. The first is constructed from the "Book of Generations," an originally independent text, now cut and distributed through the book of Genesis. The second is derived from the wording of the P plagues account. And the third is derived from the "List of Stations," another originally independent text, now located in Numbers 33. Each of the three texts from which the editorial frames are constructed has the character of P material. The plagues text is itself part of P, and the other two resemble P in language and data. This indicates that the redactor of the final work favored P.

d. Texts Attributed to R. The special relationship between the redactor and P is confirmed by the presence of passages that are similar to P but which are supplemental and which appear to come from a later period, viz. the era of the Second Temple. For example, Num 15:1–31 and Numbers 29–30 have substantial terminology and interests in common with P, but these passages nonetheless duplicate much information that is already given in P. A major difference between these passages and the P texts that they overlap, however, is that the P texts emphasize the required presence of the tabernacle, as noted above, but these passages never mention the tabernacle. This fits with the assignment of these passages to the period of the Second Temple, which unlike its predecessor did not house the tabernacle, cherubs, and ark.

e. Degree of Completeness of Texts. When the strands of the interwoven source works are untwisted and separated from one another, neither J nor E can be read as a continuous story. Each is incomplete. However, J and E together, with only P separated from them, do form a nearly complete and continuous narrative. It is this combined narrative that P has been shown to follow. P, as well, when separated from the other sources is a continuous and nearly complete narrative, with only an occasional lacuna. This indicates that J and E were combined in a separate and earlier editorial process and that P was added to them in a subsequent editing. It also indicates that each of the respective editors of these stages had a different set of governing principles and methods. The redactor of JE must have cut substantial portions of each of the sources in order to produce the desired combined work. The redactor who merged JE with P appears to have taken enormous pains to retain as much of the source texts as possible without producing intolerable contradictions and repetitions. This person may well have been responsible for adding D in the same editorial enterprise. The separate stages of the editing of D (the law code, then the Josianic edition, then the exilic edition) would have been completed by the time of this redactor. The joining of D with JEP required little more than moving the accounts of the promotion of Joshua and the death of Moses to the end of Deuteronomy. Since the Torah that Ezra is reported to have read in Jerusalem in the 5th century B.C. appears to have been the complete Torah, including J, E, P, and D, Ezra himself or someone from his circle is a likely candidate to be the redactor of the Torah. Ezra is identified as a scribe, as one who was particularly concerned with the Torah, as an Aaronid priest (hence the sympathy with and similarity to P), and as the first person known to possess a scroll of the complete Torah.

The strength of the identification of the four major sources of the Torah is not any single one of the categories enumerated above. Rather, *it is the convergence of all of these bodies of evidence that is the most powerful argument for this view of the Pentateuch.*

C. Views of Authorship

When J, E, and P were joined with D, the report near the conclusion of Deuteronomy that Moses writes "this *tôrâ*" on a scroll was taken by readers thereafter to refer to the entire combined work. From the time of its promulgation under Ezra and Nehemiah, the full Torah was regarded as having been composed by Moses (Ezra 3:2; 7:6; Neh 1:7–9; 8:1, 14; 9:14; 10:30; 13:1).

Mosaic authorship came to be doubted on the basis of anachronisms and conflicts within the text. These problems were first expressed by medieval commentators. They included

1. In the Torah, Moses is spoken of in the third person.

2. The Torah includes an account of Moses' death (Deuteronomy 34).
3. It includes a list of names of Edomite kings who lived after Moses' death (Gen 36:31–39).
4. The text notes that "the Canaanite was then in the land" (Gen 12:6; 13:7). This reflects authorship at a time long after Moses when the Canaanites no longer were the dominant people in the land, with the author informing the audience of a prior state of affairs.
5. Deuteronomy reports that Moses spoke "across the Jordan" (Deut 1:1). This reflects authorship in Israel (i.e., on "this side" of the Jordan) with the author referring to Moses' location in Moab as being "across the Jordan."
6. The Torah reports that Moses "was very humble, more than every human on the face of the earth" (Num 12:3). It is difficult to picture the humblest man on earth writing these words.

The philosophers Hobbes and Spinoza wrote treatments gathering these and other problems into overall analyses of the Pentateuch, in both cases concluding that Moses did not write the Torah. This was followed by the recognition in subsequent works, especially that of R. Simon, that the Torah had to have been composed from sources. H. B. Witter, J. Astruc, and J. G. Eichhorn published the first attempts to distinguish these sources, identifying J and E. A short time later, the text that had been identified as E was itself seen to contain two sources: E and P. Deuteronomy was also recognized as an independent text. The essential identifications of each of these sources were accomplished and widely accepted by the end of the 19th century (though the refinement of these identifications down to each verse has continued to the present time). This work became known as "Higher Criticism." The next stage was the uncovering of the historical background of each source text. W. M. L. DeWette identified D with the "book of the *tôrâ*" from Josiah's reign. With this point as the historical fulcrum, a synthesis of the relative chronology with the historical conditions of major biblical periods was arrived at through Reuss, Graf, Vatke, and Wellhausen *(WPHI).* This synthesis became known as the "Documentary Hypothesis."

The Documentary Hypothesis has remained intact in its essentials, and a substantial body of evidence has been added in support of it, as described in the preceding section. The primary developments have been (a) improved understanding of the historical circumstances and concerns of the authors, (b) improved understanding of the editors and the editorial processes that brought the source texts together, and (c) in very recent scholarship a shift in the dating of P. The Graf-Wellhausen model regarded P as the latest of the sources, belonging to the exilic or postexilic period, and this view has dominated the consensus of scholarship for a century. In 1937, a preexilic provenance of P was proposed by Y. Kaufmann *(KRI*) as an alternative to the Graf-Wellhausen model, but Kaufmann's arguments failed to persuade the majority of biblical scholars in the subsequent period. However, as pointed out above, new data has gradually been assembled to cast serious doubt on the possibility that P was composed so late.

Other alternatives to the Documentary Hypothesis that have been raised thus far have not succeeded in replacing its premises. A number of Scandinavian scholars (particularly I. Engnell) argued that the Torah was not formed out of such specifically identifiable written compositions as J, E, P, and D, but rather was the end product of the merging of numerous orally developed compositions. The converging lines of evidence listed above are not accounted for in such a model.

Attention to oral composition of narrative in general has increased in biblical scholarship. It is not so much an alternative to analysis of the literary composition of the Torah as a separate and potentially complementary enterprise. There is value in attempts to learn something about orally conveyed stories and poems that influenced the authors of the source works or which were themselves those authors' sources. Such study has been necessarily hampered by the obvious difficulty in getting at communications that were made orally three millennia ago, but the growth of this area of concentration is potentially enriching. In any case, the possibility of discoveries in this area is essentially confined to the roots of J and E, not to P, D, or R. The *written* antecedents of P, D, and R (namely JE, the Deuteronomic law code, and the two poems now included in Deuteronomy 32 and 33) are visible and, for the far greater part, are sufficient as sources to account for the present state of these works without hypothesizing unknown orally transmitted sources as well. J, also, is based at least in part on written sources, as the J prose account of the events at the Red Sea in Exodus 14 has been shown to have drawn from the poetic Song of the Sea in

Exodus 15, and the J accounts of at least Jacob's four oldest sons appear to reflect acquaintance with the poetic Blessing of Jacob (Genesis 49).

Some scholars have argued for the relative lateness of J and/or E, or of individual texts that are usually reckoned to J or E (Van Seters 1975; Rendtorff 1977). Some have even questioned the existence of J or especially E as actual source texts. In light of the linguistic evidence for the relatively early dates of these texts, arguments for exilic or postexilic provenances cannot be substantiated. The bodies of evidence of consistent characteristics of these texts, as well as the evidence of historical linkages of each text to respective groups in the divided kingdoms of Israel and Judah, also weigh heavily against arguments for the lateness or nonexistence of J or E. E is frequently characterized as a fragmentary rather than a continuous source. However, this impression appears to be the result of two aspects of the redactor's treatment of E. First, the beginning of E has been eliminated, for the first text that alearly belongs to E does not appear until Genesis 20, and it presumes prior narrative. Second, while J is heavily focused upon the patriarchs and the patriarchal covenant, E is essentially focused on the age of Moses, the Exodus, and Sinai, and it does not even have a patriarchal covenant. As scholars have worked systematically through the Torah beginning with Genesis, the J text has appeared more complete and literarily dominant. Since the divine names are a primary means of separating J from E in Genesis but are less valuable after the name of God is revealed in E in Exodus 3, scholars have tended to ascribe doubtful texts after this point to J and in general to expect J 's completeness and dominance to persist. As the historical referents and other source indications listed above lead to ascribing more text to E, it appears that E is a well-represented source, originally continuous prior to its being combined with J, and that E and J are approximately equal in quantity of text now preserved in the Pentateuch.

The field of biblical studies known as form criticism has often been regarded as an alternative to analysis of the sources and redaction of the Pentateuch, but form criticism has more often been complementary to source criticism, especially in the work of the best known form critical scholar, H. Gunkel. Form-critical analysis endeavors to identify (1) the particular genres of some of the individual units of the work, and (2) the circumstances in which the individual units were produced, particularly aiming to determine the social settings in which the particular genres of literature were composed. When such difficult identifications are possible, they can be helpful contributions to the larger picture being described here. For example, G. von Rad (*PHOE*) endeavored to place the Pentateuchal credo (e.g., Deut 26:5–9) in its *Sitz im Leben* in the history of the religion of Israel and to relate its components to the formation of the larger work (which for von Rad was the Hexateuch rather than just the Pentateuch). G. E. Wright (1962) focused form-critically on the covenant litigation *(rîb)* as a prophetic genre and applied it to the song of Moses in Deuteronomy 32. The recognition of the *rîb* form also contributed to the understanding of the relationship between Ezekiel and P, as discussed above. Most helpfully, G. E. Mendenhall (1955) and K. Baltzer (1971) shed considerable light on Israelite covenant forms, particularly that of the Sinai covenant, through comparative analysis of the suzerainty treaties of the ANE. This was complemented by light shed on the Noahic and Abrahamic covenant forms by M. Weinfeld's comparative analysis of Near Eastern royal grants (1970).

D. Literary Qualities

Description, analysis, and appreciation of the literary artistry of the Torah have long been the province of the classroom, while historical, linguistic, and theological matters have dominated published research in the field. But in the 1970s and 1980s more formal scholarly attention to the aesthetic qualities of the Torah has grown substantially. Especially in the wake of E. Auerbach's comparative analysis *(Mimesis)*, there has been attention to the layered quality of Pentateuchal narrative, especially in J and E. The narrative is characterized to a great degree by economy of wording in the foreground depiction of persons, events, and especially dialogue, while being at the same time rich in background—as opposed to Homeric explicit depiction of thoughts and events in the foreground. The Pentateuchal narrative is filled with ambiguities, seemingly intended, which have been fodder for a rich variety of interpretation over centuries. For example, when Abraham tells his servants on the way to sacrifice Isaac, "*We* shall return to you," his wording may be taken as wishful thinking, faith, deception of the servants, deception of Isaac, or

any of a number of other possible explanations. The Torah's narrative is filled with such literary ambiguities, which do not have the appearance of inexpert composition but, quite the contrary, beckon for decipherment and interpretation.

The narrative is characterized by frequent occurrences of irony, particularly in the Jacob and Joseph sequences. For example, Jacob deceives his father regarding his brother Esau by using his brother's garment and the meat and skins of a goat, and subsequently Jacob himself is deceived by his sons regarding their brother Joseph, and they use their brother's garment and the blood of a goat. This pattern of deception and ironic recompense pervades these stories.

There appear to be two classes of character development in the Torah. Most persons, both major and minor figures in the work, are essentially constant personalities. Noah, Abraham, Sarah, Isaac, Aaron, and the Pharaoh do not grow and change dramatically from their first appearances in the narrative to their last. However, three figures in the Torah are pictured as changing through the course of events of their lives: Jacob, Joseph, and Moses. Jacob, the aggressive and deceiving youngster, becomes the passive old man. Joseph, the naive teenager who offends his family with his accounts of his dreams, becomes the adult who interprets the dreams of a king and shows understanding and forgiveness to the brothers who injured him. Most complex of all with regard to character development, Moses, who attempts in numerous ways to avoid the commission to free the Israelites, becomes a powerful and enigmatic combination of anger, compassion, discouragement, and optimism through years of functioning at the juncture of the divine and human realms.

Paronomasia is common, especially in J and E, though occasionally in other sources as well. The puns may be etiological, as in the account of Abraham's and Sarah's laughter (Heb *ṣḥq*) in episodes related to the birth of Isaac *(yiṣḥaq);* or they may be artistic bridges between the content and wording of the narrative, as when the golden calf account notes that Aaron had put the people in disarray, which in Hebrew is *pr‘h,* an apparent play on the word Pharaoh, which is consonantally the same.

Perhaps most striking among the literary qualities of the Torah is the extent to which it is both a unity and a collection of small units. The units or episodes are united (a) by common themes (especially covenant), (b) by falling into a chronological flow of generations through history, and (c) by editorial connecting mechanisms (such as the book of generations, and the list of stations of the journey from Sinai to the promised land). The result is that the Torah can be read as individual stories or as a continuous, meaningful narrative with pervasive themes.

E. Historical Qualities

Relatively little of the Torah's story can be verified historically. Sufficient evidence from extrabiblical sources and archaeological artifacts is lacking to make judgments for or against historical veracity. For the book of Genesis, the primeval history is barely capable of being considered from the point of view of historicity, given its conception of a finite universe surrounded by water, a talking snake, "sons of God(s)" having relations with human women, a box (ark) containing the whole of animal life, and simultaneous creation of languages. The patriarchal narrative, involving the movements of a single nomadic family across the ANE, is unlikely to find specific verification. None of the patriarchs or their spouses or their children are mentioned in any extrabiblical source. The stories have been recognized to reflect general familiarity with the behavior of some peoples of the general area in the general period of the patriarchs (the first half of the 2d millennium B.C.), but the parallels are relatively few and are unspecific in relation to actual biblical persons and events. Even the best known parallels must be considered cautiously. For example, the case of a husband adopting his wife as a sister in Hurrian texts provides an interesting parallel to the wife/sister stories of Abraham-Sarah and Isaac-Rebekah, but the case has been challenged as being of limited help in forming judgments about how widespread the practice was and about the degree of historicity of the biblical accounts. On the other side, cases of anachronisms in this narrative are pointed out which challenge the historicity of some episodes, a frequently mentioned example being the issue of the domestication of the camel in this early period.

For the Egypt experience and Exodus, too, sources are lacking for either verification or refutation. The period of Hyksos rule in Egypt is frequently cited as providing a suitable setting for the arrival of the

"Israelites" (the Jacob-Joseph migration), followed by enslavement in the period after the expulsion of the Hyksos by a Pharaoh "who did not know Joseph." Even if suitable, the scenario is without evidence pointing to it. The relationship between *ʿapiru* and "Hebrew" slaves continues to be argued, and its value, too, is to identify a possible historical setting for the enslavement, not a specific proof. The Egyptian names associated with Israel's early priesthood (e.g., Moses, Phinehas) argue for the historicity of some Egyptian experience, as does the nature of the tradition itself, i.e., a people would be more likely to invent a story of being descended from gods or kings than from slaves. On the other hand, the specific story of the naming of Moses erroneously takes his name as Hebrew and ascribes to an Egyptian princess a facility with Hebrew etymology.

The relatively extreme apologetics that have been raised to account for the miraculous events of the plagues and Red Sea have been generally groundless speculation—eclipses, red clay, tides, unusual planetary events—and have proven unhelpful to historical scholarship. In the case of the Red Sea events, we can trace the development of the Pentateuchal account from its earliest version, the Song of the Sea, through the J version, to the P version. The Song of the Sea appears to have been a source that the J author used in constructing his account, and J and the Song of the Sea were in turn sources for the P author. We can therefore observe the additions made to the story over a span of centuries. The earliest version has no splitting of the sea and no passage of the Israelites through it. Its poetry has been literalized in the prose of J and expanded in P. The centrality of the event in the early poetry indicates the likelihood of some antecedent historical event involving a redeemed Israelite group and a disaster upon an Egyptian force at some body of water, but reconstruction beyond these limits is precarious. The identification of the body of water as the "Reed" sea is also precarious to the extent that, though it is close to the meaning of *sûp*, it hypothesizes a lake by that name to the N of the western arm of the Red Sea. No lake by that name is known, and the biblical texts clearly understand the event to take place on the body of water known as the Red Sea, for the name *sûp* is applied to the eastern arm of the Sea as well (Num 14:25; 21:4). See also RED SEA.

The specific mountain known as Sinai or Horeb remains unidentified, and no extrabiblical sources have shed light on the events associated with it. The polemical character of the golden calf account in light of the calves of Jeroboam compromises its historicity, as the entire matter of relations among the priestly houses compromises the polemical accounts of Moses and Aaron in E, P, and D. The population figures of the Israelites in these accounts are routinely questioned as geographically impossible. Even the depiction of all of the tribes of Israel sharing the Egyptian and wilderness experience is subject to doubt. The identification of Moses' father-in-law as a Midianite priest in both of the earliest sources (J and E), as well as the anti-Midianite polemic of P, keep the Midianite or Kenite hypothesis recurrent and viable in scholarship.

In sum, one can speak of an historical core of persons and events in the patriarchal and Mosaic ages as recounted in these books, with historical certainty diminishing as one focuses with ever more specificity on individual actions and details in the narrative.

F. Theological Qualities

The Torah does not develop a systematic theology, neither in the work as a whole nor in any of the component works. Theological matters are conveyed through stories and laws, not through expressed speculation. The deity in the Torah is a God who acts and a God who speaks but is at the same time essentially a hidden God. He is known through his actions in history. He reveals aspects of his personality in words, e.g., "merciful and gracious, long-forbearing and abundant in faithfulness and truth" (Exod 34:6). But Yahweh's essence remains unknown, as do his ultimate purposes.

The Torah is monotheistic. It pictures Yahweh as sole creator of the universe. It does not personify natural forces as deities. There are occasional uncertainties in its language, as in the first commandment according to J, P, and D, which forbids worshipping other gods. This wording is taken by some to mean that the existence of other gods is allowed for, but it is equally explainable as reflecting qualities of the language itself, i.e., it is simply in the nature of language that it is difficult to formulate a command to be monotheistic without referring to the deities who are excluded. Similarly, the reference in the Exodus

account to Yahweh's rendering judgments on the gods of Egypt does not necessarily mean that the author imagined such deities as existing. The short story of the "sons of God(s)" in Genesis 6 seems to be a very likely exception to the Torah's monotheism, better recognized and left open to further analysis than denied or interpreted away. The matter of angels is more complicated, as it is not entirely clear what each author (of J and E, not P or D) pictures. The accounts in Genesis 18–19 (J) and 32:25–33 (E) both picture a man seeing an angel but speaking as if he has dealt directly with God. It is therefore unclear to what extent an angel is conceived of as an independent being or what its powers are, and so one cannot say that angels as depicted in the Torah are incompatible with monotheism. See also ANGELS.

All of the Pentateuchal sources depict the deity as male, with a masculine name, spoken of in masculine grammatical terms. Even this is enigmatic, nonetheless, because no female consort is conceived of for Yahweh in these books, and the worship of a goddess in various forms is forbidden (Exod 34:13; Deut 7:5; 12:3; 16:21), and so the masculinity of the deity where there is no feminine in existence is of uncertain meaning at best.

Partly as a result of the combination of the sources and partly as a result of the nature of the religion of Israel, the Torah pictures the deity possessing paradoxical combinations of qualities. Yahweh is both the God of the universe and a personal God, both the creator of the heavens and earth and the God who takes a personal interest in individuals and families. Similarly, Yahweh is both just and merciful, angry and forgiving; and the tension between these two conflicting divine attributes pervades the narrative of the divine-human relations.

The relationship between Yahweh and humans is conceived in the Torah in terms of covenant. The similarity of the three Pentateuchal covenants—Noahic, Abrahamic, Israelite—to ANE treaty and grant documents indicates that divine-human relations were conceived of in legal, contractual terms. The deity is pictured as entering into a defined relationship with humans, with expectations from each of the parties. The entire Pentateuchal law and most of the biblical narrative are bound to this covenant relationship.

G. Conclusion

The Torah is the core work of the Bible. It is a work of impressive literary artistry in its broad scope and in its small component stories. It possesses artistry of form and depth of content, housing the ideas and values of a people over centuries. Not the work of any one person, it reflects a rare event in literary history, a literary partnership in which the works of many individuals were brought together into a meaningful whole that is more than the sum of its parts. The Torah is quintessentially a work of combination. It is a single work, a collection of five books, and an editorially brilliant merging of sources. It combines history and literature. It merges prose, poetry, and law. It is concerned with God, with humankind, and with a few individuals. It contains stories of individual bonds and conflicts within families, and it recounts events involving nations. "The generations of the heavens and the earth," it sets a record of human history against a cosmic background and relates it to the divine presence.

TOU (PERSON) [Heb *tōʿû* (תֹּעוּ)]. See TOI (PERSON).

TOUBIANI [Gk *Toubianoi* (Τουβιανοι)]. A group of Jews Judas Maccabeus encountered (2 Macc 12:17) in his search for an opponent named Timothy, whose identity is unclear, since the Ammonite Timothy (against whom Judas had fought several times) was reported killed in 2 Macc 10:37. The author of 2 Maccabees had Judas make a futile 95-mile journey from the region of Caspin (or Chaspho) and then return to attack Timothy at Carnaim, near Chaspho. Goldstein (*2 Maccabees* AB, 440) points out the unlikelihood of this sequence of events.

Who, then, are the Toubiani? Scholars usually assume that they are related to the people of Tob (Gk *toubion*), Gileadite Jews slaughtered en masse by their gentile neighbors (1 Macc 5:13). See TOB (PLACE). Goldstein (ibid., 439–40) argues that the Toubiani (or Tubiakenoi as he thinks the name should be spelled) designated Tobiad troops relocated from their original station S of the Jabbok after the surrender (but not total annihilation) mentioned in 1 Macc 5:13. While one cannot rule out the possibility that the groups were related but not identical, Goldstein's suggestion probably points in the right direction, even if his textual reading is not certain. He also argues that they were stationed in a "palisaded camp" (Gk *charaka*), not in "Charax" (or Dathema). Since the location of Dathema and its relationship to Charax remain debated, one can do no more than conclude that the location of the Toubiani must remain open, though it likely lay in Gilead, not 95 miles S.

TOWERS. The term tower, as it is used in biblical, historical, and archaeological literature pertaining to the Near East, describes structures with a wide array of functions.

In the OT the Hebrew word most commonly translated as "tower" is *migdāl.* In Greek the word is *purgos,* and in Arabic *būrj.* The Arabic word *rujm* can refer to a tower, tumulus, or stone cairn. In some cases *migdāl* occurs as part of a place-name or is used in an allegorical sense; in most cases it refers to specific stone or brick structures in both towns and rural settings.

Circular or square stone structures, often less than 8 m in diameter, are scattered over huge expanses of Palestine, the Transjordanian highlands, and N Arabia. Long before recent intensive surveys began to record such sites by the hundreds, archaeologists and travelers had noticed that towerlike structures, some apparently ancient, dotted the landscape. These observers offered a wide array of possible interpretations for the structures' functions.

Archaeologists have commonly interpreted these as military watchtowers or signal stations, and many of them could indeed have had this function. Others may well be agricultural outbuildings, storage caches, farmhouses, field clearances, route markers, funerary *tumuli,* or memorial stone heaps.

A. Agricultural Field Buildings, Farm Houses, and Field Clearances.

Modern examples suggest that the most common function for isolated rural towers was agricultural. Like the field towers of modern Palestine, towers mentioned in biblical texts were closely associated with fields, orchards, vineyards, and winepresses (Isa 5:2; 2 Chr 26:10; Mark 12:1; Matt 21:33). In this context an alternative to a "tower" was often a "hut" or "booth" (Heb *sukkâ;* Isa 1:8).

The most common function of these towers may have been to store agricultural equipment and produce, to provide a lookout for farmers protecting their crops from thieves or animals, to house farmers temporarily while they worked in fields at a distance from their home villages, and only incidentally to hide villagers during times of social conflict (Applebaum et al. 1978: 95–97; Dalman 1935: 317–18; Doughty 1936: 329). Agricultural outbuildings, including watchtowers and corbeled huts, are still common in Palestine and other parts of the Mediterranean basin.

Many small towers on the Transjordanian plateau show no sign of having had doorways. A common type is a circle 3–4 m in diameter with a single crosswall covered by stone slabs to create a platform about a meter above the present surface. Possibly these are the foundations of grain silos or drying platforms. In

ancient Palestine, as in Egypt, silos were typically beehivelike structures, circular in plan, with domed ceilings and with interior crosswalls to raise the floor above the damp ground and to deny access to rodents (Currid 1985). Unfortunately, biblical references to silos or barns (Deut 28:8; Prov 3:10; Jer 50:26; Joel 1:17; Hag 2:19; Matt 3:12; 13:30; Luke 12:16–18) are not informative of their shape or construction, and at present we cannot ascribe this function to any of the ancient towers.

Some small rural towers probably had pastoral functions. Towers allowed shepherds to watch over their flocks and herds (2 Chr 26:10). In the past, nomadic herders may also have employed towers along their migration routes (as their modern counterparts use stone cairns) as storage caches (Doughty 1936: 323; Evenari et al. 1958, pl. 48b; Hole 1978: 153). These caches of food or valuables permit modern bedouin on the march to retrieve goods they are unable to carry. An inscription, probably dating to the 3d century A.D., attests to use of one round tower in N Arabia as a storehouse (Winnett and Reed 1973: 56).

In many stony parts of the world, massive stone "towers" are simply houses. In the Palestinian hills, stone is not only the most readily available building material, but sometimes occurs in natural blocks that require no dressing (Glueck 1939: 167). We see examples of isolated stone houses, which some of the towers in Palestine and Transjordan could resemble, throughout the Mediterranean basin. The best examples are the *trulli* and *caselle* of S Italy, with their corbeled, conical domes of stone. *Chipuro,* one of the traditional Italian words for *trullo,* has a Greek origin meaning "guardian of the cultivated field" (Branch 1966: 96), and may once have referred to outbuildings.

The most common stone *tumuli* in Palestine are simple stone heaps. Some of these could be ruined towers, but in agricultural areas most are surely repositories of stones cleared from the fields (Isa 5:2; Doughty 1936: 61; Ron 1966: 48–49). A low wall ringing the stone heap prevented dispersal of stones.

B. Route Markers, Tombs, and Memorials

Both stone heaps and towers sometimes served to mark roads in the desert. The usual biblical word for these heaps was *siyun.* In Jer 31:21 the "waymarks" mark the route of exile. In Arabic, *ʿalam* is a cairn used to mark the road for travelers and caravans (Doughty 1936: 96, 117, 403, 478; Oxtoby 1968: 33–34). Such waymarkers are necessary where there is only an indistinct track across the desert. They also serve to mark the locations of wells and pilgrim stations along the way. Usually they are simple heaps of stones, somewhat conical in shape, and 3–4 m in height.

Stone cairns often served as burial monuments (Gen 35:20; Isa 65:4; 2 Kgs 23:17; Ezek 39:15). Arab *rijjūm* likewise served as bedouin burial places (Doughty 1936). Cairns called *mantār* in Arabic were the "hasty graves of buried pilgrim 'witnesses' " (Doughty 1936: 117). Pre-Islamic burial cairns commonly exhibit Safaitic or Thamudic inscriptions (Harding 1953). Most are simple heaps of stones the living could go to slaughter sacrifices to the deceased, to pray, or to weep (Doughty 1936: 282). Some large *rijjūm* with central cists, and beehive-shaped structures in Sinai called *namūs* (pl. *nawamīs*), appear to have been barrows and tombs, some dating as early as the 4th millennium B.C. (Doughty 1936: 431–32). Some large earth-covered *tumuli,* similar in form to those of Thessaly and Anatolia, appear to be early Iron Age funerary monuments (Albright 1923; Amiran 1958).

Many *rijjum* apparently mark places where passersby threw stones to honor a deceased person, to mark the site of a battle, or for some other ideological reason (Buckingham 1825: 157; Hill 1891: 263; Hole 1978: 154–55; Lawrence 1926: 79). A number of biblical words for monuments could refer to such cairns (2 Kgs 23:17; 1 Sam 15:12; 2 Sam 18:18; 1 Chr 18:3; Isa 56:5).

C. Defensive Towers

A common interpretation of stone towers is that they were part of a military defense and communications system (e.g., Gese 1958; Hentschke 1960). In biblical passages towers are often isolated outposts where guards could watch for the approach of enemies (2 Kgs 17:9; 2 Chr 14:7; 20:24; 26:9; Isa 21:12). A less formalized military function for any *rujm* with a good view of the countryside was to permit herders or scouts to watch for the approach of enemy riders without fear of showing their silhouettes on the horizon (Musil 1927: 88–89, 138, 221).

Some towers served as fire signals in a chain of communication stations. Pre-Islamic poetry occasionally refers to cairns that are "surmounted by a beacon fire" (ar-Rashid 1980: 147), and the Arabic

word for cairn *(ʿalam)* sometimes referred to a lighthouse or fire signal *(al-mantār).* Frontinus (1st century A.D.) noted that ancient Arabs employed smoke and fire signals to communicate enemy troop movements (*Strategemata* 2.5.16). From biblical through Ottoman times some towers served as police posts along roads (Burckhardt 1829: 60, 109, 129; Doughty 1936: 556–57).

Migdāl sometimes refers clearly to towers in the fortifications of a town or city (2 Kgs 14:7; 17:9; 2 Chr 14:6; 26:9, 15; Neh 3:1), to a stronghold within a town (Judg 9:51), or to isolated fortresses (2 Chr 27:4), also known by the word *mĕṣād* (1 Sam 23:14, 19, 29; Jer 48:41). Archaeologists have identified small hilltop forts built during the Iron Age in Palestine, the Negeb, and Sinai that may have numbered among the last (Mazar 1982). Later functional equivalents of these forts are probably the Roman *castella* (e.g., *ʿEn Boqeq,* Gichon 1973), usually small square forts with corner towers.

Other military terms in the biblical texts to describe towers include *bahin,* "siege tower" (Isa 23:13); *pinnâ,* "battlement" (Zeph 1:16; 3:6); and *miśgab,* "stronghold" (2 Sam 22:3; Ps 18:2).

D. Place Names and Temple Towers

The word *migdāl* occurred in many biblical place names that may refer to fortresses, fortified towns, or towns dominated by a towered temple (e.g., *Migdol,* Ezek 29:10; 30:6; *Migdal-Shechem,* Judg 9:46–49; *Migdal-Eder,* Gen 35:21; *Migdal-el,* Josh 19:38; *Migdal-gad,* Josh 15:37). Among the former we should probably include one or more fortresses along the border of Egypt and many fortified Asiatic settlements that appear in art of the Egyptian New Kingdom.

A number of towns with names incorporating the word *migdāl* may owe their names to temples that were their principal landmarks during the MB and LB ages. Prominent temples with thick walls and a pair of towers flanking the doorway have appeared in excavations at Shechem and several other sites in Palestine. While modern archaeologists often label some of these buildings "migdal temples," they are not necessarily the ones that ancient Hebrews meant by *migdāl.* Only the *Migdal-Shechem* has good support from both biblical and archaeological evidence (Wright 1965: 123–28).

The "tower of Babel" (Gen 11:4–5) probably represents another case where *migdāl* refers to a temple. There is little doubt that the account recalls the ziggurat temples of Babylonia. See BABEL (PLACE).

TOWN CLERK. See CITY AUTHORITIES.

TRACHONITIS (PLACE) [Gk *Trachōnitis* (Τραχωνιτις)]. A region in the N Transjordan over which Herod Philip was tetrarch (Luke 3:1). In pre-Hellenistic times the region of Trachonitis was a part of the area known as Bashan. See BASHAN (PLACE). This region in the S part of modern Syria is also known as the Hauran.

This region was an administrative district characterized by its unique topography. The name Trachonitis has its etymological origins in the term Trachones, meaning "rough rocky areas." Strabo first uses this term to describe two areas in Syria (16.2.16–20). In S Syria, el-Leja and es-Safa fit this topographical description. These two largest black basalt lava flows cover hundreds of square miles and stand as much as fifty feet above the surrounding plain. The rocky area of es-Safa is quite inhospitable, and has not eroded to form any significant topsoil for vegetation to grow in. El-Leja, located closer to Damascus and the better-watered regions nearer the Mediterranean, is not as inhospitable as es-Safa. This lava flow issued from volcanoes of the Jebel Druze and flowed NW. In places, there are springs and sufficient topsoil in which to grow crops where eroded material has washed into depressions. This rugged country was the home of a sparse population of which little is known prior to the Greeks. The Ptolemaic administrative district of Trachonitis was one of three located NE of the Yarmuk River. This district included the Leja and the rugged plains around it. In the first century A.D., Josephus describes the boundaries of Trachonitis as being adjacent to Paneas at the base of Mt. Hermon in the NW, Gaulanitis in the W, Batanaea and Auranitis in the S, and the N boundary lying 25 miles S of Damascus (*Ant* 15.344ff).

Nabatean Arabs and other Arabs increasingly occupied the area while it was considered to be under Ptolemaic control. Nabatean inscriptions begin to appear in the area ca. 100 B.C. and continue through the time that the Romans incorporated the region into the province of Arabia. The Romans claimed control of the area under Pompey in 64 B.C., but held rather tenuous control through client rulers. Zenodorus ruled much of the area E of the Sea of Galilee ca. 30 B.C., including Trachonitis, following the settlement of Octavian. Under the rule of Zenodorus, and apparently with his encouragement, the people of the area raided the Damascenes and disrupted the S trade routes into the city. They then made their escape into their rugged homeland, avoiding reprisals. Caesar Augustus responded to this disruption of the peace by assigning his loyal and powerful client-king, Herod the Great, the task of controlling these peoples. Herod, in ca. 23 B.C., added Trachonitis to the territory he controlled. According to Josephus, *razias* (raids) were considered necessary for survival among the inhabitants of the region. In order to reduce the Trachonians' need to raid others in order to survive, Herod promoted agriculture and eventually settled a colony of 3,000 Idumeans in the area (ca. 12 B.C.). Nearby, he also settled a military colony of Jews from Babylonia at Bathyra in Batanaea to help maintain the *Pax Romana.* Nonetheless, in 9 B.C., while Herod was away in Rome patching up relations with his oldest sons, the people of Trachonitis rose in revolt and had to be violently suppressed. When Herod the Great died in 4 B.C., his territory E of the Sea of Galilee was bequeathed to Herod Philip (*Ant* 17.319). Philip was affirmed as tetrarch of this region, including Trachonitis, by Augustus. Philip's realm was occupied by a mixed population of Jews, Syrians, and Arabs (*JW* 3.58). His reign was mild and peaceful, and he promoted a prosperous province loyal to Rome until his death in A.D. 34 (Strabo 16.2.20). Philo (*Gaium*, 41) used the term Trachonitis to refer to all of Philip's realm, but this usage is not adopted by Josephus or other ancient authors.

Upon Philip's death, control of Trachonitis temporarily reverted to the governor of Syria while a successor was chosen (*Ant* 18.106). In A.D. 38, Gaius Caligula granted control of Trachonitis and the

surrounding districts to Agrippa I, the grandson of Herod the Great. He followed Philip's example of maintaining peace in the area until his death in A.D. 44. Trachonitis once again reverted to the supervision of the governor of Syria until Agrippa II was old enough to follow in his family's footsteps as a loyal Roman client-ruler in A.D. 53. Under Agrippa II, the office of general of the nomads helped to maintain peaceful relations in the arid regions between nomads and sedentary agriculturalists. Agrippa II continued to control Trachonitis after the Jewish revolt, until ca. A.D. 98. The region of Trachonitis was then absorbed into the province of Syria until A.D. 295, when it became a part of the province of Arabia. Trachonitis reached the apogee of its prosperity in the early years of the 2d century A.D. Evidence of the settlement of the region is seen in the impressive basalt buildings that remain, similar to those of Bosra and Umm el-Jimmal. Early churches of this area are similarly built. Important archaeological sites in Trachonitis include Si and Qanawat. Philip the Arab, who became emperor of Rome in the mid-3d century, came from Shahba, a city of Trachonitis on the W slopes of Jebel Druze. Early archaeological surveys of the region were conducted by numerous travelers, such as Gotleib Schumacher. The most thorough recent work is that conducted by J.-M. Dentzer.

TRADE AND COMMERCE. Trade is the exchange of goods, especially the buying and selling of commodities. Commerce connotes trade on a larger scale involving transportation of the goods between places. This entry consists of two articles that survey trade and commerce in the biblical world of the ANE and E Mediterranean: the first focuses on the pre-Hellenistic ANE, and the second focuses on the period of the Roman empire.

D. Attitudes Toward Trade

A. Meaning of Trade

Anthropologists suggest that trade is a mechanism by which new ideas diffuse among cultures, and it has the advantage for modern students of sometimes leaving traces in the archaeological record. The ancients participated in trade in order to supplement the goods that were available in their immediate environment, and most probably they did so in order to pursue economic gain in a broad sense (Adams 1974). Though trade contact is frequently an attractive hypothesis for scholars trying to explain change in

ancient societies, it does not seem that what we would regard as international trade is really very important economically in terms of volume of goods exchanged or the value of the goods (Leemans 1977). Most ANE economies were creating many more goods and services at home than they were importing.

It is not always easy to distinguish trade from robbery on the one hand and diplomacy on the other. Vagabonds who used force to wrench goods from travelers might be sanctioned by some prince, while tribute paid by a weak king to a great one might be an effort to prevent robbery. Also, diplomats represented the presents they delivered as freewill gifts, but they fully expected them to be matched by the receiver. Though there is much ANE evidence for calmer, more day-to-day exchanges, goods changed hands in all these situations.

1. Money. In early periods, silver was widely used as a form of money, supplemented in Mesopotamia by grain and sometimes other staples. In the Middle Babylonian period (1360–1155 B.C.E.), gold appears to have been the standard of value (Edzard 1960). Decisions about what monies to use probably were not made by the governments involved but evolved slowly over time from custom and the availability of the precious goods that constituted the standard. Coinage did not arise until the middle of the first millennium B.C.E. in Asia Minor, but before that time small bits of silver were broken off and weighed for each transaction (Eilers 1957).

2. Markets. There is controversy about the existence of markets in the ANE, which derives from Herodotus' reported statement of Cyrus' that implies that the Persians have no markets, or rather, no places for cheating other people, as the Greeks did (Hdt. 1.153). But recent study suggests that although Near Eastern cities usually do not have large open places within them, they do have price-setting markets which may have come together at city gates or more informally on the outskirts of towns (Röllig 1976; cf. 2 Kgs 7:1). The quay, Akk *kārum,* was frequently a focus of trade, since it was where foreign goods were first unloaded and sold.

Market conditions in Egypt are harder to gauge, because so few cities have been excavated. But there is an important theory that argues that the unification of the Egyptian state around 3100 B.C.E. occurred as a response to the interest of people from Mesopotamia in the gold deposits in Egypt's E desert. The rulers of nomes or counties in S Egypt may have believed that they needed to control the whole river in order to ensure that others would not be able to deprive them of access to the gold finds. We see in the Gerzean and Early Dynastic periods in Egypt, about 3500 to 2686 B.C.E., artistic affinities to Mesopotamia that may point to the existence and importance of this trade, though those affinities die out after the first two Egyptian dynasties (Trigger 1983: 31–33, 37–40, 60).

3. Resources and Needs. Mesopotamia is poor in mineral resources but in antiquity was rich in agricultural products. Its exports probably are mostly invisible to us now, because wool and grain decay (Crawford 1973). The rivers and canals of the region made transportation cheap, though, and it is likely that even bulky goods could be moved some distance from their place of production.

Mesopotamia imported precious and semiprecious stones from the E, notably lapis lazuli, a blue stone which comes from Baluchistan in Afghanistan and was beloved for cylinder seals and pendants. Also, woods of various kinds were imported, usually from the Iranian mountains, and sometimes from the W, including Lebanon. The origin of the tin that was alloyed with copper to make bronze in Mesopotamia is still unclear, but tin usually reached Mesopotamia from the E, implying sources in Iran, while the copper may have come from Asia Minor and up the Persian Gulf (Muhly 1973).

Syria and Palestine are relatively poor in mineral resources and probably imported most semiprecious stones from Asia Minor and elsewhere. The ivory in which reliefs were carved may have come from local elephants; we have references to them from as recently as the 8th century B.C.E. Timber was available from stands in what is now Lebanon, which were important in Solomon's building efforts (1 Kgs 5). It is clear that most of the Near East at one time or another turned to these stands for lumber, termed in the Bible the "cedars of Lebanon," a symbol of strength, as in Judg 9:15 and Isa 2:13. Over the course of the millennia the stands were not replenished except by natural processes, which eventually were insufficient to keep up with demand (Klengel 1967).

Egypt, like Mesopotamia, is itself poor in mineral resources, but it is near gold deposits in its E desert and the sources of other exotic products in sub-Saharan Africa. Egyptians were probably dependent upon resinous products in Syria for some of their embalming needs.

Along with trade in material goods, there was doubtless early trade in human beings. Although slavery did not supply a major portion of the labor force in any ANE society, the writing of the word for slave in Sumerian indicates that Mesopotamians thought of slaves as men originally coming from foreign lands.

B. Trade in the 3d and 2d Millennia B.C.E.

1. Early Trade. Trade is early attested in the Near East by obsidian blades found in Neolithic village sites; obsidian, a glass formed in volcanoes, was valued for knives and was available from the mountains in what is now Turkey. The trade in obsidian may have been one in which people in one village sent the item on to those in another; it may not have involved any big investment in time on anyone's part. Çatal Hüyük in S Turkey was a center for the trade in obsidian in the 6th millennium B.C.E. The trade may have been important in offering a familiar highway for the exchange of information about the domestication of plants and animals. Already in the Ubaid Period in S Mesopotamia, about 5500–3500 B.C.E., there are bits of lapis lazuli, showing some sort of contact with the E (*RLA* 4: 77).

Egypt had a close relationship with the town of Byblos on the Lebanese coast from Early Dynastic times, 3100–2868 B.C.E. Fancy Egyptian objects are found there, and the interest for the Egyptians was the timber that the hinterland of Byblos produced. One may assume that this contact was largely by sea, and it continued whenever Egypt was unified and powerful (*CAH* 1/2: 343–51).

Ebla in N Syria (2400–2200 B.C.E.) shows a lively trade with the E, but there is also a cartouche, an oval ornamental frame with the sovereign's name, of Pepy II of Egypt (about 2200 B.C.E.), indicating connections with Egypt. The city of Mari down the Euphrates appears frequently in the Ebla texts, and there are indications that Ebla may have dominated Mari economically (Archi 1981: 154; Pettinato 1977).

2. Persian Gulf Trade. From the OAkk period (2334–2193 B.C.E.), there are indications that there was a seaborne trade between the Indus Valley civilization and Mesopotamia through the Persian Gulf and also probably an overland trade through what is now Iran. The remains of the trade are curiously one-sided; Indian seals are found in Mesopotamia, but nothing much Mesopotamian is found in India. In Mesopotamian texts there is mention of two ports or regions from which exotic goods were to be imported called Magan and Meluhha. Various identifications have been proposed, but it appears that in early periods these places are to be sought along the Persian Gulf and the Indian Ocean (During-Caspers 1972). But in the 1st millennium B.C.E., it is clear that Magan and Meluhha refer to Egypt and Sudan (*RGTC* 5: 182).

In the OB period (2004–1595 B.C.E.), we can trace the activities of seafaring merchants from Ur, the southernmost important Mesopotamian city. They ventured out to an island called Dilmun, which was probably Failaka near Kuwait or maybe Bahrain further down the gulf. There the merchants went with textiles to trade for copper (Oppenheim 1954). In the Middle Babylonian period (1360–1155 B.C.E.), the Persian Gulf trade picks up again, and there are letters from Dilmun in the Persian Gulf found at Nippur in central Mesopotamia (*RLA* 4: 87; *RGTC* 5: 182, 195, 261).

3. Importing Mesopotamian Luxury Goods. The trade in precious items can be followed through several centuries in administrative documents from S Mesopotamia, especially the city of Umma, which may have been in a good position to be a transshipment point for goods coming down from the Iranian hills. In the OAkk period (2334–2193 B.C.E.), we have texts that show that some of this trade was in the hands of merchants who may have worked as acquisitions agents for the government, but who also may have had commissions from individuals to buy goods. We cannot tell from the texts if these merchants traveled, but someone must have traveled and brought foreign goods to markets in Umma, since they are available there (Foster 1977).

A continuation of this trade can be seen in the series of texts from the Ur III period (2112–2004 B.C.E.) which record, along with a great many goods that were locally produced, many that came from abroad. The interesting thing about these texts is that they recorded the prices of everything purchased in weights of silver. They also recorded the prices of all the goods that were regarded as capital; that is, goods that

were sold to get silver to pay for the acquisitions. This is the world's earliest price series, and over the 15 years that it covers, it shows that this part of the S Mesopotamian economy experienced remarkable economic stability.

The capital that the Umma merchants were given, usually by city government officials, included silver, fish, leather products, grains, wools, and occasionally dates. The merchants acquired alkalies, bitumens and gypsums, fruits, metals, oils, reed, resins and spices, tanning agents, timber, and vegetables, and less frequently they received wools and grains. The metals bought included lead, gold, and copper (Snell 1977; 1982: 114–81, 208–16).

The fact that the texts recorded prices shows explicitly that the government did not control all aspects of the economy and had to spend its capital to get the goods it needed. Though collections of legal instances, like Hammurapi's so-called code, sometimes include lists of prices, there is no evidence that these tariffs were ever enforced; like the other stipulations in the legal texts, the price lists are probably meant only to show what was regarded as a fair and just price for commodities and services (Snell 1982: 204–7).

Though the merchants in the Ur III Umma texts probably worked for the state, they may also have had private commissions. The status of the merchants themselves is not known, but it is probably wrong to draw a clear official-private dichotomy in the ancient world. We would not have these texts if the merchants had not been supplying government bureaus (Snell 1982; 1988).

Similar long-distance trade interests can be traced in texts from the OB period (2004–1595 B.C.E.). Precious stones and metals, perfumes, and drugs were the most important things imported in the period, and Mesopotamia continued to export produce, leather, and oils, and to transship tin. There is evidence of these kinds of activities in several OB cities, including Ur, Larsa, Sippar, and Babylon; up the Euphrates near what is now the Syrian-Iraqi border, the city of Mari was an important center for importing tin and copper. It is likely that the last king of Larsa, Rim-Sin (1822–1763 B.C.E.), suppressed the trade or at least stepped up control in the latter years of his reign (Leemans 1950; 1960).

Again in the NB period (627–539 B.C.E.), there was a similar network of trade operating (Oppenheim 1967). Goods imported included copper, dye, tin, lapis lazuli, alum from Egypt, iron from Lebanon and from Ionia *(Yamana),* honey, wine, resins, and, oddly enough, wool (perhaps really cotton or even silk) and linen. The goods may have been brought down the Euphrates from Carchemish, and the few relevant texts come from Uruk in S Mesopotamia. The merchants who bought the goods were working not only for temples but also for private individuals. The capital goods for these operations were those that Mesopotamia produced in abundance—grain and wool.

4. Old Assyrian Trade. The best documented trade is that of the Old Assyrian period. Merchants from the N Mesopotamian city of Assur imported tin, probably from Iran, and transshipped it to Asia Minor, where locals combined the tin with copper to make bronze. The merchants also exported textiles from Mesopotamia and came back with copper and also huge profits in gold, sometimes as much as 100 percent on a single trip, which took a couple of months. We know about the trade because of large caches of cuneiform texts consisting of more than 16,000 documents that were kept by the leading merchants who lived in Asia Minor. The merchants may have intended eventually to return home, but their livelihood depended on the Asia Minor trade. Many intermarried with the locals, and all depended on the protection of local magnates to do their business (Garelli 1963; Larsen 1967; Veenhof 1972).

The trade was organized by a group of merchants who called themselves the *kārum,* "the quay" par excellence. Money was accumulated in the Assyrian capital, Assur, from investors. It was entrusted to a traveling agent, who received one third of the profit. The agent carried his capital in a sack as he moved his goods by donkey to Anatolia, usually to Kaneš, the most important Anatolian trade center. Note the association of sacks (Heb *ṣĕrōr*) and merchant ventures in Prov 7:20.

The Old Assyrian trade lasted from about 1900 to about 1820 B.C.E., and we can trace three generations of families involved in it; the trade was later resumed for a generation between about 1780 and 1730 B.C.E. The texts are dated in the Assyrian system of naming the year after an official; we have more than 80 such dates, but we do not know the order of the officials (*RLA* 4: 92). Still, the texts give fascinating glimpses of life in the Assyrian enclaves and of the complexities of dealing with the locals. Native princes

wanted to collect tolls and custom duties from the merchants, and merchants preferred when possible not to pay. Consequently, smuggling was an art that was sometimes profitable (Veenhof 1972: 305–42). Apparently the trade shut down because it became unprofitable and not particularly because of the arrival of new ethnic groups, including the Hittites.

We are very poorly informed about trade in areas controlled by Hittite kings, because there are few relevant archival texts. But the Hittites certainly had merchants, as we see in a fragmentary text in epic style that sketches some of their activities. The text is from the period of the Hittite Empire, 1380–1215 B.C.E., though it may go back to earlier sources. It sees the merchants' bringing "plenty and abundance." Concretely, they bring barley, maybe grapes, silver, gold, lapis lazuli, stones, iron, copper, and tin, as well as animals and people taken as booty; the text envisions the merchants driving a caravan of goods and people along for sale (Hoffner 1968).

5. Amarna Age Trade. Direct contact between Mesopotamia and Egypt is not clear until the Middle Babylonian period, around 1360 B.C.E. There is a tantalizing indication that there was indirect contact in the form of a treasure, found at Tod in Upper Egypt, which has a horde of Mesopotamian cylinder seals with a cartouche of Amenemhat II (1929–1895 B.C.E.), though the horde may be a collection made considerably later.

In the Middle Babylonian period, we have from Egypt an archive of cuneiform tablets written mostly in Akkadian language and found in the capital city of el-Amarna. Most famous for showing the disruptions in contemporary Palestine, they also attest to international trade in gold and other fine goods among Babylonia, Mitanni (which was the Indo-European-ruled Hurrian kingdom on the upper Habur River), the Hittite empire in Asia Minor, and Egypt. The non-Egyptian rulers in general exchanged finely made clothes and other goods for Egyptian gold. Kings of Babylon sent lapis lazuli and other stones in exchange for gold, woods, and ivory (*RLA* 4: 85). This trade was a form of diplomatic exchange rather than a regular mercantile system, although it is clear from the letters revealing the exchanges that the rulers certainly had come to expect a certain level of trade, and the Egyptian contributions sometimes disappointed them (Edzard 1960).

At the end of the period, we have an Egyptian tale about an official, Wen-Amon, who traveled to the Syrian coast to buy wood and got into misadventures when he lost his money (Lichtheim *AEL* 2: 224–30). The story, which dates to soon after 1080 B.C.E., shows that the trade the Egyptians had come to rely on was imperiled by the decay of international stability.

6. Ugaritic Trade. Cuneiform texts from Ugarit on the N Syrian coast between 1400 and 1200 B.C.E. reveal a transshipment spot for Syrian agricultural goods and fine art goods coming from the Aegean Sea. The trade appears to be firmly controlled by the local government, though the documents of course come from governmental archives (Heltzer 1978). Wood was available in Ugarit presumably from stands in the countryside, which the city dominated.

C. Trade in the 1st Millennium B.C.E.

1. Phoenician Trade. The Phoenicians, who lived along the Lebanese and Syrian coast, traded widely by sea across the Mediterranean and by 900 B.C.E. had even set up colonies as far away as Spain. Their seamanship was legendary, and they are said even to have circumnavigated Africa (Hdt. 4.42, though Herodotus did not believe it). But lacking navigational instruments, they had to hug the coast. Their colonies were small and situated on promontories and islands that were easily defensible from the mainland; this shows that they were not interested in colonizing the hinterlands but just in setting up trading posts. Carthage on the Tunisian coast was the only large city that they founded (Harden 1962; Bunnens 1979).

The objects of trade probably included oils and wines from Syria and Greece, wood from Lebanon, and the purple dye obtainable from a mollusk on the Mediterranean coast. The color purple, *phoinix* in Greek, probably gave the Phoenicians their Greek name. They never used the name of themselves but referred to their major city of origin, calling themselves Sidonians (Muhly 1970: 33–34).

The Phoenicians were the first to use the immediate forerunner of the alphabet as a writing system; this system they shared with the Greeks, who developed it into a real alphabet in which all phonemes in Greek could be represented (Brown 1981).

2. Solomon's Trade. The Bible makes clear that Solomon was involved in an active trade in horses and chariots, perhaps serving as a middleman between Egypt and Anatolia (1 Kgs 10:28–29). He may also have had horse farms near Hamath (2 Chr 8:3–4). This trade was probably limited to luxurious items and may not have affected the general prosperity (Ikeda 1982). In 1 Kgs 9:26–28 and 10:11–12, we have the story of Solomon's cooperation with the Phoenicians to launch a fleet on the Red Sea to get gold. The visit of the queen of Sheba in 1 Kgs 10:1–10 may be a memory of a trade in spices, gold, and precious stones. Gowan (1922) has provided an analysis of the origins of foreign goods mentioned in the Hebrew Bible.

3. Desert Trade. With the advent of the camel in the ANE before 1000 B.C.E., merchants could routinely cross the Syrian desert, creating new trade routes and energizing old cities like Damascus. This trade is associated with people whose names can be understood as Arabic, and in 312 B.C.E. we see that the Nabateans dominated the trade with a network of routes in S Syria, Jordan, and Arabia (Negev 1986: 2). These Arabic-speakers wrote in Aramaic, and most of their records were probably on perishable material like parchment. The most important commodities moved seem to have been spices, probably imported from India and Africa (Bowersock 1983: 15–16).

4. Urban Trade in Mid-Millennium. Under the Neo-Assyrians almost nothing is known of the mechanisms of trade, but there clearly were foreign goods and foreign influences. Commerce even with India is shown by the presence of cotton (*RLA* 4: 87). In the Neo-Babylonian period many foreigners lived in Babylonia, but Babylonian merchants were not to be found in the W; under Nebuchadnezzar II (604–562 B.C.E.) the chief merchant in Babylon actually had a Phoenician name, *Hannūnu* (for Phoen *Hanno;* Oppenheim 1967: 253). In the long peace of the 6th century B.C.E., after the Persians had united most of the civilized world, the scale of commerce in Mesopotamia became much broader than ever before (Dandamayev 1971).

Little is known about retail trade in Mesopotamia, though the word for retail trader, *sāhiru* (cognate to Heb *sōḥēr,* "merchant"), has been identified (Landsberger 1967: 179–90). Also there were wandering salt and wine sellers in Neo-Babylonian cities (Oppenheim 1970: 21 and n. 54).

D. Attitudes Toward Trade

There were both positive and negative feelings about trade in the ANE. Mesopotamian rulers were aware that it was in their interest to ensure that merchants, and especially seaborne merchants, be safe and free to go as they pleased (Finkelstein 1967: 67). Rulers granted tax immunity to traders and also boasted of the quality and variety of goods available during their reigns.

But there are also negative evaluations of the traders themselves. The passage in Ezek 28:5–7 about the Phoenician city of Tyre seems to see trade as a source of sin. And one Heb word for profit, *beṣaʿ,* usually has the sense of "unjust gain," as in Exod 18:21 where Moses' father-in-law advises him to appoint as judges "able men from all the people, such as fear God, men who are trustworthy and hate gain (RSV: a bribe)."

Some Mesopotamians may have had a similar attitude, but it is harder to find in their texts. Mesopotamians were aware of unscrupulous merchants and believed that cheating in commerce was displeasing to the gods (Lambert *BWL,* 121–38, esp. lines 103–23; Nakata 1971).

DANIEL C. SNELL

ROMAN EMPIRE

Trade and commerce in the Roman world from the late 1st century B.C. until the 4th century A.D. underwent some fundamental alterations, yet there were some aspects which remained basically unchanged. At the beginning of the period the Mediterranean basin contained a number of independent/semi-independent political states in commercial-diplomatic contact and conflict with one another and with Rome. The larger states, Seleucid Syria (until 64 B.C.), Ptolemaic Egypt (until 30 B.C.), Hasmonean and later Herodian Judea (until the 1st century A.D.), Nabatean Arabia (until A.D. 106), states in Asia Minor (Galatia until 25 B.C., Cappadocia until A.D. 18, Commagene until the 1st century A.D.) and other smaller eastern powers, both nominally independent client states of Rome and autonomous entities, as well as the few independent states in the W (the kingdom of Mauretania until the 1st century A.D.), interacted as commercially independent, if not completely politically autonomous states. By the 4th century A.D. the entire Mediterranean basin had been unified politically under the aegis of Rome. Political unification by the 4th century also brought with it a unified system of coinage and laws regulating the commerce, though not a completely unified economy. This 4th-century economy was less *laissez-faire* than that of the 1st and 2d centuries. By the 4th century the state and the church took an increased interest and role in commerce, often at the expense of the independent entrepreneur (Whittaker 1983a: 163–80). This transformation from the 1st century B.C. until the 4th century A.D. was gradual, the

by-product of a series of patchwork-stopgap solutions to economic problems rather than a deliberate long-term policy initiated by the Roman central government.

A. Imperial Commerce

Italy initially dominated and was the center of much of the trade and commerce in the Western empire, especially in fine ware pottery manufacturing at centers in Arretium, the Po Valley, and the Bay of Naples regions. Italian wines also had large markets both in the peninsula and abroad, but throughout the 1st and subsequent centuries Italy lost this prominence. Potteries in Gaul, North Africa, and Spain gradually supplanted the fine Italian-made wares. Italian-made ceramics had never dominated the eastern Mediterranean market, where a long tradition of fine ware pottery manufacture predated the Roman by some time. In glass manufacture the Hellenistic centers in Egypt and Syria, from the Augustan period on, witnessed increased competition from factories in the west in Italy, Gaul, and the Rhine Valley. Wines and olive oils were imported in increasingly large quantities to Rome, especially from Spain, Gaul, and North Africa, as is evident from amphorae remains at Monte Testaccio (Almeida 1984; Tchernia 1986). Although Italy would still claim *de jure* political prominence over the provinces until the 3d century, its preeminent position as a manufacturing and production center passed to the provinces (Rostovtzeff 1957: 162–69) by the late 1st –2d centuries A.D.

The cause-effect relationship between Rome's frequent foreign wars and the empire's economic prosperity has been debated frequently. Is Marxist economic interpretation of history accurate? Did the desire for economic gain promote or at least partially cause many of Rome's wars? Some argue that economic gain to the Romans was an integral part of a successful war, that to the Roman aristocrats it was impossible to dissociate the expectation of gain in the form of land, plunder, slaves, and tribute from the expectation of a successful war (Harris 1979: 2, 54, 56–57; North 1981: 1–9). Others rebut the Marxist concept of historical materialism (Frank 1912–13: 233–52; Badian 1968: 16–28; Hatzfeld 1919: 369–76). One scholar asserts that none of Rome's foreign wars were economically motivated (Finley 1985: 157–58). There is little doubt, however, that economic benefits could result from successful military expeditions and the acquisition of new territory (Sidebotham 1986: 113–74) and that at least one of Rome's foreign military adventures during the principate—that of Aelius Gallus to South Arabia in 26–25 B.C.—was economically motivated (Sidebotham 1986: 120–30).

B. Monetarization of the Roman Economy

Coinage was in widespread use throughout the empire, especially in the urban areas and among the military. However, it is difficult to determine how extensive the use of coinage was in many rural regions. Many commercial transactions may have involved barter rather than coinage. Certainly during the economic, political, and military troubles of the 3d century much of the economy seems to have been conducted by barter. The central government issued gold, silver, and aes coins. In many regions of the empire local aes issues supplemented imperial coinage (in Asia Minor, Palestine and the East in general, areas of Spain and southern Gaul) to meet the exigencies of local commerce. In some cases, even local issues of silver continued (Asia Minor). Egypt remained, after the Roman annexation of 30 B.C., a separate economic unit with regard to coinage. The mint at Alexandria coined billon (debased silver) and aes coinage of a standard different from that of the central government. These various local coinages, along with other indices, including the existence of regional tax zones which did not necessarily coincide

with provincial borders (de Laet 1949: 119), reveal that the Roman empire was not a unified economic system, but a collection of various regional and local systems interacting to various degrees. There was a gradual trend toward unification of the imperial coinage and the elimination of all locally and regionally minted issues. This was accomplished by the reforms of Diocletian and his Tetrarchic colleagues in the late 3d /early 4th centuries and their minting of a series of aes, silver, and gold coins of good quality (West 1951: 290–302; Erim et al. 1971: 171–77). Accompanying this coinage reform was the first recorded attempt at empire-wide control of wages and prices: the Edict of Maximum Prices. This fiat was not a success (West 1951: 290–302; Erim and Reynolds 1970: 120–41; 1973: 99–110). The basic *laissez-faire* nature of the Roman economy, the size of the empire, and the inability or lack of willingness to enforce the edict resulted in its failure. Neither the unification of the coinage nor the edict reveals, however, a unified economic system, although this may have been one of the objectives. See also COINAGE.

C. Inflation

Inflation was a factor in Roman trade and commerce in this period. Initially, Augustus (27 B.C.–A.D. 14) issued a series of high-quality aes, silver, and gold coins. Over the following four hundred years this system underwent a gradual modification and eventual abandonment and replacement. Inflation was historically handled by the government by debasing the fineness and decreasing the weight of the silver and gold issues and decreasing the weight and size of the aes issues. This resulted in minting a greater number of coins with the same amount of metal, which, theoretically, allowed the government to meet its expenses with a lesser amount of precious metal. Along with this there were unsuccessful attempts by the government to have the public accept debased issues at fiduciary face value rather than judging the value of the coins by the fineness and weight of the metals contained therein. Judging by prices and coinage devaluations, inflation was not severe during the 1st and 2d centuries, but in the course of the 3d century prices rose dramatically, and quality silver coinage ceased to be minted and was replaced by massive issues of a silver-washed coinage; the minting of lower-weight gold issues continued throughout the 3d century. Much of the economy, even payment of troops, seems to have reverted to a barter system. This was only rectified by the Tetrarchic, Constantinian, and later-4th-century coinage reforms (Jones 1974c: 187–227; Duncan-Jones 1982: 7–11, 66–67, 71, 255, 356–57, 366; West 1951: 290–302; Mattingly 1962: 177–78, 250–55).

D. Roman Banking

The Roman banking system was primitive. Much capital was reinvested in land or used for noncommercial, non-growth endeavors—conspicuous consumption and the construction of ostentatious public buildings—and not diverted into commercial enterprises. Capital might be loaned at very high rates of interest to provincial communities or client kings (Jones 1974a: 118–21) or to merchants in the form of bottomry loans (Jones 1974c: 187), etc., but in general, low-interest loans for commercial purposes were rare (cf. government incentives to *navicularii* carrying grain to the capital: Garnsey 1983a: 56–65; 1983b: 118–30; Hopkins 1983: 84–109; Casson 1984: 96–116). Letters of credit and instruments of transfer were seldom used. Nevertheless to evaluate the status of Roman trade and commerce only on the basis of the relatively backward banking system is misleading.

E. Transportation

The argument that Roman trade and commerce was backward and non-growth-oriented owing to attitudes, technological backwardness and stagnation, and lack of a surplus money supply among most of the population (with the concomitant lack of buying power) (Garnsey and Saller 1987: 43–63) has flaws. The bulk of the population was poor, but they had sufficient purchasing power to obtain textiles, pottery, glass, metal goods, and staple foods, much of which was imported from some distance away (Carandini 1983: 145–62). By ancient standards the economy of the Roman empire, seen as a whole, was progressive. The government placed few restrictions on merchants; tariffs, tolls, and taxes were slight on wares passing from one region to another within the empire (Sidebotham 1986: 104–5). Port, harbor, canal, road warehouse, and other commercially related transportation infrastructure construction, repair, and expansion continued throughout the 1st and 2d centuries. Items carried over long distances were not

only bulk staples such as grain (especially wheat and barley), wine, and olive oil, but also textiles, stone, timber, metals, ceramic wares, including roof tiles and bricks, and, of course, luxury goods. Fluidity of long-distance interregional or trans-Mediterranean commerce was greater at river or sea ports because of the relatively inexpensive waterborne transport (Greene 1986: 17–35). Inland regions had a lesser degree of commercial interaction with distant locations because of the high cost of landborne transport (Greene 1986: 35–44; White 1984: 127–40; Duncan-Jones 1982: 366–69), but undoubtedly did a high volume of commercial transactions within the immediate region (Hopkins 1983: 85) and, perhaps, a higher volume of longer-distance trade than has heretofore been commonly believed (Hopkins 1978: 42–47).

The need to provide the army with supplies, including ceramics, metals, stone, timber, and basic food stuffs, undoubtedly played a role in the development of long-distance trade and trade to and beyond frontier regions (Middleton 1983: 75–83; Pucci 1983: 105–17; Whittaker 1983b: 110–27), but it is impossible to determine what proportion of the empire's overall trade involved supplying the military. The military manufactured some ceramics and bricks for its own use (Peacock 1982: 136–50) and undoubtedly produced some of its own food.

Urban areas in the Roman empire were centers of consumption and production. There was a symbiotic relationship between urban/municipal areas and the surrounding rural regions. The bulk of the underpinning of the Roman economy was rural agriculture. Thus, urban areas were very dependent upon rural for basic agricultural necessities. Yet, the economic vitality of the countryside depended to a great extent upon wealthy land-owning aristocrats, many of whom dwelt in nearby cities and towns, and to transportation networks which radiated from urban areas (Hopkins 1978: 68–77; Jones 1974b: 35–60; Finley 1985: 123–49). The nearby cities and towns also produced many of the basic manufactured goods (pottery, cloth, glass, metal goods) consumed by the rural populations and were the centers of government and tax collection (Garnsey and Saller 1987: 56–57). Rural populations regularly visited nearby towns and cities for market days and religious holidays (MacMullen 1974: 28–56).

Ancient artistic evidence in the form of reliefs, mosaics, and glass bottles with ancient literary testimony and recent underwater excavations of ancient merchant ships and harbors attest to the relative sophistication of the transportation system. The art depicts both land and water transport. While banditry, costs, and length of time increased the hazards and limited the range of land transport, there was a superb road system which could be used, except in very mountainous areas, throughout most of the year. While most major paved roads were built initially with military considerations in mind, merchants could also use them (White 1984: 93–100). In some cases, short lengths of paved roads existed almost solely for commercial purposes. The *diolkos*—a paved road—connected the Saronic and Corinthian gulfs in Greece (MacDonald 1986: 191–95), and a similar roadway at Ras Banas, N of Berenice on the Red Sea coast of Egypt (Burstein fc.), served primarily if not exclusively commercial transportation purposes. Harnesses for draft animals and conveyances may not have been as inefficient and crude as previously believed (Greene 1986: 36–43; White 1984: 127–40).

Seaborne commerce basically took place from March to November. Winter weather prevented most sailing on the Mediterranean. Seaborne commerce was subject to storms, but piracy in this period in the Mediterranean was practically unknown. Merchant ships and riverboats (White 1984: 141–56, 210–13; Greene 1986: 17–35) excavated in Germany, the Netherlands, off the south coast of France (Madrague de Griens and Marseilles), Italy (Albenga and Torre Sgarrata), one of the Greek islands (Antikythera), Turkey (Yassi Ada), and Israel (Caesarea Maritima) attest to the sophisticated, careful construction of merchant vessels in this period which were mainly ships of 100 tons or less (Houston 1988: 553–64). Their ability to tack, making use of even the most adverse winds, has recently been demonstrated (White 1984: 143–45). Excavations of Roman harbor complexes in North Africa (Carthage and Lepcis Magna), in Italy (Ostia and Cosa), in Greece (Cenchreia), in Israel (Caesarea Maritima), and elsewhere have revealed that the Romans had a sophisticated knowledge of underwater currents, problems of silting and a technology which allowed them to build large breakwaters underwater from hydraulic concrete (Hohlfelder *ANRW* 2/37/4). Such large, sophisticated harbor facilities seem, however, to have been exceptional (Houston 1988: 553–64). See also TRAVEL AND COMMUNICATION.

F. The Merchant/Entrepreneur Class

Roman writers, many of whom were aristocrats, traditionally looked down upon merchants and traders (D'Arms 1981: 3–5). Prevailing sentiment among aristocrats was that they did not engage in such activities, but were gentlemen farmers. This impression is somewhat misleading. Some landed aristocracy did engage in commerce (Pleket 1983: 131–44; D'Arms 1981: 1–19, 48–71). Anything produced on their estates was worthy of sale, and this might include pottery, tiles, or other manufactured products (D'Arms 1981: 72–96). Trafficking in such wares did not carry a stigma; in the late 3d –2d centuries B.C., the need for a law limiting the size of a transport ship which an aristocrat might use to ship his wares to market (Livy 21.63.3–4; *lex Claudia de Senatoribus*) belied the literary topos. Often, aristocrats and the emperors themselves avoided the stigma of engaging in trade and commerce directly by having agents (usually trusted slaves or freedmen) engage on their behalf with the patron, in many cases supplying the capital (Kirschenbaum 1987: 31–88; D'Arms 1981: 39–40, 44, 63, 66, 78, 89, 103–4, 141, 155, 158).

Epigraphic evidence, in the form of tombstones, and in Egypt also numerous ostraca and papyri, reveals the social status and origins of many merchants. Slaves, freedmen, and freeborn people, both male and female, from all areas of the empire, engaged in commerce. The nomenclature and geographical origins of some enable scholars to trace connections to prominent aristocratic families both in Italy and in the provinces (D'Arms 1981: 1–19; Sidebotham 1986: 78–102). While many of the entrepreneurs themselves were not from the Roman senatorial order, and were of relatively low rank or status on the social scale, their power and prestige—gained as a result of wealth from their trade—might be great. The ostentatious, rich freedman Trimalchio in the 1st -century-A.D. novel *Satyricon* was a parody of persons of his wealth regardless of social standing (D'Arms 1981: 97–120).

Merchants were *mercatores* (Gk *emporoi*), *navicularii* (Gk *naukleroi*) and *caupones* (Gk *kapeloi*). Trading firms *(collegia)* were not companies in the modern sense; merchants/entrepreneurs invested directly into a trading venture and not into their *collegia* for a specific commercial venture. Liability seems to have been personal. Often, in the city of Rome at least, such business firms or partnerships were expressed in terms of friendship *(amicitia)* and were usually temporary. The concept of a commercial agency was never fully developed in Roman law (Jones 1974b: 41–60; Rickman 1980: 228–29; D'Arms 1981: 165).

G. Slavery

Slavery was an important factor in the Roman economy, but one which should not be overemphasized. A dearth of statistics prevents a quantitative evaluation of the role of slavery in the Roman economy. Basically, as long as slavery as economically viable in Roman agriculture and commerce, it continued in use. With the growing rift between *honestiores* and freeborn *humiliores* from the 2d –3d centuries on, the employment of *humiliores* as tenant farmers or dependent laborers was cheaper than the actual ownership and use of slaves (Finley 1980: 123–49). There were moral questions raised about slavery as an institution, but such sentiments had little effect upon general attitudes even after the advent of Christianity. Slaves carried on much of the commercial activity for wealthy aristocratic masters and patrons who wanted to avoid the social stigma of direct association with commercial endeavors. Often the slaves were allowed to control many or all aspects of their earnings *(peculium).* See also SLAVERY (NT).

H. External Trade

The Roman world had commercial contacts beyond its political frontiers. Archaeological and literary evidence attests to commercial relations with Scandinavia, free Germany, E Europe, sub-Saharan Africa (Eggers 1951; Wheeler 1955: 7–111), and lands to the E, including South Arabia, coastal sub-Saharan Africa at least as far S as Zanzibar, India, Sri Lanka, and China (Wheeler 1955: 112–82; Charlesworth 1974: 57–73, 97–111; Rawlinson 1916; Raschke 1978: 604–1378; Sidebotham 1986; Ferguson 1978: 581–603). Romans went to these lands and foreign merchants came to Roman territory to conduct this commerce, and much trade went through middlemen of various "nationalities." How extensive and intensive this trade was and what percentage of all Roman commerce this foreign trade comprised cannot be ascertained. Nor can it be determined whether this was a trade mainly in luxury or common trade

wares. Arguments that the "balance-of-trade" favored the E, based upon Pliny the Elder's hyperbolic comments, are unconvincing (*HN* 6.26.101; 12.41.84). The general lack of a concept of a "balance-of-trade surplus or deficit" within the Roman government and the fact that this "eastern" trade was conducted more, it seems, by barter than by purchase tend to dismiss such arguments (Sidebotham 1986: 13–47). However, there was Roman governmental facilitation of this extraimperial commerce in the form of road, canal, and port construction, and protection of the trade by the military. The government charged heavy customs duties of 25 percent or more which it levied directly or farmed out for collection (Sidebotham 1986: 102–10; Harrauer and Sijpesteijn 1985: 124–55) on imported items from the E. Presumably the same rates applied to imports from beyond Rome's political frontiers to the N and S as well. In addition, in more remote areas merchants and travelers bought passes to use roads which required military policing due to marauders and bandits (Sidebotham 1986: 132, 164; Garnsey and Saller 1987: 158–59). This enabled the government to help defray costs of garrisoning such locations (Sidebotham 1986: 35, 80–81). There may even have been a Roman naval unit patrolling the Red Sea to keep piracy under control (Sidebotham 1986: 70, 71, 77).

Ideas as well as commerce passed along the trade routes. Political unification of the Mediterranean basin and Western Europe under the Roman aegis prompted the suppression of piracy and the construction of thousands of miles of roads. The relative ease and safety of travel compared to earlier times and the generally tolerant attitude of the Roman government toward most foreign cults facilitated the spread of religious and philosophical beliefs from one region to another. Transported by merchants, travelers, scholars, and members of the Roman military from all parts of the empire, new cults were established at important political and commercial centers, especially seaports and major inland entrepôts where merchants from many lands resided. Army camps, especially along the frontiers and near large urban centers, also fostered the spread of new cults. Frequently these newly imported beliefs appealed to local inhabitants. Often, too, peoples in newly annexed territories practiced religions which attracted Roman devotees.

STEVEN E. SIDEBOTHAM

TRADITION HISTORY. In modern biblical studies, it is widely recognized that the literature of the Bible, or at least large portions of it, came gradually into existence through a process in which oral or written materials were passed down from one generation to another, acquiring their final form with the assistance and contributions of many individuals and groups along the way. Tradition generally preceded text, and this tradition—just as the later canonized text itself—has a history. As a method, tradition history is one of the steps in exegesis, attempting to recover the meaning that the tradition had at each stage in its growth.

E. Implications and Significance

A. The Phenomenon of Tradition

Carrying the heritage from the past into the present, tradition is ubiquitous in the human community, both in primitive and modern times alike. It is, in fact, so widespread and so all-embracing a phenomenon that studying it can become an enterprise without boundaries. In biblical studies, however, tradition history has a somewhat restricted meaning in that it refers only to verbal traditions, that is, oral or written materials articulating in words that which is transmitted, such as stories, proverbs, laws, sayings, poetry, and teachings on the one hand and motifs, notions, themes, and ideas on the other. Excluded is another whole range of ways in which the word "tradition" is commonly used—for practices or beliefs such as customs, habits, rules, mores, rituals, ethos, or even social and religious institutions. These are not the direct subject matter of tradition history, even though they can and usually do affect the verbal traditions that are being handed down. Tradition history focuses, instead, on the specific literary or verbal developments that led up to the biblical literature in its present form.

Another important distinction is evident in two Latin words used in the study of tradition history. Latin *traditio* refers to the process of transmission, whereas *traditum* designates the materials themselves that are being transmitted from one person, group, or generation to another (see especially sec. C below). The process is extremely variable. In some instances it can be carried out statically through very careful, even reverential transmission, avoiding the introduction of any changes in the wording of the tradition; in other cases persons in the line of transmission can be responsible—whether deliberately or accidentally—for alterations, expansions, omissions, and new combinations of the traditions.

Of special importance in this latter respect are the category of interpretation or actualization (known also by the German word *Vergegenwärtigung*) and the effort by any given generation to contemporize its received traditions by reinterpreting them "existentially" in light of, or applying them to, its own context and time (Groves 1987). The products of the past are thereby not left as an antiquarian's artifacts but are brought to new life as articulations of a new reality. Thus, the stories about Abraham, the laws of Moses, the prophecies of Isaiah, or the sayings of Jesus are not simply residues of the ancient past but are actually reinterpreted—and consequently changed in themselves—in order to apply to the conditions and urgencies of later people, and these shifts become a part of the traditions as they continue to be handed on to the next generation. A tradition that originally had only local significance could be nationalized, just as material that began as non-Israelite and polytheistic could be adapted to Israel's monotheistic faith. This collective creative process has meant, therefore, that probably the vast majority of the biblical literature contains multiple levels of meaning; that is, that it has an extended tradition history reflecting the gradual contributions of new individuals, groups, and generations as they reinterpreted the old heritage for themselves.

Tradition history is normally associated with the oral period in which stories and sayings were composed, retold or recited, and preserved for long periods of time (Nielsen 1954; Culley 1976). While traditions could be remembered and passed on reliably in this form, a distinct degree of flexibility is to be expected for the oral stage, and different versions of a single story or saying are not unlikely. For a culture in which literacy was generally restricted to the few who needed to be able to write for governmental, commercial, educational, and religious purposes (cf. Demsky 1988), "oral literature" among the wider populace was commonplace. At some point—and this juncture varied for the different traditions—the oral materials were committed to writing, often after they had matured to a high level of artistry and had been combined with other similar traditions, and their transmission thereafter could occur through this new medium. It is not accurate to say, however, that the traditioning process—that is, the gradual, incremental growth of the traditions—transpired only through oral means. In written transmission, a given literary piece could also undergo change or growth as it was being handed down from one generation to the next.

Tradition history embraces the whole period of development, from the first formulation of a tradition on to the point where it became relatively stabilized. This latest phase would have been the stage of canonization, but most texts became essentially fixed and no longer fluid prior to that. In a sense, it is a difference between tradition *before* and tradition *after* Scripture (Barr 1966: 28–29; for more discussion of

the canonization process and its relation to tradition, see also Sanders 1972): growth and change occurred before a literary piece was rendered constant and was accepted as authoritative Scripture, whereas thereafter the text continued to be handed down but then as a document not to be altered internally but only copied and interpreted exegetically.

B. Development of the Study of Tradition History

Research on the history of biblical traditions did not begin in earnest until the 20th century, in fact only with the 1930s (for a full history of research, see Knight 1975). Prior to that it had indeed been recognized that the biblical literature came into being gradually and that tradition and transmission played a significant role. Seventeenth-century scholars such as Thomas Hobbes, Benedict de Spinoza, Isaak de la Peyrère, and especially Richard Simon thought it likely that portions of the Bible do not exist now in the form in which they were first written, but that they attained this form only after having been handed down to later writers. But there was little effort made to recover the details of the traditioning process, and focus fell instead on the literary stage of conflating and editing written documents. Source criticism was the dominant exegetical method through the end of the 19th century, with Julius Wellhausen's work as its showcase achievement.

The new era was introduced by Hermann Gunkel, first in his 1895 effort (partially translated in Gunkel 1984) to trace the lines of mythical materials on creation from early Babylonia to the Hebrew Bible and ultimately to the book of Revelation. But it was his development of form criticism—initially in his 1901 commentary on Genesis (see the English translation of his introduction in Gunkel 1964) and later in his studies of other narratives, prophetic literature, and the psalms—that laid the groundwork for subsequent traditio-historical studies. In identifying the wide variety of genres used by the ancient Israelites to express themselves, Gunkel drew attention to the process by which a group or an individual could receive traditional material and rework it in creative ways. In a revolutionary shift of method and perspective, he emphasized the oral stage of composition and transmission. Furthermore, with his concept of the life setting *(Sitz im Leben)* of genres, he opened the door for new inquiry into the real-life contexts in which the people engaged their own needs, problems, and crises through an innovative interpretation of their received traditions. Additionally, Gunkel was one of an influential group of Hebrew Bible and NT scholars who sought to understand the history of religion in the ANE, and this—as in his 1895 study of the creation myths—contributed to a new effort to trace the way in which religious materials, often of foreign descent, could be appropriated and revised as the *traditum* of later communities.

The initiators of traditio-historical research in its modern sense were Gerhard von Rad and Martin Noth, and for both of them the Pentateuch (Hexateuch for von Rad) served as the staging ground, as has been the case for the rise of several other of the exegetical methods. Von Rad's 1938 monographs (translated by 1966, *PHOE*) began with the assumption that the Hexateuch, a remarkable complex of diverse kinds of material, is the final stage in a long process of development and that it must be possible to recover some of the earlier stages and circumstances of its composition. His key to accomplishing this lay in what he identified as the creeds of Israel's faith, best evident in Deut 26:5b–9; 6:20–24; and Josh 24:2b–13, which articulated the rudiments of the sacred history and thus formed the structure for organizing the Hexateuchal materials into a linear whole. This literature was not authored in the modern sense; rather, it emerged out of earlier collections, crafted especially by the Yahwist, of originally independent traditions. See YAHWIST ("J") SOURCE.

Noth, in 1948 (translated in 1972, *HPT*), expanded on von Rad's work by shifting the emphasis to the *pre*-Yahwistic stage of tradition growth and by demonstrating the importance of critical analysis of all details of this growth process. Both of these scholars, in subsequent publications, also indicated the implications that traditio-historical study of the biblical literature could have in other areas: Noth for historiography, and von Rad for theology.

A distinctive approach to the study of tradition history emerged among Scandinavian scholars, above all among those who taught or studied in Uppsala (Knight 1975: 217–399; Jeppesen and Otzen 1984). Key representatives of this method were Sigmund Mowinckel, H. S. Nyberg, Ian Engnell, and G. Widengren, and later also Helmer Ringgren, Arvid Kapelrud, Eduard Nielsen, Gösta Ahlström, and Birger

Gerhardsson, to name a few. Under the leadership of Engnell especially (see Engnell 1969), tradition history became elevated as the most important of the exegetical and historical methods, and the legitimacy of other methods reflecting a modern "bookish" approach was disputed.

This circle of scholars became known for several distinctive positions. They attributed paramount importance to oral means for the composition and reliable transmission of the materials; these traditions were tied to specific places and groups wherever possible; emphasis fell on the "living," dynamic process in which the biblical literature came into being; committing oral traditions to writing was often seen as an incidental stage which had little effect on them; and ANE religious ideas were perceived as dominant influences on the content of these traditions. This line of scholarship has lost some of its characteristic edge since the 1960s, but its sense of the vitality of the tradition process remains a lasting contribution.

Traditio-historical study of both the Hebrew Bible and the NT is now established as a standard component in the analysis of the literature; in fact, Hebrew Bible scholarship is said to be "primarily traditio-historical in orientation" (Morgan and Barton 1988: 101). There is virtually no biblical section which has not been examined from this perspective, except for literary materials which did not go through a developmental, cumulative process but were composed at the outset in their final form. And even in those cases there are normally motifs, ideas, themes, and more which the author incorporated from the heritage of the past. Commentaries of biblical books now integrate tradition history as a routine part of the exegesis.

C. Relation to Other Exegetical and Historical Methods

The traditio-historical method represents one of the steps in modern biblical exegesis. Generally it follows directly on TEXTUAL CRITICISM, SOURCE CRITICISM, and FORM CRITICISM, making full use of their results concerning the unified or composite character of the text in question, the historical background and nature of any sources, the text's genre and life setting, and the like. The tradition historian first attempts to recover traces of the prehistory of the text (the analysis or criticism stage of the inquiry) and then hypothesizes about the probable course through which it passed in its development (the synthesis stage). To accomplish this task is somewhat analogous to an archaeological excavation, in which progressively earlier and earlier strata are discovered as one cuts deeper into the mound.

These prior levels of meaning are often identifiable as interpretations or comments attached to or integrated into the text, such as some of the motive clauses that follow on the various laws. Embellishments and stylizations which heighten the plot or message, especially in stories (the contest between Elijah and the prophets of Baal in 1 Kings 18 is a good example), also can indicate the handiwork of later traditionists, as can etiological elements. One watches, moreover, for evidence of localization—where the tradition might have been at home—and tradents—the groups that would have handed it on and reinterpreted it, such as certain cultic personnel, social sets, or political interests. The text's present literary context may well not be original, for so often the narratives, sayings, prophetic utterances, and laws arose independently and only with time became joined together with similar materials. Fusing such traditions into a larger complex or collection is itself a new level of interpretation in comparison with the meaning each bore as an entity circulating separately; this, in fact, is the stage of development which Rendtorff (1977) identifies as the often-neglected, but crucial phase in the growth of the Pentateuch.

The exegete synthesizes all of these findings into a description of the growth of the tradition from its origin to its final form. This constitutes, admittedly, a hypothetical picture that may be more or less probable. Some interpreters, in fact, dispute the extent to which an oral prehistory can even be posited on the basis of the literary text and then used as a historical source (e.g., Van Seters 1975; see, nonetheless, Vansina 1965; 1985). Yet the question is in principle legitimate: How did a specific text come into existence, and what was the import of any of its earlier forms and elements—to the extent that these can be plausibly identified? If the present text affords a glimpse of this, then it is part of the text's meaning and deserves to be studied. These findings also become part of the total cluster of information on which the historian and sociologist (see, e.g., Gottwald 1979) can draw in order to reconstruct the events and social structures of a given period.

D. Application to Types of Biblical Literature

Various kinds of literature comprise the *traditum,* the materials which were passed from one person or generation to the next, becoming developed and actualized in the process. The tradition history varies according to literary type as well as historical period. The examples below are taken primarily from the Hebrew Bible, to which this method has been applied most extensively.

1. Narrative. Stories enjoy great popular interest, especially in non- or semi-literate societies where they serve as the primary repositories of shared cultural memory. Multiple functions can be posited: entertainment for young and old alike; instruction, especially of moral and religious customs; historical remembrance; ritualistic celebrations; interpretation of contemporary realities (e.g., etiologies, eponymous stories); articulation of group identity and character. All of these purposes and more caused narratives to originate and circulate in early Israelite, Jewish, and Christian communities, just as was the case for the legends and myths of ancient Mesopotamia, Egypt, Greece, and Rome. It is not unlikely that certain persons, especially gifted as raconteurs, were repeatedly called upon to tell familiar stories about the past. As they recited these favorite anecdotes before an audience, they could quite naturally introduce embellishments, stylistic refinements, and new interpretations.

Stories of the great ancestors, of the Exodus and wilderness wanderings, of the Conquest and the judges, of prophets like Samuel, Elijah, and Jeremiah, of leaders like Saul, David, and later kings—all held fascination for the common people. They generally arose as shorter, independent accounts—e.g., the numerous narratives about Abraham or about David—and gradually became gathered into cycles or collections centered on a specific character or period—such as the traditions about Abraham now recorded in Genesis 12–25, or the stories of David's rise to power in 1 Samuel 16—2 Samuel 5. Their tradition history thus spans this entire growth process and seeks to clarify the meaning and significance of each story at all of its successive stages.

2. Law. Large portions of the Pentateuch comprise laws now grouped in collections called the Covenant Code, the HOLINESS CODE, the Deuteronomic Code, and the scattered smaller sections often associated with the Priestly Code. See LAW. These, however, are not codes in the sense of a body of laws promulgated by a legislature or ruler with law-making prerogatives. Israelite law is better understood as customary law, which emerged among the people as the needs of their actual situations required it. Laws about a goring ox, about boundary stones, about treatment of slaves were responses to problems requiring some type of consensual resolution. As situations changed or more complexity was experienced, a given law could accrue qualifications or elaborations. Thus, capital punishment was first ordained for causing another's death, but to this was subsequently added a stipulation about how to handle a case of possibly unintentional murder (Exod 21:12–14); or the law of adultery was ramified in light of a wide range of possible liaisons and circumstances (Deut 22:22–29). The people continually worked out the terms for their coexistence in all areas of life, including cultic practice.

The Pentateuchal laws represent the later collection of such regulations, yet they betray portions of the long development that led up to this point. In addition, throughout the rest of the Hebrew Bible it is possible to trace an inner-biblical legal exegesis, an effort to apply and interpret Pentateuchal laws to new situations, especially in the face of gaps and obscurities in Israel's legal *traditum* (Fishbane 1985).

3. Prophecy. Prophecy in Israel was above all of the spoken word. Typically, the prophet stepped forward to speak critically or comfortingly to the general populace, the king, other leaders, the people in the marketplace, or the cult (exceptions were ecstatic and cultic prophecy). These utterances tended to be short; their power resided in the terse, poignant articulation which could be readily grasped and remembered. In some cases there may have been disciples or followers (Isa 8:16 has often been interpreted in this manner) who committed them to memory and who even added their own interpretations to them as the need arose. Collecting these into written form would generally have come at a later stage, as the incident described in Jeremiah 36 depicts (note especially 36:32, which states that after the first dictation the second included even more utterances). Some of the prophetic materials may well have appeared first in written form; many scholars think that Isaiah 40–55 was drafted as a treatise, although portions may initially have been delivered orally. The tradition history of prophetic materials, at any rate,

identifies any evidence of orality and public presentation, traces the course from independent, smaller units to the larger collections of sayings, and notes the influence of themes and motifs, religious and social institutions, and prophetic predecessors. See PROPHECY.

4. Lyrical Poetry. The poetry of Psalms, Song of Songs, Lamentations, and the numerous individual songs inserted elsewhere throughout the Hebrew Bible displays yet another type of tradition history. Like other biblical literature, these poetic pieces were rooted in the life of the people, for in their songs the Israelites gave expression to their joy, their sufferings, their beliefs, and their hope. Yet more so than other literary forms, these were closely tied to ritualistic settings, contexts in which individuals and groups would find it especially appropriate to celebrate or lament. At all points in their history the Israelites married, buried their dead, worked, warred, languished in illness, rejoiced over recovery or success. Traditional songs, largely anonymous in authorship, arose and persisted throughout the centuries for the people to use, much as have our modern hymns. Some, such as the songs in Exodus 15, Judges 5, Genesis 49, and Deuteronomy 33, have been shown through orthographic and linguistic analysis to be especially ancient (Cross and Freedman 1975). A traditio-historical analysis seeks to determine the course of development, the possible ritualistic settings, and the traditional materials incorporated in each such poem.

5. Wisdom. Some of Israelite wisdom springs from the popular sphere: the ever-present proverbs, sayings, riddles, and advice from parent to child and friend to friend. Another source was the royal court, where judicious decisions and prudent actions were highly esteemed. Beyond these was the intellectual tradition among the sages, the learned who taught the young, responded to persons facing vexing dilemmas, and reflected on persistent issues in human life, such as tragedy, injustice, self-control, personal relationships, and the nature and destiny of life in this world. The Wisdom Literature in the books of Proverbs, Job, and Ecclesiastes and scattered throughout the rest of the Hebrew Bible is the result of a long process, stretching back to and drawing upon its ANE heritage, of trying to come to terms with the natural need for knowledge, understanding, and meaning in life.

6. Tradition in the New Testament. Although the time spans for growth and transmission vary significantly between the Hebrew Bible and the NT —often centuries for portions of the former in contrast to only decades for the latter—the study of tradition history has played a role also in NT studies, albeit less so than have form criticism and redaction criticism. Most notable are the Gospels, which are based on sources of sayings attributed to Jesus as well as stories about his ministry and impact (see the classic study by Bultmann 1963). The early churches preserved these in memory and in written form, actualizing and reinterpreting them as the believers faced new social and historical realities. The Gospels themselves represent such a reworking of the traditions. It was, however, no natural shift from oral to written, and the oral *traditio* was notably more flexible and fluid than was the literary. As Werner Kelber (1983) has suggested, a crisis of credit perhaps developed in the church as a result of the Roman-Jewish War, and the Gospel of Mark was written—on the basis of earlier sources and traditions—to establish a new basis for permanence and trust. The Johannine community also developed and kept alive its own perspective on the basepoints of Christianity.

For the letters by Paul, which reflect subtleties in the relationship between oral and written language (Funk 1966: 224–74), tradition history is of importance especially in analyzing the appropriation and interpretation of traditional materials, such as a hymn (e.g., Phil 2:5–11) or a credal confession (e.g., 1 Cor 15:3–5). The phenomenon of quoting is evident at an even broader level, for the NT —from Jesus through Paul to the book of Revelation—repeatedly cites its scriptural heritage—the Hebrew Bible—and interprets it in light of the new faith.

7. Early Jewish Tradition. Within the postbiblical Jewish community there was an especially pronounced interest in keeping alive the traditions of the past by remembering and building upon them. Jewish and Christian apocalyptic movements did this in one manner. Sects such as the Qumran community pursued assiduously their own interpretation of Scripture and, in the process, preserved for us some of the most ancient copies of biblical texts.

Of special significance, however, is the stream of tradition known as the "Oral Torah," which held authority alongside Scripture, the "Written Torah." The laws of the Pentateuch were continually studied and interpreted in an effort to clarify their minute points, especially for the purpose of deriving rules and instructions that would fit the new circumstances of the day. These emerged as *halakah,* a body of rules, norms, and legal decisions on specific points. Alongside that was the *aggadah,* a wide range of narratives, homilies, anecdotes, and aphorisms that could aid the understanding of the biblical heritage. The rabbis preserved the Oral Torah in memory through a sophisticated mnemonic system and eventually recorded and edited it into the Mishnah by ca. 200 C.E. (Neusner 1987; Weingreen 1976). From that point on to the closing of the Babylonian Talmud (ca. 600 C.E.), the traditioning process continued as new generations of sages engaged scriptural and mishnaic basepoints in light of their new circumstances.

This process occurred more in the context of sustained study and debates amone rabbis than had been the case in ancient Israel's traditioning, which often involved the wide reaches of the population. However, the principle of gradual growth of tradition through new interpretation and actualization of the past heritage is present in both. Notably, several scholars are currently seeking to apply the biblical exegetical methods of form criticism, redaction criticism, and tradition history to the complexities of this vast literature (see various discussions in Safrai 1987; also Saldarini 1986).

E. Implications and Significance

Tradition history, even with the hypothetical nature of its proposals, has assumed a widely accepted role in biblical exegesis. Its importance lies in the effort to uncover the creative process which issued in the biblical literature—to the extent that this process was collective and gradual. It acknowledges that numerous persons and groups, and not simply solitary authors, contributed to the growth of the tradition. While materials were at points transmitted from one generation to another in a manner that would minimize changes in the *traditum,* in many other instances the tradition was "existentially" applied to the new historical situation, resulting in novel layers of meaning which were incorporated quite naturally into the growing text.

Tradition history carries with it considerable theological implications (see articles in Knight 1977; also Morgan and Barton 1988: 93–132). For the text is thus viewed not so much as a repository of static truths revealed in a unilateral manner without human involvement, but rather as a dynamic collection of material that points to the ongoing human struggle for survival and meaning in real-life situations. Gerhard von Rad's two-volume inquiry into the theology of the Hebrew Bible *(ROTT*) takes this process of the actualization of tradition as its starting point. Similarly, the results of traditio-historical study become part of the evidence to be scrutinized by the historian of ancient Israel, as demonstrated by Martin Noth in his much-debated history *(NHI).* Yet, at a more basic level and even despite the uncertainties on many individual points, one can agree with Noth's assertion (*HPT*, xxxv, 3–4, 147) that the significance of the study of tradition history rests perhaps not so much in its answers as in the very questions it raises.

DOUGLAS A. KNIGHT

TRADITION OF THE ELDERS [Gk *paradosis ton presbyteron* (παραδοσις τον πρεσβυτερον)]. The precise phrase "tradition of the elders" occurs only in Matt 15:2 and Mark 7:3, 5, in connection with Pharisees, scribes, and other Jews and their custom of ritual hand-washing. It is probably a technical term that refers to customs observed and considered binding by Pharisees and some other Jews, although not written in the Pentateuch. Although the Pharisees themselves have left no writings, several ancient sources associate the Pharisees with the term "tradition" or "tradition of the fathers" (Josephus, *Ant* 13.10.6 §297; 13.16.2 §408; Matt 15:3–9; Mark 7:8–13; Gal 1:14). Other sources mention unwritten traditions which have been handed down for generations (Philo, *Spec* 4.28.149–50; Ben Sira 1:1). Josephus reports that observance of these traditions evoked controversy with the Sadducees. The Qumran texts contain attacks on "the seekers after smooth things" (*dwršy ḥlqwt*), who are identified by most scholars as the Pharisees, for following their own traditions and not God's law (1QH 4: 7,11).

Detractors of the "tradition of the elders" stressed its human origin and contrasted it with God's law (Matt 15:3–9; Mark 7:8–13; cf. Col 2:22; Titus 1:14). Its champions undoubtedly saw it as divinely revealed, complementary to the written Law, possibly analogous to the way later rabbinic Jews regarded the oral Law (*m. ʾAbot.* 1:1).

The three NT references to the "tradition of the elders" suggest that ritual hand-washing before eating, originally prescribed only for priests eating consecrated food in the temple, gained wider practice. Though there are no other 1st -century references to the custom, 3d -century evidence shows that some Jews ate ordinary food in a state of ritual purity (*t. Dem.* 2:2).

Later Jewish literature yields no example of the phrase "tradition of the elders," although "tradition" *(mśwrt)* is common, as is the related verb "receive" *(qbl).* The expression "elders" may have been used by the Pharisees themselves to add the authority of antiquity to traditions which were transmitted orally from teacher to student in the manner of the Hellenistic schools. These traditions may have been susceptible to attack because they were neither priestly nor handed down along familial lines. Baumgarten (1987: 72) has suggested that the charges against the tradition of the elders in Matt 15:3 and Mark 7:8 may not have originated with Jesus or his followers, but may have been a common anti-Pharisaic slogan in antiquity. In other instances, Christians characterize their own traditions using the term *paradosis* in a favorable way (1 Cor 11:2; 2 Thess 2:15).

CLAUDIA J. SETZER

TRAJAN (EMPEROR). Trajan (Marcus Ulpius Traianus) was born at Italica (Spain) on September 18, probably in A.D. 53, and became emperor after the death of Nerva on January 25, 98. The Ulpii, originally from Umbria in Italy, had been settled in Spain for generations, but Trajan's father was the first in the family to gain senatorial rank; subsequently, he served Vespasian as governor of Syria and as proconsul of Asia. Only a few details of the son's early career survive. He served as military tribune in Syria under his father, and, rising to the rank of legionary commander in the reign of Domitian (A.D. 81–96), helped to suppress a revolt against the emperor. Rapid promotion followed. In 91, he received the rare award of an ordinary consulship, but nothing else is known of his subsequent activities until 97, when he was appointed governor of Upper Germany by Nerva, and then adopted by him and awarded the title Caesar. Almost immediately, the senate added the customary imperial powers, and so, when Nerva died, the transfer od sovereignty was smoothly accomplished. A completely different version of Trajan's accession is provided by the unknown epitomist of the *Caesares,* who gave an account of various Roman emperors dating from the 4th century: according to him, "Trajan seized power with the backing of Sura" (*Epit. de Caesaribus* 13.6). Sura was an eminent general, senator, and supporter of Trajan, and was well rewarded by him subsequently; no other ancient author, however, refers to Sura's supposed role in the events of 97/98.

According to tradition, Trajan's relationship with the senate was excellent. He held the consulship less frequently than did his predecessors, thereby providing opportunities for eminent members of the order; after his fourth consulship in 101, he assumed it on two occasions only, in 103 and 112. He adopted the custom of renewing the imperial tribunician power on December 10 (the date on which, for many centuries before Augustus' reign, tribunes had taken up office), rather than use the anniversary of his own accession to the throne, as every emperor until this time had done. He participated in the senate's sittings, and senators drew up the minutes. He also allowed them to make formal declarations of war and to ratify peace treaties. But all this was nothing more than a mark of deference toward them. Furthermore, while the administration of the empire was largely in the senators' hands, the difference between the power of individual members of the order as imperial representatives and as members of the senate in Rome was now immense. Despite the respect Trajan showed them as a body, only those to whom he entrusted the command of armies or of provinces could be regarded as powerful. In essence, the autocracy was becoming more efficient, or, at least, more centralized.

Again, the distinction had long been recognized between senatorial and imperial provinces, i.e., between a settled province such as Asia Minor and one like Germany, less stable and occasionally turbulent; and, while the distinction was clear in theory and law, it was frequently less so in practice: the emperor could, and often did, intervene in senatorial provinces when he deemed it necessary. The difference now, though, was that such action was regularized and become quasi-legitimate. Pliny's appointment to Pontus-Bithynia is one example. Furthermore, a new group of officials emerged in Trajan's reign, the *correctores,* who were sent to free cities and given special powers to regulate their affairs; then came the development of *curatores,* another new group of officials sent by the central government to check the finances of communities throughout the empire. The same tendency is evident in the greater role of the equestrian order in government. Posts previously held by the palace freedmen, including those in the imperial secretariate, now passed more and more to equestrians. Twenty new procuratorships were assigned to them, and they gained full control of the imperial finances. But because they owed their positions and advancement to the emperor alone, the movement toward concentration of power in his hands became even more marked.

Trajan's provincial administration has been described as sound, benevolent, and efficient. Certainly he was more interventionist than his predecessors, as has been indicated. Important evidence of his attitude is provided by the 121 letters that passed between the emperor and Pliny during Pliny's term as governor of

Pontus-Bithynia. Of these, the two letters dealing with the Christians are particularly interesting (*Ep.* 10.96, 97). They represent the earliest pagan version of the dissension between Roman authority and the Christians and provide a fairly detailed account of early Christian services from the pagan viewpoint; most importantly, they give valuable evidence on the problem of the new religion's legal status in the early empire. The letters were known to, but had not been seen, by Eusebius (*Hist. Eccl.* 3.33).

One of the more interesting developments in what might be called social reform was the provision of sustenance for poor children, the system of *alimenta.* While most of our information on this reform comes from Trajan's reign, the creation of trust funds for child maintenance was not a new thing in the Roman world: private grants for this purpose were made under Claudius or Nero. On the other hand, state intervention and evidence for the distribution of *alimenta* in Italy belong to this period. The system operated as follows: interest (usually 5 percent) on money lent to farmers by the emperor was paid into a special municipal fund and then distributed to poor children. How successful the practice was cannot be assessed, though Trajan referred to it regularly on his coins and even on the arch at Beneventum; and by the end of the 2d century, a new bureaucracy had been created to administer it, under the aegis of a *praefectus alimentorum.* Ultimately, it too became part of the ever-growing centralization.

Trajan's foreign policy was more overtly expansionist than his predecessors' had been. Two wars were fought against the Dacians, culminating in the annexation of their territory and the creation of a new province by 106. Less successful in the long term was Trajan's eastern campaign. By 115, he had taken Armenia and Mesopotamia, but attacks by the Parthians on the newly won territory, together with revolts by the Jews in Cyrene, Egypt, and Cyprus, posed serious problems. Trajan left the E for Rome, but he died unexpectedly at Selinus in Cilicia on August 8, 117, and was succeeded by his relative Hadrian, who relinquished many of the E conquests.

Trajan's reputation in antiquity was always good, but the accuracy of that tradition is difficult to assess, given the absence of contemporary or near-contemporary literary evidence for his activities. The most detailed account, that of Dio Cassius, belongs to the 3d century and survives only in summaries made much later. In essence, Trajan remained a soldier with little or no interest in cultural or intellectual pursuits. The administration over which he ruled was more organized, more centralized, and, presumably, more efficient than it had been under his predecessors. Trajan, like Augustus, was regarded in antiquity as a model emperor. See *ANRW* 2/2.

TRANCE. See MYSTICISM.

TRANSFIGURATION. The name given to events that transpired in one of the passages common to the Synoptic Gospels (Matt 17:1–9 = Mark 9:2–10 = Luke 9:28–36). Within the passage, Jesus takes Peter, James, and John up a mountain some days after he has given a discourse in response to Peter's confession at Caesarea Philippi (Matt 16:13–28 = Mark 8:27–9:1 = Luke 9:18–22). Insofar as the preceding passage includes Jesus' prediction that, as the Son of Man, he must suffer, be rejected, killed, and raised, the Transfiguration is contextually redolent of christology. On the mountain, Jesus is transformed in front of the disciples (hence the name "Transfiguration," from *metamorphoō* in Matt 17:2 and Mark 9:2; *TDNT* 4:755–59), and his clothes shine white. Moses and Elijah appear with Jesus, and Peter offers to build three tents (or booths), one each for Jesus and those who have appeared with him. A cloud then overshadows the proceedings, and a voice from the cloud announces that Jesus is his son, and commands, "Hear him." Jesus is then left alone with the disciples, who say nothing of the experience at the time.

The account abounds with exegetical difficulties, all the more so when each gospel's divergencies from the common story (sketched above) are examined. Such questions resolve themselves fairly straightforwardly once we recognize the sort of material with which we are confronted. Because scholars

have tended to restrict their attention to *genres* they believe they know from the NT, the Transfiguration has been described variously as a misplaced story of Jesus' resurrection (Stein 1976), his second coming (Boobyer 1942), his heavenly enthronement (Riesenfeld 1947), and/or his ascension (McCurley 1974). The only benefit of such a categorization is that it appears to limit the number of unintelligible events associated with Jesus: for example, the Transfiguration is subsumed within the resurrection and is dealt with only in general (and probably theological) terms. But even that benefit is only apparent. The Transfiguration is quite unlike the other passages with which it has been classed, except that it is a mysterious invocation of theophany. Those other passages which have been mentioned do not constitute literary *genres*, for the simple reason that they do not appear frequently enough to establish a convention of presentation which amounts to a system of speech.

Stories concerning heavenly voices, however, are well known in rabbinic sources (*JEnc* 2: 588–92; Lieberman 1962: 194–99). A view frequently encountered is that, with the removal of the Holy Spirit and the end of prophecy, only an echo or resonance (*bat qôl,* "daughter of a voice") from the heavenly court voiced God's perspective. This is explicitly stated in *t. Sota* 13.3, and an example then follows (Neusner 1985: 114, 115): when the sages were gathered at the house of Guria in Jericho, they heard a *bat qôl,* "There is here a man who is predestined for the holy spirit, except that his generation is not worthy of it." The sages then looked at Hillel, whom they took as the object of the praise. The Transfiguration obviously includes more motifs than are involved in most stories which refer to divine voices (such as the story concerning Hillel), and yet it is possible to say that the Transfiguration is conveyed by means of the genre of an account concerning a *bat qôl.* As in the case of Hillel in the house of Guria, the basic structure of the Transfiguration locates Jesus physically and socially, and makes him the object of the praise of a *bat qôl,* as his confreres appreciate.

But if the generic structure of the Transfiguration is to be found in stories concerning divine voices, its narrative structure (in the unfolding and details of events) is reminiscent of Moses' ascent of Mt. Sinai in Exodus 24. At the close of the story, Moses is said to ascend the mountain, when God's glory, as a cloud, covered it (v 15). The covering lasted six days (v 16), which is the amount of time between the Transfiguration and the previous discourse in both Matthew (17:1) and Mark (9:2). After that time, the LORD calls to Moses from the cloud (24:16b), and Moses enters the glory of the cloud, which is like a devouring fire (vv 17–18). Earlier in the chapter, Moses is commanded to select three worshippers (Aaron, Nadab, and Abihu) together with seventy elders, in order to confirm the covenant (vv 1–8). The result is that just these people (v 9) are explicitly said to have seen "the God of Israel" in his court (v 10) and to have celebrated their vision. The motifs of master, three disciples, mountain, cloud, vision, and audition here in Exodus 24 recur in the narrative of Jesus' Transfiguration (Chilton 1980: 120–22).

As noted above, the reference to "six days" in the Matthean and Markan accounts of the Transfiguration (but not in the Lukan account) coheres with Exodus 24. Other distinctive elements (that is, elements not held entirely in common among the Synoptics) within the gospels' versions may also be associated with the complex of material to which Exodus 24 belongs. For example, Matt 17:2 uniquely refers to Jesus' face shining like the sun, which is reminiscent of Moses' aspect in Exod 34:29–35. In more general terms, the Markan reference to the whiteness of Jesus' garments, "such as a fuller upon the earth is not able to whiten" (9:3), establishes by its own means the heavenly context which is more elaborately developed in Exodus 24 (particularly vv 15–18). But the material unique to Luke most emphatically commends a Mosaic association. Luke puts a distance of eight (rather than six) days between the previous discourse and the Transfiguration, a fact that has baffled commentators. In the rabbinic interpretation of Exodus 24, however, the numerical variation is meaningful. In the *Targum Pseudo-Jonathan* (Exod 24:10, 11), it is particularly Nadab and Abihu who see "the glory of the God of Israel." Because "man will not see God and live" (Exod 33:20), they are punished; but the blow falls on the *eighth* day.

Luke (9:31) also depicts Moses and Elijah discussing Jesus' "departure" *(exodus)*; quite evidently, Exodus 24 provides no firm limit to developments within the Transfiguration, since the terms "Exodus" and "Elijah" have associations all their own. Elijah's immortality is already attested in 2 Kgs 2:9–12, and is well established within early and rabbinic Judaism (Chilton 1987: 268–70). The statement in Deut 34:7,

that Moses in fact died, did not prevent Josephus from describing Moses as having "disappeared" *(aphanizetai)* in the course of conversation with Eleazar and Joshua (*Ant* 4.8.48 §326). In that Josephus speaks of Elijah and Enoch (another deathless figure) with the cognate adjective (*aphaneis*, *Ant* 9.2.2 §28), his understanding that Moses was immortal seems unquestionable. No doubt these associations are at work throughout the Synoptic presentation, as were those of Elijah's experience on a theopanic mountain (1 Kgs 19:8–18). Similarly, the term *skēnē* ("tent," "booth," or "lean-to"), although not appearing within the LXX in Exodus 24, figures both as the natural place of abode during this period (Exod 18:7) and as a particular place of God's dwelling—concerning which Moses receives commandments on the mountain (Exod 25:8–9; 25:1).

Although the term "midrash" has recently gained currency in efforts to describe the reference of the NT to the Hebrew Bible, its usage in the present case would be inappropriate. Rather than a commentary (even in the loose sense of that word) on any OT text, there is an explosive series of associations which links Moses and his cycle with Elijah and his. The force of that explosion is such that the elements of Exodus 24 are scrambled in the Transfiguration, and crucial matter (Exod 24:12–14) has no analogue whatever. In fact, Exodus 24 in the Hebrew Bible is but a preamble to the divine instructions which properly commence in chapter 25. What happens on Mt. Sinai designates Moses, in narrative and visionary terms, as the single spokesman of divine revelation (24:18); others in the chapter are presented, only to be excluded at the pivotal moment of divine disclosure. They join in the celebration of the divine vision (vv 9–11), but they do not hear what Moses hears. By contrast, the climax of the Transfiguration, the apogee of tension and the interpretative key, is precisely the moment when the voice addresses not Jesus alone but the three disciples as well. The generic structure concerning the *bat qôl* is no accoutrement of the narrative but the very focus of interest—and that which lends some order to the explosion of associations.

At other points in the story of Jesus, accounts involving divine voices were recounted. The most obvious example is his baptism, but John 12:27–33—which is often discussed in association with the Transfiguration—is perhaps a more pertinent one. It establishes that an account of a *bat qôl* could be associated with Jesus' suffering, without the elaborate, scriptural allusions of the Transfiguration. Conversely, Paul presents an instance (2 Cor 3:12–4:6) in which Mosaic imagery, perhaps rooted in a traditional association of ideas and motifs, can be developed without reference to the *bat qôl* of Jesus. In the Transfiguration, however, a christological climax is reached just as Jesus' suffering is predicted: the *bat qôl* warrants, and a Mosaic vision confirms, that Jesus in his suffering is God's son, and therefore should be heard (cf. Deut 18:15, also within the Mosaic complex of the Hebrew Bible). Fundamentally, therefore, the Transfiguration is a visio-literary metamorphosis of the genre of *bat qôl:* Exodus 24 (and associated material) is the instrument by means of which the significance of the divine voice is conveyed. 2 Peter 1:16–18 is widely regarded as a summary of the Transfiguration, and it is remarkable that, having attested the message of the divine voice (v 18), the text goes on, "and we have more securely the prophetic word" (v 19): in effect, the source of narrative embellishment is recognized. Of course, the power of the scriptural imagery is such that eschatological vindication may be intimated by it (cf. *2 Bar.* 51:3–14, and the eschatological reference to "Elijah" in Malachi 4:5, 6; cf. Matt 17:10–11 = Mark 9:11–12), but the focus of the Transfiguration is not the future, or any of those moments after Jesus' death whose central meaning is eschatological. The point is what the *bat qôl* says at the moment Jesus consciously commences a journey of suffering: This is my son, hear him as you would Moses and Elijah.

TRANSJORDAN. Generally the area E of the Jordan Rift Valley from the Gulf of Aqaba (Elath) in the S to Mt. Hermon in the N, and E into the desert to the edge of normal vegetation. The term does not appear in the RSV. However, the phrase "beyond the Jordan" (Heb *ʿbr hyrdn*) frequently carries at least part of the meaning, as in Josh 12:1: "beyond the Jordan toward the sunrising." This probably means Gilead and Bashan where the tribes of Reuben, Gad, and half of Manasseh had settled (Num 34:14–15; Josh 12:6). Ammon, Moab, and Edom could also be designated by the name. Technically "beyond the Jordan" can mean either side, depending on one's place and point of view. However, the majority of references indicate E of the Jordan, or E Palestine as the area is sometimes called.

A. Political Definitions

Biblically, the area includes the modern Golan Heights (ancient Bashan), now part of Syria, and the modern Hashemite kingdom of Jordan, which occupies much of the traditional Transjordan. The area above (east of) the Lower Jordan (Galilee to the Dead Sea) is OT Gilead and NT Perea (which had been ruled by Herod Antipas). Some divide Gilead and S Gilead, separated by the Jabbok (the modern wadi Zarqa). When the Israelites arrived, Bashan and N Gilead were part of the kingdom of Og, extending about 90 miles from Mt. Hermon to the Jabbok.

The Jabbok begins at Amman, ancient Rabbath-ammon, and flows N –NE ca. 17 miles before turning W, and it empties into the Jordan Valley near Deir ʿAlla. After entering the valley rift, it turns SW flowing into the Jordan river. The OT kingdom of Ammon developed S of the Jabbok and had an indeterminate E boundary, while its W boundary fluctuated according to the strength of the kingdom. At times, the Ammonites controlled the whole 22 miles to the Jordan, and sometimes half of that distance.

During times of restricted Ammonite power, the area in the Jordan Valley S of the Jabbok to the Arnon (referred to in some texts as S Gilead) belonged to Moab. But this portion of Moab was conquered by Sihon (Num 21:26–30), before the Israelites arrived. The Israelites in turn defeated Sihon and Og, and the tribes of Gad and Reuben settled there. Later, it was the scene of part of the story of Ruth, after which it was conquered by the Ammonites.

The central territory of Moab was a stretch ca. 50 miles from the Arnon (Wadi Mujib) in the N to Zered (Wadi Hasa) in the S. The country of Edom was S of Moab, extending the ca. 120 miles to the Gulf of Aqaba.

B. Topography and Climate

The area has considerable variety in topography and climate. In the N, Mt. Hermon rises to 9,230 feet above sea level. The Rift Valley is 230 feet *above* sea level at the Huleh basin, and 695 feet *below* sea level at the Galilee. The surface of the Dead Sea is 1,275 feet below sea level, and the deepest point of the floor of the sea is 2,550 feet below sea level. To the S, the Arabah rises to 650 feet above sea level at Jebel er-Rishe and then drops to sea level at Aqaba. Paralleling the Jordan Rift to the E, the Gilead (Ajlun) hills rise as high as 3,500 feet above sea level, while the mountains of Edom reach 5,700 feet near Petra.

The northern area receives about 30 inches of rain a year, but the Dead Sea area has less than 3.5 inches. The E decline of the Transjordanian mountains slopes gently toward the E, and the rain sinks through the porous limestone following the bedding plains over the more impervious underlying granite, to appear as springs in the Sirhan in such places as the oasis of Azraq. The rains supported wheat, barley, and livestock in Bashan, grapes and forestland in Gilead, sheep and grain in Moab, and olives in much of the N area. Ancient irrigation was largely limited to the vicinity of streams, except for the *ganats* of Roman-Byzantine times (Glueck 1968: 169; 1967: 430) between the Jabbok and Nimrin wadis. The Nabateans developed an extensive irrigation system in the old Edomite area.

From ca. 3000 B.C. or earlier, the King's Highway (Num 20:14–21) extended from Aqaba to Damascus with stops at Amman and other points along the route. This road cut down across the major wadis with long hairpin turns. Coming from Aqaba, a more level road—the Pilgrim's Road—branched off at Ma'an and ran further E along the desert. However, it has less water, and in ancient times it was more exposed to raiders from the desert. The two roads merge again at Amman. The King's Highway is still in use. The modern Desert Highway follows roughly the same route as the ancient Pilgrim's Way.

Another ancient N–S route runs from Aqaba to the Lisan on the Dead Sea, where it climbs into the hills to the E. The route descends into the Jordan Valley again, just N of the Dead Sea, and extends N to the Yarmouk River Valley and thence to Damascus or down the Wadi Sirhan. The highway from Hazor crossed the N part of the region to Damascus.

The wadis were E–W travel routes. The Wadis Yabis, Jabbok, Nimrin (Shueib), and Abu Gharaba (Kefrein and Rameh/Hesban) were the more important ones in biblical times. Jacob followed the E–W route down the Jabbok from Penuel to Succoth. The Amman-Salt-Jericho Road came down the Nimrin to the Naklah ford and the more recent Allenby Bridge. Farther S, roads lead down from the plateau Madeba to the hot springs at Zerqa Ma'in and from Kerak and the Crusader's castle to the Lisan ("tongue") on the Dead Sea.

In geological times, Jordan was sometimes under water with incursions from the Mediterranean in the N and from Aqaba in the S. The "Tethys Ocean" joined the Mediterranean and the Indian Ocean ca. 20 million years ago. Approximately 300,000–70,000 years ago the Lower Jordan Valley was one big lake, while another large freshwater lake, El Jafr, lay in the E desert covering ca. 1000 km ^{2}. This became brackish and shallow (ca. 26,400 years ago) and eventually completely dried up.

C. Occupational Overview

Prehistoric human and animal remains have been found on the shores of these lakes (Vita-Finzi 1982: 25; Helms 1981: 18; Schattner 1962: 15). Old Stone Age, Middle Stone Age (Natufian), and Neolithic materials have been found in Azraq, Amman (ʿAin Ghazal), Beidha, etc. Occupation continued through the Chalcolithic and EB periods to ca. 2400 B.C. (Java, Tell Umm Hamad, Tell el-Husn, etc.).

MB occupation, the time of the patriarchs of Genesis, has been debated. Glueck found occupation in EB IV and a gap thereafter until the 13th century B.C. (LB IIB), when Moab, Edom, and then Ammon were settled again. There was another gap in the Neo-Babylonian and Persian periods. Glueck's own later work found more LB remains in the N (1967: 451), and subsequent survey and excavation shows no MB –LB gap N of the Arnon (Sahab, Amman, Jordan Valley). South of it remains are still scanty. MacDonald (MacDonald et al. 1983) reports no MB or LB sherds or artifacts in the Hasa (Zered) survey. Future work may yet turn up some evidence. Tell es-Safi, for example, just N of the mouth of Zered (Wadi Hasa) at the S end of the Dead Sea, has MB (1950–1550 B.C.) pottery (some identify Safi with Zoar in Gen 14:2, 8). There was no gap during the Neo-Babylonian and Persian periods (Sauer 1982; 1986; MacDonald 1986; MacDonald et al. 1983).

The usual view of the LB IIB period is that the Israelites moved through Transjordan in the 13th century B.C. after their Exodus from Egypt. They found Edom, Moab, and perhaps Ammon as settled kingdoms. Sihon had recently extended his rule to the Arnon, but the Israelites conquered him and Og of Bashan to extend their rule to Mt. Hermon (Numbers 21). The tribes of Reuben, Gad, and half of Manasseh (half of the Joseph tribe) settled this area.

The Philistines may have controlled part of the Jordan Valley in the 12th–11th centuries B.C. Later, the Ammonites (Judg 11:4–33) and the Moabites extended their control (Eglon, Judg 3:12–30). After the split of the Solomonic monarchy, Judah was able occasionally to rule Edom, while Israel occasionally controlled Moab (2 Kgs 3:4–27; Mesha and the Moabite Stone). The Arameans of Damascus extended their control over Bashan and at times Gilead (1 Kgs 22).

The Assyrians (735–605 B.C.) eventually subdued the whole area, making N Gilead part of their provincial system while Ammon, Moab, Edom, and Judah paid tribute as client states. Afterward, the Babylonians ruled the regions (605–539 B.C.). The Persians took over in 539 B.C. and the Greeks in 333. During the Persian period, the Tobiads, apparently a Jewish family, ruled Ammonite territory (Lapp

1987). Alexander the Great's Ptolemy took over Egypt and Palestine after Alexander's death. Ptolemy II Philadelphus rebuilt Rabbath-ammon as Philadelphia, later the southernmost of the Decapolis. In the time of Jesus, the Decapolis territory extended from Philadelphia (Amman) N to the Yarmuk River and in the Jordan Valley from the Wadi Yabis to Hippos on the E side of the Sea of Galilee.

The Ptolemies held the area until 198 B.C., when the Seleucids of Syria conquered it. The Seleucids were replaced by the Hasmoneans or Maccabees, who, in turn, were conquered by the Romans in 63 B.C. The Roman client king, Herod the Great, ruled from 37 to 4 B.C. His son, Herod Antipas, ruled Perea along the Lower Jordan and the N part of the Dead Sea, from the Wadi Arnon (Mojib) to the Yabis. Another son, Philip, ruled the old area of Bashan—Gaulanitis, Ulatha, Panias, Ituraea, and Batanaea.

The Nabateans, in the meantime, had pushed the Edomites into S Palestine in the 6th century B.C. By Antipas' time, Nabatean control had crept N to the Arnon; and during the life of the Apostle Paul, King Aretas IV had a governor in Damascus (2 Cor 11:32). In A.D. 106, the Nabateans' kingdom centered on Petra and was annexed by the Romans. The E Roman or Byzantine empire began in A.D. 325, and the Muslims conquered the area in A.D. 632.

TRAVEL AND COMMUNICATION. This entry consists of two articles surveying the logistics of traveling and communicating over distance. The first focuses on the ANE world of the OT, and the second focuses on the Roman world of the NT.

THE OLD TESTAMENT WORLD

The interrelationship of the ANE necessitated contact and communication which spanned vast stretches of the Levant. While roads reflect, in general, the path of least resistance, choosing the terrain which provides the most easily traversed routes, various factors—difficult surfaces, climatic and seasonal variability, and human and animal interference—present dangerous and unpredictable combinations. Roads, in turn, represent important factors in military and commercial activity, and hence are a crucial subject for the study of ancient history. See ROADS AND HIGHWAYS (PRE-ROMAN). Indeed, the importance of contact and communication is illustrated by the extreme hardships that travelers and troops endured in their efforts to traverse the Near East.

_____

A. Difficulties
    1. Hazards
    2. Limited Daily Headway
B. Safe Roads as Metaphor
C. Modes of Travel and Communication
D. Special Occasions of Travel and Communication

_____

A. Difficulties

1. Hazards. For 20th-century North Americans accustomed to an interstate highway system, or for modern Europeans who have sped along the Autobahn, the notion of travel and communication in the ancient world can easily be open to misimpression. This likelihood of distortion appears to be all the more possible in light of how the Romans are often remembered for the quality of their roads. In *What Shall Endure?,* Ethelyn Miller Hartwich recalls:

> Great roads the Romans built that men might meet,
> And walls to keep strong men apart, secure.
> Now centuries are gone, and in defeat
> The walls are fallen, but the roads endure.

No such tribute could be penned of ANE travel and communication. In point of fact, even international roadways were sometimes narrow winding paths that were clogged by mud or marsh after winter rains, or dusty and rutted throughout the many months of oppressive, searing heat. Certain places along these roadways required ancient travelers to navigate difficult, almost impassable terrain. Entailments of travel could include facing the hazards of water shortage or foul weather, or confronting wild beasts of prey or the haunting threat of bandits. A letter from the Babylonian king Burnaburiash II (mid-14th century B.C.) to Pharaoh Amenophis IV offers an alarming and sobering perspective on the difficulties and dangers of ancient travel through Canaan: "I am told that the way is dangerous, water is scarce, and the weather is hot, so I have not sent you many fine presents … when the weather improves, I will send [some presents] … [my] caravans have been robbed twice" (EA 7.53–76). An Egyptian royal treatise from the 10th Dynasty *(Instruction to Merikare),* apparently composed in order to legitimize a policy of unifying Upper and Lower Egypt and of reestablishing Egyptian hegemony over its Asian frontier, and more precisely over Canaan, provides a poetic summary of some of the perils inherent in ancient travel and communication:

> Lo, the miserable Asiatic,
> He is wretched because of the place he's in:
> Short of water, bare of wood,
> Its paths are many and painful because of mountains.
> He does not dwell in one place,
> Food propels his legs,
> He fights since the time of Horus,
> Not conquered nor being conquered,
> He does not announce the day of combat,
> Like a thief who darts about a group (*AEL* 1: 103–4).

Other pieces of Egyptian literature offer substantially the same verdict concerning ancient travel and communication. Two extant papyri stress the amenities and advantages that accrued to the profession of a scribe, while at the same time they pointed up hardships in other occupations. The profession of soldier, declared the *Papyrus Lansing,* required one to travel without rest over mountainous terrain, to drink water only every third day, water that was usually rancid or strong with the taste of salt, and to face constantly the torment of attackers on every side (*AEL* 2: 172). This same refrain was echoed in the *Satire of the Trades,* where a characterization of the profession of courier included having to leave Egypt and go into

the desert, to leave all goods to one's children, and to face the fearful threat of lions and Asiatics (*AEL* 1: 188).

A portion of the main communication thoroughfare of ancient Canaan was described by the Egyptian Thutmosis III (1490–1436 B.C.) as being so narrow at one place that his horses would have to proceed single file, thus creating a vulnerable military situation in which the pharaoh's vanguard and rear guard would be separated by several miles (*AEL* 2: 31). In the late 13th century B.C., an Egyptian official traveling through Syro-Palestine also described conditions along the roadway. At one point, he reported "that the sky is darkened by day and [the road?] is overgrown with cypresses and oaks and cedars which reach the heavens" (*ANET*, 477). Elsewhere in this same papyrus, the traveler offered a similar assessment of a portion of the main road near Megiddo:

> Behold, the ambuscade is in a ravine 2,000 cubits deep, filled with boulders and pebbles … The narrow valley is dangerous with Bedouin, hidden under the bushes. Some of them are four or five cubits [from] their noses to the heel, and fierce of face. Their hearts are not mild, and they do not listen to wheedling. You are alone; there is no messenger with you, no army host behind you. You find no scout, that he might make you a way of crossing. You come to a decision to go forward, although you do not know the road. Shuddering seizes you, [the hair of] your head stands up, and your soul lies in your hand. Your path is filled with boulders and pebbles, without a toe hold for passing by, overgrown with reeds, thorns, brambles and "wolf's-paw." The ravine is on one side of you, and the mountain rises on the other. You go on jolting, with your chariot on its side, afraid to press your horse [too] hard (*ANET*, 477–78).

Some of these texts are dealing with the movement of caravans or troops, while others address the travels of a single individual; but all the documents describe the same ominous reality: travel through Syro-Palestine in the early biblical periods was a difficult and hazardous business.

The same difficulties and perils, however, were faced by travelers throughout the entire Fertile Crescent. Herodotus may have had his reasons for boasting that messengers on the Persian Royal Road were "stayed neither by snow nor rain nor heat nor darkness from accomplishing their appointed course with all speed" (8.98; cf. Xenophon *Cyrop.* 8.6.17), but such travel clearly would have been an exception to the rule. Texts from Asia Minor (*Annals of Muršili II* [CTH 61.2.23]; *Muršili's Speech Loss* [CTH 486]) tell of snow, ice, and even lightning preventing travel. An Ugaritic text (RS 20.33 trans. in Rainey 1971: 133) describes how rains had caused the overflow of wadis, thus hindering further troop movement. In the same document, the Ugaritic king was reminded that the ravages of severely cold weather had taken their toll: devoured troops, broken chariots, and dead horses. Akkadian literature is replete with references to foul weather causing delays in or even preventing travel (e.g., CAD K: 551b; Z: 160–62; cf. VAT 746.19–22).

In the same manner, travelers throughout the Fertile Crescent were required to face the hazard of almost impassable terrain. A text from Muršili II (CTH 61.2.22, 70) tells of a mountainous, densely wooded terrain that prevented passage of horses and chariots, so troops were required to proceed on foot. Assyrian literature often speaks of the perils of difficult terrain. Often these texts, admittedly, are designed to extol the virtues of a particular king, so it would be imprudent to take what they say at face value. For example, the preface of the large sculptured relief of Assurnasirpal II (883–859 B.C.) contains numerous epithets of the king, including statements such as "the one who marches on mountain paths, the one who progresses by difficult means through mountains, and the one who opens paths in mountains which rise perpendicular to the sky like the edge of a dagger" (*GARI* 2: 183–84, 187). Similarly, as part of the preface to his Monolith Inscription, Shalmaneser III (858–783) is described as the "one who finds (his way among) the most difficult paths, who treads the summits of mountains and highlands far and near … who opens up trails north and south … who traverses mountain and sea" (*LAR* 1: 212). The preface of the Display Inscription of Sargon II (722–705) states: "I opened up mighty mountains whose passes were difficult and countless, and I spied out their trails … I advanced over inaccessible paths (in) steep and terrifying places, I crossed over all (sorts of) plains (?)" (*LAR* 2: 25–26; cf. 40, 60; for similar claims by Tukulti-Ninurta I [1244–1208] and Tukulti-Ninurta II [890–884], consult *GARI* 1: 108, 118–19; *LAR* 1:

127–28). Though texts like these undoubtedly contain hyperbolic elements, being specimens of political propaganda, other pieces of Assyrian literature deal with the same phenomenon of traveling over difficult terrain in ways that seem to reflect actual historical description. In some cases, these texts have a ring of authenticity by virtue of the degree of detail they supply. Tiglath-pileser I (1114–1076), for instance, states that he took horses and chariots with him on one campaign where it was necessary to hack out a path with copper pickaxes in order to make passable a road through a rough mountain range (of the Zagros, in the vicinity of the Lower Zab). But having crossed the Tigris later in the campaign, he had to abandon his chariot and proceed on foot (*GARI* 2: 7–8). In another campaign, this monarch tells of taking with his army a corp of engineers *(ummānu),* whose task it was to level tracks and clear roadways. They also cut down certain species of trees which were then used for constructing a bridge across the Euphrates (*GARI* 2: 12; for this translation of *ummānu,* refer to *AHW*, 1415; cf. CAD K: 11a). Sargon II speaks of cutting a road through difficult terrain, so narrow the path and so strait the passage that his infantry had to pass marching sideways (CAD G: 90b), and having to use camels and baggage asses to get to the pinnacle of a mountain (*LAR* 2: 75), including descriptions of the sound of a mighty waterfall and the presence of a certain species of fruit tree along the road on which he was traveling (*LAR* 2: 93–94). Sennacherib (705–681) describes traversing over difficult terrain on his sedan chair before the landscape became too steep. Continuing on foot, the king tells of getting tired, sitting down to rest and drink cold water before renewing his difficult climb (*LAR* 2: 122–23). In other cases, historical credibility seems to be warranted in some passages dealing with difficult roads by virtue of the fact that the respective Assyrian monarch had to admit his own limitations. For example, Assurnasirpal II was pursuing an enemy over difficult paths and rugged mountains in the area of the Lower Zab. Upon reaching a certain mountain which he says was exceptionally rugged, he was unable to pursue further (*GARI* 2: 122). Sennacherib, on one occasion, was routing his Elamite foes along a road, yet because the "month of rain set in (with) extreme cold and the heavy storms sent down rain upon rain and snow," he was afraid of the swollen mountain streams, and so he turned back in the direction of Nineveh (*LAR* 2: 125, 155–57).

Even in the Persian and Greek periods, the situation did not improve dramatically: Diodorus of Sicily refers to stretches of the Persian Royal Road that were difficult to negotiate because of steep slopes (1.2), and Xenophon's description of the "March of the 10,000" includes a number of stories about chariots stuck in the mud, and the need to clear and repair roadways (*Anabasis* 1.2.21–22; 1.5.7–8; 4.1.10; 5.1.13–15; 5.2.6; cf. *Cyrop.* 6.2.36). Even as late as the Roman period, when larger and heavier military machinery was being moved and roads received some paving, personnel to keep roads open and clear were very much needed. According to Josephus (*JW* 3.6.2; 3.7.3), road workers preceded most of Vespasian's army, to cut down trees that hindered a march, to remove stones from the road, and to build it up and make it level and straight. A similar procedure was followed by Titus (*JW* 5.2.1).

Beyond the hazards of water shortage, foul weather, and nearly impassable roads, ancient travelers also had to contend with bandits, infiltrators, and wild beasts along roads. But unlike the problem of difficult terrain, which would largely have been limited to the mountainous regions of the Zagros, Taurus, Amanus, Lebanon, and Anti-Lebanon ranges and their outliers, the hazards of men and beasts were ubiquitous. A Hittite text (*Bel Madgalti* 1–16) offered repeated instructions to scouts who were sent out to keep roadways open and safe. In the *Admonitions of Ipuwer* (19th–20th Dynasties), a "prophet" stood before pharaoh and bitterly complained: "Lo, the ways are [blocked], the roads watched. One sits in the bushes till the night-traveler comes, in order to plunder his load. What is upon him is seized; he is assaulted with blows of the stick; he is criminally slain" (*AEL* 1: 154). An Amarna text, imploring Amenophis IV to intervene on behalf of Babylonian merchants who had been robbed and murdered in Canaan, amply illustrates that the *Admonitions* contained more than mere rhetoric. My messengers, declares the sender, "were held up on business in Canaan … in the city of Hinnatun in Canaan, [certain men] of Acco killed my merchants and took their silver … I have been robbed in your land … as to the people who killed my messengers, kill them and avenge their blood. Otherwise they will return and kill either a caravan belonging to me or one belonging to you" (EA 8). Shortly thereafter, Wenamun reported that thieves had robbed him of silver and gold (in Phoenicia). He went on to discuss how some travelers

carried with them a statuette of Amun, which served as a magical protector (*AEL* 2: 225, 228). As part of Late Egyptian Wisdom Literature *(The Instruction of Ankhsheshonq),* a friend is advised: "Do not walk a road without a stick in your hand. Do not walk alone at night" (*AEL* 3: 172). And Josephus reported that Herod the Great opened a road between Syrian Antioch and Samsat (on the Upper Euphrates) that was very dangerous because of 500 ambushers and narrow passes at woods (*Ant* 14.15.8; cf. Luke 10:30). Two Egyptian literary documents from the late 13th century B.C. warned of the problem of wild beasts. "A soldier, when he goes up to Retenu (i.e., Palestine)," says the one text, "has neither staff nor sandals. He does not know whether he is dead or alive, by reason of fierce lions" (Waterhouse 1963: 160). Of conditions along a Canaanite roadway, the other papyrus utters, "Lions are more numerous than leopards or bears, (and the road is) surrounded by Bedouin on (every) side of it" (*ANET,* 477). Wild beasts were also a formidable threat to travel, as described in the Bible. Samson is said to have encountered a young lion on the Sorek valley road between Zorah and Timnah (Judg 14:5–6). Citing evidence that he was a worthy opponent of the giant Goliath, David boasted that he had slain bears and lions while tending his father's sheep along Judean pathways (1 Sam 17:34–36). The Bible also records a tragic incident on the road between Jericho and Bethel, in which two bears killed some 42 young boys (2 Kgs 2:23–25). Travelers on roads that aligned the Jordan river valley must have faced the same reality: the Medeba map depicts a lion on the prowl in the valley (cf. Jer 50:44; Mark 1:13); many Arabic towns in this valley appear to bear the names of beasts; skeletal remains of beasts have been exhumed from the Jordan's flood plain; and mention is frequently made in itineraries of the sighting of beasts in this valley.

Such difficulties and perils doubtlessly contributed to the fact that most international travel and communication was undertaken by caravans; in numbers, there was some protection against alien elements and agents. Considerable literary evidence from Mesopotamia and Asia Minor indicates that caravans were generally large and almost always escorted by security guards, armed by the public powers for their tasks, and that the caravanners were expected to stay strictly on the preordained route. It was not uncommon for caravans to include as many as 100 to 200 donkeys, sometimes carrying priceless commodities, and one extraordinary text from Mari refers to a caravan of 3,000 donkeys (Finet 1966: 24–28; cf. Greenberg 1955: 18; see also Gen 37:25; Judg 5:6–7; 1 Kgs 10:2; Job 6:18–20; Isa 21:13; 30:6; and Luke 2:41–45, for some biblical evidence of caravans). Private caravans are attested only rarely in antiquity. Wealthy travelers were in a position to buy slaves to serve as armed guards (e.g., Abraham, Gen 14:14–15), while the poorer segments of society either moved in groups or attached themselves to a governmental entourage headed in the desired direction (Casson 1984: 173). Evidence shows that a measurable portion of overland travel took place under the cover of darkness; nocturnal travel could offer the advantage of escape from the oppressive heat of the sun, while at the same time provide some avoidance of detection by brigands and bandits. One wonders, in fact, whether travel at nighttime may have contributed directly to the wide diffusion of moon-cult worship, the most prevalent form of religion across the Fertile Crescent (cf. Ps 121:6).

2. Limited Daily Headway. Another obstacle to overland travel and communication was the limited headway one could make per day. To be sure, factors of dissimilar terrain, different purposes of travel, and variation of season could dictate the actual distance covered in a day. Accordingly, the ancient world was not unfamiliar with exceptional distances covered in a single day: swift governmental messengers could traverse the 1,500 miles of the Persian Royal Road in only nine days (Herodotus 8.98); messengers who carried news of Nero's death to the W limits of the empire averaged almost 10 miles per hour (Durant 1944: 323); Tiberias rode some 600 miles in 72 hours to be at the bedside of his dying brother (Durant 1944: 323); and couriers in the Roman postal service averaged about 95 miles per day (Forbes 1965: 138). But these were rare exceptions in the ancient world, and they should be treated as such.

On the other hand, we possess numerous archival texts, itineraries, and military annals from all parts of the ANE: Egypt, Babylonia, Assyria, Persia, and Asia Minor. Some of this evidence comes from the 2d millennium B.C., and other portions derive from the 1st millennium. The evidence is generally uniform and mutually corroborating that one day's journey in the ancient world incorporated between 17 and 23 miles, with slightly higher daily averages when traveling downstream by boat. Similar daily averages

continued to be the norm in later classical, Arab, and medieval itineraries, from Egypt to Turkey, and to Iran. Even as recently as 100 years ago or less, some modern itineraries or travel accounts document the same sort of meager daily averages. The same kind of limited headway is portrayed in a number of biblical episodes. Abraham sighted Mt. Moriah (vicinity of Jerusalem) during the third day of his trip from Beer-sheba (Gen 22:4), and the two sites are separated by approximately 50 airline miles. Kadesh-barnea (either Ain Qadeis or Ain Qudeirat) was a distance of 11 days' journey from Horeb (in the environs of Jebel Musa in S Sinai), following the testimony of Deut 1:2, and some 190 airline miles separate the two places. According to 2 Kgs 3:5–10, a march from Jerusalem via the "way of Edom" to the capital city of Moab (Kir-hareseth) lasted 7 days. The approximate distance involved in this journey was 115 miles. Ezra led a Jewish caravan from Babylonia to Jerusalem. His company is said to have departed from the Babylonian frontier on the twelfth day of the first month (Ezra 8:31), and it arrived in Jerusalem on the first day of the fifth month (Ezra 7:9), which means that the journey itself lasted a little more than three and one-half months (cf. Josephus *Ant* 3.15.3). Given the probable route traversed by Ezra and his compatriots (cf. 8:31—the more dangerous shortcut past Tadmor?), they would have traveled about 900 miles in a little more than 100 days, but the size and makeup of his caravan would have mitigated against greater daily averages. Alternatively, had they followed the longer course of the Euphrates as far as Imar/Emar, and proceeded from there along the Great Trunk Road past Damascus (i.e., the normal route), a more typical daily average would have obtained. The same distances pretty much hold true in the NT, too. On one occasion, Peter journeyed 40 miles from Joppa to Caesarea and arrived at his destination on the second day (Acts 10:23–24). The urgency of the apostle's mission allows for the inference that he took a direct route to Caesarea and made no intermediate stops. In fact, Cornelius later explained that his own ambassadors had journeyed round-trip between Joppa and Caesarea in 4 days (10:30). On another occasion, after having been charged by the Jews in Jerusalem with an offense worthy of death, Paul was hurriedly escorted to Caesarea via Antipatris in two days' time (Acts 23:23–35), a distance of about 65 miles according to the roads the soldiers most likely followed. According to Josephus (*Life* 52), it was possible to travel between Galilee and Jerusalem by way of Samaria, a distance of about 70 miles, in three days' time.

B. Safe Roads as Metaphor

Mindful of the perils and difficulties inherent in ancient travel and communication, one gains a greater appreciation of "open/straight/level roads" (i.e., safe roads) as metaphor for an era of peace. Opening roads (or canals) was repeatedly cited by ancient kings as an accomplishment worthy of royal distinction. Such thinking was not limited to one geographical sphere of the Fertile Crescent; nor was it restricted only to one period of time or one genre of literature. King Azittawadda was a powerful West Semitic monarch, probably of the 8th century, who erected a city and citadel at Karatepe in Asia Minor. A long autobiographical inscription found there, composed on the occasion of the dedication of city and citadel, praises Azittawadda as the one in whose days "there was, within all the borders of the Plain of Adana, from the rising of the sun to its setting, even in places which had formerly been feared, where a man was afraid to walk on the road, but where in my days a woman was able to stroll, peaceful activity, by virtue of Ba‘al and the Gods. And in all my days, the Danunites and the entire Plain of Adana had plenty to eat and well-being and a good situation and peace of mind" (*ANET*, 654). The central point here is that security of domain may be seen in terms of tranquility on the roads. This same notion appears on a tablet from the Assyrian Assurbanipal. The text states: "In the whole land, no gentleman did any evil (harm). The one traveling by himself, traveled the farthest road in safety. There was no thief, (nor) shedder of blood. No deed of violence was committed. The lands were quiet. The four regions (of the world) were in perfect order, like the finest oil" (*LAR* 2: 380–81; cf. ARM 2: 78.31; 112.8). Nebuchadnezzar II made a similar claim in one text. The Babylonian avers, "I opened passages and (thus) I constructed a straight road … I made the inhabitants of the Lebanon live in safety together and let nobody disturb them" (*ANET*, 307; cf. connection between building a highway and securing peace, found on the Moabite Stone [*ANET*, 320]). At times, an era of peace exemplified by open, straight, or level roads is ascribed to a particular deity, whether Nergal (*ANET*, 268), Osiris (*AEL* 2: 85), Aten (*AEL* 2: 97), or even Yahweh (Ps 143:10;

Prov 3:6; cf. Prov 15:19). The Bible also uses such imagery metaphorically to signify an era of peace and tranquility. The prophet Isaiah (40:3–5; cf. Luke 3:4–6) declares concerning the restoration of Israel and Judah:

In the wilderness prepare the way of the Lord,
make straight in the desert a highway for our God.
Every valley shall be lifted up,
and every mountain and hill shall be made low;
the uneven ground shall become level,
and the rough places a plain.
And the glory of the Lord shall be revealed,
and all flesh shall see it together,
for the mouth of the Lord has spoken.

Elsewhere, this prophet (42:16; cf. 45:13; 57:14; 62:10) assures the nation of God's active participation in its restoration and in a period of ensuing peace:

I will lead the blind
in a way that they have not known,
in paths that they have not known
I will guide them.
I will turn the darkness before them into light,
the rough places into level ground.

The prophet Jeremiah also wishes to convince the nations of Israel and Judah that they would be restored, that God would not utterly abandon them, but that they would see an era of tranquility. He writes (Jer 31:9; cf. Heb 12:13):

With weeping they shall come,
and with consolations I will lead them back,
I will make them walk by brooks of water,
in a straight path in which they will not stumble;
for I am a father to Israel,
and Ephraim is my firstborn.

C. Modes of Travel and Communication

In addition to walking, the usual mode of overland travel in the ancient world was by way of pack ass. Pack asses were attested as beasts of burden as early as 3000 B.C., and they were consistently used in caravan travel and trade (Cole 1954: 706). The pack ass was strong, even tempered, surefooted, and inexpensive. Though less common, certain other animals were used in travel and communication. The ox was known as a draft animal as early as 3000 B.C., in connection with both carts and sledges (Salonen 1950: 1–8). Also, the first association of true horses and wheeled vehicles took place during the 3d millennium.

Though horses ridden for military purposes did not become common until the 1st millennium, there is pictorial evidence for ridden horses in Asia already in the early 2d millennium (Moorey 1986: 198), and from about 1800 B.C. comes evidence of horse-drawn chariotry. It has long been argued that horses and chariots, and perhaps also composite bows and battering rams, were suddenly introduced into Mesopotamia some time around the middle of the 2d millennium by Indo-Europeans (Mitannians) who emigrated from beyond the Caucasus mountains. Now it is clear enough that horse-drawn chariots were part of standard military fare by the middle of the 2d millennium. But documentation from Mari demonstrates that already in the 18th century B.C., several breeds of horses were being raised, trained, traded, and used for a variety of purposes by a population that was native. Texts from ARMT 18 even provide lists and details of horse stable personnel gear. Likewise, Akkadians at Mari had access to more than one kind of chariot; they were employed for parades, hunting, racing, and as prestige vehicles for short journeys. Whether or not they were used for military purposes as early as the 18th century B.C. is not yet clear, but a number of factors combine to offer a rather persuasive argument. First, there are about two

dozen terms attested in this archive which designate one or another chariot part. In a few texts, some of these same terms are listed as part of military issues, which also included two-wheeled chariots, leather quivers, helmets, and scale armor. Also included among these issues was the *tilpānu,* which in the past was thought to refer to a "throwing stick." But this lexeme has recently been shown to designate the "composite bow." The composite bow appears at Mari on a stone slab which portrays a siege scene. Finally, Mari texts make plain the fact that battering rams were regular combat weapons there. Nevertheless, explicit textual reference to chariot warfare is still unknown in Mari texts, and the invention of the bit comes at a later time (Littauer and Crouwel 1979: 68–70, 99–100; Dalley 1984: 159–65).

D. Special Occasions of Travel and Communication

As in modern travel, there would have been countless personal reasons for people in antiquity to have traveled between preexisting points. Beyond these, however, several special situations would have occasioned ancient travel and communication: (1) commercial (e.g., commodities from as far afield as India, if not Thailand and Malaya, westward as far as the Atlantic Ocean, were being traded commercially across the Fertile Crescent by the Middle Bronze Age); (2) military (e.g., innumerable texts and annals); (3) royal (e.g., diplomatic correspondence was brought by courier or governmental official to a foreign dignatary, as in the case of the Amarna letters); (4) religious (e.g., evidenced in numerous holy wars, missionary urges, and religious pilgrimages); (5) scientific (e.g., the expedition of Alexander the Great against Persia was planned in part in order to explore the entire inhabited world as far as the eastern ocean, so Alexander took with him scientists who were entrusted with keeping daily reports, recording distances between stops, and describing geographical features of the soil and landscape along the way); and (6) political (e.g., deportations which politically disenfranchised many people, or trips within the province made to procure native natural resources for the state).

_____

A. Communication by Water and Land

The great rivers of Egypt and Mesopotamia have provided convenient means of communication from time immemorial. From earliest days, too, the Aegean has facilitated communication between the Greek mainland and islands and the W coast of Asia Minor. The Egyptians, the Cretans, the Phoenicians, and later the Greeks undertook coastal voyaging and N–S crossing in the Mediterranean.

1. The Roman Grain Fleet. In NT times, an important means of communication by sea was the imperial grain fleet plying between Alexandria and Italy. Egypt was the granary of Rome, and as the regular and adequate supply of grain to the capital was essential, this service was organized as a department of state as early as the Ptolemaic period (Rostovtzeff 1957: 708). The ships were privately owned, but the owners (Gk *nauklēroi;* Lat *navicularii*) let out their services under contract to the state and operated under state control. An inscription from Andriace, the port of Myra, marks an imperial building for grain storage (*CIL* 3.6738); there is a similar one from the same period at nearby Patara (*CIL* 3.12129). With a steady wind from the west, the best route from Alexandria to Italy was by Rhodes or one of these Lycian ports.

The fleet served other state interests than the transport of grain: for example, state prisoners being taken under guard to Rome might be carried on board. Private passengers and cargo were also carried.

2. Roman Roads. "All roads led to Rome" in NT times: the Romans paid much more attention to communications between the several provinces and Rome than between province and province. The good workmanship put into Roman roads is evident from the survival of many of them to this day: the Romans spoke of "building" a road (Lat *viam struere*). They learned some road-making techniques from the Etruscans, but the idea of continuous paved roads was Roman. A road required a sound foundation, efficient drainage, and where necessary, strong bridges.

In Italy the most famous road was the Via Appia, began under Appius Claudius in 312 B.C.; it ran S from Rome to Capua, and was later extended to Brundisium (Brindisi). From there the sea-crossing to the Balkan peninsula was about 100 miles. When Macedonia became a Roman province in 148 B.C., the Via Egnatia was constructed, running east from Dyrrhachium (modern Durres) and Apollonia (modern Poyani) on the Adriatic to Thessalonica, from which existing roads ran S to the main Greek cities. The Via Egnatia was later extended farther E to Neapolis (modern Kavalla), the port of Philippi, and later still to Byzantium on the Bosporus. When the Roman province of Asia was formed in 133 B.C., the Via Egnatia (with a short sea-crossing at either end) provided easy communication between Rome and the new province.

Asia Minor was already provided with superior roads going back to the period of Persian supremacy. The Persian empire operated an efficient road system with inns or caravanseries and watering places at convenient intervals. The "Royal Road" ran from Susa to the Aegean, a distance of some 1,500 miles, a three months' journey. Herodotus (Hdt. 5.50–54) lists 81 staging posts, at each of which fresh couriers and horses stood ready to carry royal decrees to the remotest parts of the empire (cf. Esth 8:10). See also ROADS AND HIGHWAYS (ROMAN ROADS).

3. The Imperial Post. The Roman imperial post followed much the same system, with one important variation. Whereas the Persian system provided a fresh courier at each staging post, Augustus arranged for one courier to complete the whole journey by carriage *(vehiculum)*, with fresh horses being provided at each staging post (Suet. *Aug.* 49.3). Even with the provision of carriages, this called for considerable stamina in the couriers, but what it lost in speed it gained in efficiency, for the courier who arrived with the message knew of the circumstances in which it had been dispatched and could supplement the written account with firsthand information. Thus, couriers from Syria and Judea brought Vitellius the news (A.D. 69) that the eastern legions had sworn allegiance to him (Tac. *Hist.* 2.73).

Sometimes citizens with sufficient influence were permitted to use the imperial post for personal business. The younger Pliny, while legate of Bithynia and Pontus, wrote to Trajan, saying: "I have made it a fixed rule not to grant anyone a permit to use the imperial post unless he is traveling on your service; but I have just been obliged to make an exception. My wife learned of her grandfather's death and was anxious to visit her aunt. I thought it would not be reasonable to deny her a permit when promptness means so much in performing this kind of duty, and I felt sure that you would approve of a journey made for family reasons." The emperor replied that of course he approved: "you had no need to entertain any doubts on this score even if you had waited to ask me *first*" (*Epp.* 10.120, 121).

There is no plausibility in the suggestion that Paul sometimes used the good offices of "saints … of Caesar's household" (Phil 4:22), i.e., members of the imperial civil service, to convey his letters for him. He evidently used members of his own circle for this purpose.

While security and regularity rather than speed were the aim of the imperial post, speed was sometimes of special importance. In 9 B.C., Tiberius was at Ticinum in N Italy when he learned that his brother Drusus was mortally ill at his summer camp in Germany, 500 miles away. Using relays of horses supplied by the imperial post, he covered the distance within three days; indeed, he is said to have covered 200 miles of the journey within twenty-four hours (Val. Max., *Facta Memorabilia* 5.3). This, of course, was quite exceptional.

Speed was essential when an emperor's death and his successor's identity had to be reported to the provincial authorities. For example, Tiberius died on March 16, A.D. 37 (Tac. *Ann.* 6.50); news of his death reached the legate of Syria, L. Vitellius, while he was on a visit to Jerusalem at Passovertide that year (Joseph. *Ant* 18.122–24). Since Passover in A.D. 37 coincided with the full moon of April 17/18, the news arrived within five weeks. It is uncertain whether it was brought by land along the Via Egnatia or by sea from Italy to Alexandria. The accession of Galba (June 9, A.D. 68) was announced in Alexandria in 27 days (*CIG* 4957 = *OGIS* 669).

The voyage from Italy to Alexandria in favorable weather was much shorter and faster than the circuitous land route by Macedonia, Asia Minor, and Syria. Herod Agrippa I, appointed king of the Jews by Gaius, set out from Puteoli for his new kingdom when the NW winds began to blow in A.D. 38 and reached Alexandria "a few days later" (Philo, *Flacc* 27)—perhaps in about two weeks. By contrast, the accession of Pertinax on January 1, A.D. 193 took 63 or 64 days to be announced at Alexandria: on March 6 the prefect of Egypt issued an edict with directions for its celebration (*BGU* 646). At that time of year, the news would have come by land (ca. 2,500 miles).

Travel by sea was virtually ruled out in winter. According to the elder Pliny (*HN* 2.122), the seas were reopened to navigation on February 8; according to Vegetius (*De re militari* 4.39), they remained closed until March 10. Vegetius probably had in mind sailing over the open sea. He adds that the safe season for Mediterranean sailing ended on September 14; after that it became dangerous, and ceased altogether for the winter on November 11. In an emergency, however, winter sailing might be attempted. In a time of food scarcity at Rome, Claudius insured shipowners against the loss of their vessels in wintry weather and offered a bounty for every new ship constructed for the grain fleet. (Suet. *Claud.* 18.2). Even by land, travel was hazardous in winter, especially on roads which led through mountain passes.

Where the time taken by a journey is specified, it is usually because it was exceptionally short (or, occasionally, exceptionally long); such precise time indications afford no basis for calculating average speeds, whether for the imperial post or for private travel.

The voyage from Alexandria described by Lucian *(Nav.)* is formally fictional, but it is plainly based on real experience. The journey from Alexandria to Italy, because of contrary winds, was longer and more circuitous than that in the opposite direction, but Lucian's grain ship was dogged by misfortune: it was driven into the Aegean and docked in Piraeus on the seventieth day after setting out, whereas it should have reached its destination in an Italian port by that time.

4. Private Travel and Correspondence. Private travelers generally had to be content with a slower rate than the imperial post; they could not rely on guaranteed transport and were usually more leisurely in their progress. If the imperial post could cover 50 miles in a day, private travelers with horse transport would

do well to cover 25–30, while pedestrians might achieve 15–20. Yet, where business was urgent a private traveler could go surprisingly fast. When Galba was proclaimed emperor by the Roman senate on June 9, A.D. 68, he was at Clunia in Spain, but his freedman, Icelus, left Rome at once and brought him the news within seven days, two days before the arrival of the official messenger (Plut. *Galba* 7)—a journey of 348 miles by land plus four or five days' voyage from Ostia to Tarraco.

In A.D. 143–44 the orator Aelius Aristides completed a winter journey from Smyrna to Rome. He fell sick and had to spend a long time at Edessa on the Via Egnatia, reaching Rome only on the hundredth day from his departure; yet he claims that for part of the way he traveled as fast as the imperial post (Aristides *Or.* 24).

The conveyance of private letters depended on the availability of carriers bound for the appropriate destination; they might therefore be earlier or later in arrival. A letter sent by Cicero from Rome to Athens reached its destination in 21 days, which he describes as "pretty smart" (*Fam.* 14.5.1); another, though sent at the height of summer, took 46 days to complete the same journey (*Fam.* 16.21.1). Of two letters sent to Rome from Syria, one—received on May 7, 43 B.C.—had taken 61 days (*Fam.* 12.10.2); another, dated December 31, 45 B.C., took 100 days (*Att.* 14.9.3).

B. Communication in the NT and Early Christian Record

A study of communications in the E Roman provinces helps to elucidate parts of the NT, especially Acts but also the Gospels and Epistles.

1. The Gospels. In Palestine the Romans used the ancient highway which led from the Euphrates to Egypt: it ran S through Damascus, crossed to the W side of the Jordan N of Lake Tiberias, went through the plain of Esdraelon (Jezreel) and the pass of Megiddo, and turned S along the Mediterranean coast—the Via Maris. Several minor branches linked various centers in Galilee with the W coast. A road by Antipatris (modern Rosh haʿAyin) linked Caesarea with Jerusalem; from Jerusalem to Jericho the road down the Wadi Qelt continued to serve, as it had done from ancient days.

Jesus and his disciples, who went around on foot, did not need to make much use of highways suitable for wheeled traffic; there was no scarcity of pedestrian tracks for them to follow as they went from one place to another in Galilee.

2. Paul. Paul and other missionaries to the gentile world found the Roman road system indispensable.

When Paul and Barnabas landed from Cyprus at the river port of Perga in Pamphylia and made their way up country to Pisidian Antioch (Acts 13:13–14), they probably crossed the Taurus range by the Klimax pass and went N to Prostanna, at the S tip of Lake Eğridir, and moved along the SE shore of the lake to the Anthios valley (Broughton 1937: 131–33). Pisidian Antioch, a Roman colony, was linked by road to the province of Asia on the W and to the cities of S Galatia on the E. For example, it was linked with Lystra, another Roman colony, by a military road which did not pass through Iconium. Paul and Barnabas, however, did not take this road: before going on to Lystra from Pisidian Antioch they visited Iconium. Iconium was an important road junction then as now: five Roman roads converged there. Derbe, to which Paul and Barnabas went from Iconium and Lystra, lay on the frontier between Roman Galatia and the client kingdom of Antiochus, but the Roman road system did not halt at the frontier; it continued through the client kingdom to the Cilician Gates and so on to Tarsus and Antioch on the Orontes.

On his next visit to Asia Minor (Acts 15:41–16:10), Paul set out by land from Antioch on the Orontes by the Syrian Gates, crossed the Taurus by the Cilician Gates (a gap worn by the Cydnus river), and so on to Derbe and Lystra (Ramsay 1906: 273–98). Another road from the Cilician Gates ran by Philadelphia to Troas; yet another ran N by Cappadocian Caesarea to Amisos on the Black Sea, crossing a main thoroughfare leading W from Armenia to the Bosporus.

On this occasion Paul probably intended to continue along the main road to Ephesus, but he was directed not to do so; instead, he and his companions left that road at Iconium or Pisidian Antioch and crossed the Sultan Dag to Philomelium (Akşehir), from which a road running NW would take them to Cotiaeum (Kütahya). From there they journeyed by Adramyttium to Troas (for the route, see Broughton 1937: 135). Alexandria Troas (to use its full name) was "a nodal point on what became a sophisticated

system of international routes" (Hemer 1975: 91). The imperial post used the short sea crossing between Troas and Neapolis as a link between N Asia Minor and the Via Egnatia.

Paul and his company crossed from Troas to Neapolis, and visited Philippi and then Thessalonica on the Via Egnatia. Having been prevented from going to Ephesus, Paul may have planned now to make for Rome along the Via Egnatia, but trouble at Thessalonica forced him to turn S. Thus, he eventually reached Corinth, where he stayed for 18 months (Acts 18:11).

From Corinth he returned to Palestine and Syria by sea. In general, contrary winds made Mediterranean sea travel from E to W difficult: for example, Casson (1951: 136–48) reckoned that, while the voyage from Rome to Rhodes took 7–11 days, that from Rhodes to Rome took 45–63 days. Paul, having visited Caesarea, Jerusalem, and Antioch, set out again by land for Asia Minor. This time he succeeded in reaching Ephesus. According to Acts 19:1, he approached Ephesus from "the upper country." Any route from the interior would pass through what was "upper country" from the perspective of Ephesus, but Ramsay (1897: 93–96) supposed (probably rightly) the reference to be to a higher road which left the main westward road at Apamea (modern Dinar) and led to Ephesus from the N side of Mt. Messogis (modern Aydin Dağlari). From Col 2:1, one might infer that Paul was a stranger to the Lycus valley, through which the main road ran.

After his three years' ministry in Ephesus, Paul revisited his European mission field. At Troas he hoped to meet Titus, whom he had entrusted with a delicate mission to the church of Corinth. He waited until sailing had ceased for the winter; he concluded then that Titus would come by land through Macedonia, and he set out for Macedonia to meet him (2 Cor 2:12–13; 7:5–6).

It was probably after meeting Titus that Paul visited Illyricum (Rom 15:19). To do this he would follow the Via Egnatia to the vicinity of its W terminus at Dyrrhachium (see Hammond 1974: 185–94) and then turn N along the Adriatic, either by land or (if the time of year permitted) by sea.

At the end of this time in Europe, Paul set out for Palestine, primarily to deliver the proceeds of a relief fund which he had organized in his gentile mission field for the church of Jerusalem. He was accompanied by delegates from the contributing churches. The delegates set sail from Cenchreae, the E port of Corinth, but Paul changed his mind at the last minute and went N to Philippi; from Neapolis he and Luke sailed to Troas and rejoined the others there. The voyage from Neapolis to Troas took five days (Acts 20:6), by contrast with the two days required earlier for the journey in the opposite direction (Acts 16:11), no doubt because of a prevalent northeasterly wind. By this time the Passover and festival of unleavened bread were past (in A.D. 57 the festival lasted from April 7 to 14), and Paul was anxious to reach Jerusalem in time for Pentecost (which in A.D. 57 fell on May 29).

From Troas the party set out by a fast ship, which rounded Cape Lectum and put in at Assos; Paul, for reasons not disclosed, went from Troas to Assos by land, a considerably shorter journey (25 miles) than the sea route, and was taken on board at Assos. The ship next put in at Mytilene, Samos, and Miletus. Instead of putting in at Ephesus, it sailed across the head of the Gulf of Ephesus, but it stayed in port at Miletus long enough for Paul to send a messenger asking the leaders of the Ephesian church to come to Miletus to meet him.

The ship then continued on its way to Cos, Rhodes, and Patara. As it was probably proceeding E along the S coast of Asia Minor, Paul and his party left it at Patara and found a large ship which was making a straight run across the open sea to the Phoenician coast to unload its cargo at Tyre. Chrysostom *(hom. 45 in Ac.)* reckoned that the voyage from Patara to Tyre took five days. Luke notes that on their way they sighted Cyprus to starboard.

At Ptolemais (Acco) the ship probably reached its final destination. The party went on by road to Caesarea (a journey of some 30 miles) and, as time was now well in hand, spent several days with the Caesarean Christians before completing the remaining 64 miles up country to Jerusalem, perhaps on muleback.

The hazards of travel by land and sea are underlined by a passage in which Paul lists the perils he endured in his apostolic journeys (2 Cor 11:25–26). Travel by land involved dangers from flooded rivers and highway robbers. He does not include (though he might well have done so) hazards incurred in

spending the night at inns along the road: these were notoriously dangerous and unsavory places. Travel by sea involved the danger of shipwreck, which he had endured three times (this was before he was shipwrecked off Malta); on one of these occasions he had spent 24 hours adrift on the open sea.

The hazards of sea travel are best illustrated by the account of Paul's voyage from Palestine to Italy (Acts 27). This is narrated in considerable detail, and in terms which point clearly to the record of an eyewitness who was not himself a seaman, but has provided "one of the most instructive documents for the knowledge of ancient seamanship" (Holtzmann *Apostelgeschichte* HKNT, 421).

Paul, who had been sent to Rome for the hearing of his appeal to Caesar, was (with other prisoners) put under the charge of a centurion. The ship of Adramyttium, which they boarded at Caesarea, took them to Myra; its port Andriace was a principal port of the imperial grain service. A large ship of the grain service was in harbor, ready to continue its homeward voyage; the centurion, who may have been a *frumentarius*, a supervisory officer of the grain service, put his charges on board.

It was already late in the sailing season, and the shipowner was anxious to make good speed and reach Italy before the seas closed for the winter. The NW wind slowed their progress, but they rounded Cape Salomne and sailed under the lee of Crete. By the time they came to Fair Havens (6 miles E of Cape Matala), it was clear that they could not complete the voyage before winter, so it was decided to make for Phoenix, 40 miles farther W, and spend the winter there. Suddenly, however, a violent NNE wind, called the Euraquilo (the *gregale*), blew down from the interior of Crete and drove them out to sea. During the short time that they sailed under the lee of Cauda, the crew hauled the dinghy on board, undergirded the ship, dropped a floating anchor, and then, with storm sails set, drifted before the wind on the starboard tack. The situation was so desperate that they had to jettison most of the wheat cargo, the raison d'être of the voyage and the source of the shipowner's livelihood.

With no navigational aids—neither sun nor stars were visible, because of the storm—they had no idea where they were, and all hope of survival had been given up when they found themselves approaching land—Malta, as it turned out, where they managed to get ashore, although the ship was a total wreck.

After three months' stay on Malta, they embarked on another vessel of the grain service, which had wintered there in harbor, and reached Puteoli safely. Passengers from Alexandria were normally put ashore there, while the cargo was taken on to Ostia. From Puteoli, Paul and his party went N by the Via Appia—two staging posts on the road are mentioned, the Forum of Appius and Three Taverns—"and so we came to Rome" (Acts 28:14). An adventurous journey indeed!

Paul's associates also made use of those communications on his behalf, none more assiduously than his aide-de-camp Timothy. When Thessalonica had been newly evangelized and Paul was forced to leave the city before his mission was completed, he sent Timothy back there from Athens to see how his converts were faring. This journey could have been made by land or by sea. On another occasion Paul sent Timothy from Ephesus to Corinth: he was in the course of writing a letter to the church, but received news of a situation so urgent that it called for personal intervention by a man in whom he had total confidence, before the letter could be completed and dispatched.

More arduous was the mission undertaken by Timothy when Paul was in custody in Rome. Anxious to have news of his converts in Philippi, Paul sent Timothy there. This involved a road journey of nearly 750 miles (about forty days) each way—360 miles to Brindisi from Rome and 381 miles along the Via Egnatia to Philippi—over and above the crossing of the Straits of Otranto (occupying the best part of two days). Timothy undertook it readily: one who spent so much time in the company of a man who spoke of himself as "constantly on the road" must himself have been a seasoned traveler.

3. The Delivery of 1 Peter. The First Letter of Peter was sent (probably from Rome) to Christians "in Pontus, Galatia, Cappadocia, Asia, and Bithynia." This sequence of provinces probably indicates the route to be followed by the letter carrier. According to Hemer (1978: 239–43), if the carrier landed at Amisus in Pontus (modern Samsun), he could follow a road which took him to Amasia in North Galatia, Zela in S Pontus, and Caesarea in Cappadocia. This was the road mentioned above as linking the Black Sea with the Cilician Gates. Leaving it at Cappadocian Caesarea, the messenger could take a road west to Iconium and Pisidian Antioch (in S Galatia), and to Apamea in Asian Phrygia; then he had a choice of northbound

roads which would take him through Asia into Bithynia, to Nicaea, Nicomedia, and Chalcedon on the Bosporus, and there he could find a ship for his return journey.

4. The Letters to the Seven Churches of Asia. The sequence of the seven churches listed in Revelation—Ephesus, Smyrna, Pergamum, Thyatira, Sardis, Philadelphia, and Laodicea—probably also indicates the route taken by the bearer of the seven letters. "Ephesus was the messenger's natural place of entry to the mainland of the province of Asia, and the other cities lay in sequence on a circular route round its inner territories" (Hemer 1986: 15). To this day, six of the seven cities are on the railway (Pergamum being the exception). As Ramsay (1907: 171–96) pointed out, the messenger, starting at Ephesus, would visit the cities one by one, going N by Smyrna to Pergamum, and then turning in a SE direction to visit Thyatira, Sardis, Philadelphia, and Laodicea. From Laodicea he would have no difficulty in taking the W road back to Ephesus.

5. The Journey and Letters of Ignatius. Another early Christian journey was that taken between A.D. 110 and 115 by Ignatius, bishop of Antioch on the Orontes, when he was sent under armed guard to Rome to be exposed to the wild beasts in the amphitheater. He and his guards went by land to Troas, from which they crossed to Neapolis, and so on to Rome by the Via Egnatia. The earlier part of their journey is undocumented: presumably they traveled by the Cilician Gates and then W to Iconium and Apamea. At either Apamea or Laodicea they turned N and went through Philadelphia and Sardis to Smyrna, where they arrived in August and stayed for some time. Here, our evidence for the journey becomes more detailed, thanks to letters which Ignatius sent from Smyrna to churches which, learning of his presence there, dispatched delegates to greet him—the churches of Ephesus, Magnesia by the Maeander, and Tralles. Had Ignatius' route passed through these cities, their churches would not have needed to send messengers to him at Smyrna. At the same time, Ignatius used the good offices of someone who was setting out for Rome to send a letter to the Christians of the capital, advising them of his impending arrival there and begging them not to exercise any influence to try to save him from martyrdom.

The party then went on to Troas, where there was a further stay; here Ignatius wrote letters to the church of Philadelphia, where he had stopped briefly on the way to Smyrna, as well as one to the church of Smyrna and another, more personal, to its bishop, Polycarp.

On his way through Philippi, Ignatius evidently impressed the Philippian Christians, for shortly afterwards they decided to make a collection of his letters, and wrote to Polycarp asking for his help. Polycarp's positive reply to their letter is extant: he asked them to let him know if they had any news of what happened to Ignatius and his companions.

The fictitious details of Ignatius' journey in the *Acts of Ignatius* picture him as following in Paul's footsteps.

TRAVELERS, VALLEY OF THE (PLACE) [Heb *gê hā-ʿōbĕrîm* (גֵּי הָעֹבְרִים)]. An unidentified valley E of the Dead Sea in which, during the latter days, the Israelites would bury Gog and his hordes after they had been slain by Yahweh (Ezek 39:11). Subsequently, the valley would be called the "Valley of Hamon-gog (i.e., Valley of the Multitude of Gog).

Scholars disagree on both the designation and location of this valley. The MT *ʿōbĕrîm* may be read as a proper name, hence "Valley Oberim" (cf. Zimmerli *Ezechiel* BKAT, 923), or as a verbal form with the translation "Valley of the Travelers" (cf. RSV). The latter designation may suggest a play of words on "the travelers" in the context.

Revocalization of the locution *ʿōbĕrîm* could result in the reading "Abarim" (e.g., NEB and RSV marg.) which was the name of a mountain range E of the Dead Sea known from Num 33:47–48, Deut 32:49, and Jer 22:20. See ABARIM. Taking the phrase "east of the sea" to mean "east of the Dead Sea," together with the vocalization "Abarim," several scholars identify the "Valley of the Travelers" with a valley in the Abarim range or a valley below the Abarim mountains, both of which are E of the Dead Sea (e.g., Fohrer *Ezechiel* 217; Wevers *Ezekiel* NCBC, 292).

Objections to such a Transjordanian identification include: (1) the Heb word *qiḏmaṯ* need not necessarily mean "east" (cf. the translation of the LXX); (2) the Heb word for "sea" may be applied to the Mediterranean, or to the Sea of Galilee, as well as to the Dead Sea; and (3) a location in Transjordan seems to be at odds with both Ezek 39:11, which places the valley within Israel, and Ezek 47:18, which states that the E border of Israel ran along the River Jordan down to the Dead Sea.

Accepting the LXX reading that the valley was notable and stressing its location within Israel, Bewer suggested that the "sea" of Ezek 39:11 is the Lake of Galilee and the "Valley of the Travelers" should be identified with the *Wâdī Fejjas,* located about 2 miles S of the sea of Galilee (1938: 124). Other proposals include identifications with the Valley of Jezreel and with the Shephelah E of the Mediterranean. However, neither of these suggestions seems to fit the Hebrew designation for "valley" in Ezek 39:11.

More recently, Ribichini and Xella (1980), drawing on Ugaritic texts, interpreted the "Valley of the Travelers" as "the valley of those who have passed to the nether world."

TRAY [Heb *maḥtâ* (מַחְתָּה)]. A word used three times in the RSV (Exod 25:38; 37:23; Num 4:9) which is more often rendered "firepan" or "snuffer." This Heb term is from a root, *ḥth,* meaning "to snatch," used to indicate the taking of hot coals from a hearth. The translation "tray" is used with "tongs" in priestly portions of the Pentateuch in reference to the utensils for servicing the golden lampstand, where it may indicate a receptacle for burnt wicks rather than coals.

TREASON. See PUNISHMENTS AND CRIMES (OT AND ANE).

TREATIES IN THE ANE. Treaties had a significant impact on the political shape of the ANE from the 3d to the 1st millennium B.C.E. They reveal a great deal of information about international relations in this area and the history of the peoples involved. The majority of them were written in Akkadian and (to a lesser extent) Hittite, with a very small number drafted in other languages; they were inscribed on tablets of clay or metal and deposited in temples of major deities. Egypt stands out as an exception to the widespread practice of treaty making in the ANE, perhaps because it was deemed beneath pharaoh, as a living god, to enter into contracts with his servants (Tadmor 1982: 140). However, no treaty documents are known from Old Babylonian archives either, including Mari. This may indicate that in this period binding agreements between some city-states were concluded orally.

The ultimate origin of the treaty tradition in the ANE is still disputed. The earliest international treaties come from Hatti, pointing to a Hittite origin (Tadmor: 1982: 139). On the other hand, the fact that this genre shares a number of features with clearly Mesopotamian forms such as the *kudurru* (boundary stone) suggests a Mesopotamian locus (McCarthy 1978: 124; Korošec 1931: 26–35).

———

A. General Characteristics

The ANE treaty was a sworn political agreement between two parties, at least one of which was a nation or king. At its core was an oath (Akk *nīš ilī,* lit., " (by) the life of the gods"), taken before the state deities of one or both parties. It was at the same time an imprecation (Akk *mamītu*), calling down divine wrath on the oath breaker. Treaty and oath were so closely associated that in 2d -millennium Mesopotamia one of the standard expressions for this type of document was *riksu/rikiltu u mamītu,* lit., "treaty-and-oath" (cf. Heb *bryt wʾlh* in Deut 29: 11, 13—Eng29:12, 14). The deities before whom the oath was taken were thought to act as guarantors of the treaty, punishing the one who transgressed it.

B. Types and Purpose

In general, one may distinguish between (1) international and (2) domestic treaties. The former were more common and may be subdivided into "parity" (between equal powers) and "suzerain-vassal" types (between a major power and a lesser nation). Parity treaties sought to establish nonaggression between the parties and to guarantee the stability of the respective ruling dynasties. Suzerain-vassal treaties served to consolidate the hegemony of the suzerain; the vassal's interests were clearly subordinate. Kestemont (1974: 346) has played down the inequality between Hittite suzerain and vassal, though his view has not won wide acceptance (McCarthy 1978: 59–60). Domestic pacts had to do with internal affairs of state, frequently with the succession to the throne, especially in Assyria (Parpola 1987: 186).

C. Terminology

1. Terms for Treaties. The ANE terms for "treaty" during the 2d millennium had the same underlying meaning, viz., "binding": Akk *riksu/rikiltu* (< *rakāsu,* "bind"); Hitt *išḫiul* (< *išḫiya-,* "bind"); Ug *mṣmt* (<

ṣmd, "fasten, yoke"; cf. Num 25:3, 5; Ps 106:28); Heb *bryt* (cf. Akk *birītu,* "clasp, fetter" [*TDOT* 2: 255]). The contract could also be designated by its oath component. In Akk it was called a *(ṭuppu ša) nīš ilī* " (tablet of the) oath" or a *(ṭuppu ša) mamītu* " (tablet of the) imprecation" (Tadmor 1982: 132). The latter term was commonly used in this way in 15th-14th-century Hatti, Alalakh, Ugarit, Amarna, and Assyria. In addition, terms denoting the relationship created by the treaty were used at times to designate the agreement or the document itself (see E. below).

2. Ratifying the Treaty. Establishing a treaty was thought to be accomplished primarily by swearing the oath, but also by certain accompanying rites. This is reflected in ANE expressions for concluding a treaty. One of the most widely used was "to cut an oath": Phoen *krt ʾlt* (*KAI* 27:8–9); Aram *gzr ʿdn* (*KAI* 222 A 7); Heb *bryt krt;* cf. Sum *nam-erím tar/ku*$_5$, "to swear (lit., "cut") an assertory oath" (and Gk *horkia [pista] temnein*). The action may originally have referred to cutting animals into pieces in the oath ceremony. At Mari "to kill an ass" (Akk *ḫāram qatālum*) became a technical expression for making a covenant (McCarthy 1978: 91) (see D. below). The vassal treaties of Esarhaddon mention concluding a treaty by touching breasts, setting a table, drinking from a cup, and using water and oil (*ANET*, 536). Akk sources speak of "giving" (cf. Gen 9:12; 17:2) and "establishing" the treaty. The parties are sometimes said to "enter into the oath/treaty" (cf. Jer 34:10; Ezek 16:8; *TDOT* 2: 260). One treaty in Ug has *mṣmt št l-*, "to impose treaty (-obligations) upon" (cf. Heb *śm bryt l-* in 2 Sam 23:5). Similarly, the treaty oath was "sworn," "given," "placed," "uttered," or "imposed" (Tadmor 1982: 132 n. 23).

D. Treaty Rituals

In addition to the solemn acts that became synonymous with the establishment of the treaty, certain other rites sometimes accompanied the oath ceremony. Most of these had an intimidating character, foreboding the fate of the one who transgressed the sworn agreement. Mesopotamian sources mention "touching the throat" (Akk *napišta lapātu*) in this connection (Tadmor 1982: 134). A document from Alalakh, in reference to a treaty, reads: "Abban [Abbaʾil?] swore an oath to Yarimlim and cut the neck of a sheep, saying ' (Let me so die) if I take back that which I gave you …' " (Wiseman 1958: 129). Perhaps the most dramatic examples of such rites are mentioned in the treaties concluded with Matiʿel of Arpad (*ANET*, 532–33, 660).

E. The Treaty Relationship

The establishment of the treaty created a state of amicable relations between the contracting parties. This was described in 2d-millennium parity treaties by words such as "peace" (cf. Josh 9:15), "brotherhood" (cf. Amos 1:9), "friendship," and "love." Concretely, this translated into mutual nonaggression and agreement on respective spheres of influence. The relationship was commonly qualified as "eternal," since it was considered binding upon the parties' successors as well. The relationship of the vassal to his suzerain was not "brotherhood" but "servitude." In treaties of this type, the language of "father/son" replaced "brothers" and was apparently interchangeable with "lord/servant" (Fensham 1971: 125). The vassal was forbidden to seek alliances with other great powers but was to "acknowledge" only the suzerain as his overlord (cf. Hos 13:4), to be at enmity with his enemies, to extradite political refugees to the suzerain, and to report all seditious talk to him. Moreover, he was to maintain peaceful relations with all fellow vassals. Disputes between vassals of the Hittite king were brought to him for settlement.

F. Keeping and Breaking the Treaty

Remaining loyal to the treaty was described as "guarding" (cf. Exod 19:5; Deut 33:9) or "remembering" (cf. Amos 1:9) it. Verbs used to describe breaking it include "break" (cf. Deut 31:16), "transgress" (cf. Deut 17:2), "be false to" (Ps 89:34—Eng89:33), "despise" (cf. 2 Kgs 17:15), "erase," "sin against," "forget" (Deut 4:23; *TDOT* 2: 260–62). Breaking the oath brought the full force of the imprecations on the guilty party. Hittite texts speak of the oath gods "pursuing" (cf. Deut 28:45), "seizing," or "destroying" (Deut 28:20, 22) the oath breaker. Assyrian documents likewise speak of the imprecation "overtaking" (cf. Deut 28:15, 45), "seizing," and "destroying." In suzerain vassal treaties, this often took the form of a punitive campaign by the suzerain against the transgressor.

G. Geographical Distribution of ANE Treaties

1. Sumer, Ebla, and Akkad. There is no evidence of widespread treaty making in Sumer. The so-called "Vulture Stela" records an agreement between Eanatum of Lagash (25th century B.C.E.) and the city-state of Umma concerning boundaries (Cooper 1986: 33–39). The ruler of Umma invokes a series of curses upon himself if he breaks the oath. About ten treaties have been identified from the Ebla archives. The most important is the "Treaty between Ebla and Assyria (?)" concerning the foundation of a commercial center. Its classification as a treaty is debated, since some sections read like laws a state would lay down for its own citizens (Lambert 1987: 355). Ebla seems to have had the upper hand. A treaty in Elamite between Naram-Sin of Akkad (23d century B.C.E.) and an Elamite ruler is preserved, but is difficult to interpret (McCarthy 1978: 32).

2. Hatti. Extant copies of Hittite treaties date from the age of Hittite supremacy, the period of the Empire (1460–1215). They were written either in Hittite or in Akkadian, the language of international diplomacy in the LB Age. About fifty such documents are known to date.

a. Parity Treaties. Very few exemplars of this type of treaty survive. The earliest known were concluded between Hatti and Kizzuwatna (in S Anatolia) and between Kizzuwatna and Alalakh about 1500 B.C.E. (Tadmor 1982: 139). The best known is that between Hattusilis III and Ramesses II after the battle of Kadesh-on-the-Orontes (ca. 1280 B.C.E.), preserved in a Hittite (*ANET*, 201–3) and an Egyptian version (*ANET*, 199–201). The document deals with mutual nonaggression, extradition of political refugees, respective spheres of influence, etc.

b. Suzerain-Vassal Treaties. In this type, the majority of the obligations fell to the vassal. For his part, the Hittite king was obligated to provide protection and military assistance. The standard structure is as follows: (1) preamble, giving the official titles of the Hittite king; (2) historical prologue, recounting the past beneficent deeds of the suzerain (and his predecessors) to the vassal so as to establish the authority claimed in the treaty; (3) stipulations or terms ("words"—cf. Hos 10:4; Exod 20:1), which could be expressed in an imperative/precative form ("apodictic") or, more commonly, in conditional clauses ("case law"); (4) requirement that the document be deposited in a temple (of major deities) of the respective parties and read at regular intervals; (5) invocation of divine witnesses, including the gods of the Hittite pantheon and divinized natural elements; and (6) blessings and curses. Though this is the "classic" structure, exceptions did occur: e.g., the omission or curtailment of the list of divine witnesses and the de-emphasis of the curses in certain treaties in which the "vassal" was a relative of the Hittite king.

3. Syria. a. Second-Millennium Treaties. At least two treaties are known from 15th-century Syria. These are noteworthy insofar as both seem to have been concluded between vassals of the king of Mitanni. The first, a "treaty-document," was concluded between Idrimi of Alalakh and Pilliya (of Kizzuwatna?; *ANET*, 532). It is concerned with the extradition of refugees and concludes with a brief curse invoking three deities. The second describes itself as an " 'oath'-document" between Niqmepa, king of Mukish and Alalakh, and Ir-Arad (?) of Tunip (*ANET*, 531–32). The terms touch on the usual matters—trade, extradition of refugees, etc. It ends with a brief series of curses invoking three "great gods."

b. The Sefîre Treaties. A series of three Aramaic texts dating from the 8th century have come to light, preserving versions of a treaty between Bar-Gaʾyah, "king" of KTK, and Matiʿel, king of Arpad (*ANET*, 659–61; Fitzmyer 1967). Given the many Neo-Assyrian traits of this document, Lemaire and Durand have recently proposed that the suzerain was Shamshi-ilu, commander-in-chief under Shalmaneser IV (1984: 23–58). (A treaty between Matiʿel and Ashur-nirari V of Assyria is also preserved—*ANET*, 532–33). An interesting feature of these Aramaic documents is the rituals mentioned therein foreboding the fate of the oath breaker, including cutting a calf in two (cf. Jer 34:18). Similar rites are mentioned in the treaty with Ashur-nirari V (see D above).

4. First-Millennium Mesopotamia. a. Babylon. Only one fragmentary treaty survives that might be Babylonian, concluded in 822 B.C.E. between Marduk-zakir-shumi of Babylon and Shamshi-Adad V of Assyria (Parpola and Watanabe 1988: 4–5). It is often assumed that the Babylonian king is the dominant party, though Parpola disagrees, classifying it as Neo-Assyrian (Parpola and Watanabe 1988: xxvi;

Parpola 1987: 186). Very little of the stipulations are preserved; it concludes with a list of gods and curses almost identical with those at the end of the Code of Hammurabi.

b. Assyria. In 1st-millennium Assyria, the term *riksu/rikiltu* was replaced by *adê* (cf. Heb *ʿdn/ʿdwt*). This appears to be a loanword from Aram *ʿdy*, a construct plural meaning "oaths" (cf. Lemaire and Durand 1984: 91–106). Parpola (1987: 180–83) has shown that it is a general term in Neo-Assyrian for any solemn, binding agreement. To date, about twenty NA *adê*s have come to light, with references to about fifty in all (Parpola 1987: 184–86). The majority of these are international treaties. The general form of the Neo-Assyrian treaties is similar in many respects to the Hittite model. The main parts are as follows: (1) preamble, identifying the contracting parties, (2) stipulations, (3) appeal to divine witnesses (state gods of Assyria and, in some instances, of the vassal party), and (4) curses invoked upon the inferior party in case he violates the treaty (Parpola and Watanabe 1988: xxxv–xliii). The following elements are sometimes found, but apparently not mandatory: a short historical introduction, seal impressions (after the preamble), and an adjuration clause (with a list of divine witnesses).

The longest and best preserved Neo-Assyrian treaty known to date (ca. 670 lines) is a domestic treaty concluded in 672 B.C.E. between Esarhaddon and his vassals (*ANET*, 534–41; Parpola and Watanabe 1988: 28–58)—the "Vassal-Treaties of Esarhaddon." It is not clear whether it was imposed only on certain vassals on the E periphery of the empire or on a wider group of subjects (Parapola and Watanabe 1988: xxx). The chief purpose of the document was to ensure the succession of Esarhaddon's son, Ashurbanipal, to the Assyrian throne.

Neo-Assyrian treaties differed from their Hittite counterparts in several respects. The contract was more one-sided: virtually all the obligations fell to the vassal party. No blessings were invoked; rather, there was a decided emphasis on the curses, which explains why the treaty could be called *mamītu*, "imprecatory oath." In the Esarhaddon treaty mentioned above, the curses run some 230 lines.

H. The Perdurance of the ANE Treaty Form

From the fact that treaties were such a significant part of international politics in the ANE, it is not surprising that this literary genre or variations of it lasted almost to the end of the pre-Christian period. The 7th-century amulet from Arslan-Tash (*KAI* 27: 8–18) shows its influence (Zevit 1977: 110–18). Nor is it possible to deny its impact on the OT idea of covenant, especially in Deuteronomy. See also COVENANT. The ANE treaty form is also clearly reflected in a text as late as 215 B.C.E., the pact between Hannibal and Philip V of Macedonia (Plb. *Hist.* 7.9; Barré 1983: 38–99).

TREE OF KNOWLEDGE AND TREE OF LIFE. The tree of the knowledge of good and evil and the tree of life are two supernatural trees located in the garden of Eden (Gen 2:4b–3:24). The two trees are mentioned together at the beginning and end of the Eden story (Gen 2:9; 3:22). However, in the middle of the story only one tree is mentioned (2:16–17; 3:3, 6, 11, 12). It is clear that this tree is the tree of knowledge because of its properties and because of the prohibition placed on it (cf. 3:3, 5–6, 11 with 2:16–17). A clear understanding of what the tree of knowledge represents or what powers it can bestow is essential for interpreting the narrative of Gen 2:4b–3:24.

A. The Tree of Knowledge

The name of this tree presents certain syntactic difficulties. It is fully: *ʿēṣ haddaʿat ṭôb wārāʿ.* The problems center around the word *daʿat.* Is this word a substantive or an infinitive, and how does it relate to the following phrase? Those who take *daʿat* as the noun "knowledge" propose either that it is in the absolute state governed by the preceding word, "tree," or that it is in the construct state bound to the following phrase, "good and evil." In the former case, there is the problem of how *ṭôb wārāʿ,* "good and evil," relates to this. Von Rad proposed that the phrase *ṭôb wārāʿ* should be considered a "subsequent addition." In the latter case, there is the difficulty of the article being affixed to a noun in the construct state. A more satisfactory solution is obtained by taking *daʿat* as an infinitive construct of *yādaʿ,* "to know," preceded by the article and with a direct object following. This construction is admittedly rather rare but not without parallel (cf. Jer 22:16).

Scholars have given a great deal of attention to the interpretation of the tree of knowledge. Three broad areas of interpretation can be discerned among the many proposals.

(1) The tree makes possible the acquisition of certain human faculties. Proposals in this area have included the acquisition of moral values (K. Budde), attaining human maturity (H. Gunkel, U. Cassuto), claiming the right of self-determination (E. Speiser, R. de Vaux), or claiming legal responsibility for decisions (W. M. Clark). A basic problem with all of these is that there is no adequate explanation given as to why Yahweh should deny any of these responsibilities to humankind. Moreover, this approach does not clarify in what way having these qualities is to be regarded as "being like gods" (3:22).

In regard to the matter of moral values, how could Yahweh consider the humans who eat of the tree's fruit at fault when they were morally ignorant? The argument for self-determination being the power granted by the tree has some merit. The context of the story points in this direction, but further consideration needs to be given to the way the phrase "knowing good and evil" affects the context. W. M. Clark's legal argument concentrates only on those passages in which "to know/discern good and evil" has a royal or legal context (e.g., 1 Kgs 3:9; 2 Sam 13:22; 14:17). There are other occurrences of this or another similar expression which do not have these contexts.

(2) The tree introduces to the first humans the knowledge of sexual relations. This has been a popular interpretation. Various proposals along this line have been made by J. Coppens, L. Hartman, I. Engnell, and R. Gordis. Elements in the story of Eden have prompted these proposals: the nakedness of the couple, their shame, the punishment in the terms of pain in childbearing and sexual desire for her husband, the fertility associations of snakes in the ANE, and the designation of the woman as "mother of all living."

Passages such as Deut 1:39 and Isa 7:15, which speak of children not yet knowing "good and evil," and 2 Sam 19:36, in which Barzillai in old age no longer knows "good and evil," are all cited as evidence. In the last case, Barzillai declines David's invitation to join his court. David offers hospitality in return for that shown to him earlier by Barzillai (2 Sam 17:27). Barzillai would prefer to spend his old age at home and tells David that he can no longer appreciate food or drink or the sounds of the court singers. In this context, his rhetorical question whether he can "know good or evil" suggests to some a reference to the triad "wine, women, and song." Hence, "to know good and evil" is an idiom for having sexual relations. If there is an allusion here to that triad, it would be the earliest occurrence. This is a slender argument for a purely sexual understanding of "to know good and evil." One can comprehend Barzillai's rhetorical question better if it is understood that he means he can no longer know "anything" as he once could and therefore cannot appreciate David's offer fully. The whole semantic range of *yāda‘,* "to know," used in the OT needs to be taken into account.

The same could be said for the passage from Qumran, 1QSa 1:9–11, cited by R. Gordis (1957). As part of the general rule for life in the Qumran community, this passage states,

> (A man) will not approach a woman to have intercourse with her until he has attained the age of twenty when he knows good and evil.

Gordis sees this as an indication that "to know good and evil" has to do with commencing sexual relations. However, the larger context of the passage sets the age of twenty in the community not only as the age of marriage but also as the age of the conclusion of the study of the Law and acceptance into the holy congregation (1QSa 1:8–9). Thus, while "to know good and evil" could have some sexual connotations it also has legal and social ones.

One cannot ignore the sexual overtones in the story in Gen 2:4b–3:24, but they do not dominate the narrative. The tree of knowledge possibly has some connection with these overtones, but that is not the whole story. One has to consider the total range of meaning of the verb *yāda‘,* "to know," to obtain a clearer picture. Further, in the Eden story one has to consider that Yahweh does not forbid human procreation. In fact, the recognition that the relation of the man and woman in the story before they eat from the tree becomes an etiology for human marriage (2:24) cannot be overlooked.

(3) The tree gives access to some universal knowledge. This interpretation has also been proposed in various forms by many scholars, including J. Wellhausen, P. Humbert, and J. A. Soggin. Wellhausen saw the knowledge associated with the tree as a broad knowledge which transcended human limitations. It was the knowledge of the secrets of the world, and its acquisition enabled humankind to imitate the work of God.

Such interpretation of the tree of knowledge is dependent on the phrase "good and evil" being understood as a merism. A merism is a figure of speech where the totality of something is expressed by two constituent parts. There are other passages in the OT where this phrase or a similar one is used as a merism (e.g., Gen 24:50; 2 Sam 14:17, 20; Jer 42:6; Lam 3:38; Eccl 12:14). In 2 Samuel 14, a woman from Tekoa comes to King David seeking his wisdom. In v 17 she says of David, "… for my lord the king is like a messenger of God (the gods) discerning the good and the evil." In v 20 she adds, "My lord has wisdom like the wisdom of the messenger of God (the gods) knowing all which is in the earth." The passage clearly uses "the good and the evil" as a merism for "all which is in the earth." David's knowledge of "all which is in the earth" is likened to the knowledge of "the messenger of God (the gods)." This is helpful in understanding Gen 2:4b–3:24.

Also important for the interpretation of the Eden story are Deut 1:39; 2 Sam 19:36; and Isa 7:15, 16. In the first and third passages, reference is made to children who do not yet "know good and evil" or who do not yet know how "to refuse the evil and choose the good." Arguments have been made for the interpretation of "good and evil" in these passages to indicate human faculties or sexual relations. But these do not exhaust the possibilities, and when 2 Sam 19:36 and 1QSa 1:9–11 are also considered it would seem that "good and evil" can best be understood as a merism indicating a comprehensive extent of knowledge which includes various concepts of maturity, with sexual, intellectual, and social implications.

The interpretation of universal knowledge as the gift of the tree in Eden would seem to fit the story best. It ties in with the theme of the humans becoming like gods. The various aspects of divine knowledge—sexual, intellectual, social, etc.—would have allowed the ancient storytellers to highlight various aspects of the narrative as they desired. Gen 2:4b–3:24 is a story about divine-human relations, the boundary that divides the two realms, and the consequences of attempting to breach the intimacy, trust, and responsibility that is part of the created order.

B. The Tree of Life

The tree of life is the second of the two main trees located in the garden of Eden. It bestows immortality on those who eat from it (Gen 3:22). The origins of the concept of the tree of life are obscure. There is no explicit reference to such a tree in other ANE literature, although special plants, food, and water are often depicted as granting the gift of immortality or at least eternal youth. In the Epic of Gilgamesh, the hero, in his travels, acquires a plant by which he can regain his "life's breath." He names the plant, "In old age a man becomes young." The gift of the plant is clearly that of a return to youthful vitality. Unfortunately, a serpent steals it from him while he bathes (Epic of Gilgamesh 11.279–89; see *ANET*, 96).

In the myth of Adapa, the hero, who is a leader among peoples, is offered the "food of life" and the "water of life" by the god Anu, but on the advice of Ea he refuses them, thinking they are rather the bread and water of death. Like Gilgamesh he misses out on gaining a quality of life beyond that of other mortals (*Adapa* 67–68; *ANET*, 101–3). The "water of life" is also mentioned in the story of the descent of Ishtar to the netherworld (*Descent of Ishtar* 34, 38; *ANET*, 107–9), while the "plant of life" is connected with kingship in Sumerian and Akkadian texts.

Throughout ANE literature, occasional descriptions of sacred trees with magical powers are known. The *kiškanû* tree is referred to in Akkadian incantation and magical texts as having some special healing powers. It grows in a pure, abundant place in Eridu. The features of the location remind us of the image of the garden of the gods. See GARDEN OF GOD.

The description of the "world tree" or "cosmic tree" in Ezek 17:22–24; 31:2–9, and Dan 4:7b–9, although used in different contexts, should be noted. Such trees are portrayed as objects of beauty, grandeur, and abundant fertility. They become shelters for all sorts of creatures and are a source of sustenance for all life.

None of the above elements can be directly connected to the biblical tree of life. The aspect of "life" in each of them changes from story to story. However, the common ground between them should be recognized. The concepts of a supernatural tree as a source of life and of eating and drinking some substance to gain divine powers seem to have coalesced in the tree of life in Gen 2:4b–3:24.

Glyptic and other artistic evidence is also cited as evidence for consideration in discussions of the tree of life. Natural or stylized trees on monuments, stelae, cylinder seals, etc., have been interpreted as sacred trees or a "tree of life." These depictions fall into two broad categories. First, such trees are associated with divine figures in human form or with certain mythical beasts. A winged disk is sometimes portrayed above the tree, which often occupies a central place in the scene. In some cases, these scenes could depict some mythic episode. The tree is occasionally connected with a mountain or with streams coming forth from the deity. Secondly, some scenes depict a central tree flanked by two animals. The beasts, which can be either mythological or common domestic animals such as goats, are often seen resting their forelegs on the tree. Occasionally, the figure of a deity replaces the tree. The interpretation of this material is highly subjective. The relation of ritual significance to decorative function is unknown, and it is difficult to connect the evidence to specific mythic episodes.

OT references to the tree of life are found outside Gen 2:4b–4:24 only in Prov 3:18; 11:30; 13:12; and 15:4. It also occurs in the LXX of Isa 65:22. In Prov 3:18, the tree of life is equated with wisdom. In the other passages, it is contrasted to something undesirable. R. Marcus (1943) argues that in the Wisdom Literature the mythological understanding of the term has been replaced by a secularized understanding specifically indicating a "health-giving drug" or "remedy." However, one must keep in mind that the concept of "life" in the OT embraces a broad range of meanings from immortality to good health. The tree in Proverbs therefore need not just be reduced to a "secular" term. It is certainly devoid of any notion of

immortality, but other aspects of the mythical tree could lie behind the references. Finally, the reference to the tree of life in LXX of Isa 65:22 (cf. "the tree" in MT) builds upon and enhances the mythic imagery used in Isaiah 65.

The notion of the tree of life is carried over into intertestamental literature. There, however, the tree performs functions different than in the OT. In *1 Enoch* 25:4–5, the fruit of the tree is to be given to the elect as food on the day of great judgment. The concept of immortality is still present in the tree, but now it is reserved for those who will enjoy a risen life in God's presence. A similar situation is described with reference to the tree of life in *T. Levi* 18:10–11, *4 Ezra* 7:123–24; 8:52 (cf. also 1QS 1:3–4 and 1QH 8:5–6).

Although the concept of the "tree of life" in Gen 2:4b–3:24 cannot be seen as dependent upon any of the other supernatural trees discussed above, we can nevertheless say that this tree is a development in Israelite literature of a traditional motif. Moreover, the tree of life appears in the context of a description of a divine garden. This is also the case with the description of the *kiskanû* tree and the tree which represents Pharaoh in Ezekiel 31. As in the case of Ezekiel 17 and Dan 4:7b–9, the motif of the supernatural tree has taken on a prominent role in the story.

The concept of the tree of life reappears in the book of Revelation (2:7; 22:2 *bis,* 14, 19). In Rev 21:9–22:5, John sees a vision of the new Jerusalem. The tree of life *(to xulon zoes)* grows on either side of the river which flows from beneath the divine throne (22:2). The tree yields twelve kinds of fruit all year round. Its leaves are good for healing the nations. A share in the tree is reserved for the righteous (v 14), among whom are those who adhere to the words of the book (v 19).

The vision of the new Jerusalem is closely connected to the letters to the seven churches in Rev 1:4–3:22. The promises made to the victorious faithful at the end of each letter are realized in the vision. In particular, the letter to the Ephesians promises the victorious the right to eat from the tree of life (2:7). The tree of knowledge is not mentioned in Revelation.

There has been debate over whether the imagery behind the tree of life in Revelation is confined to the motif of the supernatural tree in paradise. The noun *xulon* was usually used in earlier Greek texts to denote "dead wood" or "timber." In the NT, *to dendron* is usually used for living wood or trees; *xulon* again refers to "dead wood," but it is occasionally used to refer to the cross (Matt 26:47; Mark 14:43, etc.). Only in limited contexts, especially the five occurrences in Revelation, in the phrase *to xulon zoes,* does it refer to living wood. In the LXX, however, *dendron* is the common word for "tree." Some scholars suggest then that in certain circumstances and under the influence of the LXX (especially in Genesis 2–3), some NT writers have adopted the word *xulon* for "tree." A few would go on to say that the use of *xulon* in Revelation carries with it an allusion to the cross as the tree of life.

In Rev 2:7, the tree of life is located in the paradise of God. In Rev 22:1–2, the paradise motif is picked up and associated with the geography of Palestine. The tree of life is located on the banks of the river of the water of life, which flows from beneath the throne of God through the midst of the new Jerusalem. The merging of the concepts of the heavenly city and paradise is also found in *2 Bar.* 4 and *T. Dan* 5:12.

The background for Rev 22:1–2 would seem to come from two sources. The first is Ezekiel's description of the restored Jerusalem in Ezek 47:1–12. A stream of water flows from beneath the altar, out of the city, and on to the Dead Sea. On either side of the stream grow evergreen trees, the fruit of which will never cease and will be for food. The leaves will be for healing (cf. Zech 14:8–9). The connections between Ezek 47:1–12 and Rev 22:1–2 are clear, but note that in the latter the trees on either side of the stream have been identified with the tree of life.

The other source is *1 Enoch* 24–25. Enoch is shown a vision of the mountain on which God will be enthroned when he visits the earth at the end with goodness. At the foot of the mountain is a fragrant tree, which will never wither. No one can touch the tree until the judgment, when it will become the source of food for the righteous. The fact that the tree will be planted in the holy place at that time connects this earthly scene with Jerusalem.

C. The Relation of the Tree of Knowledge and the Tree of Life

We mentioned earlier that while the tree of knowledge and the tree of life appear together at the beginning and the end of Gen 2:4b–3:24, in the central part of the narrative only one tree plays a prominent role. Many scholars have concluded from this that the two trees were not part of the original narrative: only one tree was involved. The two have come together with the combination of different traditions in the pre-Yahwist stage of the story. The tree of knowledge and the tree of life could have been oral variants on one motif which have been placed side by side as variant narratives have been combined.

An alternative explanation presents itself. In some of the passages in Proverbs, reference to the tree of life is associated with wisdom (e.g., 3:2, 18, 22; 8:35; 9:11). Elsewhere in Proverbs, obedience to the commandments and *tôrâ,* "instruction," leads to life (4:13; 6:23; 10:17; 11:19; 12:28; etc.). Observance of Yahweh's instruction is wisdom (1:2–6, etc.). In Psalm 1, the one who is said to keep *tôrâ* is compared to a perennial tree "which gives fruit in season and whose leaf does not wither" and which is "transplanted by channels of water" (v 3a). Although the tree of life is not mentioned here by name, the allusion is to a tree sustained in life by Yahweh. In Psalm 92, the righteous are compared to a palm tree or a cedar of Lebanon planted in Yahweh's sanctuary (v 14). Moreover, in the Adapa myth there is parallelism between wisdom and eternal life in line 5. This information suggests that the association of the tree of life and the tree of knowledge, which gives wisdom (Gen 3:6), could have been an original feature of the story. The emphasis on the single tree in the central portion of the story would then be a later development.

TRIAL OF JESUS. Any study of the trial of Jesus of Nazareth immediately encounters several complex issues of interpretation. For example, two gospel narratives (Matthew and Mark) present a nighttime session of the Sanhedrin, though apparently this was contrary to Jewish law. Further, all the gospels mention that the religious leaders found Jesus deserving of death, while they differ on the grounds: "blasphemy" is mentioned in Mark 14:64, but this may simply refer to something theologically objectionable; a "messianic claim" seems to be at issue in Mark 15:2, and this gets taken up in a variety of ways by the other evangelists. Luke alone mentions charges against Jesus of "perverting our nation and forbidding us to give tribute to Caesar" (23:5). Also, the gospels are unanimous in affirming that Jesus was handed over to the Roman authorities—specifically to Pontius Pilate—thereby implying that the right to inflict capital punishment on miscreants had been removed from the Jewish authorities by Rome, a point that is contested by some scholars. Further, a theological tendency, discernible within the gospel tradition's development, that at times shifts the weight of responsibility for the death of Jesus from the Romans to the Jews—possibly out of a politically motivated apologetic purpose (i.e., legitimating Christianity in Roman eyes)—leads some observers to call into question the historical reliability of these same traditions. Finally, the fact that the sources which inform us about Jewish jurisprudence in the issues under dispute date from the late 1st century C.E. makes judgments about how the gospels depict Jewish involvement still more complex: Were the principles of Jewish law codified later on actually in effect in

the early 30s of the 1st century? Thus, in our treatment of the issues involved in the trial of Jesus, one must appreciate that some of what follows is necessarily conjectural—the reasonable conclusions which may be inferred from contemporary studies of the matter—and open to revision in the light of new data which may come to light.

———

A. From Arrest to Trial

All the gospel narratives report the chief occurrences that followed immediately upon the arrest of Jesus (a hearing before the religious authority, Jesus' "testimony" about himself, Peter's denial that he knew Jesus, the mockery of Jesus as a false prophet, etc.), but the evangelists differ on the sequence of these events and put different emphases on those aspects which they do mention.

1. The Night Hearing. Mark and Matthew tell of a nighttime arraignment of Jesus before representatives of the religious leadership shortly after his arrest (Mark 14:53, 55–65 = Matt 26:57, 59–68); in a typical Markan "sandwiching" arrangement, Peter's denials of Jesus are collocated with the trial scene in such a way that Peter's cowardice is contrasted with the assurance of Jesus' confession (Mark 14:66–72 = Matt 26:58, 69–75). Luke and John both mention Peter's threefold denial of Jesus (Luke 22:54b–71; John 18:17–18, 25–27), though they do not locate it within a trial before an assembly of religious leaders but place it either at the house of the high priest (Luke 22:54a) or at the house of the high priest's father-in-law, Annas, who conducted an informal inquiry before sending Jesus over to Caiaphas, the high priest (John 18:15–16, 19–24).

2. The Morning Hearing. According to some scholars, Luke situates the proceedings before "the assembly of elders of the people" in the morning to give it legal validity. However, Matera has argued against this view, suggesting that, in the revision of his Markan source, Luke is not dependent on another tradition, but that all differences between his narrative and Mark's can be accounted for on the basis of Lukan theological concerns (1989: 48–59). Luke characterizes the morning gathering as a SANHEDRIN session and makes both the interrogation of Jesus and his replies more solemn. For Luke, the session does not take place in the private chambers of the high priest (cf. Mark 14:54), and false witnesses are not suborned (contrast Mark 14:57–59); indeed, many details about the testimony against Jesus found in Luke's Markan source are dropped.

3. The Charge Against Jesus. The central aspect of the trial narrative in all three of the Synoptic Gospels is Jesus' answer to the query of the high priest concerning his identity. Each evangelist has shaped this in terms of his own theological purpose. For Mark, the messianic secret of Jesus' divine sonship can finally be revealed before the high priest; therefore, the structuring and wording of the scene may safely be attributed to Markan redactional interests (Donahue 1973). Matthew's interest differs only

slightly from Mark's purpose; though following Mark closely, he wished also to show that all that happened to Jesus, including the trial, took place by divine decree. Further, when Jesus was put under oath by the high priest, Matthew wished to avoid having Jesus swear by oath (cf. Jesus' teaching on the inappropriateness of oaths in Matt 5:33–37). Luke, for his part, put the focus on Jesus' testimony (one of the reasons why no witness testifies against him), likening him to the prophet Jeremiah, who had prophesied to and against Israel and whose witness was not accepted [Neyrey 1985: 71–73].

4. The Identity of the Authorities. In the accounts of the trial, as in the Passion Narrative generally, it is curious that the Pharisees, who are prominent throughout all four gospels, receive hardly any mention; there are but two references to them. In Matt 27:62, the Pharisees assemble with the chief priests to seal the tomb after Jesus' death; in John 18:3, officers "of/from the Pharisees" come to arrest Jesus. This suggests that the historical conflict leading to the crucifixion lay between Jesus and the priestly (as opposed to the lay) religious leadership. If we can presume that the Roman authorities allowed the Jewish leadership in Palestine some measure of local consultation on important questions, as they did elsewhere in the empire, the "informal" hearing by the religious leadership becomes historically plausible; Jewish principles for the proper conduct of a trial would, in this view, derive from later in the 1st century C.E. and would not have been in effect when Jesus was tried. Each of the evangelists would have given a theological elaboration of this historical datum to cohere with his overall depiction of the last days of Jesus.

5. The Mistreatment of Jesus. The Synoptics concur that in the course of his arraignment Jesus was mocked as a prophet and manhandled. When indicating responsibility for this, Luke points impersonally to "the ones holding" Jesus (Luke 22:63–65), while John's account mentions a guard (John 18:22–23) and Mark mentions both the guards and the religious authorities (Mark 14:65); Matthew speaks only of the religious leaders (Matt 26:67–68). Because each evangelist has his own peculiar emphasis, it is difficult to unravel the kernel of a historical incident from the interpretive strands surrounding it. However, in this instance, Matthew (by widening Mark's notice that "some began to spit on him …" to "they spat …," by lengthening Mark's single word "Prophesy!" to the words "Prophesy to us, you Christ!" and by dropping all reference to the guards' role in the mockery) is witness to the way in which a negative coloring of the role of the Jewish religious leadership in the treatment of Jesus can be heightened in the Passion Narrative. Interestingly, only Luke mentions the blindfolding of Jesus (22:64), perhaps a reminiscence of the almost universal way in which guards are wont to "make sport" of their prisoners. Did a soldiers' game of "Who's It?" later get interpreted by means of religious terminology into a mockery of Jesus as a prophet?

B. From Transfer to Sentencing

In three accounts, the "handing over" of Jesus (the Gk verb is *paradidōmi,* a term deeply charged with theological significance in the gospel tradition), from the religious authorities to Pilate's jurisdiction, takes place "early" in the morning, except in Luke's account where, according to his chronology, the Sanhedrin trial must then take place. See PRAETORIUM.

1. The Charge. Mark's and Matthew's accounts do not mention the charge against Jesus directly but only by means of Pilate's question, "Are you the King of the Jews?" Drawing on remarks of Josephus, Sherwin-White argues that "king" in such a context means "leader of the resistance" (1963: 24–25); Pilate has interpreted religious terms by political ones. The Fourth Gospel notes Pilate's question about kingship—a theme John will emphasize in his treatment of the trial—but also shows the authorities characterizing Jesus as an "evildoer" (18:30), while Luke alone mentions a threefold charge against Jesus: "perverting our nation, forbidding us to give tribute to Caesar, and saying that he himself is Christ a king" (23:2; cf. 23:14). The last two of these seemingly "political" charges had already been refuted by Luke in his version of the question about the tribute (20:20–26) and in his qualification of Peter's confession of Jesus as the "Christ of God" (9:20). Luke deals with the broader charge (that Jesus "perverts the nation") by summing it up in a way acceptable to him, under the more general rubric of "teaching" ("he stirs up the people, teaching throughout all Judea, from Galilee even to this place" [Luke 23:5]). The impact and consequences of Jesus' ministry should not be minimized, however one evaluates them: "Herod Antipas,

Pontius Pilate, the high priest and the Sadducean party, the scribes, and the pious lay movement of Pharisees all had their varied reasons for being opposed to Jesus—and, unlike the Pharisees, the other individuals or groups had ways of getting rid of him legally. Moreover, in the great festal crowds of Passover, there was always the possibility of lynch-mob justice or assassination" (Meier *NJBC,* 1326).

2. Jewish Right to Try Capital Offenses. When they brought Jesus to Pilate, the Jews of John's gospel answered Pilate's suggestion that they try him themselves by saying, "it is not lawful for us to put any man to death" (18:31). Whether Jewish authorities had the right to try capital offenses in Palestine at this time has been hotly contested. In an excursus on this issue, Dauer (1972: 143–45) notes that, despite the apologetic intent in this remark (to explain why Jesus, a Jew, was handed over to the Romans for execution by crucifixion when his conviction on a capital offense in Jewish law would have called for his death by stoning), and though the verse has been redactionally formulated (the vocabulary is readily judged "Johannine"), John is drawing on a tradition here that he considers to be historically sound (for further details, cf. *JBC,* 459 [par. 31]).

3. Jesus' Reply or Silence. The depiction of Pontius Pilate (wishing to placate the crowd and yielding to the religious authorities) does not square with the extrabiblical portrait of brutality that typified the one who was prefect of Judea from 26 to 36 C.E. Apart from the elaborate Johannine version of the trial in which the great issues of the Fourth Gospel are played out before Pilate and the Romans (John 18:33–19:11), as they had been before the Jews throughout Jesus' ministry, the evangelists depict Jesus as silent before his accusers. His only words in reply to Pilate's question are, "You have said so" (Mark 15:2 and par.), which may be interpreted affirmatively or as meaning "The terms are yours, not mine"; it is a way for Jesus to accept the title without agreeing to the political framework Pilate suggests. For the rest, the silence of Jesus before his accusers may be seen as his fulfillment of the role of the Isaianic servant, one who was silent in the face of accusations, like a sheep before the shearers (Isa 52:13–53:12).

4. A Passover "Amnesty"? While all the evangelists tell of the Barabbas "episode," Luke pointedly does not mention the release of prisoners as a custom "at the feast" (cf. Mark 15:6; Matt 27:15) or "at Passover" (John 18:39)—though some ms traditions do insert such a notice (= Luke 23:17) after 23:16 or 23:19. The name Barabbas means "son of the father," and there may be a note of irony in the crowd's choice of Barabbas, the insurrectionist (a variant reading of Matt 27:16 gives his name as "Jesus Barabbas"), over Jesus, whom the gospel writers believe to be the Father's true Son. There exists no extrabiblical evidence for such an amnesty; likely, the evangelists (or their sources) have generalized an occasional instance of a festival amnesty and see this practice at work in Barabbas' release.

5. Pilate's Wife and Jesus before Herod. Matthew alone tells of an intervention by Pilate's wife during the trial (Matt 27:19, 24–26), and Luke alone recounts Pilate's referral of Jesus to the tetrarch Herod for an opinion (Luke 23:6–12). The historicity of each of these episodes has been called into question by scholars, since each reflects the interests and formulations of their respective evangelist-authors. Like the Magi in the infancy account, Pilate's wife is a gentile open to revelation coming from a divine medium (a dream, cf. Matt 1:20; 2:12, 13, 19, 22), while the people and religious leaders reflect the hostility of Herod and all Jerusalem at the news of the birth of the "King of the Jews" (2:3–8, 16–18). Probably the formulation of the "hand washing" by Pilate (an OT practice, cf. Deut 21:6–9; Pss 26:6; 73:13) and the people's calling down of the blood of Jesus on themselves reflect the strains between church and synagogue at the time of the gospel's composition (ca. 80–90 C.E.). Luke omits any reference to the mockery of Jesus by the Romans and details, instead, a mockery conducted by Herod and his soldiers (23:11). This scene is part of a pattern of references to Herod and his coterie that appears from time to time in the Lukan gospel (cf. 3:1, 19; 9:7, 9; 13:31); perhaps Joanna, wife of Herod's steward Chuza (cf. 8:3), had some role to play in providing this information. Despite the mockery, Herod's role in the progress of the Lukan narrative furthers the emphasis Luke gives to Jesus' "innocence" (23:14–15; cf. 23:47).

6. The Verdict of Pilate. Luke has carefully structured Pilate's interrogations of Jesus into two separate trials of Jesus that follow the lines of known Roman forensic procedure: charges are presented (23:2, 14b); the magistrate handles the personal inquiry (23:3, 14c) and dismisses the charges (23:4, 14d; cf.

Neyrey: 1985: 77, 81). Pilate holds up Herod's dismissal of charges against Jesus (23:15a) as supporting evidence for his acquittal of Jesus (23:15b) and the judicial warning he imposes on Jesus (the phrase Luke puts in Pilate's mouth means "teach him a lesson," 23:15c): the Roman *fustigatio* or light beating whose implementation Luke does not describe. The other evangelists concur in Pilate's finding that Jesus is guiltless (Mark 15:14; Matt 27:23; John 19:6) and join Luke in depicting Pilate's yielding to the importunity of the crowds who call for Jesus' crucifixion. Mark, Matthew, and John show Jesus undergoing flagellation—a punishment that was meant to weaken the one to be crucified and thereby hasten his death—and, afterwards, enduring mockery at the hands of the soldiers (Mark 15:16–20; Matt 27:27–31; John 19:4–7). The mock symbols of kingship (crown, purple robe [in Matthew, the scarlet garment of a soldier] and reed/scepter) are all ironically understood by the evangelists to proclaim Jesus' true status as the "royal messiah" of God's people.

C. Parenetic Use of the Trial Tradition

Paul is witness to the early Church's difficulties in proclaiming someone who had undergone crucifixion as God's end-time messianic envoy (cf. 1 Cor 1:23–24). But the conviction held by Christians that God had vindicated Jesus by raising him from the dead very soon led to the appropriation of aspects of the Passion Narrative for parenetic purposes. This may be seen in the developments in the transmission of the words of Jesus from the cross and of his prayer in Gethsemane as models for believers to imitate. The trials of Jesus before the religious leaders and Pilate likewise became a model for disciples, as is evidently the case in Mark, who contrasts the boldness of Jesus' replies to the Sanhedrin with the cowardly denials by Peter that he knew Jesus (Mark 14:53–72 and par.).

1. The Example of Stephen. In Luke's account of the trial and death of Stephen (Acts 6:11–7:60), the parallels Luke draws between them and Jesus' trial and death are striking: like Jesus, Stephen gets taken before the Sanhedrin, is falsely accused, and forgives his attackers while undergoing death by stoning. Unlike Jesus, who was for the most part silent, Stephen is full of words, ones that prompt his rejection (cf. the reaction to Jesus' words in the synagogue at Nazareth, Luke 4:16–30); Stephen prayerfully entrusts his spirit not to the Father, as Jesus had (Luke 23:46), but to the Lord Jesus himself (Acts 7:59). For the suggestion that Luke considers the trials of Peter, Paul, and Stephen in Acts as "continuations" of the trials of Jesus, see Neyrey 1985: 89–107.

2. Christ's Confession. In 1 Timothy 6:13–14, the Paulinist holds out the example of Christ Jesus' "good confession" before Pontius Pilate as a model for church leaders to imitate in their "testimony" to the gospel and in their remaining blameless until the "appearance of the Lord Jesus Christ." Perhaps some such formula (or a reflection on the Passion such as that found in 1 Pet 2:21–24) was at the origin of the formula "suffered under Pontius Pilate" found in the Apostles' Creed and subsequent formulations of Christian belief. This, as much as the accounts of the Passion, has served to keep the trial of Jesus as part of the collective memory of the Christian Church.

TRIMORPHIC PROTENNOIA (NHC XIII,*1*). The only text to have survived from Nag Hammadi Codex XIII. The eight not fully intact leaves containing the tractate were found lying inside the front cover of Codex VI. Their ascription to a distinct codex has been established by codicological analysis and by the presence at the end of the last page of the beginning of *On the Origin of the World* (NHC XIII,*2*), known also from NHC II. This has also made it possible to calculate the pagination. The text is a translation from Greek into the Sahidic dialect of Coptic (with Lycopolitan deviations). The extant copy comes from the 4th century.

Trim. Prot. is a gnostic revelation discourse by Protennoia about her descent three times into the world to instruct (by communicating mysteries) and redeem her "children of light." Therefore, in terms of genre, this text is quite closely kin to the Pronoia hymn at the end of the long version of the Sethian *Apocryphon of John* (NHC II,*1*). Yet, in distinction to the Pronoia hymn, the first two parousias of Protennoia are not characterized by failure. Rather, in each of the three descents a distinct part of her work of revelation and redemption is achieved.

Trim. Prot. is subdivided into three parts. These discourses have been fleshed out with material from gnostic tradition. Primarily, cosmology has been built into the first discourse, eschatology into the second, and soteriology into the third. This material from the Sethian system corresponds in its concrete formulation especially to the variant as found in *The Gospel of the Egyptians* (NHC III,*2*).

Trim. Prot. is also a Sethian text. But since the main figure that brings herself to expression here, Protennoia, is also named Barbelo (38,9), the text has on occasion been designated "Barbelognostic." Yet it is precisely Barbelo who is the highest female deity of the Sethian divine triad. Barbelognosticism and Sethianism are in fact not alternatives, but designate the same variant of gnostic religiosity.

In addition to the triple structure of the text, Protennoia herself is presented as existing in threefold form. She is understood as Father, Mother, and Son, in that the Father appears in her and she in the Son. Her triple descent takes place in each instance in one of the three forms of the divine triad. As the first thought of the primal Father, the Invisible Spirit, she has a masculine aspect whenever she represents him. But as his partner (42,8) she has a female aspect, and as appearing in the Logos she bears the aspect of divine sonship.

The multilayered inner and outer threeness is however quite decisively transcended through Protennoia's cosmogonic and soteriological rule, which is portrayed in all its complexity and comprehensiveness. In her self-predications, she presents herself again and again as the origin and basis of the All, in general, and of each part and every being in it. At the same time, she describes herself as the root and the means of redemption of a part of these beings; namely, of the gnostics. She is the call that brings gnosis (36,10), and she is herself gnosis (36,12). She is the absolute figure of creation and salvation. In all this, she shows herself to be the gnostically metamorphized Sophia of Jewish Wisdom Literature. This figure had in turn already assimilated aspects of the female deity Isis/Selene. In the process of being fused with Barbelo and transformed into the supreme female deity of Sethian Gnosticism, ontological traits of the three-formed deity Hecate were also absorbed.

The question of the date of composition of *Trim. Prot.* remains problematic. With regard to the material taken from the tradition and the anthropology presupposed in it, the text makes a rather archaic impression. Furthermore, it is not characterized by a distinctively anti-Jewish tendency; nor does it

develop an advanced emanation theory. But obviously the text was subjected to several stages of redaction. Interpolations attest discussions which must have been taking place among the various religious currents in early Christian times. Hence, *Trim. Prot.* may have reached its final form (apart from the inexactitudes of scribal transmission) toward the end of the 1st or the beginning of the 2d century C.E.

Other assessments of the text and its problems place it somewhat later. Yet there is widespread agreement that *Trim. Prot.* in its basic substance is a document of non-Christian Gnosticism. Occasional secondary identifications of the divine Autogenes with Christ take place only superficially by the mere appending of the *nomen sacrum.* Even this is not carried through consistently. It is only a passage in the third discourse (49,5–22) that actually comes to grips with Christian material. In a polemical way it undertakes a gnostic reinterpretation of christological designations usually applied to Jesus. But this does not take place in view of given passages of the NT; rather, the vague appropriation of these "titles" shows that a debate with orally circulating tradition has left its traces. This interpolation finds its culmination in a docetic statement split off from the main part (50,12–15).

In at least two regards, *Trim. Prot.* is of considerable importance. On the one hand it is significant for research into Gnosticism, to the extent that it provides important information about a gnostic cultic practice. In distinction from the view that the Sethians had completely spiritualized their baptismal rite and would reject water baptism, the concept of the five seals in *Trim. Prot.* shows precisely the connection between baptismal ideology and the actual rite of baptism.

On the other hand, *Trim. Prot.* is important for NT scholarship in general. In addition to substantive parallels to the hymn of Colossians, the unusually close kinship of large parts of *Trim. Prot.* to the Prologue of John is especially striking. In *Trim. Prot.*, one encounters precisely those traits that in the Prologue seem to go beyond the rest of the gospel of John, but that have various history-of-religions parallels scattered here and there largely in Jewish Wisdom Literature. In *Trim. Prot.* this imprecise "background" comes into focus, in that these unusual traits are clustered in a single text where they are apparently at home. Since the parallels in form and content lie outside the interpolations in *Trim. Prot.*, it is misleading to attribute them to the result of a debate about the gospel of John and thus to ascribe them to the "Christianizing" redaction. It is a subject of scholarly debate, whether one should merely propose a shared Wisdom tradition to explain this phenomenon, or whether, as would seem more reasonable, one should postulate an identical gnostic world of thought for *Trim. Prot.* and the Logos hymn lying behind the Prologue of John.

TRIPARTITE TRACTATE (NHC I,5). The last text in Codex I, the so-called Jung Codex, from the Nag Hammadi find. It is one of the longest (almost 90 pages) and best preserved tractates of that collection. Its unknown author, a representative of the W branch of the Valentinian Gnosticism, probably wrote in the early 3d century. The original language of the work was certainly Greek, although it now survives only in a sometimes obscure sub-Achmimic Coptic translation, made in the late 3d or early 4th century.

The text consists of a lengthy, relatively systematic presentation of Valentinian theology, remarkable for its revision of the teachings of the Valentinian schools known from patristic sources (Irenaeus, Tertullian, Hippolytus, Origen). The first and longest part of the text records the cosmogonic process. All things are seen to derive from a single monadic first principle, which is utterly transcendent and can be grasped only by a *via negativa.* By virtue of his goodness and generosity, this Father produces the entities Son and Church, who form a Trinity at the highest level of being. The third member of that Trinity is complex, and consists of a multiplicity of aeons, endowed with free will. That multiplicity is a vestige of the much more highly articulated spiritual worlds of other gnostic systems. The insistent attribution of free will to the entities of the Pleroma, providing an interesting parallel to Origen's conception of the spiritual world, constitutes an important apologetic device against critics of gnostic determinism. Like all else on the highest level of reality, this freedom will be replicated at lower levels on the chain of being.

The process of devolution from the harmonic world of the supernal Church is caused not by a feminine aeon, Sophia, as in most gnostic myths, but by a masculine entity, the Logos. Acting spontaneously, he begins a process which, despite its apparently negative consequences, is viewed positively, as a movement necessary for the ultimate reintegration of all into the primordial source. In his movement away from the primordial unity, the Logos produces three sets of powers—pneumatic, psychic, and hylic—which comprise an intermediate level of reality. Over his psychic and hylic offspring the Logos appoints a chief archon or Demiurge, the God of this world and of the OT, who has few of the negative features assigned to his counterpart in other gnostic systems.

The second segment of the text consists of an interpretation of the creation account of Genesis, which displays some of the radical hermeneutics common in gnostic sources, but has other more "orthodox" features. As usual, exegesis of the scriptural account of origins is a vehicle for the presentation of anthropological theory. In the phenomenal world, which mirrors the tripartition of the highest and intermediate levels of reality, the tripartite distinction of pneumatic, psychic, and hylic reappears. Here, however, there is no rigid separation of different types of human being. Instead, the "powers" of the intermediate level of reality produce different components of the archetypical human soul.

The third portion of the text describes the soteriological process of reintegration. That process is initiated by Christ, who is ultimately produced by the spiritual Logos, but whose full humanity is strongly emphasized. The docetic tendencies of the gnostic tradition are clearly repudiated. In this section the soteriological consequences of the modification of Valentinian anthropology become clear. The text devotes a good deal of attention to the psychics or ordinary Christians, and numerous subdivisions are seen among them. The account of reintegration into the Pleroma even seems to allow for the possibility of their participation in that event.

This revisionist development of Valentinian theology evidences considerable philosophical sophistication, sensitivity to the criticisms leveled against Valentinian positions by orthodox opponents, and a rather irenic attempt to adapt Valentinian theory to an orthodox mold. It is thus instructive for the later history of the most influential of gnostic schools.

TRIPOLIS (PLACE) [Gk *Tripolis* (Τριπολις)]. Modern Tripoli (34°27´ N; 35°50´ E), a port city located on the Mediterranean coast N of Beirut. The Phoenicians and their successors used the port as a strategic military and commercial hub. The city, reportedly colonized by the three cities of Tyre, Sidon, and Byblos, was located on a peninsula that extended into the sea, thus providing a strong defensive position against land-based attack. On the E side, a large ditch and fortifications protected the inhabitants of the city. The peninsula also provided sheltered harbor for a merchant fleet. The Phoenician name of the city is uncertain.

Under the Persians, Tripolis became the administrative center of Phoenicia, including the cities of Tyre, Sidon, and Byblos. According to Strabo (16.2.15) and Pliny (*NH* 5.78), each of the three founding cities controlled a separate walled sector of the city.

In the time of Alexander the Great and his successors, the city continued to thrive. Following the Battle of Issus, 4,000 Greek mercenaries who had fought for the Persians fled to Egypt and the islands of the Mediterranean in ships which they commandeered at Tripolis. The city of Tripolis did not resist the Macedonian advance like Tyre and was thus spared. Tripolis came under Seleucid control following the death of Alexander.

The city of Tripolis was the site of a battle between rivals for the Seleucid throne in 162 B.C. Demetrius I, after escaping from Rome where he had been a hostage, brought a large army of supporters to Tripolis, where they defeated his cousin Antiochus V and General Lysias (2 Macc 14:1; 1 Macc 7:1–4; Josephus *Ant* 12.389). With the eventual decline of Seleucid power, the city gained its independence in 111 B.C. The Romans led by Pompey in the East, in 65 B.C. organized Tripolis as a city-state. Among the Roman period constructions was a gymnasium built through the patronage of Herod the Great (Josephus *JW* 1.422).

Reportedly the apostle Peter established a Christian community in the city, and it became a beachhead for Christianity in the area (Pseudo-Clementines *Recognitions* 4:6; *Homilies* 11:36). A record of bishops of Tripolis after A.D. 325 has been preserved. A Christian population remained through the early Islamic periods and the Crusades. The city, taken by the Crusaders in 1109, was later destroyed by the Mamluks.

TRISMEGISTOS (HERMES). See HERMES TRISMEGISTOS.

TRIUMPHAL ENTRY. See PASSION NARRATIVES.

TROAS (PLACE) [Gk *Trōas* (Τρωας)]. An important port city (Gk *Alexandreia hē Trōas*) on the coast of Mysia in NW Anatolia, 10 miles S of ancient Troy. It was located opposite the island of Tenedos. It served as a nodal point for routes through the Hellespont to the E, to the cities of Smyrna, Ephesus, and Miletus in the S, and for sea travelers to Neapolis in Macedonia and to Athens (Hemer 1975: 50). Troas is mentioned in four chapters of the NT: Acts 16:8, 11; 20:5–6; 2 Cor 2:12; 2 Tim 4:13.

On his second missionary journey, Paul was forbidden by the Holy Spirit to preach in Asia on the W coast or in Bithynia on the N coast of Anatolia (Acts 16:6–7). After traversing the region of Mysia, Paul reached the coast at Troas. Burdick suggests that Paul took the central route through Scepsis after traveling NW from Antioch to Dorylaeum (Burdick 1978: 36–40). Bowers (1979: 511) concludes, "The nature of the routes available to him for that journey suggests strongly that his journey to Troas was not that of a bewildered man groping for a point from which new options could be considered, but that of a man already with a specific destination in mind. The geographical considerations make the journey to Troas most readily explicable as an intended first stage of a journey to Macedonia (if not also beyond)."

It is significant that immediately after Paul's vision of the Macedonian, the first of the "we passages" in Acts begins (16:10). This implies that Luke joined Paul at Troas. The 150-mile sea journey from Troas to Neapolis took only two days (Acts 16:11). Because of contrary winds, the reverse journey from Neapolis to Troas (Acts 20:6) took five days.

During his third journey, Paul went to preach the Gospel at Troas and found an open door, but because of his anxiety to hear news about the Corinthians from Titus, he sailed for Macedonia after a short stay (2 Cor 2:12).

On his return trip to Troas, Paul and his party spent a week there (Acts 20:13) before Paul proceeded to Assos by himself. The reference in Acts 20:7 to the disciples gathering "upon the first day of the week" is the "earliest unambiguous evidence we have for the Christian practice of gathering together for worship on that day" (Bruce *Acts* NICNT, 407). It was after Paul's long sermon that Eutychus fell asleep on the window ledge and dropped dead on the ground, before he was revived by Paul (Acts 20:8–12).

The final reference in 2 Tim 4:13 implies that Paul may have been arrested at Troas and so did not have the time to recover his belongings, because he begs Timothy to bring them to him in prison in Rome (Hemer 1975: 106). Paul specifically requested the *membranai* "parchments." According to Roberts and Skeat (1983: 22, 60) these were not scrolls (which would have been *diphtherai*) but parchment leaves. Skeat (1979: 177) suggests that the "parchments" were therefore not literary works such as the OT, as suggested by Farrar (1903: 683) and others, "but probably notes or memoranda such as lists of Christians in various communities."

The original name of Troas was Sigia (Strab. 13.1.47). Antigonus, one of Alexander's generals, established in 334 B.C. at the site the city of Antigoneia by the process of synoecism; that is, the forcible resettlement of citizens from surrounding towns such as Colonae, Larissa, Hamaxitus, Neandria, Cebren, and Scepsis (Strab. 13.1.26). After Antigonus' death in 301 B.C., Lysimachus, the king of Thrace, renamed the city Alexandria in honor of Alexander and built a temple and walls around the city. The city came to be called Alexandria Troas to distinguish it from other Alexandrias, and then simply Troas by NT times (Magie 1950: 69, 875).

When the Gauls menaced Ilium (Troy) in 216 B.C., the siege was lifted by a relieving force of 4,000 men from Troas (Polyb. 5.111). Antiochus the Great tried to win over Troas in his struggle with Rome. When he was defeated at Magnesia in 190 B.C., the area around Troas was given to the king of Pergamum.

Because of Rome's legendary ties with Troy through Aeneas, rumors circulated that Julius Caesar intended to move the government "to Alexandria (Troas) or Ilium" (Suet. *Caes.* 79.3). Such a proposal was denounced by Horace (*Carm.* 3.3). Augustus established a colony at Troas, the only one he founded in W Asia Minor. Henceforth, the city was known officially as Colonia Augusta Troadensium or Colonia Augusta Troas (Magie 1950: 472, 1334; Jones 1971: 85).

The city benefited from the favors of the emperor Hadrian (117–38), for which its citizens erected a statue of the emperor in Athens. In his reign, Atticus Herodes built a lavish bath costing seven million drachmae at Troas (Magie 1950: 615). The main city temple was the Asclepieion, with the native god Smintheus ("mouse god"; cf. Hom. *Il.* 1.39) honored as the god of healing (Hemer 1975: 93). According to Strabo, the Augustan authority on geography, Troas was "one of the famous cities of the world." It was certainly the largest city in the Troad. Estimates of its population range from 30,000 to 100,000 (Burdick 1978: 50).

In the early 2d century, as he traveled on his way to execution in Rome, Ignatius of Antioch wrote three of his epistles from Troas (to the Smyrnaeans, to the Philadelphians, and to Polycarp). He apologized that he could not write to all the churches "because of his hurried sailing from Troas to Neapolis" (*Polyc.* 8).

Troas seems to have declined after the foundation of Constantinople in 330. Its harbors were probably silted up by the reign of Justinian in the 6th century (Hemer 1975: 94). Troas has never been excavated. The ruins of the site are today called Eski Stamboul; that is, "Old" Stamboul. The inner harbor is now a lagoon; the outer basin is silted up. Remains of the walls, which once extended about five miles, and of the baths of Herodes Atticus are still visible (Burdick 1978: 51). Additional ruins of the stadium, theater, and two temples were still visible when Chevalier saw the ruins in 1791.

Various Roman artifacts have been recovered from Troas, including a dedication to Drusus (son of Germanicus), a dedication to Hadrian, and statues of Claudius, of Nero, and of Marcus Aurelius (Vermeule 1968: 456–57).

EDWIN M. YAMAUCHI

TROGYLLIUM (PLACE) [Gk *Trōgyllion* (Τρωγυλλιον)]. A promontory and small settlement across from the island of Samos about twenty miles S of Ephesus in Asia Minor (37°39´ N; 27°02´ E). This promontory and Samos are the boundaries of a waterway between the mainland and the island. This narrow channel, only about a mile wide, offered protection for a traveling vessel before traversing the open gulf en route to Miletus. On the apostle Paul's second missionary journey, it appears that he passed through this strait. There is a question, however, of whether or not the ship anchored at Trogyllium. According to the Western and Byzantine text families, Paul "tarried at Trogillium" (KJV; RSV omits, see margin). Most of the textual evidence, however, points against the inclusion of this phrase. There are two likely possibilities: either a line of thirty-nine letters dropped out of the Alexandrian and Caesarian traditions, or a Western copyist inserted the phrase based upon his knowledge of geography and current water-transportation practices. Because of the superior external attestation, most scholars opt for the latter of these two alternatives. This promontory today is known as Santa Maria, and, at the end of it, an anchorage still bears the name *"St. Paul's Port."*

WARREN J. HEARD, JR.

TROPHIMUS (PERSON) [Gk *Trophimos* (Τροφιμος)]. The meaning of the name Trophimus is based on the Greek word *tropheia,* which can refer either to "service as a wet-nurse" or to the nourishment thus provided. Therefore, the name Trophimus could mean "foster child" or "nourishment," depending on whether the emphasis was placed on the one being nourished or on the nourishment being provided.

The individual so named is mentioned three times in the NT (Acts 20:4; 21:29; 2 Tim 4:20), always as a companion of Paul's in his travels. An Ephesian Christian (Acts 21:29), Trophimus, along with TYCHICUS, apparently represented the Asian churches who participated in the collection Paul intended to bring to Jerusalem (1 Cor 16:1–4). There is some uncertainty in the manuscript tradition of Acts 20:3–6 as to whether Trophimus and Tychicus were traveling with Paul from the beginning or whether they joined the group only in Troas or Philippi (see Delebecque 1983: 556–64; 1984: 365). In any case, Trophimus and the others sailed with Paul along the coast of Asia Minor, across the Mediterranean Sea to Tyre, and eventually arrived in Jerusalem.

Jews from the province of Asia (Acts 21:27), having seen Paul and Trophimus together in Jerusalem (Acts 21:29), supposed that Paul had taken Trophimus into the inner courts of the temple (Acts 21:28). If Trophimus was an uncircumcised gentile convert to Christianity, such an action would have defiled the temple, according to Jewish law. Since Paul was attempting to follow Jewish law carefully in this instance (Acts 21:26), he would not have needlessly jeopardized his mission by bringing Trophimus into the inner courts. Thus, Trophimus was the circumstantial, but innocent cause of Paul's arrest (cf. Acts 24:6).

2 Tim 4:20 mentions that Paul left Trophimus behind in Miletus (a city not far from Ephesus), because he was sick. If this is a reference to the trip mentioned in Acts 20–21, it stands in apparent contradiction to Acts 21:29. Since he rules out any later trips through Miletus, Throckmorton (*IDB* 4: 713) considers Acts and 2 Timothy irreconcilable. Robeck (*ISBE* 4: 923), on the other hand, argues that Paul's imprisonment in Rome (Acts 28:30) was followed by a release, during which he again traveled to Miletus and was forced to leave Trophimus behind due to illness. 2 Tim 4:6–18, therefore, would refer to a harsh and lonely later imprisonment. It can be legitimately asked, however, whether traditional support for such a scenario arises from historical fact or from attempts to reconcile the apparent contradiction.

Other attempts at reconciliation focus on alternative interpretations of the language of Acts 21:29 and 2 Tim 4:20. Erbes (1909: 207–13) argues creatively that the city in which Asian Jews saw Paul and Trophimus together (Acts 21:29) was not Jerusalem but Ephesus. They recognized Paul in the temple because they had seen him at home with someone they knew well. This, however, is far from the most natural reading of Acts 21:29. Dibelius and Conzelmann (*The Pastoral Epistles* Hermeneia, 125), on the other hand, suggest that Miletus (*milêtô*) in 2 Tim 4:20 may be a corruption of the word Malta (*melitê*). Thus, Trophimus could have accompanied Paul to Jerusalem and on toward Rome (Acts 27), but have been left sick on the island of Malta while Paul and his fellow prisoners completed their journey. If this were so, it is strange that Trophimus was not mentioned in Acts 27:2. Therefore, the tradition of a post-Acts journey, in spite of the problems, is probably the best explanation of the available information.

Rutherfurd (*ISBE* 5: 3023–24) notes the possibility that Trophimus could be the highly praised but unnamed individual who, according to 2 Cor 8:16–24, was to travel with Titus to represent Paul in Corinth. This "brother" (2 Cor 8:18–20) was one of those involved in the collection for Jerusalem. But his identification with Trophimus must remain uncertain for lack of evidence.

TRUTH, GOSPEL OF (NHC I,*3*; XII,*2*). Comprising the third, well-preserved treatise in Codex I of the Nag Hammadi library and the second, very fragmentary piece in Codex XII, this text's title is derived from its opening phrase. The work is written in the sub-Achmimic dialect of Upper Egypt and consists of an appealing homiletic reflection on the person and ministry of Jesus. Thus, it differs significantly from the form of the gospel accounts known from the NT. Its origin has been a matter of debate, although the most widely held opinion views the text as Valentinian in inspiration and as possibly authored by Valentinus himself since, according to a brief note by Irenaeus (*Haer.* 3.11.9), Valentinus reportedly

wrote a work of this title. A comparison of the scanty fragments from Valentinus with *Gos. Truth* offers enticing possibilities, but no conclusive links (Standaert 1976).

The gnostic character of the document is rather obscured, possibly for the purpose of attracting Christian readers outside the number of Valentinus' supporters. To be sure, in many features its doctrines resemble those of early Catholic sources, but traits of the text exhibit clear ties to gnostic thought. For instance, something like the gnostic myth of the fall of Sophia must underlie the opening segment, which focuses on the propagation of Error (17,4–18,11). Further, the observation that "when the Father is known, from that moment on the deficiency will no longer exist" (24, 30–32) establishes transparent gnostic affinities (McGuire 1986).

The date and place of composition remain obscure. Although the work was composed in Greek before it was translated into Coptic, whether it was written in Egypt or elsewhere is uncertain. Allusions to documents known from the NT, such as Matthew (Tuckett 1984) and certain Pauline Epistles (Ménard 1972), place the date well into the 2d century, a period that harmonizes with the rising influence of Valentinus. The richly subtle and sophisticated style and organization of the text, designed to invite readers in an inoffensive way to a certain view of Jesus' salvific role (Attridge 1988), may argue for a later date.

TRUTH, TESTIMONY OF (NHC IX,*3*). The third of three gnostic tractates contained in Nag Hammadi Codex IX (29,6–75 or 76), inscribed in Sahidic Coptic. The title has been assigned editorially on the basis of content ("word of truth," 31,8; "true testimony," 45,1), reflecting the author's concern to establish "true" Christian faith and practice (i.e., gnosis) and to expose and refute "heresy." A title may have been given at the end of the tractate, but the last leaf of the codex (pp. 75–76) is lost.

Owing to the fragmentary condition of the ms, little more than half of the text is recoverable, but enough is preserved to allow for judgments to be made on such questions as literary genre, essential content, and religious character.

The first main part of the tractate is a well-constructed homily (29,6–45,6), addressed to fellow members of a Christian gnostic community. The rest of the tractate consists of miscellaneous additions based on various sources, the function of which is to elaborate on themes already sounded in the homily itself (45,6–end). Theological polemics is a major preoccupation of the author and dominates the tractate from beginning to end.

In the homily proper, the author's polemics are addressed as warnings to a potentially sympathetic audience that knows how "to hear with the ears of the mind" (29,6–9). The target of the polemics is obviously the ecclesiastical Church (Koschorke 1978: 91–174), and attacks are directed against "the Law" (Torah), with its command to procreate (29,6–31,22), catholic convictions on martyrdom and the resurrection of the flesh (31,22–38,27), and sexual "defilement," i.e., marriage and procreation (38,27–41,4). True Christianity consists in renunciation of the world and in gnosis, i.e., self-knowledge as divine knowledge (41,4–45,6).

The appended miscellanea, directed to a more general audience, consist of observations on the virginal birth of Jesus (45,6–22), an extended midrash on the serpent of Genesis 3 (45,23–49,10) with an allegorical identification of the serpent with Christ (49,7), and observations on the "spiritual" understanding of Christ, in contrast to that of those (catholic Christians) who belong to the "generation of Adam" (49,10–50,28+). The last part of the tractate, which is also the most damaged part of the ms, is devoted to denunciation of various "heresies."

One part of this last section is particularly interesting because it not only has ecclesiastical Christians in view but certain groups of fellow gnostics as well, who are mentioned by name: Valentinus and his disciples (55,1–56,5), Basilides and Isidore (57,6–8), Simonians (58,2), and others whose identities are lost in lacunae in the ms. These gnostics are attacked on the basis of their ethics and their ritual practices. That is, the gnostic groups are attacked for their sexual practices, including acceptance of marriage, and their use of the sacrament of water baptism, which the author of *Testimony of Truth* rejects. Such "errors" are ones that ecclesiastical Christians and the specified gnostic groups presumably have in common. To be sure, the gnostic author also shares much with the other gnostics; in fact, Valentinian influences can be seen at various points in the tractate. The Valentinian influences include a well-known Valentinian formula (31,29–30), a Valentinian tradition relating to the birth of Christ (45,14–15), and others.

The specific sectarian affiliation of *Testimony of Truth* is hard to establish, but Clement of Alexandria provides information in book 3 of his *Stromateis* on a person whose career fits very well the situation of the author of *Testimony of Truth,* as reflected in its content: Julius Cassianus, an ex-Valentinian who adopted a position of strict encratism, condemning marriage and sexual intercourse. Another suggestion has also been made for the authorship of *Testimony of Truth:* Hierakas of Leontopolis, discussed by Epiphanius (*Haer.* 67; cf. Wisse 1978: 439–40).

The original Greek version of *Testimony of Truth* was probably written in Alexandria toward the end of the 2d century or the beginning of the 3d, at a time when a strong ecclesiastical establishment was taking shape under the episcopacy of Demetrius (189–232).

TRYPHAENA AND TRYPHOSA (PERSONS) [Gk *Tryphaina* (Τρυφαινα)*; Tryphōsa* (Τρυφωσα)]. Roman Christians who received greetings from Paul in Rom 16:12. They were probably gentile Christians. See NEREUS. The Greek names "Tryphaena" and Tryphosa" indicate that the two women were probably slaves or freedwomen (see the epigraphical evidence from the city of Rome; Lampe *StadtrChr,* 142, 150, 152–53). Both women had "worked hard in the Lord." This term describes either missionaries (e.g., Gal 4:11; 1 Cor 15:10) or persons active within the local church-life; Paul admonished the Christians to be subject to them (1 Cor 16:16; 1 Thess 5:12; cf. 1 Tim 5:17), which would mean in this case being subject to women. A sign of the active role of women like Tryphaena and Tryphosa in the early church is that, in Romans 16, Paul used the phrase "to work hard" only for women. That Paul recalls and mentions both women closely together may have resulted either from the similarity of their names, from their being sisters, or from some common activity in the church.

PETER LAMPE

TRYPHO (PERSON) [Gk *Tryphōn* (Τρυφων)]. Trypho ("magnificent, luxurious"), the epithet of Diodotus, a usurper of the Seleucid throne who influenced Hasmonean policies in Judea (1 Maccabees 11–15). Diodotus was born in Kasiana, near Apamea, S of Antioch. Around 150 B.C.E., the inept Alexander Balas appointed him and Hierax as governors of Antioch. When Balas lost control in 145,

Diodotus changed allegiance to Ptolemy VI Philometer. However, Ptolemy died and Demetrius II became the sole ruler of Syria, forcing Diodotus to flee.

Demetrius' corruption and his dismissal of Syrian veterans from the army in favor of mercenaries caused widespread dissatisfaction. Diodotus seized this opportunity to rebel against Demetrius. Calling himself Trypho, he mustered veterans from Apamea and crowned Balas' infant son, Antiochus VI Epiphanes. After defeating Demetrius' army, he controlled Antioch and central Syria, the areas most affected by Demetrius' corruption. Demetrius retained control of the outlying districts of the empire.

Jonathan, the high priest, supported Trypho and Antiochus because Demetrius had turned against the Jews. Jonathan conquered Mediterranean seaports in Antiochus' name and twice defeated Demetrius' army. Worried about Jonathan's growing power, in 143 Trypho tricked him into entering Ptolemaïs with only 1,000 men. There, the Syrians killed Jonathan's guard and took him prisoner. After accepting a ransom for Jonathan, Trypho killed him anyway. Jonathan's brother Simon, the new high priest, sided with Demetrius, while Trypho killed Antiochus and made himself the king.

In 141, the Parthians captured Demetrius during his attempt to reconquer Mesopotamia. This left Trypho as the sole ruler of Syria. Demetrius' wife, Cleopatra Thea, in fear for her life, asked Demetrius' younger brother, Antiochus, to accept the crown. Antiochus VII confirmed Simon in the high priesthood to secure Jewish help. In 139, Antiochus defeated Trypho near Antioch, forcing him to flee to the seaport of Dor. Antiochus besieged it, and Simon sent 2,000 Judean troops to help (which Antiochus rejected). Trypho escaped first to Ptolemaïs, then to Arthosia, and finally to Apamea, where Antiochus VII captured him. Trypho accepted Antiochus' offer to commit suicide.

TRYPHOSA (PERSON). See TRYPHAENA AND TRYPHOSA.

TUBAL (PERSON) [Heb *tūbal* (תֻּבַל)]. One of the seven sons of Japheth, Noah's son, according to the Table of Nations (Gen 10:2) and the parallel genealogy in 1 Chr 1:5. Descendants of Tubal and his siblings (Gomer, Magog, Madai, Yavan, Meshech, and Tiras) are located to the N of Israel, in Greece, Asia Minor, and N Syria. It is logical, therefore, to expect to find Tubal in the same N area.

Tubal is mentioned six further times in the prophets. Isa 66:19 speaks of the distant location to which Yahweh will send messengers of his grace. They include Greece (Yavan) and Tubal, as well as "Lud, drawers of the bow (MT)." Lud, or the Lydians in W Turkey and Greece, is the only name in the context with a descriptive epithet. Rather than seeing it as such, LXX revocalizes it and reads Meshech, one of the brothers of the forefather of Tubal in the genealogies. This fits well with the other prophetic references to Tubal, in which Meshech is always found. These include an oracle against Tyre in which trade relations between the two and Tyre include their provision of slaves and instruments of bronze (Ezek 27:13). Another oracle, against pharaoh, relegates Egypt and her allies, including the uncircumcised Tubal and Meshech, to the grave because of their terrorist activities (32:26). In an extended prophecy against Gog of the land of Magog, Gog is identified as the "chief prince (or "prince of Rosh") of Meshech and Tubal" (38:2, 3; 39:1).

Herodotus mentions two nations, the Moschoi and the Tibarenoi (3.94; 7.28), and Josephus writes of Thebel and the Meschenians (*Ant* 1.124). Older, Akkadian texts mention *tabal* (Parpola 1970: 341–43) and *muški* (Yamauchi 1982: 25–27). These are located in E Asia Minor. Tabal occupies the territory S of the Halys river, to the W of Togarmah (Barnett *CAH* 2:422; *MBA*, 15).

DAVID W. BAKER

TUBAL-CAIN (PERSON) [Heb *tûbal qayin* (תּוּבַל קַיִן)]. Son of Lamech by Zillah and brother of Naamah (Gen 4:22), described in the Cainite antediluvian line as a metalworker. The term *lōtēš,* "sharpener," suggests the work of a smith who manufactures agricultural as well as military implements (Sawyer 1986: 160–64). Tubal-Cain possesses the first such compound name to appear in the Bible. Its first element, Tubal, bears resemblance to Jabal and Jubal, the two other sons of Lamech. It was with this first element alone that Josephus, *Pseudo-Philo,* and *Jubilees* characteristically referred to this figure. It may be a *Hop῾al* or a *Qal* passive form of *ybl,* "to be brought." More often, Tubal has been related to the geographic name of Tabal, known from Assyrian texts and located in E Anatolia (Barnett 1975: 420–28; Yamauchi 1982: 25). However, this has been disputed due to the different historical contexts for Gen 4:22 and Ezek 27:13, where the association with metal trade is also mentioned (Cassuto 1961: 237; Westermann 1984: 332). It is probably more than coincidence that the name of the last male listed in the line of Cain should also contain (in its second element) the name of the first figure in that line. See CAIN. Josephus, *Pseudo-Philo,* and *Jubilees* often replace this second element with a gloss on its meaning: "metal smith." For the masculine name, *qyn,* in Old South Arabic, see Müller 1963: 314.

TWELVE, THE. In the gospel of Mark, the Twelve (*hoi dōdeka; anathrous* in Mark 3:14) are a group of disciples chosen by Jesus to be his special companions (Mark 3:14; 4:10; 11:11; 14:17). They were particularly instructed by Jesus (Mark 9:35; 10:32) and were sent by him to proclaim the coming of the kingdom and to cast out demons (Mark 3:14, 16; 6:7). The number was symbolic of the twelve tribes of Israel (cf. Matt 19:28; Luke 22:30; Rev 21:12–14) and pointed to the eschatological nature of Jesus' mission. That Judas belonged to this special group (Mark 14:10, 20, 43) accentuated the heinousness of his betrayal of Jesus.

A textually disputed passage in Mark's gospel calls the Twelve "apostles" (Mark 3:16), but the title is indisputably attributed to the group in Matthew (10:5) and Luke (6:13). In these later gospels, the Twelve have essentially the same role (Matt 10:1, 5; Luke 8:1; 9:1, 12; 18:31; cf. Acts 6:2) as they do in Mark, with a similar emphasis upon Judas, the betrayer, as one of the Twelve (Matt 26:14; Luke 22:3, 47). Matthew, however, has a special theory on the Twelve: he reduces the disciples to the Twelve (hence, the "twelve disciples"; Matt 10:1; 11:1; 20:17; 26:24) and specifically restricts their mission to Israel (Matt 10:5).

That the number twelve has symbolic value is confirmed by the early tradition of the risen Lord's appearance to the Twelve (1 Cor 15:5; cf. Acts 1:2) and the story in Acts about the selection of Matthias to fill the complement of Twelve (Acts 1:15–26). The importance of the symbolism largely explains why

the Synoptics' lists of the Twelve do not exactly correspond to one another (Matt 10:2; Mark 3:16–19; Luke 6:14–16). In the Synoptic Gospels, no individualized function is attributed to any of the Twelve, except for Peter (sometimes with James and John) and Judas.

The Twelve do not play as important a role in the Fourth Gospel as they do in the Synoptics; the Fourth Gospel does not even give a list of the Twelve (cf. John 20:2). Nonetheless, two of the Twelve are specifically identified as belonging to the Twelve, and these are each given a specific role: Judas as the betrayer (John 6:70, 71; cf. 12:4) and Thomas as the doubter (John 20:24). The fourth Evangelist's understanding of the Twelve is summarized in 6:67–71. The Twelve, whose spokesman is Simon Peter, have been chosen by Jesus. With the exception of Judas, they remained faithful even after many other disciples had abandoned Jesus.

Nonetheless, the presence of Judas and Thomas within the group and the relatively unfavorable portrayal of Simon Peter, as compared with the beloved disciple (John 13:21–25; 18:15–18; 20:2–10), indicate that the Twelve do not represent perfect faithfulness within the Fourth Gospel. Rather, they represent apostolic Christianity. Its configuration is different from that of the Evangelist's community, whose own faith hero is the beloved disciple, rather than Simon Peter.

Later traditions developed around many of the Twelve. While some of these are attested in the patristic literature, many more are to be found in the apocryphal gospels and acts.

RAYMOND F. COLLINS

TWINED LINEN. [Heb *šēš mošzar* (שֵׁשׁ מָשְׁזָר)]. The phrase "fine twined linen" is used repeatedly in the tabernacle texts of Exodus to describe one of the major textile components of the portable sanctuary and its accoutrements (e.g., Exod 26:1). The term *šēš* ("linen"), which is used rather than the postexilic *bûṣ,* seems to be part of the ancient core of priestly materials in the tabernacle account (Hurvitz 1967). "Fine twisted linen," colored wool (blue, red, purple), and goat hair (Exod 25:4) were the three fabrics used in the tabernacle. The most holy textiles were made of a combination of twined linen and colored wool threads, a mixture forbidden for secular use (Lev 19:19; Deut 22:9, 11).

The twined linen was used in nine different places in the tabernacle. Five of these—the curtains of the tabernacle (Exod 26:1; 36:8), the veil (Exod 26:1; 36:35), the ephod (Exod 28:6; 39:2, 24), the girdle of the ephod (Exod 28:8; 39:5, 29), and the breastplate (28:15; 39:8)—were made using a special technique, *ḥošēb* workmanship (RSV "skillfully worked"). This type of workmanship was the most elaborate of a set of three different types of textile embellishment used in the tabernacle. Only the most sacred objects, garments, or hangings were crafted with the *ḥošēb* technique, which may have been a kind of needlework in which figures (cherubim for the curtains and the veil) were embroidered onto the fabric.

Two other textiles made of "fine twined linen"—used for the hangings for the door (Exod 26:36; 36:37) and the screen of the courtyard gate (Exod 27:16, 18; 38:18)—were embellished with *rôqēm* workmanship (RSV "embroidered with needlework"). This technique perhaps involved the same mixture of colors and textures as the *ḥošēb* workmanship but did not add figural embellishments.

For the other two usages of this special linen—in the hangings of the court (Exod 27:9; 38:9, 16) and for the priests' breeches (Exod 39:27)—no special workmanship is specified. Linen for these purposes was thus less costly, in keeping with the fact that the courts' hangings were on the periphery of the tabernacle's zones of holiness, as were the breeches worn by all the priests, not Aaron alone, for whom the most elaborate items of clothing were indicated.

CAROL MEYERS

TWO-GOSPEL HYPOTHESIS. The Two-Gospel Hypothesis, formerly known as the Griesbach Hypothesis, proposes a comprehensive solution to the SYNOPTIC PROBLEM. It was first given this new title by Bernard Orchard (1982: vii; 1983: xii) to emphasize the central argument that the gospel of Mark was originally composed by joining together elements of the two earlier gospels, Matthew and Luke. The name is intended to distinguish this approach from the Two-*Source* (or Document) Hypothesis (hereafter 2SH), in that it does not postulate a hypothetical "lost document" such as "Q" plus Mark (or a second hypothetical "lost document" such as UrMark or DeuteroMark) as a source of Matthew and Luke. See TWO-SOURCE HYPOTHESIS. The Two-Gospel Hypothesis (hereafter 2GH) contends that the gospel of Matthew was written first in the service of the Palestinian Jewish Christian proclamation of the messiahship of the recently crucified Jesus of Nazareth. It proposes that the gospel of Luke + Acts was written second for use in the Pauline mission to the gentiles, using Matthew as the main source. It proposes that the gospel of Mark was written third as a selective combination of Matthew and Luke, as an attempt to reconcile the Jewish and gentile branches in the early Church. It proposes that the gospel of John was written fourth, revealing an extensive awareness of the other Gospels but consisting mostly of a separate stream of the Jesus tradition.

    2. Internal Literary Evidence
    3. External Historical Evidence
    4. Patristic Evidence
    5. Theological Consequences

———

A. Original Form of the Hypothesis

Medieval exegesis of the Gospels assumed a point of view similar to that of Augustine, who said that the Gospels were all equally true since Truth had authored them (John 14:6; cf. *de consensu evang.* 1.35.54). They followed Augustine's example and freely harmonized the gospel texts so as to produce an acceptable, chronological account of the life of Christ. In the 1700s, Enlightenment scholars rejected the harmonistic approach, pioneering a new method. They noted that Augustine had said that all four Evangelists were inspired by the Spirit of Christ to *remember* the events of his ministry, writing them down *in ordo recordationis* and not necessarily in chronological order. This left unsolved the riddle of the original historical order of the puzzlingly divergent events described in the Gospels. They also noted that Augustine had said that each gospel author had written in full knowledge of what his predecessor(s) had written, specifically stating that Mark had abbreviated Matthew (*de consensu evang.* 1.2.4; Weirich 1963). These statements left the door wide open for a nonsupernatural explanation of the process by which the Gospels were written.

The 2GH is usually traced back to an eminent German scholar named Johann-Jakob Griesbach, of the University of Jena, who published two studies during the 1770s on the Passion Narrative and on the composition of the gospel of Mark. Probably drawing upon contemporary scholarship (such as Owen 1764), Griesbach argued that Mark's narrative had been built up by means of a systematic combination of parallel accounts taken from Matthew and Luke. The gospel of John he found to be so different in internal chronology, phraseology, and content that he could not reconcile it with the other three Gospels (Griesbach 1789–1790; cf. Orchard and Longstaff 1978, chaps. 5, 6). Thus, Griesbach published the first modern "synopsis" in which only the first three Gospels appear unharmonized, in parallel columns (Griesbach 1776). Griesbach's student W. M. L. DeWette, also published analyses of the gospel texts (DeWette 1858) and another synopsis (DeWette and Lücke 1818), setting the stage for half a century of

prominence for Griesbach's theory (Farmer 1964: 9; Reicke 1987). This ended when numerous scholars began to opt instead for alternative forms of the 2SH presupposing priority of Mark, the view which is most widely held today.

B. The Revival of the Griesbach Hypothesis

The recent revival of Griesbach's Hypothesis began with two scholarly attacks on the 2SH. In 1951, B. C. Butler demonstrated that a key element in the basic argument used by adherents of the 2SH to support the priority of Mark, the so-called argument from order of pericopes, was logically false (Butler 1951, Chap. 5). He also attacked the Q Hypothesis, arguing that it was unnecessary as a way of explaining the parallel material in Matthew and Luke (chaps. 1 and 2). See Q (GOSPEL SOURCE) . In 1964, W. R. Farmer carried the attack farther by publishing a history of the Synoptic Problem, in which he brought forth evidence to show that the 2SH had achieved its ascendancy not only because it was founded on clear-cut literary or historical evidence but primarily because it appealed to the cultural and theological agenda of 19th-century German liberalism (Farmer 1964: 1–117; cf. Reicke 1986: 1–23). His book focused on an unprecedented critique of the "fundamental solution" that B. H. Streeter had advanced for Markan priority (1924: 151–98; cf. Farmer 1964: 118–78) and concluded with a redactional sketch of Mark on the Griesbach Hypothesis (pp. 233–83), suggesting that it still remained the correct solution. Meantime, the German historian H.-H. Stoldt independently reached the same conclusions in his history of the Markan Hypothesis (Stoldt 1977). These two frontal attacks on the 2SH have met with little response in the scholarly literature (but see C. Tuckett 1983; answered by A. McNicol 1987; cf. also J. Fitzmyer 1970; answered by Farmer 1983: 501–23).

One apparent side effect was the rise of an extraordinary interest in the SP which took the form of an unprecedented series of ad hoc scholarly conferences: the 1970 Pittsburgh Festival of the Gospels (Buttrick and Hadidian 1970); the 1976 Münster Griesbach Bicentenary Colloquium (Orchard and Longstaff 1978); the 1977 San Antonio Interdisciplinary Dialogue on the Relationships Among the Gospels (Walker 1978); the 1979 Cambridge Conference on the Synoptic Gospels (Farmer 1983); the 1980 Fort Worth Colloquy on New Testament Studies (Corley 1983); the 1982 and 1983 Ampleforth Abbey Gospel Conferences (Tuckett 1984); the 1982 Tübingen Conference on the Gospel and the Gospels (Stuhlmacher 1983); and a major "capstone" conference held in Jerusalem in 1984 under the leadership of M.-É. Boismard, W. R. Farmer, and F. Neirynck (Dungan 1990).

C. Overview of the Two-Gospel Hypothesis

In the decades since its revival by W. R. Farmer and others, the Griesbach Hypothesis has been augmented considerably. To indicate this rethinking of its essential elements, the neo-Griesbachian school gave the hypothesis a more descriptive name: the Two-Gospel Hypothesis. The 2GH now rests upon more recent methodological considerations, fresh research into the literary and historical data, a reexamination of the patristic evidence, and explorations of its potential consequences for biblical theology. The key findings in each of these categories can be summarized as follows:

1. Methodological Presuppositions. The assumptions underlying the 2GH can be summarized thusly: A source hypothesis which limits the number of hypothetical sources needed to explain the perceived literary phenomena (cf. "Occam's Razor") is preferable to one which invents numerous imaginary "lost sources," multiple "lost earlier versions" of the Gospels, hypothetical "lost recensions" of Q, etc., to explain the literary data (Farmer 1964: 209; Dungan 1970: 71–88). The proper starting point, the basic phenomenon to be explained by any source hypothesis, is the whole concatenation of agreement and disagreement among all levels of all three Synoptic Gospels. Precisely this whole web or complex pattern is the basic phenomenon to be explained; it is the Synoptic Problem (cf. Kümmel 1965: 35). Recommendations to begin by splitting the Gospels apart in order to compare them pairwise (Mark//Matthew and Mark//Luke) destroys the basic evidence (suggested by Neirynck in *IDBSup*, 845–48 and again in *NJBC*, 589; cf. Dungan 1984: 69–72). Although oral material must have preceded the written tradition, the SP as such cannot be solved by appeal to oral tradition alone. The literary data within the Gospels require an explanation of their interrelationship in terms of direct literary dependence (Farmer 1964: 202–8).

A successful source hypothesis will provide a complete, intelligible, redactional analysis of the whole of each of the Gospels (see C.3 below). The historical data from the patristic period regarding the authorship, order of composition, and relative use of the several Gospels should be given much greater weight (see C.4 below). As with historical research in general, there can be no objective "proof" of a hypothesis. The ultimate test of the validity of any source hypothesis can only be its total convincingness. Does it do justice to all pertinent evidence: patristic, text critical, literary, historical, and theological (see C.5 below)? This also means that no hypothesis can ever be finally "proved," since new evidence keeps coming to light.

2. Internal Literary Evidence. Proponents of the 2GH believe that conventional judgments regarding good or poor style, broken or intact form, and early or late theological formulation are too subjective and should not be used to establish source hypotheses. All source hypotheses must rest upon two types of objective internal literary evidence: *macro*structural phenomena and *micro*structural phenomena. But which should be given precedence?

In the past, source hypotheses have been founded on microstructural phenomena such as the percentage of similar verses among the Synoptic Gospels, the number of words in common, similar grammatical forms, etc. (cf. Streeter 1924: 151–52; *NJBC*, 588a). It is methodologically incorrect to begin with this type of data. As the critical apparatus of Nestle-Aland^{26} = UBS ^{3} clearly indicates, there was widespread intentional and/or accidental manipulation of individual words and phrases in the gospel texts in the early centuries. At the individual word level, one is so confronted by sufficient textual uncertainty that the perceived microstructural phenomena can always be explained in a variety of equally plausible ways. Conversely, there is much less evidence that there was widespread accidental or intentional *structural* modification of the texts of the Synoptic Gospels in the early Church. Therefore, for a source hypothesis to have a secure basis, i.e., one that can legitimately claim to explain the original interactions at the earliest compositional stages prior to the turbulent period, one must begin by examining the unaltered *major structural features* of the Gospels. But which ones?

The 2GH contends that the correct methodological approach is to start with phenomena that are found to exist across the entire Gospels. These would have the highest probability of having been created by the final redactors. Hence, it is of fundamental importance to begin by viewing all three Synoptic Gospels together simultaneously, not by separating them into two groups, such as Mark//Matthew and Mark//Luke (Neirynck following Lachmann; cf. *NJBC*, 588a; *IDBSup* 846; but see Dungan 1984: 68–72). Moreover, the 2GH contends that the most significant macrostructural feature in the three Synoptic Gospels is the relative order of pericopes (Dungan 1984: 72).

a. Macrostructural Evidence. However, it is impossible to see the literary evidence upon which the 2GH is built if one consults the two basic research tools scholars use today. The text of the Nestle-Aland^{26} = UBS^{3} has been shaped over the years by a succession of scholars who unquestioningly accepted the 2SH in some form or other (cf. Metzger 1971: xxviii). Likewise, the most widely used gospel synopses, despite their claims to be "neutral" with respect to source theories in their arrangement (cf. Aland 1967: vii; Huck 1976: iii; Greeven 1981: v), all favor the 2SH in their division and arrangement of pericopes (Orchard 1978; 1983: xi–xv; Dungan 1980). In fact, it is impossible to construct a totally objective, neutral synopsis (Dungan 1985). There are so many equally plausible ways to divide the text into pericopes and alternative ways to parallel them that the synopsis editor must inevitably fall back on a preconceived conception of how the materials were originally related to each other in the very act of constructing the synopsis. It is invariably a circular process. Farmer's *Synopticon* (1969) is an ingenious attempt to visualize the intersynoptic relationships through the use of colors without breaking up the text into artifical pericopes, titles, etc.

The literary facts with respect to the phenomenon of the relative orders of pericopes in the Synoptic Gospels are well known (Streeter 1924: 161; Nierynck *NJBC*, 588a; Farmer 1964: 212): the order of pericopes in Mark coincides with the order of pericopes in Matthew and Luke in every instance where Matthew and Luke agree with each other (with one possible exception: Cleansing of the Temple). In between, the order of pericopes in Mark always coincides with the order of pericopes in either Matthew or

Luke (with one exception: the Seed Growing Secretly). B. C. Butler (1951) demonstrated that this statement of the facts had been improperly used to support the argument for the *priority* of Mark (cf. *IDBSup*, 845–46).

This statement of the literary facts can most readily be explained by the hypothesis Mark combined Matthew and Luke: where their pericopes coincided in order, Mark utilized that account (see Fig. TWO.01). In between, he selected from one or the other (Farmer 1964: 211–18). All source hypotheses postulate a process of conflation to some degree. The process envisioned for Mark on the 2GH resembles Arrian's when he wrote the *Anabasis of Alexander* (see I, pref.; cf. Dungan 1974: 183–84), and it is confirmed in other biographical literature where it is known a third author used two earlier authors (Frye 1971; 1978: 279–83).

If one wishes to see the whole striking pattern of triple agreement in order of pericopes interspersed by alternating double agreement between Matthew and Mark on the one hand and Mark and Luke on the other—the pattern that led Griesbach to propose his hypothesis in the first place—one must not use any existing synopses. Fig. TWO.01 illustrates the Markan compositional pattern as understood by the 2GH. It is based on Griesbach's original outline chart in his *Commentatio* of 1789 (translated in Orchard and Longstaff 1978: 108–13; for the most recent analysis of the Markan composition on the basis of the 2GH, see now Farmer et al. 1991).

b. Microstructural Evidence. Customary analyses of stylistic features of the Gospels that focus on such phenomena as better or worse Greek, direct discourse vs. reported speech, increasing detail, increasing length, and greater or lesser "semiticism" have been demonstrated to be completely unreliable for determining whether a pericope or saying is early or late, since none of these linguistic traits are consistent indicators of early vs. late tradition (Sanders 1969; Frye 1978: 264–79).

Moreover, the quest for an individual gospel author's style has been plagued by questionable methods. If it is in fact the case that no one knows either the extent or the nature of the source material(s) used by each gospel writer, nor the compositional methods he followed, then the many analyses of the stylistic characteristics of the various Evangelists which assume that we *do* know the sources of the Gospels, and that we *do* know the methods they followed in incorporating them into their Gospels, have done little more than sow mass confusion. If one seeks to identify a writer's style without first recognizing the differences between the stylistic features of the *sources* as distinct from the stylistic characteristics of that *writer,* the result cannot be anything but confusion. Scholars who rely upon the classic studies of stylistic characteristics that explicitly assumed the Two-Source Hypothesis, such as Hawkins (1899), Turner (1924–1928), and Cadbury (1927), as well as more recent studies by Gaston (1973), Jeremias (1980), Dschulnigg (1984), and Luz (1985), will inevitably be misled. Methodologically worst of all are studies such as Pryke (1978) that begin by appealing to some vague consensus as to what "most scholars" consider to be the redactional passages in the gospel text (cf. Peabody's analysis of Nierynck's similar search for consensus; 1987: 11–14).

A more circumspect method is required. Peabody (1987: 3–14) is the first analysis of the stylistic characteristics of a gospel text that *does not assume a knowledge of that gospel's sources.* Peabody's logically correct starting point is the identification of merely "recurrent grammatical or syntactical features," leaving open the question whether they come from a source or the redactor (pp. 19–28). After these are collected (pp. 31–113), Peabody asks how one may determine if any of these "recurrent features" have been used compositionally, viz., by the final author of Mark to link originally separated segments into sections and sections in a progressive sequence from beginning to end of the gospel. Peabody correctly proposes the principle that a recurrent feature should only be considered a potential redactional stylistic characteristic of the final author of Mark if it appears in numerous, widely separated contexts of the gospel (pp. 115–58). Following this principle, the most widespread, recurrent stylistic feature would have the greatest probability of coming from the hand of the final author of the gospel (pp. 161–71). This feature must be the logical place to begin in identifying potential stylistic characteristics of the final gospel author.

After listing dozens of recurrent features in the text, Peabody isolates the most widespread feature, one which has been overlooked in all previous studies of Markan style: "*palin* ["again"] used retrospectively uniting two or more separated pericopes" (pp. 27, 171). Peabody further demonstrates that this unique characteristic *links together many other recurrent stylistic features,* suggesting the possibility of a potential redactional network across almost the whole of Mark's text (Table 70, pp. 56–57). Moreover, since traces of this network of *palin* used retrospectively is *entirely missing in Matthew and Luke,* we have prima facie evidence on the microstructural level that Mark could not have been the source of either Matthew or Luke, for it is hard to see why either, let alone both, would have systematically avoided this feature of Mark.

Longstaff (1977) has conducted another very useful experiment in microstructural detection by testing our customary assumptions as to the literary characteristics of conflated writings. Setting aside the usual speculations about what the gospel authors "must" have done in conflating their sources (cf. Dungan 1970: 91; 1974: 182–84), Longstaff analyzed writings of a known date, who used sources of a known date, in order to construct *inductively* a profile of the literary characteristics and compositional strategies of writers known to have conflated two or more sources. Longstaff concludes: "Mark is, at least in part, the result of a careful and detailed conflation of material taken from Matthew and Luke" (113; cf. Frye 1971; 1978: 264–79).

The results of this new microstructural research coincides precisely with the macrostructural evidence discovered in research on the relative order of pericopes. Whenever the microstructural evidence put forth by a particular hypothesis corroborates the macrostructural evidence upon which the same hypothesis is founded, it gains in plausibility.

3. External Historical Evidence. There are fundamental *historical* objections to the two main alternative types of source theory. First, those hypotheses envisioning a complex process in the composition of the Gospels (Parker 1953; Vaganay 1954; Léon-Dufour 1959; Gaboury 1970; Boismard 1972) invoke the existence of so many hypothetical "lost recensions" and "missing sources" of the Gospels that it is difficult to think of them as critical historical hypotheses. They are more like "conjectural scenarios" not meant to be held accountable to accepted practices of scientific evidence (Dungan 1970: 81–88). It is no wonder that none of these scholars has written a history of the early Church indicating when and where these many "lost versions" were produced or why they disappeared.

There is a different historical objection to the 2SH, however. If Mark was written first, followed by Matthew and Luke, one must then accept a disjointed historical process. According to the 2SH, the first gospel to appear was an anonymous, legend-filled portrait of a Hellenistic miracle worker (Bultmann 1963: 346–48). This first short gospel (later called "Mark") was then allegedly "corrected" by a second anonymous author who produced a "re-Judaized" revision (later called "Matthew") that *harkened back* to the theme of Jesus as the long-awaited eschatological Jewish king. Meanwhile, a third anonymous author allegedly also "corrected" the first writing to present a portrait of Jesus as the universal Hellenistic Savior (it was later called "Luke"). None of these writings came from Jesus' disciples. This hypothesis results in the denial that the historical Jesus of Nazareth can be known from the Gospels since they are largely made up of pious legends and myth (Bultmann 1963: 368–74). Paradoxically, "Q is the most important Christian text that we have … the canon behind the canon" (Robinson 1983: 28; cf. Ellis 1983: 36–38).

The 2GH, on the other hand, sees no evidence of such implausible disjunctions in the historical development of the early Church. It finds a consistent, carefully nurtured tradition extending from Jesus through the apostles into the early Church leadership (*1 Clem.* 42; cf. Gerhardsson 1961). It notes that the first gospel, Matthew, exercised an enormous influence on the life and faith of the early Church (Massaux 1950). It notes evidence that the Jesus tradition was maintained, transmitted, and applied to the living situation of the Church by a special group of traditionists especially dedicated to that task, a group which certainly included "the Twelve," James the brother of the Lord, and the apostle Paul (Gerhardsson 1964; 1986). It notes evidence that the leadership of the Church sought to maintain close and harmonious relationships, so that there might be continuity, coherency, and controlled creativity in the life of faith (Farmer and Kereszty 1990; Willis 1987). It notes evidence that the Gospel Tradition was carefully

transmitted from its beginnings down to the point when it was deposited in the four apostolic testimonies (Hofius 1983; cf. Gerhardsson 1986: 49–53). They were ultimately combined with other apostolic letters and writings (a "martyr's canon"; Farmer 1982: 213–15) as a companion volume with "the Law and the Prophets" to form the Christian Scripture. Putting the Jesus tradition into written form followed the practices of the well-known Hellenistic *bios encomium* genre (Shuler 1982; cf. Talbert 1977).

In this historical perspective, Matthew is the gospel most clearly reflecting conditions in Palestinian Judaism (Dungan 1971; Cope 1976) and might plausibly be viewed as first gospel created by the disciples of Jesus (Levi/Matthew acting as scribe) to present "the gospel" of the Hellenistic Christian synagogue of greater Syria (Orchard and Longstaff 1987: 239–45). However, some of Matthew's main themes needed modification if the gospel were to address the needs and concerns of the wider Hellenistic world. Thus, the 2GH suggests that Luke is a revision of Matthew along more universalistic lines (Orchard and Longstaff 1987: 246–62).

However, the latent distrust existing between the Jerusalem and the Pauline branches of the early Church is well documented in our sources. It is also documented that Simon Peter was a mediator in the early mission of the Church (cf. Acts 10). It is from this perspective that the 2GH understands not only the main reason for the writing of the gospel of Mark but also its remarkable structure. When the two chief Evangelists, Peter and Paul, were both executed during Nero's chaotic reign (A.D. 54–68), it shocked the Christian Church. The 2GH suggests that it is historically credible to understand Mark's intense focus on the crucifixion of Jesus as an attempt to provide a meaningful context for the recent deaths of the Church's leading apostles. Moreover, the 2GH suggests that the extraordinary unifying structure of Mark, namely, its exclusive restriction to traditions taken from the gospels of Matthew (Petrine tradition) and Luke (Pauline tradition), is an act of piety on Mark's part toward his beloved apostolic mentors (cf. Orchard and Longstaff 1987: 263–74; Dungan 1983: 412–18). Mark's dual theological parentage could also explain the striking combination of vivid eyewitness details (Petrine tradition) and Pauline theological terminology. Various dates have been proposed for the writing of the Gospels: in the 40s–60s (Orchard and Longstaff 1987: 275–77) and in the 60s–80s (Farmer 1982: 238).

4. Patristic Evidence. The question of the order of composition of the Gospels was not of great concern to the biblical exegetes in the early Church. However, definite traces of the original, historical order of composition can be found. Clement of Alexandria refers to a "tradition from the first elders" *(ton ekathen presbyteron)* that the Gospels with genealogies (Matthew and Luke) were written before the Gospels without (Mark and John; *Hypot.* 6; Euseb. *Hist. Eccl.* 6.14.5–7; cf. Farmer 1983: 6–9; cf. Gamba in Farmer 1983: 21 n. 10). The Latin manuscripts prior to Jerome often follow the order Matthew-John-Luke-Mark, an arrangement perhaps reflecting the dignity of authorship (apostles first, then disciples of apostles) as well as the chronological order attested by Clement (cf. Gamba in Farmer 1983: 21–22). The Monarchian Prologue to Mark, dating from the end of the 4th century, also assumes that Mark was written after Matthew and Luke, a view taken for granted by the 9th-century Irish historian, Sedulius Scottus (Gamba in Farmer 1983: 17–35; for the most recent full discussion, see Orchard 1987: 111–226). Augustine also reached the conclusion that Mark had conflated both Matthew and Luke (*de consensu evang.* 4.10.11; cf. Peabody 1983: 47–58).

5. Theological Consequences. The Two-Gospel Hypothesis rejects the Enlightenment tradition that there was a great gulf between Jesus and the disciples, or between Jesus and Paul, or between Peter and Paul (Willis 1987; Meyer 1987: 173–94). This legacy of radical scepticism is inimical to sound biblical exegesis (Meyer 1979: 13–110; 1989: 147–56). The 2GH sees a strong, broad tradition of biblical exegesis and theological affirmation running from Second Isaiah through Jesus' ministry on into the 1st and 2d centuries of Christian expansion and establishment, until it was canonized by the "great Church" in the 3d and 4th centuries (Farmer 1982). Few systematic theologians of the 20th century have used the 2SH, perhaps because of its reliance upon "lost documents" whose contents are not known even to the experts (Kingsbury 1981: 3–5) and its assumption of a bizarre history of the development of the early Church. The 2GH, however, focuses upon Gospels that the Church has canonized and explains their relationships logically and meaningfully. For this reason, it is to be hoped that the 2GH will provide a

sounder basis for biblical theology and ethics (cf. Farmer 1967; 1982; Farmer and Kereszty 1990; Dungan 1987). See also TWO-SOURCE HYPOTHESIS.

TWO-SOURCE HYPOTHESIS. To account for the complexity of the Synoptic Problem, the Two-Source Hypothesis in its purest form can best be summarized in the following three propositions: (a) in the sections common to the three Synoptics (the Triple Tradition), Matthew and Luke depend on Mark; (b) in the sections common only to Matthew and Luke (the Double Tradition), these two gospels depend on a second source, designated by the letter "Q " (for the German *Quelle* = "source"), which was made up almost exclusively of *logia* ("sayings"); (c) Matthew and Luke are independent of one another. Scholars also concur that Matthew and Luke had available to them their own particular sources for those sections which are unique to themselves. This hypothesis—widely held today, though with important qualifications—was only worked out in successive stages. See also SYNOPTIC PROBLEM.

A. Origins of the Theory

The first step was to suppose the existence of a primitive gospel (a so-called "Ur-gospel") on which the three Synoptic Gospels depended. This was worked out chiefly by G. E. Lessing in a work which, though written in 1778, was only published in 1784 after the author's death. This Ur-gospel (a gospel of the Hebrews or of the Nazarenes?) would have been written in Aramaic shortly after the death of Christ, then translated into Greek in different recensions, according to the circumstances prevailing at those times when it was reworked to a greater or lesser extent. The three Gospels of Matthew, Mark, and Luke would have depended on diverse translations such as these.

In 1794, J. G. Eichhorn complicated this hypothesis somewhat. The primitive gospel—still one written in Aramaic—would have undergone four different revisions, which likewise would have taken place in Aramaic. Matthew would, in this view, depend on a Revision "A," Luke on a Revision "B," and Mark on a Revision "C"; this last revision would, in its turn, be dependent upon Revisions "A" and "B" (a concession to the Griesbach Hypothesis). But Eichhorn's new idea was to suppose a Revision "D" to explain the materials which Matthew and Luke had in common but which were unknown to Mark.

In 1798 the Cambridge scholar H. Marsh again took up the ideas of Eichhorn, presenting them in a more logical fashion. He clearly distinguished two different sources to explain the formation of the Synoptic Gospels. One would have been the Ur-gospel that Lessing had already mentioned, but one that had been translated into Greek and used for all three Synoptics. The other source would have been a collection of the logia and parables of Jesus, which took into account the materials common to Matthew and Luke but unknown to Mark.

The position of Lachmann in 1835 is quite close to that of Marsh. However, he made it more precise on two important points. The materials of the Triple Tradition (Matthew, Mark, Luke), which derived from the Ur-gospel (still anonymous), would have been better preserved by Mark, a view which restored to Mark a certain priority over Matthew and Luke. Lachmann offered as proof the sequence of the narratives in the three Synoptics: Matthew and Luke only follow the same order when they are in agreement with Mark; whenever they depart from Mark, each follows his own way. This argument even today constitutes one of the pillars on which the Two-Source Hypothesis rests. With regard to the materials common to Matthew and Luke but unknown to Mark, Lachmann returns to an idea of Schleiermacher's (1832), making these depend on a collection of logia which Papias attributed to Matthew's composition. Luke, meantime, would not have known about these directly but only through an intermediary, namely canonical Matthew.

In 1836, Credner prompted an evolution in the direction of today's Two-Source Hypothesis by making more complete use of the testimony of Papias, which recognized two primitive Gospels: those of Mark and of Matthew, the latter one containing the logia of the Lord. For Credner, the Ur-gospel—which had

remained anonymous since Lessing—would, in fact, have been an Ur-Marcus on which all three Synoptics depended.

Several years later, in 1838, C. H. Weisse simplified Credner's theory by abandoning the idea of an Ur-Marcus; he proposed that the primitive gospel (Ur-gospel), which had already been intuited by Lessing, was nothing other than the canonical gospel of Mark on which Matthew and Luke would have been dependent, the latter two having also made use of the logia source that Papias had mentioned. At this point, the Two-Source Hypothesis took shape.

But Weisse ran into the following difficulty: if the second source truly was a collection of logia, how could one justify the presence, in material common to Matthew and Luke, of sections that were not logia but actually narratives, such as the healing of the centurion's son at Capernaum? Consequently, Weisse, in 1856, published a new study in which he returned to the idea of an Ur-Marcus that would have contained the *narratives* common to Matthew and Luke and which canonical Mark would have eliminated.

This theory of Weisse's enjoyed little success. But it gave flight to a reworked and brilliant treatment by H. H. Holtzmann in 1863. As the first gospel source, Holtzmann argued determinedly for an Ur-Marcus, designated by the Greek letter *alpha*, comprised of not only the materials of the gospel of Mark (taking into account the parallel redactions of Matthew and Luke), but also of a short form of the Sermon on the Mount (cf. Luke 6:20–49), the episode of the healing of the centurion's son, the pericope of the adulterous woman (John 7:53–8:11), and several verses from the end of Matthew's gospel (28:9–10, 16–20). In taking up this source, each of the three Synoptics would have effected both omissions and additions. With regard to the second source, which Holtzmann designated by the Greek letter *lambda*, Holtzmann still understood it to be the collection of logia which Papias had mentioned, better preserved in the "travel narrative" of Luke 9:51–18:14 than in Matthew.

With P. Wernle (1899), the Two-Source Hypothesis returned to its quasi-classical formulation. He attributed to the second gospel source, which he designated by the letter "Q" (208 verses), *all* the material common to Matthew and Luke but unknown to Mark, even if some of this was narrative in form. Accordingly, he could take up again the first form of Weisse's thesis: Ur-Marcus would be nothing other than canonical Mark, on which Matthew and Luke depended for the materials of the Triple Tradition. Holtzmann himself, toward the end of his life, rallied to this thesis, even though he also admitted an influence by Matthew on Luke.

At the moment, the Two-Source Hypothesis is accepted by a very large number of exegetes all over the world. It is expounded in all the introductions to the NT. One may refer especially to that of Jülicher and Fascher (1931: 321–51) or to that of Kümmel (1973: 13–53), as well as to the introduction to the three gospels composed by Schmithals (1985): the latter two of these works give an almost complete bibliography of all the works that the Two-Source Hypothesis has occasioned.

B. Foundations of the Theory

To prove the *priority of Mark* in the case of the material common to the three Synoptics, the decisive argument remains that of Lachmann concerning the sequence of the gospel units: Matthew and Luke do not have the same order among themselves except when they agree with Mark; when they disagree with him, each follows his own way (Jülicher and Fascher 1931: 330ff; Kümmel 1973: 31). Some additional remarks are needed to complete this general rule. Thus, when the sequence of the units is not identical in the three Synoptics, that of Mark is almost always sustained, either by Matthew against Luke or by Luke against Matthew (Streeter 1924: 161). We can also add that "the earliest and the latest parallels in all three Gospels coincide with the beginning and end of St. Mark" (Woods 1890: 61). Finally, when Matthew or Luke depart from the Markan order, it is always possible to specify the reason which prompted one change or the other (Kümmel 1973: 32–33). Mark, thereby, appears as the primitive gospel on which Matthew and Luke depend.

There is another argument invoked in favor of Markan priority, and it is one that is equally *decisive* ("*entscheidend*"—Kümmel 1973: 34): this gospel often has an unpolished, popular style, more oral than written, containing Latinisms and words transcribed from the Aramaic. But these stylistic inaccuracies are often absent from the parallel passages of Matthew and Luke. The only plausible hypothesis is to suppose

that Matthew and Luke, each in his own way, improved the style of Mark to render it more flowing, less semiticizing, and also simpler (Hawkins 1909: 131–38). Moreover, Mark contains details that seem to contradict the ideas that one might conclude about Christ or his disciples, or else ones that might lead to confusion. These traits are often omitted either by Matthew or by Luke, or by the two together (Hawkins 1909: 117–25). Finally, the style of Mark is readily seen to be redundant, with a tendency to express the same idea twice (Neirynck 1972). To take these details into account, some authors have returned to the idea of an Ur-Marcus (Schmithals 1985: 201–8), on which the three Synoptics would have depended, and which canonical Mark would have modified in some small way. But such a hypothesis finds little support today. Scholars prefer to explain the minor Matthew/Luke agreements against Mark either by recourse to text criticism (which results in their being denied) or by showing how Matthew and Luke must have reacted in the same way to correct Mark's text (Streeter 1924: 293–331; McLoughlin 1967; Schmithals 1985: 209–15).

C. The Q Source

Matthew and Luke together contain numerous sections that are not attested by Mark, above all the "words" (logia) of Jesus, but also narratives such as that of the delegation from John the Baptist to Jesus to ask him who he was or the account of the healing of the centurion's son. The literary connections between Matthew and Luke are often so close that one has to admit either to their mutual dependence on one another or to their use of the same source. In resolving this problem, analysis of the sequence of the pericopes common to Matthew/Luke but unknown to Mark is of no help. In fact, one can count on more than one third of these sections succeeding one another in the same order, even though, at times, they are separated from each other by sections taken over from Mark (Hawkins 1909: 108–109; Kümmel 1973: 39). This phenomenon can be explained either by a mutual dependence of one gospel on the other or by their use of a common source.

But other arguments seem to exclude the hypothesis of mutual dependence. If Matthew and Luke had depended on each other—whatever the order of that dependence—how does one explain that Matthew and Luke are so different when they explain the infancy of Jesus or the appearance of the Risen Lord?

On the other hand, when one compares the texts of Matthew and Luke in their common sections, one can establish that sometimes it is Matthew, while at other times it is Luke, who offers the more archaic text (Jülicher 1931: 336–37). So, one must admit that Matthew and Luke do depend on a common source.

Finally, Matthew and Luke offer a certain number of doublets, that is, sayings of Jesus that are found twice in Matthew and Luke; once in parallel with Mark and the second time independent of Mark. This would be the case with Jesus' statement about bearing one's own cross (Matt 16:24; Mark 8:34; Luke 9:23 in the first instance; Matt 10:38; Luke 14:24 in the second) or his statement expressing the theme that "to the one who has will more be given" (Matt 13:12; Mark 4:25; Luke 8:18 in the first instance; Matt 25:29; Luke 19:26 in the second). However, it might also have been by chance that either Matthew or Luke avoided the presence of a doublet by suppressing one of its component parts. Whatever might have been the case in this last regard, the presence of such doublets suggests that Matthew and Luke depended on two different sources: Mark and a collection of logia (Hawkins 1909: 80–107; Kümmel 1973: 40–41).

D. Weaknesses in the Theory

The success enjoyed by the Two-Source Theory rests on the fact that, even though it is relatively simple, it allows one to account for a large number of synoptic factors. Nonetheless, it does contain weak points, which those opposed to the theory have not failed to stress. See TWO-GOSPEL HYPOTHESIS. The utilization of Lachmann's argument to prove the priority of Mark on the basis of the sequence of the pericopes common to the three Synoptics has been contested by Butler, Palmer, Sanders, and Stoldt (1980: 135–54) and by Farmer (1976: 212–15). The efforts of Streeter, McLoughlin, and many others to justify, within the framework of the Two-Source Theory, the minor agreements of Matthew/Luke against Mark have been judged to be not very convincing: these authors have minimized the importance of the negative agreements (Stoldt 1980: 263–73), have advanced arguments that often are not very weighty, and have "atomized" the problem by neglecting to consider certain concentrations of agreements within the space of a few verses (Farmer 1976: 118–52; Boismard 1980). The instances of "duality" as a

phenomenon in Mark could call attention, not to the style of this Evangelist, but instead to the fact that he fused together texts taken over from Matthew and Luke (Farmer 1976: 155–56; Rolland 1984: 110–22). Finally, if Mark often appears more primitive than Matthew or Luke, one could just as readily make this observation about Matthew, or at times even of Luke (Sanders 1969).

In another respect, what is one to think of the alleged unity of the Q source? Could the sections where Matthew and Luke have a quasi-identical vocabulary (Matt 3:7–10; Luke 3:7–9) possibly derive from the same source as those which have hardly a word in common (Matt 22:2–14; Luke 14:16–24)? And how could a collection of sayings also include several narratives? See also Q (GOSPEL SOURCE). Right from the start, the Two-Source Hypothesis has found itself faced with difficulties that even now have not been totally resolved.

M.-É. BOISMARD
TRANS. TERRENCE PRENDERGAST

TYCHICUS (PERSON) [Gk *Tychikos* (Τυχικος)]. A Christian from Asia Minor who traveled with Paul on his third missionary journey (Acts 20:4) and who was later sent to the Colossians (Col 4:7–9) and Ephesians (Eph 6:21–22). In the context of the third missionary journey, Tychicus is mentioned with Trophimus, along with several others who accompanied Paul as he returned from Corinth to Macedonia (Acts 20:4). From there, Tychicus and the others went ahead and waited for Paul to catch up with them at Troas, where Paul then spent seven days (20:6). Some commentators have suggested that Tychicus was delegated by one or more of the churches to carry the collection from them to Jerusalem (1 Cor 16:3–4) (Lightfoot 1879: 233–34; Bruce *Colossians, Philemon, and Ephesians* NICNT, 176). However, while Acts relates that Trophimus went on with Paul to Jerusalem (cf. 21:6), it is not clear whether Tychicus did also.

Tychicus (assumably the same person) is described by "Paul" in Colossians as "a beloved brother, faithful minister, and fellow servant in the Lord" (Col 4:7) who is being sent to the Colossians along with

Onesimus. In Ephesians, Tychicus is sent alone, and is portrayed in the same way, although without the characterization of "fellow servant" (Eph 6:21). Each of these letters reports verbatim that Tychicus was sent to the readers so "that you may know how we are and that he may encourage your hearts" (Col 4:8; Eph 6:22). If Ephesians is dependent on Colossians, as many think probable, then the Ephesian reference to Tychicus is a literary borrowing. Whatever the case, Tychicus' twofold task is to relay pertinent information about Paul not expressed in the letters, and to provide encouragement to the community. A well-attested variant reading for Col 4:8 gives as Tychicus' first assignment: "that he may learn your news," implying that he was to report this news back to Paul. Because of his mission to relay information, the inference has often been made that Tychicus delivered both Colossians and Ephesians, and possibly the letter to the Laodiceans as well (Col 4:17).

Since Tychicus is identified as one of the "Asians" (Gk *Asianoi;* Acts 20:4), it is possible that he was already known to the communities he was to visit. However, since Colossians specifies Onesimus as "one of yourselves" (4:9), without saying the same of Tychicus, one concludes that Tychicus was probably not from that city.

Tychicus is also mentioned twice in the Pastorals. According to 2 Tim 4:12, "Paul" says he sent Tychicus to Ephesus. Was he to take over Timothy's responsibilities there? In Titus 3:12, "Paul" intended to send either Tychicus or Artemas to Crete, evidently to replace Titus, thus freeing him to meet Paul in Nicopolis where he planned to spend the winter. On the basis of 2 Tim 4:12, which would place Tychicus in Ephesus, it has been conjectured that Artemas and not Tychicus was the person eventually sent to Crete.

JOHN GILLMAN

TYPOLOGY. "Typology" has been defined as "that form of biblical interpretation which deals with the correspondence between traditions concerning divinely appointed persons, events, and institutions, within the framework of salvation history" (Achtemeier *IDBSup*, 926).

A. Definitions
B. Biblical Focus
C. Origins and Patristic Developments
D. History of Interpretation
E. Contemporary Discussion

———

A. Definitions

Paul expresses the hermeneutical starting point for typological thinking when he writes that the "veil" of Moses remains unlifted and obscures understanding when people "read the old covenant," that "only through Christ is it taken away. Yes, to this day whenever Moses is read a veil lies over their minds; but when one turns to the Lord the veil is removed," and "all the promises of God find their Yes in him (Christ)" (2 Cor 3:14–16; 1:20). This starting point presupposes the unity of the OT and NT and that the active involvement of God to save and deliver people in history is consistent. It presupposes, therefore, that the meaning of the OT is finally unclear without the NT, as is that of the NT without the OT; the two Testaments are connected at a substantive level. The Pauline image of the removal of the "veil" finds its antecedent subject matter in typology.

Typology is, in one sense, relevant for modern-day interpretive methodology because the latter is concerned about fundamental openness to the stated understandings of the original writers of Scripture. The roots of the discussion, therefore, are in the NT use of the Greek word *typos* and its cognates; returning to such exegetical roots out of respect for the text shapes the context for serious consideration of typology in biblical scholarship today.

B. Biblical Focus

Typos and its cognates appear in the following NT locations: John 20:25; Acts 7:43 (Amos 5:26), 44; 23:25; Rom 5:14; 6:17; 1 Cor 10:6, 11; 1 Thess 1:7; 2 Thess 3:9; Phil 3:17; 1 Tim 1:16; 4:12; 2 Tim 1:13; Titus 2:7; Heb 8:5; 9:24; 1 Pet 3:21; 5:3. The lexical problem of how to translate *typos* and cognates in these passages depends to a large extent on whether they are used as technical terms; only context can determine this. With the exception of a few noteworthy examples, *typos* is not used formally as a technical term; there are no indications that certain interpretive formulae are being appropriated, nor that a closed heuristic system of detailed interpretations with commensurate rules for application is operative; *typos,* in the main, is not part of a hermeneutical method as we normally think of it. The suggestions for translation within the secondary literature are multiple, but are, nevertheless, to be brought under the control of their respective contexts.

In John 20:25, "mark" or "print/imprint"; in Acts 7:43, "graven images"; and in Acts 23:25, " (letter) form" would reproduce in English the contextual use accurately. More problematic is Rom 6:17; it represents a much-debated context since it is not clear whether the interpretive antecedent is the Pauline "type" or "form" of teaching, in contrast to that of others, or the "shaping norm" that as such forms the conduct of those who live in the light of Christian instruction. In the latter case, *typos* could approach technical usage and be useful in the specialized discussion of typology.

In Phil 3:17, 1 Thess 1:7, and 2 Thess 3:9, personal antecedents are denoted as "example," serving as "models" or "images" that set a standard and give direction; what is put in noun form is that which is expressed by the verb *mimeomai.* It is not necessary to understand the "example" apart from faith as an ideal one. 1 Pet 5:3 is similar: *typoi* are not static patterns or wooden models but "representative, shaped ones" (of the flock). In the Pastoral Epistles of 1 Tim 1:16 and 2 Tim 1:13, *hypotypōsis,* as a derivative term, is used in contexts denoting a "picture," "display," or "initial representation" of the work of Christ (1 Tim 1:16), a "pattern" of Christian proclamation (2 Tim 1:13); *typos* denotes a "shaping representation" or "directional model" of Christian preaching and conduct in 1 Tim 4:12 and Titus 2:7.

The references to *typos* and cognates in Acts 7:44; Rom 5:14; 1 Cor 10:6, 11; Heb 8:5; 9:24; and 1 Pet 3:21, on the other hand, are more closely tied to usage as technical terms. In 1 Corinthians 10—perhaps the *locus classicus,* along with Romans 5, for the current discussion (Davidson 1981: 191–297)—the context for the use of *typos* and cognates is an OT one but not scriptural exegesis in the strict sense: individual OT references are not considered, but that which befell the people of Israel in the desert wanderings, a piece of Exodus history remembered in loose, summary connection to the OT accounts. In vv 6–13, Paul develops his point, using *typoi* in v 6 and *typikōs* in v 11. He discoverq in this history events which are "our prefigurations" of God's saving activity having occurred for the experience of the community of faith in the end time: "these things happened 'typically'/'typologically' to them, but they were written down for our instruction, upon whom the end of the ages has come" (v 11). Paul does not lift out a rule that is to be learned about God's further activity, nor does he find correspondence in an outer similarity of events; rather, he finds a directional indicator for an essential correspondence in God's activity. The image of Christ as the "Rock" that was "following" them (v 4) has several possible points of contact in rabbinic literature but does not appear to be dependent on such sources (Davidson 1981: 232–45); moreover, attempts to identify the genre of the passage as parenesis or midrash are only secondarily related to the *typos* question, inasmuch as typology is not a form-critical category. As in 2 Cor 3:14–16, something that would otherwise be obscure is seen in that history through the eyes of faith in Christ.

Rom 5:14 uses *typos* in an OT context (cf. 1 Cor 15:22, 45), but in an antithetical and heightened way (*ouch hōs-houtōs* and *pollō̧ mallon*): Adam is called a "prefiguration" of the One to come; Adam is this in negative rather than positive correspondence. Here *typos* is the "cast" or "hollow form" which, as molding pattern, contains in itself both sides of the image. Paul utilizes such a connection to express not patterned repetition—cf. contrasting contexts for *eikōn, homoiōma, apokatastasis,* and *paliggenesia* (Goppelt *TDNT* 8:253)—but the dynamic context of God's saving intervention.

For Acts 7:44 and Heb 8:5, the context is the actualization of Exod 25:40 and the "pattern" or "model" of the temple as heavenly archetype or blueprint and its derivative construct on earth. This interpretive context has points of contact in the OT (1 Chr 28:11–19) and in Hellenistic Judaism (Wis 9:8; Philo *Leg*

All III:102 and *Vita Mos* II:74, 141). Acts 7:44, however, leaves the interpretive antecedent of the *typos* undeveloped; perhaps there is an internal connection to the saying of Jesus about the temple in Acts 6:14 (*TDNT* 8:258). Both Heb 8:5 and 9:24, however, within the larger framework of Heb 8:1–10:18, make a direct move to connect not only Exodus 25 but also Leviticus 16 to Jesus' ministry of salvation. Here, the institution of sacrificial offerings and priestly service is drawn into a grand typological schema of vertical prefiguration, above and below, macrocosm/microcosm, not unlike Plato's heavenly world of ideas. Among other terms, the synonyms *hypodeigma* and *skia* are put into the interpretive service of the *typos* in 8:5 (cf. 9:23). The conclusion is that Christ, the high priest, has not made sacrifice with respect to the *antitypa,* those things representing the "copy" or "constructed model" (made with hands), but he "… entered … into heaven itself"—the true original rather than the copy (9:24), "the greater and more perfect tent" (9:11). In question for Hebrews, among other things, is the relationship of its vertical to its horizontal typological thought.

Finally, the reference to *antitypon* in 1 Pet 3:21 typologically links Christian baptism (1 Cor 10:1–13) with the deliverance of Noah from the flood "through the resurrection of Jesus."

C. Origins and Patristic Development

Out of this initial overview of terminology in context one naturally asks: where did this kind of thinking come from? and what became of it in subsequent Christian interpretive history of the OT? Various origins have been proposed for the technical hermeneutical use, e.g., Paul himself at 1 Corinthians 10, the hermeneutical practices at Qumran, Jesus himself (e.g., someone "greater" is here than Jonah … than Solomon, David, etc.; cf. Matt 12:41–42; Mark 2:25–28), and Deutero-Isaiah. The latter shaped that prophetic stream of tradition which actualized the past history of God's saving events for a new day, e.g., the new Exodus (Isa 43:18–21). Similar would be the future monarch of salvation (2 Sam 7:12; Isa 11:1), the end-time prophet (Deut 18:18; *ROTT*, 261–62). Broadly defined, therefore, typological thinking was already in use from at least the time of Deutero-Isaiah. Some see at work here the general device of analogical comparison as a way of making sense of life (*ROTT*, 364), and others see the influence of cyclical repetition (Bultmann 1950: 369–74)—a return to primal origins—common to the ANE world. One's reading of this question depends largely on one's perspectives on the history of religion: just how distinctive were faith and life in ancient Israel?

The development of typological thinking into the patristic period and beyond is marked by considerable excess, most notably in the link to allegory. In the *Epistle of Barnabas,* for example, the OT loses its distinctiveness and becomes a collection of Christian doctrine; it follows the allegorical reinterpretation practiced in Hellenistic Judaism. The *typos* of the serpent on a tree linked to the crucified Jesus is really an allegorical image (*Ep. Barn.* 12:7), as is that of Moses' outstretched arms and the crucifixion of Jesus (12:2–5). *Ep. Barn.* also makes use of seemingly trivial details: by cryptographic word codes ("gematria") based on an arbitrary combination of Gen 14:14 and 17:23, 27, it arrives at the number 318, which yields gematrial references to Christ and his cross (18 = "IH" Jesus, and 300 = "T" the cross in 9:7–9; cf. 7:3, 6–11; 8:1–7; 13:5). Similarly, *1 Clement* links the "scarlet cord" of Josh 2:18 with the blood of Christ (12:7). For additional references, cf. *Shep. Herm. Vis* IV:1.1; 2.5; 3.6; Iren *Haer* I:5.6; *Ign Magn* 6.1–2; *Trall* 3.1; Justin *Apol* 60.3; *Dial* 40.1; 41.1; 42.4; 90.2; 91.2–4; 114.1; 131.4; 134.3; Tert *Marc* 3:16; 4:40; 5:7; *De anima* 43; also the *Passah Homily* of Melito of Sardes. Among the Latin Fathers, *typos* is translated for the most part with "figura" or is left as the loanword "typus." Much of what was later used to discredit typology was based on the misperceptions of typology as allegory stemming from developments within this patristic period.

D. History of Interpretation

One of the early controversies within the early Church was over biblical interpretive methodology: allegorical versus literal sense. The latter was advocated by the Antiochene school, which used typology as a hermeneutical aid in the service of the literal sense and in opposition to both the excessive literalness of Jewish interpretation and the allegorical constructs of the Alexandrian school. The Antiochene program did not succeed, however, and the Alexandrian allegorical model dominated with few exceptions until the Reformation. The break with allegory and a return to the literal sense in combination with typology were

advocated and practiced by both Luther and Calvin (contra Erasmus, who preferred allegory). During the Counter-Reformation, Roman Catholic interest in the *sensus plenior* maintained dialogue with earlier discussions (patristic and medieval; cf. the *Quadriga* and Thomas Aquinas) and developed in succeeding generations perspectives that were largely independent of the Protestant discussion (Reventlow 1986: 31–47). Today, there are numerous points of contact. Among the major early Protestant contributors of studies on typology were J. Gerhard, J. Cocceius, H. Marsh, A. Hartmann, A. Tholuck, J. C. K. von Hofmann, and P. Fairbairn. Apparently, the term *typologie* was coined not by an advocate but by an opponent of these studies in the 1770s, J. S. Semler.

With the rise of historical-critical methodology and renewed interest in hermeneutics, typology entered a new phase during the late 19th and early 20th centuries. Important impulses for the debate were provided by such scholars as W. Vischer, W. Eichrodt, E. Hirsch, H. Strathmann, F. Torm, M. Noth, G. von Rad, A. Weiser, and O. Schmitz. They debated issues that would become of in-principle consequence for overall theological positions in the following decades. Prior to and after World War II, a fruitful exchange developed between L. Goppelt for NT studies and G. von Rad for OT studies over the kerygmatic intention of the OT (von Rad 1963: 35; *ROTT*, 386) and the character of eschatological existence in history for the NT (Goppelt *TDNT* 8:255–56; 1982: 210). This discussion has continued until now, to one degree or another, as part of the theological heritage of those two theologians.

In each of the decades since 1940, the scholarly community and the Church have engaged typology with renewed interest and from different angles, though interest in the mainstream of biblical scholarship for the 1980s is sporadic. What the future holds will depend on several variables: (1) how one assesses the history of the discussion; (2) what becomes of the relative (in-?)compatibility of typological categories with the hermeneutical categories of today; (3) one's bearings for the future regarding the place of Scripture in the theological discussion as a whole—especially the relationship between the Testaments; and (4) the relationship of individual biblical-exegetical studies to the overview synthesis of constructive theology.

E. Contemporary Discussion

Out of the foregoing variables, the following sensitive areas offer themselves for dialogue in the contemporary setting: honoring the stated understandings of the original writer and appropriating the intention for today is a hermeneutical/theological issue of considerable magnitude. Is typological thinking incarcerated within the context of the ancient world?

Allegory and typology have had a long-standing and troubled relationship. The distinction, once easily drawn, that typology has to do with historical facts while allegory does not, is simplistic and an overstatement. While qualifications have been advocated along the lines of history as understood and portrayed by the scriptural account rather than objective history, the category of historicity in general still remains a problem for typological thought; moreover, the place and function of symbolic language must be integrated.

Consequently, the association of typology with "salvation history" has also been strained. Much of the discomfort over their association has been over a two-detailed, phenomenological, oft-presumptive concept of "salvation history." It remains to be seen if a revised "salvation history" can emerge. If so, an association with typology may again become viable.

It is true that some who utilize typology relinquish claims to the limitations of its being a formal hermeneutical method with rules for systematic application; they would prefer to operate in the "freedom of the Spirit" (von Rad 1963: 38) or to consider it more appropriate to refer to typology as a "spiritual approach (Goppelt 1982: 202 and *passim*), "the thought of the consummation of salvation history" (*TDNT* 8:254, 259), a "meditatively applied understanding of the Old Testament" (Goppelt 1981–82, 2: 58), or a "salvation-historical optical lens" (Goppelt 1981–82, 2: 245). On those occasions, other scholars naturally become quite nervous and skeptical in light of potential abuse. Only in concert with, and not in repudiation of, the checks and balances of historical-critical methodology can typology serve with integrity today.

For the most part, typological thinkers insist on the personal, present reality of God in the "historical antecedents" of type determination: types *are* types because God put them there toward the end of an unfolding, consummation-oriented, redemptive self-disclosure of God's very person (typology's fixed point is the gospel). It is acknowledged that this is not self-evident to any observer; it is hidden and cannot be documented as a demonstrable datum; it has to do ultimately with faith in Christ and faith's posture toward the sovereignty of God. It will do little good for "liberals" and "fundamentalists" to fault one another for the other's perceptions in this area. Typological thinking cares about the unity of the Christian Bible and is serious about understanding the saving activity of God to which it bears witness; all who care and all are serious about these matters—perhaps even the Jewish-Christian dialogue—will find typological understanding helpful if it can be directed toward subject matter about which people of today are deeply concerned. It is in connection with these related lines of questioning, and not as a topic in and of itself, that typology may very well enjoy fresh consideration. See also THEOLOGY (BIBLICAL), HISTORY OF.

JOHN E. ALSUP

TYRANNUS (PERSON) [Gk *Tyrannos* (Τυραννος)]. In Ephesus, the place where Paul preached daily for two years was known as the hall of Tyrannus (Acts 19:9). Paul had at first spoken in the synagogue, as was his custom, for three months. But because of the opposition which he aroused (Acts 19:8), he was forced to find a more suitable place. The view that this was another synagogue was once advocated but is no longer maintained.

The word *turannos,* or "tyrant," first appeared in the poems of Archilochus, who boasted that he scorned the tyranny of Gyges the Lydian. In Greek usage, the word designated someone who seized power unconstitutionally, such as the famous Athenian tyrant Peisistratus (546–527 B.C.), who was none the less popular and benevolent (Adkins 1972: 68).

Williams (*Acts* GNC, 495) comments: "Since it is difficult (except in certain bleak moments of parenthood) to think of any parent naming his or her child 'Tyrant,' the name must have been a nickname given by the man's students or tenants." But the name is not an uncommon one. L. Tarutilius Tyrannos appears in two lists of *kourētes,* "young warriors," from Ephesus (*NDIEC* 4: 186).

It has been presumed that Tyrannus was either the owner of a private hall or the donor of a public building used for lectures. The "Western" type of ms evidence reads "in the hall of a *certain* Tyrannus," clearly indicating that an individual named Tyrannus is meant, and perhaps implying that he was not a prominent public figure (IDB 4: 721). The word translated "hall" (RSV; NEB, "lecture-hall"; KJV, "school") is the Greek word *scholē.* It originally meant (1) "leisure"; (2) then an activity conducted during leisure, such as a "discussion, debate, or lecture"; (3) a group to which such lectures were given; and (4) a place where such a lecture was given, i.e., "hall."

Against the majority of interpreters, Horsley (*NDIEC* 1: 130) has asked, in view of the rarity of the use of the word *scholē* with the meaning of a place, "Is there any reason why the noun in Acts 19.9 should not refer to a group of people to whom addresses were given during leisure hours?"

But the context (Acts 19:9–10) which speaks of Paul speaking daily for two years "so that all the Jews and Greeks who lived in the province of Asia heard the word of the Lord" would seem to indicate a building rather than an audience, which must have changed constantly. It is possibly from these public lectures that Paul gained the friendship of the highly placed officials called Asiarchs (Acts 19:31), who warned him of danger (Yamauchi 1980: 109–10).

The Western text inserts the most interesting addition that Paul "argued daily in the hall of Tyrannus *from the fifth hour to the tenth*"; that is, from about 11 a.m. to 4 p.m. Though this was not part of the original text, it "may represent an accurate piece of information, reserved in oral tradition," according to Metzger (1971: 470; cf. Ramsay 1896: 271). As this was the hottest period of the day, many would stop work for a midday rest at this time. Martial (*Epigrams* 4.8) wrote: "Till the fifth hour Rome tends her various tasks, then rests from the sixth to seventh." Work and school began before the crack of dawn (Mart. *Epigrams* 12.57; Juve. *Satires* 7.222–26).

This schedule would have permitted Paul to work at his own trade of tent-making (Acts 18:3, 20:34; 1 Cor 4:12). Bruce (*Acts* NICNT, 389) comments: "But Paul, after spending the early hours of the day at his tent-making … devoted the hours of burden and heat to his more important and more exhausting business, and must have infected his hearers with his own energy and zeal, so that they were willing to sacrifice their siesta for the sake of listening to Paul."

An early 2d -century A.D. Greek inscription found near the Library of Celsus at Ephesus contains the Greek word *audeitōrion* (from Latin *auditorium*), which means a lecture hall for the recitations and speeches of professors, rhetors, and poets (Hemer 1973: 128). Unfortunately, the recent attempts to investigate the area E of the library have failed to discover any remains of such an auditorium or lecture hall (Yamauchi 1980: 99–100).

TYRE (PLACE) [Heb *ṣōr* (צֹר)]. TYRIAN. One of the most ancient towns on the Phoenician coast.

Tyre (M.R. 168297) is situated about 40 km S of Sidon, and about 45 km N of Acco. In antiquity it was an island ca. 600–750 m from the mainland (Curtius *Hist. of Alex.* 4.2.7), but since the time of Alexander the Great (actually beginning in the summer of 332 B.C.) the island has been linked with the mainland by a causeway, which has broadened over the centuries. Thus, Tyre is now a peninsula. With a few exceptions, it has been occupied continuously from the middle of the 3d millennium B.C. through the Greco-Roman and Byzantine periods. Consequently, the Bible is full of references to this important city.

B. Tyre in the Bronze Ages
C. Tyre in the Iron Age
D. Tyre in the Greco-Roman Period

———

A. Textual References to Tyre

That Tyre was built on an island is attested not only in the book of Ezekiel ("in the midst of the sea, 27:32), but also in Egyptian (*ANET*, 477), Assyrian (*ANET*, 290), and classical sources (Strab. 1.217; Arrian, *Hist. of Alex.* 2.18.2; Curtius, *Hist. of Alex.* 4.2.5). Before the time of Hiram I (969–936 B.C.), there were actually *two* islands: the main one was the city, and the smaller one was a temple of Baal. Hiram linked the two islands into a single larger one (*AgAp* 1.113); this junction still appears on Tyrian coins from a much later date (Head 1911: 801; cf. also Nonnos *Dion.* 40.468ff.). The island of Tyre was 700–750 m wide, thus the area of ancient Tyre consisted of ca. 57.6 hectares, accommodating perhaps 35,000 inhabitants (Pliny computed the circumference of the island as 3 Roman miles; *NH* 5.17.76). At the time of the conquest of Tyre by Alexander the Great, the number of inhabitants had increased because of refugees coming into the city: Alexander sold some 30,000 Tyrians and foreigners into slavery (Arrian *Hist. of Alex.* 2.24.5), while 15,000 Tyrians were rescued by the Sidonians, 6,000 were killed in battle, and 2,000 were crucified (Curtius *Hist. of Alex.* 4.4.16–17).

On the mainland opposite the island was Old Tyre, called "the fortress of Tyre" *(mibṣar ṣōr)* in the Bible (Josh 19:29; 2 Sam 24:7). This town is called Uzu in the el-Amarna letters (EA 148:11, 30; 149:49; 150:18), and Ushu in Egyptian and Assyrian records (*ANET*, 477a, 287b). In the classical sources it appears as Palaityros (*Ant* 9.285; Curtius *Hist. of Alex.* 4.2.4; Diod. 17.40.5). Pliny computed the circumference of this settlement to be about 19 Roman miles. Many freshwater springs are located nearby, and before the LB Age (certainly before the lime-plastering of cisterns was common) fresh water was regularly shipped out to the island (*ANET*, 477b; *Ant* 9.287). Old Tyre was totally demolished by Alexander the Great, who used its rubble as part of the building material for the causeway out to the island.

B. Tyre in the Bronze Ages

The excavations of P. M. Bikai have revealed "that the island must have been occupied at least by the middle of the third millennium B.C.,"and that "there was permanent occupation during the Early Bronze Age" (Bikai 1978: 72). This date corresponds well with the story told by the priests of Melqart to Herodotus (ca. 450 B.C.) that "the temple was built at the same time that the city was founded, and that the foundation of the city took place 2,300 years ago" (i.e., 2750 B.C.; Hdt 2.44). Further confirmation of Tyre's existence in the 3d millennium B.C. comes from Ebla (Bikai 1978: 76; Pettinato 1983: 108). The oldest known Egyptian record mentioning Tyre has been found in one of the Execration texts: there Posener (1940: 82) reads "the ruler of Tyre." The text is dated ca. 1780–1750 B.C., but Bikai's excavation found no human habitation for this period (ca. 2000–1600 B.C.); Bikai 1978: 72). This divergence can be explained by the small area excavated, or perhaps Tyre was limited to the mainland site.

A Hittite *evocatio* (*ANET*, 352) mentions the land of Tyre, and the Legend of King Keret (composed between the 16th and 15th centuries B.C. [Albright 1958: 36]) mentions the shrine(s) of the (two) Tyre(s) (Gordon *VT*, 467), i.e., one on the mainland and one on the island. In this respect, one should note the two temples of Heracles (= Melqart of Tyre), one on the island and one in Old Tyre, as mentioned by the Tyrian delegation to Alexander (Justin 11.10.11; Curtius *Hist. of Alex.* 4.2.4). In the long list of the Asiatic towns of Thutmose III (ca. 1490–1436 B.C.) dealing with his first campaign, no Phoenician town is mentioned; perhaps Tyre and its sister-towns came to an agreement with the pharaoh by paying taxes (Breasted 1962 vol. 2: §§472, 483).

During the Amarna age (ca. 1375–1350 B.C.), four letters mention Tyre; these were sent by the king of Byblos, of which EA 77 was still dispatched to Amenophis III, as well as perhaps EA 89 (Campbell 1964: 134), the latter referring to a revolution in Tyre.

EA 92 and EA 114 are written to Amenophis IV, to whom all ten letters of Abimilki, king of Tyre, are addressed (EA 146–155). The letters from Tyre complain mainly about the hostility of the king of Sidon, who had occupied Old Tyre (= Ushu), interrupting the water supply and occupying (?) the burial ground.

During the 19th and 20th Dyns. (ca. 1300–1100 B.C.), Tyre is mentioned in the Palestinian/Phoenician town lists of Seti I, in a long letter from the days of Ramesses II (*ANET*, 477), and in a journal of a frontier official from the days of Merneptah (*ANET*, 285b). From this period derive two commercial texts from Ugarit that mention textiles from Tyre, one noting a reddish-purple garment and the other mentioning linen (Virolleaud 1957: 144, 146). This evidence recalls the story about the discovery of the Tyrian purple dye by Heracles (Nonnus, *Dion.* 40.300ff). Another letter from the king of Tyre to the king of Ugarit mentions a shipwreck at Acco, and the Tyrian king reassures his partner with the words, "let not my brother worry" (Schaeffer 1962: 41). With the invasion of Asia by the Sea Peoples, ca. 1200 B.C., destruction came to all coastal towns, and among them also Tyre.

C. Tyre in the Iron Age

Justin has preserved a tradition that "many years later these (Sidonians, i.e., Phoenicians) who had been conquered by the king of the Ashkelonians (i.e., Philistines) embarked in ships and founded the city of Tyre, one year before the conquest of the city of Troy" (Justin 18.3.5). Josephus hints at the same date when he states that "from the founding (of Tyre) to the building of the temple (in Jerusalem) there was an interval of two hundred and forty years" (*Ant* 8.62). In his report Wen-Amon (ca. 1080 B.C.) mentions that he spent a night in Tyre on his trip from Egypt to Byblos (*ANET*, 26). At that time Egypt no longer had any say in the affairs of Asia, and the Sea Peoples were the lords of the Palestinian coastland. Stratum XIII in Tyre (1070/50) shows a massive influx of Cypriot wars (Bikai 1978: 66, 74), a sign of intensive trade connections between Tyre and Cyprus. There is no doubt that from the days of Abibaal, the father of Hiram I, the town Kition (Larnaka of today) was a Tyrian colony (Josephus, *Ant* 8.146).

During the long reign of Hiram I (969–936 B.C.), Tyre witnessed its first golden age. David's victories over the Philistines on land helped Tyre to crush the Philistinian sea supremacy (*YGC*, 190), and Tyre sent cedar and workmen to build a palace for David (2 Sam 5:11). Josephus has preserved some excerpts from the Greek translations of the Tyrian records (*Ant* 8.144–149), which describe the dismantling of ancient temples in Tyre by Hiram to erect new lavishly adorned ones—a sign of the great wealth of Tyre. Herodotus describes a golden and an emerald pillar from the temple of Heracles (Hdt 2.44). Both pillars (cf. also Ezek 26:11) are depicted in an Assyrian relief from the days of Luli (Eloulaios) (729–694 B.C.); Harden 1962: pl. 50). The two pillars in front of the temple remind one of "Jachin" and "Boaz" (1 Kgs 7:21).

This great building program must have induced Solomon to solicit Hiram's help to build the temple in Jerusalem (1 Kgs 5:16–20—Eng 2–6). Hiram gave Solomon assistance and building materials for more than twenty years (1 Kgs 5:22, 25—Eng 8, 11; 6:38; 7:1). A master-craftsman from Tyre also named Hiram (Huram) was placed in charge of all the technical production (1 Kgs 7:14; 2 Chr 2:13), which Solomon paid for with agricultural products and silver. This was a commercial treaty between two equals (1 Kgs 5:25; 9:13), but after twenty years the balance of trade was greatly in favor of Tyre, and Solomon had to give Hiram "twenty cities in the Land of Cabul" (1 Kgs 9:11). The Chronicler, who disapproved of

the territorial transfer, tells that Hiram returned them to Solomon (2 Chr 8:2). However, later Acco was still part of the Tyrian state, and we may assume that the S border of Tyre reached as far as Mt. Carmel.

Another cooperative venture between Hiram and Solomon was in overseas commerce to Ophir, the land of gold (1 Kgs 9:26–28; 10:11). Hiram was the more important partner, since he is mentioned before Solomon: "there was peace between Hiram and Solomon and they concluded an alliance" (1 Kgs 5:12).

As the power of Tyre increased, the town became "the mother of the Sidonians" (cf. later coins: Hill 1911: 800). From Tyre, the Phoenician colonial movement spread across the Mediterranean Sea. Years later, a poet sang in great admiration: "Your frontiers are on the high seas, your builders make your beauty perfect" (Ezek 27:4).

Authentic sources about the history of Tyre after the death of Hiram are confined to a list of kings who ruled Tyre from the days of Hiram until the founding of Carthage (in 815 B.C.). Josephus has preserved this list (*AgAp* 1.121–125). After Hiram's death, his son and grandson acceded to the throne of Tyre. Then followed a conspiracy, and usurpers reigned in Tyre. In 887 B.C. Ethbaal I, the priest of Astarte, seized the throne and reigned for 32 years. Ethbaal is known as the "king of the Sidonians" (1 Kgs 16:31) and as the father of Jezebel, the wife of Ahab.

The reign of Ethbaal marks the second golden age in Tyre's history. Not only the title "king of the Sidonians," but also the foundation of colonies demonstrates the vast extent of its empire. Tyre's supremacy over its neighbors is documented in the inscriptions of Assyria and Babylonia, and especially in the Bible, always as a leading city. Tyre and Sidon became a political unit, which existed until 701, when Sennacherib recreated an independent city-state of Sidon. From the days of Ethbaal I the island of Tyre had two harbors (cf. Ezek 27:3; Arrian *Hist. of Alex.* 1.20.10). The N one, protected by a natural bow-shaped mole, was called the "Sidonian port" (Strabo 16.2.23). It could easily be closed by a chain or by a small number of ships (Arrian *Hist. of Alex.* 2.20.8). In the S was an artificial harbor called the "Egyptian port" (Strabo 16.2.23), protected by a long breakwater. It was built by Ethbaal I, as confirmed by the underwater excavations by A. Poidebard (1939). The measurements of the dressed stones and the constructions of that wall are exactly like the constructions in Samaria and Megiddo, from the time of Ahab (873–852/1 B.C.), as well as in Kition on Cyprus (Katzenstein 1973: 154).

The power and influence of the Sidonians can be inferred from the fact that their main deity, Melqart (= Baal), was worshipped not only in Sidon, but his cult spread to Samaria and Jerusalem (1 Kgs 16:32; 2 Kgs 11:18; cf. also the stories of Elijah: 1 Kings 18–21). This happened following the alliance between Tyre and Israel, which was sealed by marriage between the Tyrian princess Jezebel and Ahab of Israel (1 Kgs 16:31; cf. Psalm 45). Tyrian influence spread further S when Athaliah, princess of Israel, married Joram, king of Judah (2 Kgs 8:18–27). Another political marriage can be inferred from the Melqart stela erected by the king of Aram about the same period (*ANET*, 655; Cross 1972: 36–42).

The similarity of the construction of the breakwater at Tyre's S port, built in the time of Ethbaal, and Ahab's palace in Samaria implies the employment of Tyrian master-builders in Ahab's great building enterprises (1 Kgs 16:34; 22:39). Josephus mentions (probably from the Greek translation of the annals of Ethbaal; cf. *Ant* 8.324) that there was a long drought, and that after Ethbaal made supplications there was a heavy thunderstorm. This rainless time is also mentioned in the tales of Elijah (1 Kgs 17:7; 18:41–45).

The long and prosperous reign of Ethbaal left its mark on the city of Tyre. It was called "Tyre, the bestower of crowns" (Isa 23:8). A bronze band at Balawat (from the palace door of Shalmaneser III, 858–824 B.C.) shows Tyre as well protected by a huge wall and fortified by strong towers with two gates (*ANEP*, nos. 356/357; cf. also Ezek 27:2). The growth of Tyre's vast international trade demanded an expansion of the harbor to accommodate a foreign anchorage. In Ezekiel 27 is a lament for Tyre which can hardly have been composed by the prophet. Incorporated into the poem is a lyrical depiction of Tyre as a glorious ship and a catalogue of Tyre's world trade (a most important source for ancient economic history) (Ezek 27:12–24). It is possible that the sources for the description of Tyre's greatness originated with Ethbaal I (Maisler [Mazar] 1952: 83–84), and there are hints of such songs in both Isaiah (23:16) and Ezekiel (26:13). Ammon and Moab may have been omitted because they were vassals of Israel and Judah, but one wonders why the Philistine city-states are omitted. The omission of Babylon justifies our doubt

that Ezekiel was the author. The same may be said of many parts of Ezekiel 28, in which traces can be detected from the ancient Phoenician epics and myths (Albright 1932: 194 n. 26; van Dijk 1968).

Mercenaries served the Tyrian empire (Ezek 27:10–11), but there is never any mention of a military campaign on the mainland in which Tyre was involved. The Tyrians knew how to defend their island stubbornly, as seen from the annals of the Assyrian kings, and also from the Tyrian records (Josephus, *Ant* 9.287; Ezek 29:18); but they always preferred, if possible, to pay tribute, which was redistributed to Tyre's customers.

Ethbaal was succeeded by his son Baal-azzor, who is mentioned in an Assyrian inscription from the year 841 as Ba›li-ma-AN-zêri (Safar 1951: 11–12, 19). During the reign of Jehoshaphat, king of Judah, and Ahaziah, king of Israel (852/1–851/0), there was a plan to renew navigation from Ezion-geber to Ophir, the land of gold (1 Kgs 22:49–50; 2 Chr 20:35–36), which ended in complete failure. The king of Tyre, the uncle of Ahaziah, may have been the real instigator of that scheme.

Until the coup d' état of Jehu and the murder of Jezebel and the house of Ahab, the political alliance between Tyre and Israel remained intact, but from that point, the relations were broken off. Decades later, Amos still accused Tyre of having "ignored the covenant of brotherhood" (actually a covenant between two equals; Amos 1:9). Amos speaks only of Tyre (as *pars pro toto*), but the Sidonian state did not border Judah. Tyre's transgression was the deliverance of an entire population to Aram (= Damascus; not "Edom"), thus ignoring the alliance, which had actually been broken by Jehu in 841 B.C. The background of Tyre's actions were the wars between Israel and Aram, which ended in Israel's becoming, under Jehu and his successor, a vassal of Aram. The king of the Sidonians naturally favored the stronger power, which was one of his main customers, especially since Tyre served also as the port for Damascus.

With the death of Shalmaneser III in 824 B.C., Tyre was free from paying tribute to Assyria and devoted all its efforts to its colonial empire, the crown of which was Carthage, founded in ca. 815/814 B.C. (Katzenstein 1973: 120). This important event happened in the seventh year of Ethbaal's great grandson Pygmalion (820–774 B.C.), when his elder sister Dido fled from Tyre and founded Carthage in N Africa (Josephus, *AgAp* 1.125–26). Tyre became the leading maritime power. In 805 B.C., Adad-nirari III (810–783 B.C.) appeared in the W, and among the tribute bearers was the Sidonian king. There was a period of about 35 years, between the death of Pygmalion and the appearance of Tiglath-pileser III (744–727), when Ethbaal II (?–739/738 B.C.; Levine 1972: 23) ruled over the Sidonian empire. Recently, the name of a possible further king of Tyre, Milkiram (ca. 750 B.C.), has been discovered (Lemaire 1976: 83–93). He must have ruled before Ethbaal II, since Ethbaal is mentioned in the list of the tribute bearers to Tiglath-pileser dated to 738 B.C. Milkiram may be the connecting link between Pygmalion and Ethbaal II, but we cannot be sure of it. His reign would be contemporaneous with the reigns of Jeroboam II of Israel and Uzziah of Judah, a period of great prosperity in the Israelite kingdoms, and one of great trade connections between Tyre and its neighbors (cf. Amos 3:15; 6:4).

Tiglath-pileser III initiated an aggressive policy against the W, in which a conquered country would be made an Assyrian province. Tyre resisted the expansion of Assyria into W Asia, which was aimed ultimately at the control of the E coast of the Mediterranean. Eventually, several Greek city-states on Cyprus became vassals of Assyria, hoping that this status would protect them from the encroachments of the Tyrian colonies on the island. However, the Assyrian kings did not annex the two most important centers on the Mediterranean, Tyre and Gaza; these commercial metropolises remained independent, but the tribute placed on them was huge.

The tribute lists of Tiglath-pileser III mention Ethbaal II, Hiram II, and Mattan II. Hiram II (738–730/29 [?] B.C.) is also mentioned on a fragment of an offering bowl, dedicated by the governor of Qart-ḥadašt (= Limassol) (Gibson, *TSSI* 3, 66–68; Katzenstein 1973: 207–11). In 730/729 B.C., Mattan II paid to the Assyrian *rabšaq* the enormous amount of 150 talents of gold (*ANET*, 282). The accumulation of precious metals was the symbol of a nation's status: "And Tyre has built herself a rampart; she has heaped up silver like dust and gold like mud in the streets" (Zech 9:3). And compare: "Clever and shrewd as you (= Tyre) are, you have assessed wealth for yourself, you have assessed gold and silver in your treasuries; by great cleverness in your trading you have heaped up riches and with your riches your arrogance has

grown" (Ezek 28:4–5). Perhaps because of this immense payment, the wealthy merchants (cf. Isa 23:8) saw to it that a new king, Eloulaios (called Luli in the Assyrian records [*ANET*, 287–88]), was enthroned. According to the Greek translation of the Tyrian annals (Josephus, *Ant* 9.284–87), Eloulaios subdued a rebellion of the inhabitants of Kition (Cyprus), and during his reign Shalmaneser V (726–722 B.C.) invaded Phoenicia, after which "Sidon and Akko and old Tyre and many other cities revolted from Tyre and surrendered to Assyria." Still, the island withstood the pressures and the Assyrian king reappeared. The Tyrians proved victorious in a naval battle, after which Shalmaneser retired and placed guards at the water sources on the continent. The Tyrians, however, endured the siege for five years.

When Sargon II (721–705 B.C.) ascended the throne, Eloulaios apparently saw an opportunity to make peace with the Assyrian king. The Assyrians had occupied the whole Tyrian mainland, and their hand must have been very heavy upon the Sidonians (cf. Isa 37:24; Saggs 1955: 126–31; Harden 1962: figs. 48–49). But apparently at the death of Sargon (Isa 14:8), Tyre stopped its yearly tribute, and because of its rebellion Sennacherib (704–681 B.C.) appeared and recaptured the mainland in 701 B.C. (*ANET*, 287–288; see also Harden 1962: pl. 50). Eloulaios fled to Cyprus (Isa 23:12; Ezek 28:8; Harden 1962: pl. 50), and Sennacherib broke up the kingdom of the Sidonians and installed an independent king in Sidon.

During the reign of Esarhaddon (680–669 B.C.), Baal I ruled over Tyre (ca. 680–660?). Baal tried to win back by statesmanship the territories that Tyre had lost. He succeeded in creating a "third power," a bloc of the W Asiatic kings, who were respected and even courted by the big powers, Assyria and Egypt. This confederation was called by Esarhaddon the "22 kings of Hatti (12) from the seashore and (10) from Cyprus" (*ANET*, 291). Baal headed this league and was apparently followed by Manasseh of Judah, who already had a certain connection to Baal. One result of this union was the total isolation of Sidon, which was unable to muster support for its rebellion; it was conquered and destroyed, and made an Assyrian province. The S part of the former state of Sidon (apparently S of the river ez-Zaherani) was given to Baal, but Baal had to increase his yearly tribute, apparently in proportion to the Sidonian share he had received (Borger 1956: 49).

From a (draft?) copy of the treaty between Esarhaddon and Baal (*ANET*, 533–34), it seems that Baal belonged to the Tyrian royal house. This dictated treaty not only imposed obligations on Baal, but also gave him a substantial *quid pro quo.* Among the many hard conditions was the installation of an Assyrian commissioner *(qêpu)* in Ushu, who had to be present when Baal would receive a letter from his "friend" Tirhaqa, king of Egypt. Such a contact must have been made in 674 B.C., when the first Assyrian campaign against Egypt ended in a failure. Esarhaddon apparently blamed Baal for having conspired against him, and on his second campaign against Egypt in 671 he struck also against Tyre (*ANET*, 290, 292). Esarhaddon's great victory over the Egyptian forces, and the capture of Memphis, must have induced Baal to surrender and to ask for forgiveness, for which he had to pay with territorial losses (*ANET*, 291). Following his victory, Esarhaddon erected several victory steles, the most famous being that from Zinjirli (now in Berlin; *ANET*, 447). This shows the Assyrian king with two ropes in his left hand, by which he holds two prisoners: one is apparently the Egyptian crown prince, and the other may be Baal. In his third campaign against Egypt, Esarhaddon died. His successor Assurbanipal (668–627?) mentioned his "third campaign" in 667, which was directed against Baal of Tyre (*ANET*, 295–96). The Assyrian empire declined rapidly after the death of Assurbanipal, and Tyre, like all W Asiatic countries, was able to regain its former possessions on the mainland, only to lose them again after 45 years. However, during this period, Tyre again became the leading city on the Phoenician coast, and her daughter city, Carthage, became both the naval and the military protector of Tyre's colonial empire W of Cyprus.

In the prophecies of Zephaniah, the Tyrian Baal is still the primary foreign deity in Judah (Zeph 1:4); Phoenician traders may be alluded to in the expression "merchant-people" (Zeph 1:11), and perhaps also the "foreign vestment" (Zeph 1:8) may point to the "multicolored garments" given by the Phoenicians to the Assyrian kings. In the last decades of the 7th century B.C., the Egyptians appeared again in W Asia, this time trying to help the weak Assyrians counter the attacks of the Babylonians. An alliance must have existed between Egypt and Tyre, as inferred from Herodotus, who tells about a "sacred precinct of this king [apparently Psammetichus I] in Memphis … south of the great temple of Hephaestus. Phoenicians

from the city of Tyre dwell all around this precinct and the whole place is known by the name of the camp of the Tyrians" (2.112). Since Hephaestus was the god of artisans, we should credit Tyrian craftsmen with at least a part of the so-called "third group" of the famous Phoenician silver bowls (Harden 1962: 189). In return, Tyre gave to pharaoh "a (royal) domain of cedar" in the Lebanon (*ARE* 4: §970).

Nebuchadnezzar's victory over Pharaoh Neco in 605 B.C. changed the political map of W Asia (cf. 2 Kgs 24:7). From that time until the conquest of Babylon by Cyprus in 539 B.C., Tyre was the main foe of Babylon in Asia. While there were contacts between Tyre and Judah (Jer 27:3) and between Tyre and the Philistine city-states (Jer 47:4), Tyre was jubilant when Jerusalem fell in 586 B.C. (Ezek 26:2). The Tyrian king did not, however, recognize the immediate danger; only too late did Tyre recognize the political and strategic line of Nebuchadnezzar, who, after the fall of Jerusalem, turned to Tyre and besieged it to safeguard his lines for his ultimate goal, the conquest of Egypt.

Josephus quotes the Phoenician (= Tyrian) archives (*AgAp* 1.156) and also Philostratus' history (*Ant* 10.228), which record that Nebuchadnezzar besieged Tyre 13 years (ca. 585–573/2). This siege is mentioned by Ezekiel (29:17–18), who says that Nebuchadnezzar will carry off much booty from Egypt (29:19) as a recompense for his failure. Apparently the long siege ended with a treaty: the royal Tyrian house had to reside in Babylon. Although a Tyrian king could rule in Tyre, next to him a Babylonian commissioner was appointed with a seat in Ushu. In contrast to other royal families living in Babylon, the Tyrians could always fetch the heir apparent from Babylon (*AgAp* 1.156–59). Yet Tyre's power had been totally exhausted; its overseas territories were taken over by Carthage with the exception of Tyrian possessions in Cyprus. Indeed, Carthage became an independent state, but a filial relationship between daughter and mother, certainly in the religious field, survived until the destruction of Carthage by the Romans in 146 B.C.

In October 538 B.C., when Cyrus conquered Babylon, all W Asia became a part of the new Persian empire. But by having founded Carthage, Tyre had exerted an enormous influence upon the W world, entirely disproportionate to the tiny size of the island, which in its heyday was "perfect in beauty" (Ezek 27:3), "the crowning city" (Isa 23:8), "a famous city, whose strength lay in the sea" (Ezek 26:17).

H. J. KATZENSTEIN

D. Tyre in the Greco-Roman Period

Alexander the Great conquered Tyre in 332 B.C.E. after a seven-month siege, ending Persian control of the area. Alexander's attack came after the city ostensibly refused to allow him to offer sacrifices to Hercules (assimilated to the Phoenician deity Melkart) (Arr. *Anab.* 2.17.1–2; Strabo, *Geog.* 16.2.23). Several dedicatory inscriptions to Hercules have been found at Tyre (Chéhab 1962: 16–18; pl. Va; cf. Char. *Chaereas and Callirhoe* 7.2.7–9). The city offered a strategically significant port for the Persian fleet, making its defeat essential for Alexander. To capture the island fortress, Alexander built a mole (still extant) from the mainland approximately half a mile long and 200–300 yards wide, using the remains of destroyed buildings on the mainland.

Tyre's prosperity took a downturn when Ptolemy Philadelphus redirected Red Sea and Indian trade from the Petra-Tyre route to Alexandria. It recovered under Seleucid rule and reestablished itself during the Roman period as a major commercial and trade center (Jidejian 1969: 81–82, 89). Hannibal escaped to Tyre after his defeat in the Punic Wars; there, he encouraged Antiochus III to battle Rome (Livy 35.48.6; 37.30.1–10). Antiochus III's subsequent defeat by the Romans at the battle of Magnesia in 189 B.C.E. strengthened Roman control over most of the Greek East.

Coin issues of Tyre and Sidon from the Seleucid period indicate the rivalry between the two; Tyrian coins call Tyre "mother of the Sidonians," and Sidonian coins call Sidon "mother city of Tyre" (Jidejian 1969: 82). Tyre became increasingly important under Roman rule. An inscription at Tyre cites the senate and the people of Tyre honoring Marcus Aemilius Scaurus, Pompey's lieutenant. The inscription, found by E. Renan, indicates that Scaurus served as Tyre's patron. Rome confirmed Tyre as autonomous and in 93/94 C.E. Tyrian currency depicts Tyre as a metropolis (Chéhab 1962: 24, 31).

Tyre played a significant role in the political and economic history of Greco-Roman Palestine. During the Ptolemaic period, slaves bought in Palestine were sold in Tyre in what was a highly profitable

business (Hengel 1974, 1: 41–42; 2: 32; cf. 2 Macc 8:11). Under Antiochus IV Epiphanes, rapid Hellenization influenced Tyre and Palestine. Jewish tradition, for example, states that Jason, high priest in Jerusalem, sent representatives to Tyre with 300 drachmas for sacrifice to Hercules-Melkart during the quadrennial games (2 Macc 4:18–20). In addition, the Jewish writer Eupolemus depicts Solomon giving to Tyre a golden pillar that was placed in the temple of Zeus (*OTP* 1: 870); this legitimated Jewish recognition of pagan deities by leaders such as Jason (Hengel 1974 2: 74).

Jewish leaders influenced many key events in Tyre and the surrounding region. Simon the Hasmonean was made *strategos* by the Romans from the Ladder of Tyre to the Egyptian border (1 Macc 11:59; *Ant* 13.146). Later, Jonathan stopped Tyre's attempt to exert control over portions of Galilee. Julius Caesar placed bronze tablets in Tyre that decreed Hyrcanus as ethnarch of the Jews and ally of Rome (*Ant* 14.197–98). Marion of Tyre in 40 B.C.E. invaded Galilee and established three strongholds. Herod the Great, however, ousted him shortly afterwards (*Ant* 14.298–99). Josephus reports that Herod the Great visited Tyre periodically and even had Tyrians in his service (*JW* 1.231–38, 275, 543). Tyre was also among the many cities that received benefactions from Herod, who built halls, porticoes, temples, and a marketplace for the city (*JW* 1.422). Nevertheless, when the Jewish revolt broke out in 66 C.E., the city killed or imprisoned many of its Jewish inhabitants (*JW* 2.478). During the revolt, Jews advanced against Kedasa, a property of Tyre (*JW* 2.459). Some Tyrians, however, enrolled as mercenaries in the service of John of Gischala (*JW* 2.588).

Tyre's economic and cultural development had certain similarities to and impact on nearby Galilee. Josephus reports that as the Roman Cestius marched into the Galilean city of Chabulon (Chabolo in *Life* 213), he found the city houses built like those at Tyre, Sidon, and Berytus (*JW* 2.504). Indirectly at least, Tyre participated in Palestine's economy. According to Acts, Herod Agrippa I supplied food to Tyre and Sidon (12:20). In addition, minted coins of Tyre have been found throughout Palestine, including a large number in the upper Galilean villages of Meiron, Gush Halav, and Khirbet Shema. The degree of direct Tyrian involvement in the Galilean economy, however, remains uncertain (Hanson 1980). Some connection seems certain. One of main trans-Galilean routes connecting Damascus and Tyre came near Caesarea Philipi and passed near the upper Galilean villages of Nabratein and Gush Halav. Roman paving stones and a milestone dating to Aurelian (270–275 C.E.) have been found on the road connecting Damascus and Tyre (Jidejian 1969: 8). The paucity of Tyrian coins at Nabratein, however, suggests that the trade and economic network in the area was more complex than previously thought (Meyers 1985: 123).

Tyrian coins have a long history. See COINAGE. Coins from Tyre minted during the reign of Ptolemy Philadelphus have been found at Scythopolis (Beth-shean; Hengel 1974: 89). Tyrian coins of the Greco-Roman period have a bust of Melkart with a laureate crown and wearing a lion skin around his neck (Jidejian 1969: 100–102). Considerable archaeological evidence exists for the use of Tyrian coinage in Jerusalem marketplaces, but numismatic evidence indicates that Tyrian coins were not preferred to Roman silver coins for payment of the temple tax (Ariel 1982: 285, 290; contra Jeremias 1969: 36).

The gospel tradition implies some link between Tyre and Galilee. Jesus withdraws to the region of Tyre and Sidon (Matt 15:21; Mark 7:24, 31) and while in Galilee preaches to persons from Tyre (Mark 3:8; Luke 6:17). The Q tradition contrasts Tyre and Sidon with local communities of Bethsaida and Chorazin (Matt 11:21–22 = Luke 10:13–14). Acts portrays a community of Christians living there who are visited by Paul. Paul's ship sails from the west and reflects the great amount of commercial activity that took place in Tyre in the 1st century (Acts 21:3–7).

A number of pagan and Christian scholars came from or were associated with the city, including the philosopher Meleager, the skeptic Heracleitus, the Stoics Antipater (who introduced the younger Cato to Stoic philosophy) and Apollonius, a Sophist historian Aspasios, the 2d-century geographer Narinus, the 3d-century Christian Origen, and the Neo-Platonist Porphyry (Jidejian 1969: 90–92; Hengel 1974: 84–88).

Trade in purple dye and purple-dyed clothing no doubt aided Tyre during the Greco-Roman period, as remains of abundant shells located near the city indicate. In addition, the murex snail shell, from which

purple dye was made, is found on the reverse of imperial coins of Tyre (Jidejian 1969: 150, 158). The trade was lucrative, although the dyeing process was smelly (Pliny *NH* 9.60.127; Strabo 16.2.23). An old dye factory predating the 1st century C.E. has been discovered just outside the city walls (Jidejian 1969: 108). See also PURPLE; ZOOLOGY.

Archaeological finds also include one of the largest hippodromes from the Roman period (Jidejian 1969: 111–13) and a porticoed street that measures over 170 meters long and 11 meters wide. The street located on the S part of the island, has a 2d-century mosaic pavement composed of geometric patterns, as well as a double colonnade of imported *cipollino* or white green-veined marble. Nearby, an impressive marble statue of Hadrian with tunic, cuirass, and paludamentum was discovered (Chéhab 1962: 14–22; pl. 8). Of particular interest for the 1st century is an inscription of two *agoranomoi,* or market overseers, dating to the 60s C.E. In this, Gaius Julius Jucundus appears to be a Roman citizen in charge of citizenship. The other *agoranomos,* Nicholas, a Greek name, has a father, Baledo, who bears a Phoenician name (Chéhab 1962: 30). A large burial ground, with a monumental arch and numerous Greek and Latin inscriptions, has been found near Alexander's causeway (Salamé-Sarkis 1986: 193–205; Rey-Coquais 1977).

TYRE, LADDER OF. See LADDER OF TYRE.

TYROPOEON VALLEY (PLACE) [Gk *pharanx tōn tyropoiōn* (φαρανξ των τυροποιων)]. A valley, known today as el-Wad, which runs through the center of the old city of Jerusalem. The Greek name used by Josephus (*JW* 5.4.1 §140) means "Valley of the Cheesemakers." This attribution most probably was derived from cheese manufacture in the area. No other ancient name is known. The valley begins near the Damascus Gate at the N end of the city and runs S along the W side of the Temple Mount and the City of David. On the other side of the valley it is joined by a shallow transverse valley leading from the area of the Joppa Gate, and further to the S it is overlooked by Mt. Zion. The gradient of the valley increases significantly at the SW corner of the Temple Mount and drains to the area of the confluence of the larger Hinnom and Kidron valleys. Here at the lower end of the valley, supplied with water draining down the valley and water brought from the Gihon Spring via Hezekiah's water tunnel, were the "Old" and "Lower" pools of Siloam. The Tyropoeon Valley is sometimes described as the Central Valley, since it lays between the Hinnom and the Kidron.

Archaeological investigations around the SW corner of the Temple Mount have shown that as much as 40 feet of debris has accumulated in the upper end of the valley. Herod the Great's extension of the Temple Mount protruded into the Tyropoeon Valley. This made it necessary for the foundation of the temple precinct to go very deep. Excavations along the W side of the temple precinct have shown that in the 1st century A.D. a road ran along the W exterior of the precinct in the floor of the valley and all the way down to the Tekoa Gate near Siloam. This road was crossed by Wilson's Arch, which was a key route into the temple and also carried an aqueduct to provide water. Farther to the S, Robinson's Arch spanned the street running in the floor of the Tyropoeon Valley, providing access to the temple. Numerous shops have been identified along this street in the floor of the valley. This route through the valley would have been one of the most heavily traveled, as it provided easy access through the city and to the temple.

U

ʿUBAID. See AL ʿUBAID.

UBEIDIYA (M.R. 205232). A prehistoric site on the W bank of the JORDAN RIVER about 3 km S of Lake Kinneret (Lake Tiberias). It is a large exposure of a Lower Pleistocene formation, originally called by L. Picard after the common freshwater shell in the deposit, designated as *"Melanopsis stufe."* It was renamed the Ubeidiya Formation following the archaeological excavations (1960–74), which provided long vertical exposures.

The excavations uncovered a composite sequence, about 150 m thick, which contained a series of archaeological horizons. Bones and shells were preserved in many of the layers, which are now folded in the form of a small anticline with several undulations, lying at –160 to –225 m below sea level. The contorted and faulted situation made the systematic archaeological excavations a challenging project. As a result, only 14 archaeological horizons were extensively excavated over surfaces ranging from 60 to 250 m^2.

The lithic assemblages demonstrate a limited typological variability. The common artifacts are the core-choppers and the flakes, which are generally made of flint. Polyhedrons (core-choppers with more than two stiking platforms—also made from flint) were found in moderate frequencies. Sheroids were shaped from limestone cobbles and range widely in both size and weight. Handaxes, trihedrals, and picks were mainly made of basalt but with a considerable representation of limestone and flint. The specific choice for raw material possibly took into account the needed size and the efficient cutting edge. On the whole, basalt and limestone cobbles were more abundant than the flint cobbles and pebbles. All the used raw material was available on the beaches of Lake Ubeidiya and in the wadi channels which descended from the W escarpment of the Jordan Rift.

In the lower archaeological horizons only core-choppers, polyhedrons, and soperoids are common (layers III-12 through II-24), while in the rest of the sequence bifaces appear in small percentages except for layer K-30, which is a gravel deposit rich in bifaces. According to African terminology, both Oldowan, Developed Oldowan, and Early Acheulian were represented in Ubeidiya. Naming the entire sequence as Early Acheulian will be in line with the current notion that members of the *Homo erectus* family, the bearers of the Acheulian Industrial Complex, were the hominids who moved out of Africa. Only a few fragmentary hominid remains were recovered at the site. Except for one incisor, they all were found on the surface. They were attributed to *Homo* sp. indet.

The fauna from Ubeidiya includes various mammalian species, reptiles, birds, and mollusks. Many of the bones and shells only came to rest in the deposits from which they were retrieved, and their actual habitat was either in the lake, on the hilly slopes, or upstream in the wadis. Their presence enabled the reconstruction of a very variable landscape in which these early hominids survived. It encompassed an oak-covered plateau with dry wadis descending into the lake. The slopes were partially forested and partially rocky exposures. Grassy meadows separated the hilly area from the open freshwater lake where thickets of reeds and some tamarisk formed a delta covered with pebbles and cobbles. A small lagoon stretched N of the delta. The common species, as represented by bone counts, were the hippopotamus, two species of deer, and two species of horses. However, other large- and medium-size mammals were the elephant, the rhinoceros, a giant sheep, two antelopes, thirteen species of carnivores, including bear, wolf, and lynx, one primate (other than humans), and a large number of rodents. Among these, the Mediterranean species and those which subsist in wetlands were the most common. A large number of birds, several reptiles, and a few molluscan species, some of which designate the lower Pleistocene age to the formation, complete the list. The fauna of Ubeidiya is a mixture of various geographic and ecological zones encompassing both the Eurasian world and a few African species.

Various authors have concluded that the fauna of Ubeidiya are younger than the Seneze fauna of W Europe or is of the same age as the end of Villanyian/basal Biharian in E Europe. These correlations mean that the age of the site should be estimated at 1.5–1.0 million years old. The preliminary paleomagnetic results indicate that it lies within the Matuyama Reversal Epoch. The similarity between the lithic industry of Olduval Bed II and that of Ubeidiya can be considered as additional support for the suggested date.

OFER BAR-YOSEF

UCAL (PERSON) [Heb *ʾūkāl* (אֻכָל)]. One of the recipients of Agur's utterance, named in Prov 30:1.

Nothing else is known of Ucal. He was perhaps a friend or student of Agur along with Ithiel. It is less likely that Ithiel and Ucal are sons of Agur, since they would probably have been designated as such. The words *lĕʾîtîʾēl* and *wĕʾūkāl* may not be proper names at all. The Hebrew of this verse is completely obscure. The LXX provides a verb, *pauomai,* in place of the name "Ucal." The corresponding Hebrew verb would be *ʾăkalleh* ("I cease"). Other textual modifications yield the translations "I can/cannot do it"; "I withdraw/become faint"; or "I am consumed." The translations for *wĕʾūkāl* depend largely on the translation of the previous name (?) and subsequent context. The narrative resumes with *kî.* This indicates that the following, "I am more stupid than any man," is linked to the introduction of verse one. This leads some interpreters away from a textual change that implies an absolute cessation, since the matter is continued with the following verses. The simplest solution is to read Ucal as a proper name, but the occurrence of the *waw* preceding *ʾūkāl* will not allow an unquestionable translation. If Ithiel and Ucal were simply names, the *lamed* preposition which preceded Ithiel would also be expected before Ucal. The *waw* preceding Ucal then, seems to indicate a *waw* consecutive rather than a simple conjunction. The verb would provide a rather abrupt ending of the line "I cease," while the considerations which led to an end of the philosophical search are elaborated following the particle *ki.* The reading proposed by this interpreter is *wāʾēkel,* rather than the personal name "Ucal." See also McKane *Proverbs* OTL.

UDHRUH (M.R. 207971). A site, some 20 km NW of Ma'an and 15 km E of Petra on the edge of the Jordanian desert, which is watered by a perennial spring. The site has therefore attracted settlements throughout antiquity. Excavations (1980–1985) have concentrated on the town of Udhruh, and at the same time a detailed survey has been undertaken of the region from Ma'an-Ain Musa-Shobek-Ma'an (800 km^2).

The first historical record of the town is a reference by the geographer Ptolemy in the early 2d century A.D., although inscriptions and literary sources emphasize the wealth and importance of the town in Byzantine and Early Islamic times. The only serious archaeological work at the site was a five-day survey in 1897 by Brünnow and Domaszewski (1904). In 1980, rescue work began because a modern village had expanded westwards over the architectural remains and removed many of the walls.

The architectural site of Udhruh consists of a large Roman-walled town with twenty-four projecting defensive towers. Several towers still survive to first-story height, and sections of the town wall stand 7 m high. Other extant structures in the town include a Roman basilica, a Byzantine church, and an Ottoman fort. However, surface surveys indicate occupation as early as the Paleolithic and continuing into the Chalcolithic periods. A dense scatter of Neolithic tools and flakes outside the town implies the existence of a Pre-Pottery Neolithic settlement. EB and LB ceramics show a continuity of occupation, but late Iron Age walls in the lower levels of a deep trench near the spring are the earliest structures so far found in the town.

The Nabateans are best known for their capital at Petra, but their pottery is also one of their most remarkable legacies. The very fine and delicate ceramics have more of the texture and quality of porcelain than one would normally associate with earthenware. In fact, the fineness of the techniques used in both manufacture and decoration are unparalleled in earthenware in antiquity. Finds from the Udhruh pottery

kiln include over 1,000 kg of Nabatean ceramics, spindle sockets for potter's wheels, an iron trimming knife, and a bronze spatula identical to that used by modern potters for shaping and smoothing.

Excavations have shown that Udhruh had a sizable Nabatean settlement, which was partially underground with tunnels and semisubterranean structures quarried into the limestone hillside S of the town walls. One underground passage, over 20 m long, yielded a mass of Nabatean ceramics and glass.

The town walls were probably constructed at the same time as the *Via Traina Nova* in 112–14 A.D. A papyrus from Egypt mentions legionaries at work in regional quarries at this time, and the reference may refer to the most extensive quarries in Jordan, discovered in the 1980 survey, one km W of Udhruh. The town walls probably stood 12 m high in antiquity and would have presented a formidable obstacle to marauding desert tribes from the E. The walls were rebuilt in the Byzantine period, but were not significantly altered throughout the site's later phases, which continued without major break into the 16th century. Several of the towers and gateways have been excavated, and a central large administrative building has been exposed together with its colonnaded courtyard.

In 1980, a detailed survey of the region was initiated, and over two hundred new sites have been found, including a Roman construction camp for the town of Udhruh and a complex series of forts and towers forming a defensive frontier along the Roman highway. Tell Udhruh (500 m from the main site) was excavated in 1985 to reveal an extensive Iron II settlement terraced on the hillside. Over 110 sites have been found in the survey with Iron Age to Roman period ceramics on the surface.

UEL (PERSON) [Heb *ʾûʾēl* (אוּאֵל)]. A descendant of Bani and one of the returned exiles whom Ezra required to divorce his foreign wife (Ezra 10:34). The parallel text of 1 Esdr 9:34 lists Joel here but the two names can be identified with each other. Uel was a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:10; note that Binnui replaces Bani in Nehemiah's list [7:15]). Noth suggests that Uel is a theophoric name containing the particle *ʾēl* (*IPN,* 90). For further discussion, *see* BEDEIAH.

JEFFREY A. FAGER

UGARIT (35°35′N; 35°45′E). Tell Ras Shamra, near the Mediterranean coast of Syria, is the site of ancient Ugarit, capital of a kingdom of the same name that flourished in the 2d millennium B.C. Occupied since Neolithic times, it was abandoned around 1180 B.C. (with the exception of minimal later occupation). Its commercial importance was due to a rich agricultural countryside, and above all to its port, discovered on the site of Minet el-Beida (= Ug *Mahadu* [?]; *Leukos Limēn* [White Harbor] of the Greeks, *Port Blanc* of Crusader times). Its celebrity comes from the discovery since 1929 of texts written in various languages, and in particular in a language hitherto unknown—Ugaritic. See LANGUAGES (UGARITIC). The Ugaritic texts reveal cultural, religious, and mythical traditions from essentially the 14th through the 13th centuries B.C. This explains the importance given to Ugarit in historical studies of the ANE and biblical world. This entry, consisting of two articles, will describe the results of the excavations of Ugarit and the nature of its ancient texts and literature.

A. History of Excavations and Discoveries

In 1928 a burial cave was discovered by accident at Minet el-Beida; since this time the French archaeological mission, directed by Claude F. A. Schaeffer, from 1929 to 1970, after the exploration of the port in this bay, concentrated on the excavation of Tell Ras Shamra, which rose up less than 1 km inland from there. The direction of the mission was then taken over by Henri de Contenson (1971 to 1974), by Jean Margueron (1975 to 1977), and after 1978, by Marguerite Yon. The work has progressed almost continuously except for one interruption from 1940 to 1947 because of World War II.

1. From 1929 to 1939. The first excavations concentrated in part on the Minet el-Beida dig (harbor installation and tombs, 1929 to 1935). At the same time was undertaken excavation of the city that was discovered on the Ras Shamra tell. On the acropolis of the city, residential quarters were excavated (1929–37), dominated by two temples (called the temple of Baal and the temple of Dagan), as well as the House of the High Priest (in which some of the mythological tablets were discovered). From 1932 to 1937, the living quarters located below the acropolis were explored, to the N and NE (an area called the Lower City).

2. From 1937 to 1955. The exploration at the W part of the tell had begun in 1937, but was interrupted by the war. The years 1937–1939 date the excavation of the NW complex, in which is located the palace of the queen mother, a four-pillared building, and the Hurrian Temple. Also begun at this time was the excavation of the royal palace (or "Grand Palace"), protected from the W by a strong fortress.

Excavation of the royal palace complex and the fortress was undertaken in earnest from 1948 to 1955. It is then that the greater part of the archives of Ugarit were discovered.

3. From 1953 to 1974. The inhabited areas in proximity to the palace were explored during these seasons. The residential quarters (sometimes called the "Aegean quarter") have allowed us to know homes rich in information, both by a series of discovered texts (for example the "House of Rap‹anu") and by the complexity of the organization and the diversity of the objects (for example, the House of Alabasters, 1973–74).

This area also revealed vast enclosures, also sometimes qualified as palaces: the Southern Palace (or Little Palace), excavated in 1964–65 (which yielded an archive of texts), and the North Palace, dug 1968–71, that was perhaps a royal palace preceding the LB Palace.

The large trenches, which run approximately N–S, were opened beginning in 1959 in the E half of the tell, to explore other living areas. The South City Trench, begun in 1959, and the South Acropolis Trench, dug from 1961 to 1964, have both produced groups of texts. From 1971 to 1973, the excavation of the installation called post-Ugaritic was continued toward the middle of the tell (a settlement of fairly limited extent, from the Persian and Hellenistic periods).

Moreover, the necessity of understanding the history of the site before the Late Bronze Age (of which levels appear everywhere) led to undertaking deep probes in a systematic fashion: one begun in 1953 and maintained until 1960 to the W of the temple of Baal; a probe of the Royal Palace Garden, 1954–55; and, above all, *Sondage H*, from 1962 to 1974, to the W of the Acropolis. Traversing 18 meters of occupation layers since the 7th millennium, it provides the stratigraphy of the site.

4. From 1975 to 1988. The excavations from 1975 to 1976 were devoted to the exploration to the NW part of the tell, and to the excavation of a large house of the LB period. Since 1978, work at the site has

been linked to the study of city planning and to the city itself: excavation of the field located in the center of the city, an architectural study of the "South City Trench" (dug in 1959), plus the area northwest of the tell (dug 1937–39). In 1986, excavation of the southern area began, near the supposed entrance of the city: a new group of texts was discovered near the place that had, in 1973 (following modern public works), yielded an important series of texts.

5. Ras Ibn Hani (1975–1986). A salvage excavation was undertaken in 1975 on a small tell located by the sea at Ras Ibn Hani, less than 5 km SW of Ras Shamra. A new Ugaritic settlement was discovered there (ancient Biruti?), with palaces and fortifications which yielded new texts. It has been explored since its discovery by a Franco-Syrian mission directed by Adnan Bounni and Jacques Lagarce.

B. Geographical Setting and Natural Conditions

The kingdom of Ugarit extended over a surface of about 2,000 km^2, and occupied approximately what today is the Mohafazat of Latakia. It extends from Jebel Aqraʿ in the N to the Jable region in the S, limited by the Mediterranean Sea to the W and the Alaouite Mountains (Jebel Ansariyeh) to the E.

The capital was established on Tell Ras Shamra. Located only 10 km N of the city of Latakia, the tell is on a plain, about 1 km from the bay Minet el-Beida, where the port was located. It is surrounded by a large architectural plain, fertile and fairly well irrigated, separating the hills from the sea, then the mountain Jebel Ansariyeh, which stands more than 1,000 m tall. The northern horizon is marked by the silhouette of Jebel Aqraʿ rising to more than 1,800 m, the ancient Mt. Zaphon (the Mount Casius of the Romans), whence ruled Baal, god of storms.

The presence of these mountainous areas and the proximity of the sea ensures that the region surrounding the tell has a climate favorable to Mediterranean cultures. The mountain chains to the E protect the plain from the drying winds of the Syrian steppe, all the while retaining the rain coming from the sea. The temperatures are thus fairly mild, and the rains, spread out over seven or eight months from fall to spring, amount to more than 800 mm each year.

The tell itself is ringed by two small waterways—the Nahr Habayyeb to the N and Nahr ed-Delbe to the S—that join W of the tell to form the Nahr el-Feid, which empties into the bay at Minet el-Beida. These rivulets, linked to the rainfall, are dry through several summer months, but the water table is not deep; it feeds several springs that flow at the foot of the tell, and numerous wells spread out over the city. The presence of dams to the north and south helped to maintain the level of the water supply during the summer drought.

The temperate climate which the plain enjoyed in ancient times permitted cultivation of the traditionally Mediterranean type: vines, olive groves, and cereals (as Ugaritic economic texts and archaeological evidence testify), as well as arboreal cultivation (almond and pistachio trees) and the raising of small livestock. In addition, the hills and mountains were covered with forests (of which hardly a trace survives today), in particular cedars, pines, and cyprus trees.

The exploitation of natural resources, agricultural areas, and forested land played a role in the commercial activities of maritime exchanges with countries near and far (as far as Egypt or the Aegean world) as well as supplying the inhabitants themselves. The availability of wood and stone influenced construction techniques and the development of architecture. Besides the evidence that we have from texts, archaeological observations speak worlds: the presence of numerous oil presses has been noted; buildings were constructed using stones from the Mqaté quarries, several hundred meters N of the tell; walls were supported with wood timbers from the mountains, and reinforced with wooden beams and reeds from nearby streams; terraces were made out of clay.

It is difficult to determine exactly what determined the fortune of a particular site at certain periods. Numerous elements of sociological demographic and historical character explain the avatars of a kingdom which, after having known such development, simply disappeared completely at the beginning of the 12th century. One must, however, underline the fact that this development was due to geographical realities: on the one hand, climatic conditions favorable to agricultural growth, and on the other hand, its location of the Mediterranean coast. An excellent port permitted Ugarit to trade with countries accessible from the sea (Egypt, the Levantine coast, Cyprus, the Anatolian coast, the Aegean) at the same time that it

welcomed caravans from the interior that put it in touch with Mesopotamia, N and interior Syria, the Hittite world, the Mitannian kingdom, and other powers.

C. Historical Summary: 7th–2d Millennia B.C.

Sondage H provides evidence that the beginning of human occupation of the site can be dated from the 7th millennium. During this epoch, the Neolithic (which was the period of sedentarization in Syria-Palestine), it appears that groups of farmers (as well as hunters and fishermen) established themselves there (Level V C). New techniques appear about 6000 B.C. in agriculture (raising domestic animals), as well as in agriculture (houses with a quadrangular plan, constructed of stone with plastered floors), and in the fabrication of containers made out of mineral-based materials ("white ware" in plaster, as in other contemporary sites; and above all, fired ceramics, of which we can follow the improvements for a millennium). This Neolithic phase can be subdivided in two: *Level V B* (6000–5750) and *Level V A* (5750–5250). These two levels have equivalents in other sites more or less nearby (Amuq A and B, Bouqras II, the beginnings of Tell Sukas, ancient Neolithic Byblos, Tell Ramad III, Mersin in Cilicia, and Hassuna). The distribution points to the development of a civilization with common traits over a large part of the Near East (see Fig. UGA.01).

Chronological Table of Occupational Sequences at Ras Shamra

Approximate Dates	Life on the Tell	Level	Period
ca. 6500	First settlements	V C	Prepottery
ca. 6000	Pastoralism; ceramics, stone architecture	V B	Pottery
ca. 5250	Differentiated architecture; craft specialized	IV	"Halaf" (Chalcolithic)
4th millennium	Appearance of copper	III C	Final Chalcolithic "Abaid"
		III B	
ca. 3000	Urban center; streets; fortifications; copper smelting	III A	Early Bronze
ca. 2200	Abandonment		
Beginning of 2d millennium	Arrival of Amorite populations; urban development; walls, palace	II	Middle Bronze
ca. 1650	Abandonment? Cultural decline?		
ca. 1600	New urban period	I	Late Bronze II
15–13th century	Ugaritic kings known from texts		Late Bronze III
ca. 1360	Amistamru I		
1360–1330	Niqmadu II		
1330–1324	Arhalbu		
1324–1274	Niqmepa		
1274–1240	Amistamru II		
1240–	Ibiranu		
–1225	Niqmadu III		
1225–1180	Ammurapi		
ca. 1180	Destruction and abandonment under attacks from the sea		
5th–4th century	Minor settlement on the tell		Persian Period
1st century	A few tracks of occupation		Roman Period

It seems that the Neolithic period was a time of great development at Ras Shamra, if one is to judge by growing technological advancement and population density. On the other hand, the Chalcolithic (Level IV) period is first of all characterized by a reduction in the inhabited area; it seems that the passage from the Neolithic to the Chalcolithic coincided with serious troubles and with the arrival of new oriental elements that led to a profound transformation. One recognizes, around this date, the mark of a

civilization called *Halaf*, characterized by decorated ceramics of excellent quality, that spread to the N of Mesopotamia and Syria. At this point, the architecture of Ras Shamra diversified, the artisans began to specialize (in ceramics, for example), the raising of small livestock (sheep, goats) increases. This period lasts from about 5250 to 4300 B.C.

The period that spans the end of the 5th millennium and all of the 4th (Level III C and B) seems to have been a less prosperous period for Ras Shamra; it was still characterized by ties with Mesopotamia, and it corresponds to the period called *Ubaid.* A notable development was the appearance of copper.

The final phases of Level III (Level III A) correspond to the Early Bronze Age. From around 3000 B.C. on, there was again considerable increase in the occupation of the site, apparently without a break from Level III B. The city center presents a true urban character, with small streets and ramparts for protection. The architecture, which seems at first to have been made of fired brick (EB I), increasingly employed stone, in particular in defensive constructions. Tools, still essentially lithic, also included metal objects (copper and bronze). The variety of ceramics suggests relationships with contemporary sites in Cilicia, northern Syria, and Palestine (Khirbet Kerak ceramics for example), and also with the Syrian interior (with the "simple ware" of the Amuq and Orontes region). The EB III phase at Ras Shamra, as in other regions, experienced a rapid development in metallurgy. Bronze production served largely in the fabrication of arms (lance heads, daggers), but also of tools (flat axes, needles) and of ornaments (pins). It is in this period, around 2400 B.C., that one finds for the first time the mention of the name Ugarit (*Ug-ga-ra-at*^{ki}) in a list of toponyms found at Elba, in the Syrian interior.

Around 2200 B.C., as is the case for other sites in the Levant, the tell was abandoned for a period of at least a century (maybe two) during the troubled period that in Egypt also marked the end of the Old Kingdom.

It was thus a new life on the site that began around 2000 B.C., during the Middle Bronze Age (Level II), with the arrival of new nomadic populations (such as the Amorites from the Syrian interior) who, little by little, became sedentary in Syria. Some among those established on the Ugarit acropolis seem to have been metallurgy experts; the presence of ornaments discovered in their tombs—ornaments that were also on silver figurines of divinities—led the excavator to designate these people as "necklace wearers." Other than the necklaces, their arms (triangular daggers, socketed lances, fenestrated axes) are characteristic, and the discovery of the molds was proved that they were made on the spot. No architecture is known from the MB I (this may be an accident of excavation, or the civilization may have conserved its nomadic traditions); only large collective tombs have been found. It is with the MB II–III (ca. 1900–1650) that one sees a new urban civilization develop in spectacular fashion, in which traditions from the Syrian coast fuse with contributions of the new arrivals. The city then covered almost the entire surface of the tell and was protected by an impressive rampart, the glacis of which is still visible in some parts (in keeping with the type of defensive construction common in the Levant). Among the MB structures that remain, one will obviously note the two temples located on the acropolis (see D.3 below) as well as the "Hurrian Temple" to the NW of the tell; it is probable also that the building designated as the North Palace (N of the Royal Palace) was constructed at the end of the MB but was abandoned during the construction of the LB Palace.

The excavations have yielded numerous objects from this period. One of the most striking features is the abundance of Egyptian objects, often with hieroglyphic inscriptions: a pearl with the name of Sesostris I (1970–1936 B.C.), funerary figurines bearing the name of an unknown deceased person, statues and sphinxes found mutilated. This mutilation, which appears to have been voluntary (statue of Chnoumet, daughter of Amenemhet II around 1900 B.C., or the sphinx from the temple of Baal), has given rise to different interpretations. Were these acts linked to international difficulties? Or were these statues the spoils of war from the period of Hyksos domination in Egypt? What is important to remember is the considerable place held by Egyptian relations with the kingdoms of the Levantine coast. But the name of Ugarit is also mentioned in the Mari texts (the Ugaritic king's desire to see the Palace of Mari; visit by the king of Mari to Ugarit; mention in the economic archives referring in particular to the tin trade), bearing witness to constant relations between Upper Mesopotamia and the coastal kingdom. In the absence of

confirmatory information, hypotheses that posit political domination by the pharaohs of the 12th Dyn. over Ugarit, while not excluded, remain only theories.

The end of the MB (ca. 1650 B.C.) and the period from the first phase of the LB until the end of the Amarna period (15th century) remain obscure, for Ugarit as well as for other Levantine sites. All that can be said is that Ugarit went through a troubled period and a decline that went perhaps as far as a temporary abandonment of the city. But the destruction was not complete, for the temples of the Acropolis remained until the end of Ugarit; the city, in addition, retained its name.

But after these years of obscurity, the LB period (Level I) once again saw an expansion of the urban center, with spectacular enrichment of the kingdom and greater and greater importance given to royal power. One can follow the development from the 15th to the 12th centuries, because from this point on the succession of kings and their relations with foreign powers can be established, thanks to texts found in the Amarna archives and at Ugarit, and to seals that marked official documents.

There is no question here of retracing the history of the kingdom of Ugarit, linked as it was to the powers that surrounded it and exerted their influence in turn—Mitanni, Egypt, Hatti—as well as to those neighboring nations with which Ugarit had amicable or hostile relations according to circumstance or period—Carchemish, Amurru, Siyannu, Kadesh, or the coastal nations like Sidon or Byblos. At the most, one can recall a few significant moments which marked local history.

It seems that from around 1400 to 1350 B.C., Ugarit was under Egyptian control. A fire in the palace around 1360 must have destroyed the earlier archives it contained, because it was in the reign of Niqmaddu II (1360–1330) that the surviving royal archives began; but the documents from Amarna and the passages from the archives of Niqmaddu II seem to show that Niqmaddu's father, Amistamru I, was in a position of submission to Amenophis III (whose cartouche was found at Ugarit). The domination was not direct; thus, a treaty by Niqmaddu with the king of Amurru appears around 1350 to have imposed a sort of Amorite protectorate, but always within the Egyptian sphere of influence.

In 1350, the expedition of the king of Hatti, Suppiluliuma, against Mitanni and its Syrian vassals succeeded in bringing Mitanni under Hittite domination, and it also brought Ugarit, Amurru, and Kadesh into the same sphere of influence. Under the reign of the king of Ugarit, Niqmepa, after a period of trouble with Nuḫašše and Carchemish, Hittite domination stabilized.

At the end of the 14th century, the role of the king of Carchemish as the administrator of Hittite politics in Syria became more precise: in many cases he was charged with resolving conflicts between Ugarit and a neighboring country (Siyannu to the S or Mukish to the N) on behalf of the Great King, whose domination over this region was firmly established. At the time of the Ugaritic king Amistamru II (mid-13th century), the rivalries and alliances between Ugarit and Amurru were explained in particular by extremely complex matrimonial politics, of which the royal correspondence chronicles the vicissitudes; one can see the international political implications through the place held by the kings of Hatti and Carchemish in these operations. Numerous texts also mention commercial and judicial agreements to resolve differences in transactions, or to ensure the security of caravans; the presence of Hittite functionaries at Ugarit is evident. But commercial relations between Ugarit and Egypt and regions under Egyptian control (such as Palestine) seem to have revived, in particular after the Hittite-Egyptian treaty between Hattušiliš III and Ramesses II in 1270.

It is clear, especially beginning in the middle of the 13th century, that the kingdom of Ugarit, whose wealth was based on a flourishing economy (maritime commerce in particular), concentrated the sources of prosperity in the hands of the royal power. On the other hand, the weak military capacity of the kingdom worsened still more. The king Ibiranu (1240) did not voluntarily participate in the war effort of the Hittite sovereign. At the end of the 13th century, with King Ammurapi, the last Ugarit period began. The raids by the "Sea People" that harassed the coastal states as well as the Hittite king, as far as Egypt, and in which the king of Alashia-Cyprus played the role of informer (perhaps a double agent), were clearly the cause of the destruction of Ugarit, as well as of numerous other sites.

But the annihilation of the Ugaritic power necessarily had other causes which explain the total and definitive abandonment of the city by its inhabitants. It is certain that the equilibrium that ensured the

stability of the kingdom was undermined from within. The evolution that saw the royal power develop in an unbridled fashion during the 13th century (also noticeable in the city in the constant improvement to the royal palace, as well as in the centralization of all economic power in the palace administration) led to a concentration of all goods around the palace; the countrysides, incapable of supporting the augmentation of fiscal needs, were little by little depopulated in favor of the city, where one was closer to the king. Thus was created a disequilibrium which proved to be fatal between regions of agricultural production and commercial sectors, between inhabitants and royal civil servants: the "sons of Ugarit" gave way to the "people of the king."

The date of the destruction has been fixed at approximately 1180 B.C. Homes were abandoned by their inhabitants, pillaged, and burned. Following this, no other urban center was ever located on the site; the evidence of subsequent occupation (Persian and Hellenistic periods, Roman period) only affects small portions of the tell, and it no longer shows any collective organization that represents a village or a city, contrary to what had happened for 5000 years; the villages had become a city and then the capital of a kingdom.

D. The City of the Late Bronze Age

The city that remains visible is limited by the present surface of the tell, which rises almost 20 m above the surrounding plain. It today covers a surface of more than 20 hectares, but it is certain that this measurement does not account for the entire Late Bronze Age city. We know in fact that the northwest limit of the tell has shrunk by more than 50 m, eroded by the course of the Nahr Habayyeb, giving one side the appearance of a cliff. To the E and above all to the S, the presence of modern plantations prevents an exact determination of the extent of the ancient habitation in the area that separated the archaeological site and the present course of the Nahr ed-Delbe (see Fig. UGA.02).

1. Boundaries, Access, Configuration. The fortifications were of vital importance, in a region as flat as the coastal plain and as close to the sea, from which an enemy could arrive. We know that the MB city was surrounded by ramparts, and that remains true for the LB city. However, we are far from having discovered the entire outline of the city wall. To the N, as we have just said, nothing remains other than a trench (from 1934) N of the acropolis. To the E, where the incline is less steep, the soundings have revealed the remains of a wall. To the S, nothing appears other than, in the still-visible relief of the land, fairly clear levees of earth angled to the S–E and S–W which could correspond to a sort of bastion on both sides of the depression that runs from the S toward the center of the tell.

To the W, excavators have brought to light an imposing fortress that protected the entrance to the royal palace. It includes a stone glacis (angled at 45 degrees), and a square tower of 14 m with enormous walls, protecting a tenaille door and an entrance by a zigzag ramp (now gone). Of this ensemble, there remains a postern—today the most spectacular element—made out of huge corbeled blocks, which gave access behind the tower by a zigzag corridor. These fortifications are thought to have been built in the MB period; but rebuilding and constant transformations affected the whole, up until the end of the LB period. (The access ramp was modified, the postern later blocked.) This whole area was profoundly transformed by the construction of the royal palace, and the subsequent improvements also affected the fortified gate that protected it to the W.

The strategic importance of this gate confirms the existence of a continuous rampart around the entire city; this fortified part protected the royal palace, which was also protected toward the city by a tambour door across the street that runs to the N; but this door was but a modest defense in comparison with the enormous exterior door. One cannot help but think that the palace, so well defended from the W, was more easily accessible to enemies that came from across the city. Later excavations will perhaps answer further questions about the defense of the city, particularly to the S.

One would like to know what points of access permitted entry, from the plain and from the port, into a city completely surrounded by walls. The only constructed entrance known today is the fortified gate that has just been mentioned, which led to the palace compound. But it is impossible to see this as the principal entrance to the city; the loaded caravans transporting merchandise from the port surely did not use the official entrance to the royal palace; and the gates that defended it (in the tower to the W and

across the street to the E) were each too narrow for such passage. The regular traffic must have been elsewhere.

Observation of the outline of the tell on the S slope shows a kind of large depression, which begins at the S limit between the two levees of earth already mentioned and rises fairly steadily toward the center of the tell (to the west of the South City Trench). It lies on the axis of the bridge-dam recently excavated, which supported the access route from the plain. One is thus tempted to see this as an important access road into the city, perhaps the principal road that, crossing the Nahr ed-Delbe, led the plain to the interior of the city (the exploration of this road was undertaken in 1986 to clarify this question). But it is certain that other approaches were also used to come from the plain, in particular from the E side, where the relief leads toward agricultural lands by a relatively regular and easy slope.

The configuration of the whole of the city shows several areas of occupation within the area delineated by the contours of the tell. Currently, out of more than 20 hectares, slightly more than 6 (thus less than a third) have been explored on the surface. This does permit, nonetheless, characterization of certain quarters and an analysis of the elements of the town plan of living conditions (with regard to which recent work is particularly interesting).

A considerable portion of the surface of the city was, during the last moments of Ugarit at least, reserved for the royal power: this part includes not only the royal palace but also the installations and outbuildings that were linked to it, whose architecture isolates them from the rest of the city. The "acropolis" area is of interest in understanding the major temples known today. The rest of the area was residential quarters.

2. Palace Complex. The royal palace constitutes the most spectacular monument of Ugarit, both in its dimensions and in the quality of the construction, which used largely cut stone, but also uncut stone, wood, and clay. It was built in several phases over the course of the 14th and 13th centuries, the successive improvements corresponding to the expansion of royal power (see Fig. UGA.03).

The very elaborate organization of its plan in the final state implies a differentiation of spaces with diverse functions: administrative (the management of the affairs of the kingdom was mixed with administration of the palace), public and official, and private. Some functions took place on the ground floor and others on one floor (or more?) above; witness the presence of at least a dozen stone stairs and some walls preserved as high as the first floor.

The principal entrance is located to the NW; from the paved courtyard that leads to the fortified gate, one enters the palace through a large vestibule with two columns, surrounded by benches. One then proceeds into a vast courtyard (courtyard I), which leads through another portal flanked by columns to a reception room, doubtless the throne room. All around these different spaces are arranged smaller rooms with various functions (guard rooms, administrative offices), with stairs leading to other floors. The archives were found in these rooms: the Western Archives (administrative documents and correspondence) and the annex office of archives, whose texts are mostly in Ugaritic, but also in Akkadian, not to mention several tablets in Hurrian.

To the S and E of this very official area are found complexes organized around other courtyards. The courtyards II, IV, and VI are also surrounded by smaller rooms with various proposed functions; N of courtyard II are the tombs which constituted the royal necropolis, according to the principal found in numerous private homes: the family tomb is in the home. In the area of courtyards IV and VI are found the Central Archives, mostly in Akkadian (180 as against less than 50 in Ugaritic). They are primarily a collection of juridical texts and royal contracts, with a series of 135 impressions of dynastic seals that has allowed the reconstruction of the succession of kings from the 15th to the 12th centuries. The complex around courtyard V, to the S, constitutes the most recent addition; a shallow pool (8 m × 6 m) adorns the center of the courtyard, fed by a series of channels. In the rooms located to the S, the very important Southern Archives have been found (texts on relations with Hatti), and to the W of the courtyard the South-Western Archives (with a notable proportion of texts in Hurrian); in the courtyard itself, near the pool, tablets were found in an oven dating from the last phase of the city's history, and are thus extremely precious.

The E part of the palace (of which the E limit is unfortunately badly preserved) contains a vast garden (courtyard III), around which were probably the private apartments; in a room to the NE of this courtyard, very luxurious ivory furniture has been found (a bed headboard, a pedestal table, a horn). A door, protected by guards, gave access from the city to this part of the palace. The rooms located to the far E surely had administrative functions; it is indeed there that the Eastern Archives were found, containing above all economic texts (two thirds in Ugaritic, about one third in Akkadian, several Hurrian texts, and one Hurrian-Akkadian bilingual).

Several buildings located to the N of the paved courtyard at the entrance should also be included as part of the palace area: first the buildings beyond the palace street, buildings called the Arsenal and the Military Governor's Residence; then, the complex containing the Four-Pillared Building, with a huge paved room and a monumental entrance with a staircase (and sometimes wrongly designated the Royal Stables), built without a doubt in the 13th century; and finally the Hurrian Temple, older than what surrounds it. The temple's sacred character enabled it to survive intact, despite the change in orientation of the new constructions at the end of the LB period. This complex, including the palace, was carefully defined and protected from the city by continuous walls and well-defended doorways. It also benefited from very elaborate improvements which were reserved for it, like canals to carry water, or the great sewer that crossed and drained only the royal area.

The palace itself, which extends over 120 meters from E to W and as much as 90 m from N to S, occupies almost 7000 m^2, and the royal area as we know it today, about 10,000 m^2. This large proportion with respect to the rest of the city, the development and the progressive extension of palatial buildings, and the concentration of archives found in the palace confirm the conclusions that one could draw from studying administrative and fiscal texts, lists of villages and professions, according to which the royal power did not cease to extend its influence during the 13th century.

3. The Temples. The temples located on the highest part of the site, the acropolis, were named respectively the Temple of Baal (because of the discovery there of a stele depicting the god Baal with sword and thunderbolt [See Fig. UGA.04] and the "stele of Baal Ṣapān"and the Temple of Dagan (on the strength of two steles bearing the name of this god discovered nearby). These conventional names are retained here.

The better preserved is the Temple of Baal, located to the W within an enclosure of which part of the wall remains. Strong foundations support a podium upon which is built the temple, comprising a vestibule, which is reached by a staircase on the facade, and a larger rectangular room, longer on one side than the other; one can still see in this room the remains of a monumental staircase of cut stone (at least in this part) that extends to three sides of the building: it is thus possible to estimate the height of the building—a minimum of 16 or 17 m above the ground. The temple must have appeared like a kind of tower, on top of which was a terrace where part of the ceremonies took place. So in the legend, King Keret is invited to offer a sacrifice "at the summit of the tower" (*KTU* 1.14.2.21–22). If one considers the fact that the acropolis itself rises some 20 m above the surrounding plain, the height of this tower at its summit would have made it a part of the terrain visible from afar and would have served as a landmark at sea. Seventeen stone anchors that have been found in this temple—incorporated in the construction of the walls, or deposited as votive offerings like steles (none in the temple of Dagan)—show the evident veneration of this sanctuary by sailors. In the courtyard in front of the temple is found a square altar of cut stone. The quality of the offerings, of which some vestiges have been found despite the pillaging of the city (for example the golden cup and plate, decorated with hunting scenes and the royal chariot), indicate the importance of the cult that was conducted in this temple.

The Temple of Dagan, of which only the foundations remain, can be analyzed in the same way, and contains the same characteristics that would warrant its reconstruction as a tower. Near these temples that are separated from the city by their enclosures are found small blocks of residences served by roads. But this quarter does not seem to be a simple and common quarter of modest habitations; one of these houses, called the House of the High Priest, has produced since 1929 an important group of arms and bronze tools, of which certain ones carrying dedications to the "High Priest." See Fig. UGA.05. These

inscriptions furnished one of the keys to deciphering Ugaritic; nearby, groups of tables were discovered, including the most important mythological texts.

Other sacred places have been found in the city, starting with the Hurrian Temple already noted in the palace complex, which seems to be a smaller version of the same structure as the two contemporary acropolis temples.

But recent work also shows the existence in the city of sanctuaries more integral in the whole complex with direct access to the streets. Certain of these even seem to be part of city blocks, of which the rest is occupied by domestic buildings. Their sacred character is recognizable on the one hand by the architectural organization, as in the case of the "rhyton sanctuary" recently discovered in the center of the city. Its decentralized plan, the platforms constructed for offerings, and the benches along the walls are similar to the types of LB architecture common in the eastern Mediterranean, in Cyprus, for example, but above all in Palestine. The sacred function of certain of these buildings, whose floor plans are often poorly preserved or difficult to interpret, follows also from the objects that have been discovered there. This includes furniture necessary for the ceremonies (libation rhytons, cultic stands, incense burners) and representations of divinities (statuettes and steles), or still other objects tied to divinatory practices, such as the inscribed livers and lungs found in the South Acropolis Trench (House of the Magician Priest).

The existence of these places of worship found throughout the city is evidence of the presence of religious activities among all the inhabited areas, and not just the areas which were reserved for it. One cannot exclude either the existence of domestic cults, a manifestation of popular religion side by side with frequentation of the great temples, if one is to judge by the number and the dispersion in all areas of the site of small figurines, whether it be pendants in precious metal or the effigy of the goddess (Astarte?), or more humble figurines modeled in terra-cotta.

4. Public and Domestic Architecture. As we have seen, the unearthed portion of the tell only covers about 6 hectares, of which one fifth is occupied by the palace complex. The remarks that will he made about the Ugaritic domestic architecture concern the S slope of the tell, the best known, and the part one reaches first upon entering the city by what seems to be the principal entrance.

The main road has not yet been precisely located and excavated (even if one can see its approximate location). From the residential quarter to the South Acropolis Trench, the vaguely parallel streets that more or less follow natural contours are linked to each other by small, short, straight streets running N–S. They thus outline the small blocks, of many different forms, without any concern for regularity or exact orientation. This network of streets is superimposed upon an older network, which was created over the centuries by the disordered evolution of a living habitat, by unsystematic reconstructions and modifications of properties.

We have seen in the history of the excavations the different living quarters excavated over a thirty-year period; we will limit ourselves here to noting several significant points, in particular from the texts that have been discovered.

The residential quarter in immediate proximity to the palace consists essentially of private houses, of which certain were occupied by rich merchants, royal functionaries, or representatives of foreign powers. Several caches of tablets have been found in this quarter: in the House of Rasapabu (varied texts, above all legal and economic); the House of the Scholar (literary, lexicographic, and technical texts); the House of Rap'anu (legal and economic texts, but also religious and, above all, diplomatic). The House of the Bronze Armorer contained a pile of bronze arms and tools, of which one sword is marked with the cartouche of the Pharaoh Merneptah.

The areas referred to as the center of the tell, the South City Trench, and the South Acropolis Trench, are also areas of private dwellings. The libraries are rarer: noteworthy are the House of Literary Tablets (South City Trench), which has furnished a variety of texts. The house called "of the priest of the models of inscribed lungs and livers" or "Magician Priest" (South Acropolis Trench) seems to come more from the sacred architecture tradition (see D.3 above) than from that of ordinary private dwellings; it contained religious texts in Ugaritic and in Hurrian.

The city blocks, themselves of varied dimensions, are divided into living units (houses) closely linked with one another and imbricated, so that not one of them alone constitutes an autonomous architectural unit. That is why the interior partitions have changed over the course of the history of each block, according to inheritances and sales: it was sufficient to pierce a hole or board up a doorway to modify the size or the orientation of a house.

The construction used largely stone (cut stone for the lower portions in the most beautiful houses, and rubble stone everywhere else), wood (for timber framing and beams), unbaked brick (attested in recent excavations), and mud-daubed reeds (for the ceilings and terraces). The plans of the houses are variable, but one notes in many cases a very functional partition of space, visible in the ground plan: access to the street is from a vestibule whence the interior traffic patterns branch out, horizontally by the doorways and vertically by a staircase, the first flight of which is of stone. One area is reserved for domestic activities, recognizable from culinary utensils (stone, ceramic, bone), another perhaps for the treatment of textiles, and another area for storage, with jars and sunken silos. The living quarters on the next floor up must be reconstructed. Fairly frequently, a separate area, with its own entrance but linked to the rest of the house, housed a family tomb. These private homes abutted industrial establishments, whether for agricultural production (oil pressing, for example) or jewelry or figurine workshops.

The population of the city of Ugarit is difficult to compute. For the latest phase of its history, historians have tried to extrapolate from the texts and from the surface area of the houses and their presumed density of inhabitants. A number of 6,000 to 8,000 inhabitants for the 13th-century city has been given, and about 25,000 inhabitants for the entire kingdom, but these are only estimates. The archaeological indications lead one to believe, in any case, that the population of the city increased during the 13th century; the increase in population density agrees with what can be inferred from the texts.

E. Material Culture

Life appears to have been very rich and refined at Ugarit, with a high development of certain techniques and an interest in improvements that make life more comfortable in an urban setting within a very restricted space.

1. Daily Life. The architectural remains show the existence of improvements that were sometimes very elaborate, facilitating the conduct of daily life. This is the case, for example, with everything having to do with water, for the royal area especially, as well as more modestly for the life of ordinary inhabitants (wells, aqueducts, reservoirs in stone vessels, and drainage by a monumental sewer for the palace quarter; cesspools found mainly in houses and streets in the rest of the city). By the same token, certain industrial buildings required complex installations, such as the oil presses with a counterweight press (of which there are several examples on the tell). This is only a small proportion of such establishments, for many of the industrial complexes, using only portable equipment made out of perishable material (wood in particular), left no archaeological trace.

Nonetheless, these activities, familial or larger, used instruments in stone, ceramic, carved bone, metal, etc., of which some have come down to us. Household utensils are represented by numerous stone mortars and pestles used to grind cereal; sickle blades of carved flint used to cut wheat or the reeds for roofs; fish hooks, knives, axes, and adzes; toiletries in bronze (razors, small tweezers, pins); everything that concerns textile production (a weaver's weight, spindles and spindle holders, sewing needles); and an abundance of utilitarian dishes, made locally for the most part, or more delicate pieces, imported from Mycenean Greece and from Cyprus. A great number of objects attest to the technical competence of certain Ugarit artisans whose works show highly developed technique and artistic research: glyptics on stone, for example, or better yet, ivory or metalwork and ceramics.

2. Cultural Life. In the archaeological record, artistic concerns appear above all in the plastic arts. Sculpture, however, is poorly represented, by only a few steles, and by what is called the "minor arts": the making of figurines or containers decorated in metal (bronze and gold); engraving and sculpture on ivory. But in these techniques the Ugarit artists produced objects that numbered among the most accomplished in the Levant during the LB period. To cite only the most famous, one should recall the headboards in sculpted ivory from the royal palace, or the golden cup and plate from the Temple of Baal. In all these

cases, these are not productions for an ordinary clientele; the artists worked for kings and gods. However, the rich also possessed luxurious objects decorated with art.

Concerning artistic activities of a more abstract nature, literature and music, also closely linked to religious preoccupations, written testimony given by the tablets is more explicit in content. But the material remains also bring their contribution: thus, musical instruments discovered in the dig (like bronze cymbals, or castanets, or even an ivory horn) evoke ceremonies in the rituals or mythic stories. As to literature—ignoring the medium of modeled fired clay (the tablet), which is itself an archaeological object, as well as the stylus of bone which allowed one to impress the cuneiform signs—it relied on the teaching of writing, of which we have evidence. A building has not been located which can be designated as a school, but the presence of several alphabet primers, lexicographic documents, and students' copies in several places in the city prove that Ugaritians learned to write, and that they were familiar with technical vocabulary and foreign languages according to very precise pedagogical techniques. But here again it was without doubt only a fraction of the population who formed the professional category of scribes.

Bibliography

Excavation reports have appeared fairly regularly since 1929 under the responsibility of the successive directors of the mission in the journal *Syria* (Paris) as well as in the *Annales archéologiques arabes syriennes* (Damascus), and in *CRAIBL*. Reports of recent activity at the site by M. Yon appear in the "Chronicles archéologique," *Syr* 60 (1983) 286–90; 64 (1987) 277–80; 67 (1990).

Detailed syntheses were prepared in celebration of the 50th anniversary of the discovery of Ugarit. Important among these are:

Courtois, J. C., et al. Ras Shamra. *DBSup* 9: 1124–1466.
Ras Shamra—Ugarit 1929–1979. Lyon.
Saadé, G. 1979. *Ougarit: Métropole cananéenne.* Beirut.

Collections of studies and definitive publications have appeared in the series *Ugaritica* and in associated monographs:

Callot, O. 1983. *Une maison à Ougarit.* Ras Shamra-Ougarit 1. Paris.
Schaeffer, C. F. A. 1939. *Ugaritica I.* Mission de Ras Shamra 3. Paris.

TEXTS AND LITERATURE

"Literature" in the title of this section is to be understood in the broadest sense as "written document" and "Ugaritic" in the broad sense as "deriving from the ancient city-state of Ugarit." The purpose of this overview is, therefore, to describe briefly the documents unearthed at Ras Shamra that date from the period ca. 1400 B.C. (the only period, to date, which has furnished documents in number). The main emphasis will, nevertheless, be on the texts written in the Ugaritic script and language. (Since the Ugaritic language is written only in Ugaritic script, "Ugaritic" will henceforth be used to refer to both the script and the language.)

Ancient Ugarit was a cosmopolitan center and its scribes were well versed in both the local West Semitic language today called "Ugaritic" (ancient name unknown) and in Akkadian, the *lingua franca* of the late 2d millennium throughout the Near East. The extent of the scribes' erudition in Mesopotamian learning is becoming clearer as hundreds of Sumero-Akkadian lexical and literary texts, discovered

primarily during the 20th–22d campaigns (1956–58), are published. In addition to these principal languages, texts also exist in Hurrian (both in the Ugaritic script and in the Sumero-Akkadian syllabic script), Egyptian, Hittite (syllabic and hieroglyphic), and in a largely undeciphered script known as "Cypro-Minoan." From later periods, there is the odd Phoenician text, as well as Greek, Roman, and Arabic coins.

A. Religious Texts

Virtually all overtly religious texts are in Ugaritic and reflect West Semitic religious concepts. The few (Sumero-)Akkadian literary texts published to date belong for the most part to the category of wisdom literature, with the admixture of human and divine elements characteristic of that genre, and they tend to repeat or at least resemble known Mesopotamian texts. The Hurrian religious texts are primarily ritual in nature and reflect closely the standard Ugaritic cult. The Ugaritic texts fall into two broad categories: myths and cultic texts, the former in poetry and the latter in prose. These major categories can again be subdivided.

Some of the myths are long literary productions that deal only with deities, others are of similar length but tell of relationships between heroes and divinities, while a third category consists of various shorter poetic texts which deal primarily with divinities but without a clear attachment to any of the major myths. Because the texts from this third category are written on single tablets, usually damaged, it is often difficult to decide the precise literary type and the *raison d'être* of a given text.

The cultic texts also belong to several sub-categories: (1) rituals, which relate the events of a cultic cycle, the sacrifices, the offerings, the processions; (2) deity lists; (3) divinatory texts of various kinds.

1. Mythological Texts. We do not attempt to attach separate terms to each of the Ugaritic literary types because the Ugaritic types do not fully correspond, be it by subject-matter or by form, to the Homeric or Germanic types which have given rise to such terms as "epic," "legend," or "saga." Since all of the texts grouped under this heading include a divine element, we use "myth" in the broad sense of "a literary production which deals with the acts of the gods, with or without an explicit human element." The phrase "literary production" is important here, for in all of these texts one may perceive a conscious attempt to produce a literarily refined work—this literary intention is manifest in the poetic form of these works. It is indubitable that in many cases, perhaps most, the specifically "literary" form has a long prehistory of oral transmission and elaboration; it is thus the artistic (or "belle-lettristic") aspect of these works that we intend to convey by the term "literary production" (and not primarily the fact that they are written down: the writing down was probably a relatively minor part—however important it may be in practical terms for the survival of the myth to our day—of the "literary production").

a. Baal-Anat Cycle. The precise relationship of the tablets commonly known as the *Baal-Anat Cycle* (*CTA* 1–6 = *KTU* 1.1–6) is uncertain and the object of much debate. The common title is a fair one,

however, for wherever the text is well enough preserved to permit comprehension, it is clear that the main protagonists are Baal, god of the storm and hence of agricultural fertility, and Anat, Baal's wife-sister, perpetual "young girl" (*btlt* ≅ Heb *bĕtūlâ*), and goddess of both love and war. In these texts El is a father-figure, head of the pantheon, and attended by his wife Asherah, but these two ancient deities do not initiate action and are not the primary focus of any of the principal narratives. It is rather Baal who is the focus: he defeats his enemy *Yammu* ("Sea"), he requests and receives a palace like the other gods but is shortly thereafter himself defeated by *Môtu* ("death"), but is in the end resurrected and serves again to bring rain and plenty upon the earth.

The principal literary question regarding the Baal-Anat texts is whether they form a true cycle or simply a collection of somewhat disparate stories. The only basis of a truly cyclical interpretation yet proposed is the seasonal one (de Moor 1971), where the trials and victory of the weather could be directly related to the cycle of the seasons. Coupled with this seasonal interpretation has often been the assumption that the myths reflect a ritual cycle tied in with the seasonal cycle. A unitary interpretation, but not necessarily a cyclical one, would be to see in these texts a glorification of the young deity Baal (comparable to the glorification of Marduk in certain Mesopotamian texts): in such a view the ultimate victory of Baal could only be obtained by the defeat of the various enemies which appear in the poems (Sea, River, Death, Leviathan, etc.) and his own defeat by Death would be seen as an episode rather than as a repeating occurrence.

b. Story of Kirta. The *story of Kirta* (written *KRT* in Ugaritic; vocalization uncertain) is of an entirely different kind (*CTA* 14–16, = *KTU* 1.14–16). In it the clearly human though legendary royal figure Kirta struggles with the dual problem—ironically inseparable—of perpetuating his "house," i.e., his progency and hence his dynasty, while preserving his own existence (against divine retribution for sin) and maintaining his own hold on the throne (against an ambitious son). The very beginning of the first tablet is lost but soon thereafter one learns that Kirta has lost seven wives, one after the other.

CTA 14: (10) Kirta's household has been destroyed,
(11) Kirta's place has been removed;
(12) His rightful wife [the first] he cannot find,
(13) His proper spouse;
(14) A [second] wife he marries but she disappears,
(15) The mother's offspring who was his;
(16) A third dies in childbirth;
(17) A fourth by illness;
(18) A fifth Rashap (19) gathers in;
A sixth the lads (20) of Sea;
The seventh of them (21) falls by the sword.
(22) Kirta sees his household destroyed,
(23) His "seat" completely removed.

Saddened by the sight, Kirta weeps and falls asleep. El appears to him in a dream and enjoins him to seek a wife in the far-off city of *ʾudm*. Kirta undertakes the expedition and on his way vows to Asherah that if successful he will give twice his bride's weight in silver, even thrice her weight in gold, to the goddess. The mission is successful, the new bride produces children, but Kirta neglects his vow and is punished by a mortal illness. El contrives to heal him (the text is damaged and has preserved no reference to a rite of penitence) but on recovering his health Kirta is faced with an attempt by his son *yṣb* to take the throne. The final tablet preserved ends with Kirta's curse on his ambitious son. It is certain that this is not the end of the story, however, for the tablet is intact and the text stops in the middle of a sentence.

The meaning of this story for the Ugaritians is uncertain, but because it was written by one of the leading scribes under one of the kings named Niqmaddu (*CTA* 16 VI 59 = *KTU* 1.16: 59, to be compared with *CTA* 6 VI 53–57 = *KTU* 1.6 VI 54–58), one may assume that Kirta's dynastic problems eventually received a solution that was meaningful to the kings of Ugarit, whose own dynasty, according to their

own understanding (see RS 24.257 = *KTU* 1.113; Pardee 1988, chap. 5), went back at least to the early 2d millennium.

c. Story of Aqhat. The *story of Aqhat* (*CTA* 17–19 = *KTU* 1.17–19) is another long narrative containing human and divine elements. Here the royal element is largely absent, though the problem of obtaining progeny is as important as it was in the Kirta story. The poem as preserved opens in medias res with Daniel requesting of El a son and receiving a favorable answer. The son, Aqhat, becomes a hunter whose bow, a fine composite bow produced by the craftsman-deity Kutharu, is coveted by the goddess Anat. When Aqhat refuses to give up the bow, Anat has him killed. Aqhat's father recovers the body for burial and the hero's sister undertakes to wreak vengeance on Anat's hired assassin. Here the third tablet ends, again, apparently, before the end of the story. Three other fragments (*CTA* 20–22 = *KTU* 1.20–22) apparently deal with the same story, for Daniel is mentioned by name in them, but they are so fragmentary and the subject-matter is so different, that their attachment to the main tablets is not certain.

Though apparently copied by the same scribe as the Kirta text (see *CTA* 17 VI 56 = *KTU* 1.17 VI 56), royal dynastic concerns are much less evident here and the retention of the name Dan (i)el as an ancient wisdom figure in the book of Ezekiel (28:3) makes the identification of the work as a didactic one tempting. The only element in the text which may reasonably be said to belong to the category of wisdom sayings, however, is the list of "Duties of a Son," repeated four times in *CTA* 17 (= *KTU* 1.17):

I (27) Who sets up the stela of his ancestor-god,
In the sanctuary (28) of the sun-disk of his clan;
Who causes to rise from the earth his incense,
(29) From the dust the perfume of his place;
Who attacks (30) those who spurn him ("him" = his father)
Drives out those who oppress him;
(31) Who takes his hand when he is in his cups,
Bears him up (32) when he is drunk with wine;
Who presents his emmer-offering in the temple of Baal,
(32) His gift in the temple of El;
Who rolls his roof on (33) a muddy day,
Washes his harments on a miry day.

Listing is a well-known characteristic of wisdom literature and the list just translated may constitute a link between the Aqhat narrative and a more abstract form of wisdom literature.

d. Minor Texts and Fragments. The two best-known texts—because published early on—not belonging to one of the collections of cycles just described are the myths of *The Birth of Shahar and Shalim* (*CTA* 23 = *KTU* 1.23) and of *The Marriage of Nikkal* (*CTA* 24 = *KTU* 1.24). The first text belongs to the category of short mythological texts alluded to above because of its brevity, its lack of direct links with the larger mythological texts, and because it contains non-mythological elements, in this case instructions for a ritual. It has particularly captured the attention of specialists of West Semitic religion in part because El is the principal protagonist but not least because it contains some of the more lurid passages of a literature which is not especially graphic in sexual matters. *The Marriage of Nikkal* is stated explicitly to be a song (it begins *ʾašr* "I sing"). It contains a myth recounting the marriage of the West Semitic lunar god Yariḫu with the Mesopotamian lunar goddess Nikkal.

From a series of individual texts and fragments published sporadically since the 1930's it has become clear that we know only the tip of the Ugaritic mythopoeic iceberg and that the range of literary types contained therein was surely broader than we might believe on the basis of the major mythological texts. Only a sampling can be indicated here:

1) *CTA* 10–12 (= *KTU* 1.10–12): three texts dealing with Baal but outside the context of the Baal-Anat cycle cited above.
2) RS 15.134 = *PRU* II 1 = *KTU* 1.82: a long and relatively complete text that appears to be primarily mythological but of which the meaning is disputed.

3) RS 19.039 = *PRU* V 1 = *KTU* 1.92: another primarily mythological text, but rather badly broken, in which the goddess Athtart, not a leading figure in the standard literature, plays a major role.
4) RS 24.258 = *Ugaritica* V 1 = *KTU* 1.114 begins with a mythological narrative of the drunkenness of El and ends with a medical prescription in prose for the relief of hangover.
5) RS 24.244 = *Ugaritica* V 7 = *KTU* 1.100 contains a mythological and poetic account of how a mare-goddess is relieved by the god Horon of the threat posed by venomous serpents.
6) RS 24.252 = *Ugaritica* V 2 = *KTU* 1.108 recounts in poetic form an invitation to *Rapi'u,* "king of Eternity" (probably a title for *Milku,* a god of the underworld) to participate in a drinking feast with other deities; after a long lacuna the text ends with a blessing, probably intended for the king of Ugarit, to be effected by the intermediary of the Rephaim, the shades of former kings.

Alongside these documents which are primarily mythological and poetic in form, one can mention a few documents which are even more mixed in type:

1) Inserted at the end of the prose ritual text RS 24.266 = *Ugaritica* VII, pp. 31–39 = *KTU* 1.119 is a poetic prayer enclosed within instructions for when it is to be offered:

(26) When the strong one attacks your gates,
The warrior (27) your walls,
You shall lift your eyes to Baal;
(28) "O Baal, cast the strong one from our gates,
(29) The warrior from our walls.
A bull, (30) O Baal, we sanctify,
A vow, O Baal, (31) we fulfull;
A [first]-born (or: a [ra]m), O Baal, we sanctify,
(32) A food-offering, O Baal, we fulfill,
A drink-offering, O Baal, we make;
(33) We go up to the sanctuary of Baal,
We take the path to the temple of Baal"
(34) Baal will hear your prayer,
(35) He will cast the strong one from your gates,
The warrior (36) from your walls.

2) RS 24.257 = *Ugaritica* V 5 = *KTU* 1.113: On the recto is a text divided into short paragraphs but too badly broken to permit one to ascertain whether the form is poetic. On the verso is a list of the kings of Ugarit back to the founding of the dynasty more than half a millennium earlier. Many have seen in the joining of the texts on the same tablet evidence for a celebration in honor of the deceased members of the dynasty.
3) RS 24.272 = *Ugaritica* V 6 = *KTU* 1.124 appears to be a prose text but one that recounts a mythological consultation of the hero-deity *Ditanu* in order to obtain the healing of a sick child. After the description of the consultation come two oracles pronounced by *Ditanu,* both of which appear to contain quasi-naturalistic devices (placement of spices for the cleansing of the house) for the recovery of a sick person.
4) RS 34.126 = *Syria* 59 (1982) 121–28 = *KTU* 1.161 bears a text of mixed characteristics: The form is poetic, but it appears to be primarily ritualistic. At the death of a king, the deceased ancestors are invoked, sacrifices are offered, and a blessing is pronounced on the house of the new king. In this text, the poetic form is very likely owing to the mythological nature of the list of ancestors (only the two kings that immediately preceded the deceased king are well-known figures; the rest are apparently of great antiquity for their names are virtually unknown and they are called "the Rephaim of the earth" and "the ancient Rephaim").

2. Ritual Texts. More than one hundred ritual texts have been found at Ras Shamra, most of them in Ugaritic, some in the Hurrian language, written in both the syllabic script and in the alphabetic script (*Ugaritica* V, pp. 447–544), none in Akkadian.

The Ugaritic ritual texts are expressed with an exasperating concision: an animal or another item is mentioned in conjunction with a divine name and often in conjunction with a designation for the type of offering in which the object is classified, e.g., *šrp* "burnt offering," *šlmm* "peace offering." Unfortunately, the attribution to a deity is not always indicated by means of a preposition and the lack of vocalization prevents us from perceiving a possible attribution expressed by a case-ending. There are occasional references to preparations or to processions, e.g., RS 24.291 = *Ugaritica* VII, pp. 41–44 = *KTU* 1.132: 1–3 "On the 19th (day of an unnamed month) one makes the bed of (the deity) Pidray with the cover(s) of *mlk* ('the king' or the deity 'Milku'?)"; RS 19.015 = *PRU* 4 = *KTU* 1.91: 10–11 "When Athtart-*šd* enters the royal palace, when the Rashap-deities enter the royal palace …" The texts are often divided into sections by horizontal lines drawn across the tablet, by references to times (e.g., *lll* "at night"), or by numbers indicating the days of the month. Such references are far too infrequent, however, to permit the reconstruction of a cultic cycle. Indeed, it is very possible that the few texts that have come down to us were prepared in or for several different sanctuaries and that they represent, therefore, a multiplicity of cults and, perhaps, of cultic cycles. If such is the case, we are far indeed from being able to reconstruct a cultic cycle.

The exasperating concision of these texts has resulted in some rather basic questions still being undecided. Were these ritual texts meant to be "descriptive" or "prescriptive" (Levine 1963)? If they were prescriptive, why the multiplicity of forms of the cult and the apparent lack of serialization (i.e., there is not a "Book of Leviticus" from Ras Shamra)? If they were descriptive, why are many of the verbs expressed in the "imperfect," the verbal form which in prose is normally reserved for the description of non-completed acts? Our own preference is to see these imperfects at the very least as denotations of the habitual and in the apparent multiplicity of cult forms a reflection of multiple cult centers.

There are also some uncertainties as to the meaning of basic formulae: what precisely does *brr* mean in the formula *yrtḥṣ mlk brr* "the king washes himself *brr*" or *ḫl* in the phrase *ʿrb špš wḫl mlk* "at the setting of the sun, the king is *ḫl*"?

a. Expiatory Ritual. A very special ritual, one that was not limited to a specific sanctuary or cult, was the expiatory ritual RS 1.002 = *CTA* 32 = *KTU* 1.40. Several fragments of duplicates and of similar texts have been discovered since the publication of the original text (+ RS 17.100 = *CTA* Appendix I = *KTU* 1.84; RS 24.270A = *KTU* 1.122; RS 24.652 G, K = *KTU* 1.154)—this relatively large number of exemplars of a particular type of text may be seen as a sign of a broad usage. Though the texts are fragmentary and not perfectly understood, it is clear that the literary type is that of the ritual (the terms *dbḥ* "sacrifice," *ṯ* "offering," *š* "sheep," and *ʿr* "jack" appear), that various types of sin are being dealt with (the terms *ʾap* "anger," *qṣrt npš* "impatience," and *qṭt* "disgusting deed" appear, as well as the verb *ḫṭʾ* "to sin"), and that the inhabitants of Ugarit (*bn/btʾugrt* "son, daughter of Ugarit") and their royal household (*nqmd, ʾaṯṯ* "Niqmaddu, [his?] woman/wife") were involved.

b. Deity Lists. We are fortunate in having among the few Ugaritic religious texts three exemplars of a list of divine names, two in Ugaritic (RS 1.017 = *CTA* 29 = *KTU* 1.47; RS 24.264 + *Ugaritica* VII, pp. 1–3 = *KTU* 1.118), one in syllabic script (RS 20.024 = *Ugaritica* V 18). This confluence of texts in two different scripts gives us the identification made by the Ugaritic scribes of Levantine deities with their Mesopotamian counterparts, often better known, and is evidence of at least one partial form of standardization of the Ugaritic pantheon—"partial" because the text contains only thirty-three entries of which six are the repeated word *bʾlm* "a Baal." Furthermore, a ritual text, RS 24.643 = *Ugaritica* V 9 = *KTU* 1.148, contains a list of offerings made to a series of deities of which the names and the order of mention are almost the same as in the divinity lists just described (just three divine names from near the end of the list are missing in the ritual text: *ʾuṯḫt, mlkm,* and *šlm,* nos. 30, 32, and 33 of the lists). We know from the other ritual texts that other deities were worshipped in the Ugaritic cult, for not only are many other divine names mentioned but RS 24.643 is the only ritual to reflect even approximately the known "pantheon" list in its particular order. Moreover, there are other lists of divine names in other orders (e.g., RS 4.474 = *CTA* 30 = *KTU* 1.65; RS 24.246 = *Ugaritica* V 14 = *KTU* 1.102; RS 26.142 = *Ugaritica* V 170, the last in syllabic script). One can only conclude that the three identical lists and RS

24.643 reflect one cult, that of Ṣapon (RS 1.017 is headed *ʾil ṣpn* "the gods of Ṣapon,"while the ritual text bears the heading *dbḥ ṣpn* "sacrifices of Ṣapon"the Ugaritic equivalent of the classical Olympus, and that other cults, perhaps less catholic, would have had their own "pantheon" lists.

The other deity lists just mentioned furnish evidence for such a hypothesis. RS 24.246 = *Ugaritica* V 14 = *KTU* 1.102 contains on the recto a list of divine names (fourteen lines) and on the verso a list of names that resemble personal names but which are generally unattested as such and which all contain a divine name or epithet. The divinities are, of course, mentioned in other ritual texts but we have no evidence, aside from this tablet, that the names which appear on the verso were ever the object of a cult. RS 4.474 = *CTA* 30 = *KTU* 1.65 deals exclusively with the household of El. It begins with a hierarchical list of El's family, also known from the expiation ritual (RS 1.002) mentioned above: "El, the sons of El, the circle of the sons of El, the assembly of the sons of El, Thukamuna-wa-Shunama, El and Athirat." The text continues with a series of attributes of El ("grace of El," "constancy of El," "well-being of El"), two uses of the word *ʾil* (≅ El) as an appellative ("the god *ḫš,"* "the god *ʾadd"*), two forms of Baal ("Baal of Ṣapon"and "Baal of Ugarit"), and ends with a series of prepositional phrases ending in the word El ("by the sword of El," "by the adze of El," etc.). This enigmatic set of associations was certainly connected at least partially with cultic ritual (cf. the partial overlap between this text and RS 1.002).

c. Extispicy Texts. Another form of ritual was extispicy, the examination of internal organs from sacrificial animals for the purpose of predicting the outcome of a particular enterprise. From Mesopotamia there are both clay liver models inscribed with a prognosis and long collections of such omens each of which consists of the sign ("If the liver is in such-and-such a form …") followed by the prognosis ("such-and-such will happen"). The excavations at Ras Shamra have given us a small collection of inscribed liver models (some with Ugaritic texts, some only with marks indicating the interpretable features of the liver), one inscribed lung model (several discrete Ugaritic inscriptions), and two collections of omina (one dealing with omens based on abnormal animal fetuses, the other with omens based on abnormal human fetuses).

The liver models with Ugaritic inscriptions are votive rather than ominophorous, e.g., "Sacrifice of Bayyay, son of Sharay, to Athtart who is in Athtart" (RS 24.323 = *Ugaritica* VI, pp. 172–73 = *KTU* 1.142). The reference is to a sacrifice to the goddess Athtart in her particular manifestation in the village of Athtart, probably the village that is known as the "Estate of Athtart" (*gt ʿ ṯtrt*) in the administrative texts.

The lung model (RS 24.277 = *Ugaritica* VI, pp. 165–72 = *KTU* 1.127) bears a series of votive inscriptions ("sacrifice of …," "sheep of …") which are arranged on the three principal planes of the model at various angles to each other and separated by lines incised in the clay. It also contains an ominological statement not dissimilar to the prayer to Baal (RS 24.266) cited above: "If the city is about to be taken, if death attacks the inhabitants, the households of the inhabitants shall take a goat and they shall (thus) see afar (i.e., what will happen)" (lines 29–31).

A striking example of Mesopotamian culture translated into the Ugaritic language is that of the divinatory texts based on abnormal fetuses of animals or humans. The genre was well known in Mesopotamia and is commonly designated by the first words of the omen, *shumma izbu,* "If the abnormal fetus …" The form of the omen is that of the extispicy omens described above: the protasis describes the particular features of the abnormal fetus (e.g., "If the fetus has no tongue …") while the apodosis provides the prognosis (e.g., "… the king will destroy the enemy land"). The genre is represented by two texts from Ras Shamra, one, the better preserved, dealing with abnormal animal births (RS 24.247 = *Ugaritica* VII, pp. 44–60 = *KTU* 1.103 + 1.145), the other, only a small fragment from the left side of the tablet, dealing with abnormal human births (RS 24.302 = *Ugaritica* VII, pp. 60–62 = *KTU* 1.140). (For both texts see Pardee 1966.) There is also a very poorly preserved tablet, from the neighboring site of Ras Ibn Hani, of an omen text based on planetary phenomena (RIH 78/14 = *Syria* 57 [1980] 352–53). These texts preserve the structure (a long series of single-sentence omens, each based on a different observed phenomenon), the form (protasis, apodosis), and the terminology (e.g., "king," "land," "enemy," "destroy," "sword," "troops") of the better-known Mesopotamian texts and it is almost certain that the Ugaritic versions were

derived at some point from Mesopotamian models. The exact route by which these literary models reached the Levant is uncertain, however, for no known text of the genre from any source has the same sequence of omens as the Ugaritic exemplars.

d. Hurrian Religious Texts. Another aspect of the internationalism of the Ugaritic ritual texts may be seen in the important group of Hurrian religious texts found at Ras Shamra. Because the Hurrian texts are often in rather bad condition and because the Hurrian language is still poorly understood (it is non-Semitic), the Hurrian texts have not as yet made a major contribution to our understanding of Hurro-Ugaritic religion. The ritual texts and the deity lists are similar to the Ugaritic texts already described; in addition, there appear to be prayers or hymns of a length as yet unparalleled in Ugaritic (e.g., RS 15.030+ = *Ugaritica* V, pp. 463–64). The intermixture of the Hurrian and West Semitic aspects of Ugaritic culture is perhaps most clearly visible in the ritual texts, for they furnish several examples of linguistic mixture in a single text. The mix takes all forms: texts entirely in Hurrian (in both alphabetic and syllabic scripts), texts principally in Hurrian but with key phrases in Ugaritic (e.g., RS 24.291 = *Ugaritica* VII, pp. 41–44 = *KTU* 1.132), texts principally in Ugaritic but with a discrete Hurrian section (e.g., RS 24.643 = *Ugaritica* V 9 = *KTU* 1.148: 13–17), texts with Ugaritic vocabulary but Hurrian morpho-syntax (e.g., RS 24.291 = *Ugaritica* VII, pp. 41–44 = *KTU* 1.132). The speakers of Hurrian are best known from references in non-Hurrian sources to the state of Mitanni (*floruit* 14th century B.C.); its capital, Washukanni, has never been identified with certainty and the native archives for the Mitannian state are thus still to be excavated. This rather shadowy people was well represented in the Ugaritic population of the 13th century, as we know from proper names. The ritual texts in Hurrian do not differ in any significant way from the Ugaritic ones, consisting primarily of sacrifices to either Semitic or Hurrian deities, with key formulae, especially verbal phrases, often in Ugaritic. There was, therefore, an important degree of symbiosis between these two ethnic elements of Ugaritic society (to the extent that ethnicity was represented by language) and it would appear that the organization of the cult was primarily the Ugaritic (i.e., West Semitic) one, for the operative cult terms were Ugaritic.

B. Epistolary Texts

There are approximately eighty letters in the Ugaritic language from Ras Shamra and Ras Ibn Hani and approximately double that number in Akkadian. As is to be expected in a culture where the knowledge and use of writing was still the privilege of a small minority, most of these documents originated from the upper social classes, especially from the court itself.

1. Formulae. The Ugaritic epistolary formulae are relatively tightly set, though a good deal of variation is permitted within the standard pattern. In general, the literary convention is that of an oral message, in which the written tablet would have served as an *aide-memoire* (e.g., RS 18.40 = *PRU* V 63 = *KTU* 2.40: 1–4: "To the king my lord say: Message of Thapiṭba‹lu your servant"). The temporal perspective is that of the writer, and the so-called epistolary perfect is used for acts associated with the writing of the letter (e.g., RS 16.265 = *PRU* II 19 = *KTU* 5.9: 7–8: *›iršt ›aršt l›aḫy lr‹y* "A request I make [lit. "I have requested"] to my brother, my friend") (Pardee and Whiting 1987). In social situations involving a superior and an inferior, the former is usually named first (e.g., RS 18.113A = *PRU* V 8 = *KTU* 2.42: 1–3: "To the king, [my lo]rd, say: Message of the centurion, your servant"). A set of greetings may intervene between the address and the body of the letter, especially if the letter was written to a family member and/or to a social superior (RS 11.872 = *CTA* 50 = *KTU* 2.13: 1–8: "To the queen, my mother, say: Message of the king, your son: May the gods guard you and keep you well"). A request for a response to the present letter can either follow the greetings or come at the end of the letter (e.g., RS 15.008 = *PRU* II 15 = *KTU* 2.16: 16–20: "And may my mother return word to me of every good thing").

A typology of Ugaritic letters such as those proposed for Hebrew and Aramaic letters by P.-E. Dion has not yet been devised (see LETTERS [ARAMAIC]). The following discussion is organized by social status of correspondents; this status was reflected in both formulary and content.

2. Royal Letters. There are few Ugaritic letters in which a reigning sovereign is mentioned by name; usually only titles are used, even in international correspondence. There are a few such cases, however, where the king is addressed by name: e.g., "Message of the Sun [the king of Hatti] to Ammurapi: Say:

…" (RS 18.038 = *PRU* V 60 = *KTU* 2.39: 1–2); "[Messa]ge of Puduḫepa, quee[n of Hatti: To] Niqmaddu say: …" (RS 17.435+ = *Ugaritica* VII, pp. 121–28 = *KTU* 2.36: 1–2). When the king of Tyre wrote to the king of Ugarit, he referred to the addressee only as "the king of Ugarit, my brother" (RS 18.031 = *PRU* V 59 = *KTU* 2.38: 1–34). Thus the personal name of the king of Ugarit is mentioned by his Hittite overlords while a king of equal rank uses only titles. Judging from the more voluminous Akkadian correspondence, the pattern observable in these three letters may be described as a general tendency, viz., the king of Hatti addresses the king of Ugarit by name, the local rulers do not. Thus in RS 17.132 = *PRU* IV, pp. 35–37, we find "Thus (says) the Sun, the Great King: To Niqmaddu say: …," while the king of the neighboring state of Amurru uses a formula without the name: "Thus (says) the king of Amurru: To the king of Ugarit, my son, say: …" (RS 17.152 = *PRU* IV, p. 214). That the use of the addressee's name was not simply a question of the superior-to-inferior relationship is shown by another letter from the king of a neighboring country to the king of Ugarit in which the social positions of the last letter cited are reversed but the name of the king of Ugarit is not mentioned: "To the king of Ugarit, my father, say: Thus says Ariteshub, the king of Ushnatu, your son: …" (RS 17.143 = *PRU* IV, p. 217). As many scholars have pointed out, the social relationship of the correspondents is reflected primarily in the order of mention of the two names. The use of the royal name either reflects Hittite practice or else implies a degree of formality not in use between fellow Levantine kings. Unfortunately, we do not have a letter from the king of Egypt to serve as a check, but there are two Ugaritic versions of letters from kings of Ugarit to Egyptian kings (RIH 78/3 + 30 = *Syria* 57 [1980] 356–58; RS 34.356 = *Sem* 32 [1982] 10–12) and, though damaged at the crucial spots, it is unlikely in both cases that the addressee's name was mentioned. The first of these letters is especially remarkable in that it provides for the first time in Ugaritic a series of greetings similar to those that characterize the Amarna letters written in Akkadian from the kings of Palestine and Syria to the king of Egypt in the early fourteenth century. The first twelve lines of RIH 78/3 + 30, the entirety of the recto as the tablet is preserved, are taken up by these greetings: "[To the Sun,] the great king, the king of Egypt, [the goo]d [king,] the just king, [the king of ki]ngs, the lord of all the land [of Egyp]t, say: Message of [Ammistam]ru, your servant: At the feet of [my lord] I [fall.] With my lord may it be well; [may it be well?] with your personnel, with your land, [with your horses,] with your chariots, [with your X, with all that belongs] to the Sun, the great [ki]ng, the king of Egyp[t, the good king,] the ri[ghteous king, the king of Egypt …]."

There are several letters from various persons associated with the royal throne. The most important of these personages is perhaps Talmiyanu, who writes to the queen of Ugarit as his mother, but is not known ever to have taken the throne of Ugarit—at least under the name Talmiyanu. The clearest indication of Talmiyanu's blood relationship to the throne is in RS 8.315 = *CTA* 51 = *KTU* 2.11:1–4: "To my mother, our lady, say: Message of Talmiyanu and of Aḫatumilki, your servants." In these formulas two different pronominal suffixes are used (*ʾum-y* "my mother," and *ʾadt-ny* "our lady") to distinguish the blood relationship of Talmiyanu from the simple inferior relationship of Aḫatumilki (if "mother" had been simply a title of respect, the distinction need not have been made).

The content of the royal letters is similar to that of the hundreds of known Akkadian letters from the region: usually matters of tribute and trade, duties to the "Great Kings" of Hatti and Egypt and responsibilities to the fellow kings of the region. Most of this correspondence is in Akkadian, with Ugaritic usually reserved for personal letters between members of the royal family. It is generally believed that the few Ugaritic letters of international character are translations of Akkadian originals: the two out-going letters to Egypt mentioned above must either be drafts or translations for archival purposes. One such Ugarit version, the letter from Puduḫepa referred to above, deals primarily with matters of tribute (*ʾargmny*) and trade (*qnʾum, pḥm* "purple- and red-dyed textiles") (RS 17.434+ = *Ugaritica* VII, pp. 121–34 = Pardee 1983–84: 6, 29–31). On the other hand, the letter (also cited above) from an unnamed Hittite king to Ammurapi, the last known king of Ugarit, strikes a more ominous note: "As regards the letter which you sent (to me) the Sun concerning food, the Sun (himself) is perishing" (RS 18.038 = *PRU* V 60 = *KTU* 2.39). The famine that struck Hatti near the end of her existence (ca. 1200

B.C.) has been well documented and RS 18.038 is apparently a further witness to that situation (Astour 1965).

There were also not only formal statements of brotherhood, but acts of brotherly kindness are recorded as well. In the body of the letter from the king of Tyre to the king of Ugarit (address to "my brother" cited above), one finds the following account: "Your boats, that you had sent to Egypt, were foundering (lit. 'dead') off Tyre. They were caught in a bad storm. But the salvage-master took all the grain in the baskets (i.e., the cargo of grain) then I in turn took from the salvage-master all the grain, all the people (lit. 'every soul'), and all the good, and I returned (it all) to them. Your boats are in Acco, stripped (i.e., the sails were destroyed in the storm). My brother should worry about nothing!" (RS 18.31 = *PRU* V 59 = *KTU* 2.38: 10–27).

Finally, in a letter of which the address is broken but which can be ascribed to the royal correspondence because of the content and because the prostration and greeting formulas are addressed "to my mother," appears an as yet enigmatic reference to the anointment of an Amurrite princess: "Yabninu has gone to the king of Amurru and has taken (with him) one hundred (shekels of) gold as well as rugs for the king of Amurru. He has also taken oil in his horn and has poured it on the head of the daughter of the king of Amurru […]" (RS 34.124 = *KTU* 2.72). It is likely that there is a connection between this text and the so-called case of the Great Lady, which involved the repudication by Ammistamru, king of Ugarit, of an Amurrite wife (*PRU* IV, pp. 125–48; Fisher 1971), but the meaning of the ceremony (consecration, purification?) and its precise historical context (marriage, remarriage, execution?) remain unclear. Anointment is well known from a wide selection of Levantine sources and was practiced in more than one circumstance; there are especially close verbal parallels in biblical Hebrew (Pardee 1977: 14–19).

3. Non-Royal Letters. One may assume, for the reason stated in the introduction to the epistolary documents, that most correspondence occurred between highly placed members of Ugaritic society. Occasionally titles are used which show such to have been the case: "Head Shepherd" (RS 1–5.[001] = *CTA* 59 = *KTU* 2.2: 1), "Chief of the priests" (RS 1.18 = *CTA* 55 = *KTU* 2.4: 1). In other letters, access to a royal personage is mentioned: "How is it with the letter-tablet that I sent to Thariyelli [the queen mother]? What has she said?" (UH 138 = KTU 2.14 = Bordreuil 1982: 6–9); "GNRYN to Milkuyatan: Mention me favorably to the king" (RS 15.007 = *PRU* II 20 = *KTU* 2.15: 1–3).

There is a larger number of letters in Akkadian in which titles are used and from these one can gain a clearer perspective on the workings of the royal bureaucracy, e.g., RS 11.730 = *PRU* III, pp. 12–13: "Thus (says) the king of the land of Birutu: To the Governor of the land of Ugarit, my son, say: May it be well with you. May the gods keep you well. My son, I herewith send my messenger in order that he carry out my wishes in your land. You, my son, be on the lookout for his welfare [lit. 'put your eyes good on him']"; RS 20.239 = *Ugaritica* V 52: "Thus (says) Mada›e: to the Governor [of Ugarit] say: May it be well with you. May the gods keep you. As for my cattle which the men of Rakba stole, since you said '[The king] is leaving [Ugarit,] so remit the case of your cattle to me and let's bring it to a conclusion', so now let's bring the case to a conclusion and get my cattle back. But, if they don't give me back my cattle, the elders of Rakba, Babiyanu son of Yadudanu, Abdu along with his son and Addunu his son-in-law, and the millurion, must all come and enter the temple (i.e., swear an oath); (then only) will they be absolved."

In other cases, all that can be gleaned from the letter and the prosopography of the correspondents is the relative relationship of the correspondents: e.g., RS 29.93 = *Ugaritica* VII, pp. 75–78 = *KTU* 2.70: "To Yadurma, our master, say: Message of Pinḥathu and of Yarimhaddu, your servants. Greetings to our master. May the gods guard you and keep you well. At the feet of our master twice seven times we fall from afar. Here Bin-Ayyana is continually making requests to your maid-servant [i.e., one of the writers, probably Yarimhaddu]. So send a message to him and refuse him (these requests). As for me, I have taken on a workman and repaired the house. So why has Bin-Ayyana come back and taken two shekels of silver from your maid-servant? Now as concerns your two servants [i.e., the two writers], there with you (is) everything, so give them food, for thus the household of your (two) servants is continually requesting. And when your servant [i.e., the other writer, Pinḥathu] arrives to greet you, then he will have made for

my lord a *ḫupnu-garment*, (paid for) with his own wherewithal" (Pardee 1979–80: 23–35; Pardee 1981–82: 260, n. 9; Pardee 1987: 210–11).

Some letters have all the flavor of a son writing home: "Uzanu, son of Bayyay [to …]; may Baal inquire after your health. As for me, your son, I am alive (and well). At the orders of the Sun I am staying in the house of TRTN. The woman (of the house) is not furnishing my food nor is she furnishing my wine" (RS 17.117 = *Ugaritica* VII, pp. 392–98 = *KTU* 5.11 = Pardee 1982). The statement that the "Sun" (king of Hatti or, conceivably, of Egypt) is concerning himself with the welfare of the writer indicates that our hero is in the foreign capital with the highest possible recommendations. Differences in formulae and orthography show that this letter and a companion piece (RS 17.63 = *Ugaritica* VII, pp. 389–92 = *KTU* 5.10 = Pardee 1982) were in all probability written in that city by a scribe whose dialect and literary traditions differed from those we know from the texts written within the kingdom of Ugarit.

One Ugaritic letter permits a glimpse into the training of a scribe. RS 16.265 = *PRU* II 19 = *KTU* 5.9 is a practice tablet which begins with a model letter, then degenerates into simple writing exercises. The model letter is highly interesting, for in it we find something that is missing in most of our documents from the kingdom of Ugarit: humor. The first dose of humor is rather subtle, for it consists of an accumulation of blessings that is unparalleled in precisely this form in any genuine Ugaritic letter. The second dose is much broader, however, for it reflects the age-old (!) identification of students with wine: the apprentice scribe lists various forms of the verb "to give" then, after this build-up, he states the object of the request, a cup of wine: "Message of Ithatilli to Whomever: May the gods guard you, may they keep you well, may they strengthen you for one thousand days, for ten thousand years, throughout the ages of time. A request I would make of my brother, of my friend: May he give (= grant) it to his brother, to his friend (his) friend for all time. May you give; give; give indeed; will you not give?; give a cup of wine that I might drink it."

C. Administrative Texts

Altogether approximately 900 non-literary texts written in alphabetic cuneiform have been discovered. This number is far larger than that of literary texts. In syllabic cuneiform this situation is reversed: virtually all of the approximately 1250 tablets and 600 fragments are non-literary and the very few literary texts that have been found are almost all copies of Mesopotamian works.

Alongside the well-defined and well-attested text types written in alphabetic cuneiform to which the bulk of this section is devoted, there are some categories that are difficult to define precisely because of the scarcity of examples. These peculiar texts are susceptible to serious errors of interpretation because of the lack of similar texts—perhaps yet to be discovered—which would show the standard features of these texts and thereby shed light on their structure and meaning. As an example: on the two sides of a tablet, the only one of this type known to date (RS 18.025 = *PRU* V = *KTU* 4.338), are two texts which may be independent of each other: one is a personnel list, where each name is followed by a number; one the other face is what was originally taken to be the indication of a sum of money deposited for the purpose of guaranteeing a sea-faring ship. Several years after the original publication the proposal was made to see in the text a translation into Ugaritic of an Akkadian original, or, more precisely, a summary of a longer Akkadian text, a rental contract, to which a guarantee has been added, covering several ships:

(10) Five hundred and forty (shekels)
(11) of ship-money, all together,
(12) which were provided as a guarantee for ships
(13) to the king of Byblos;
(14) the king of Byblos also
(15) received fifty (shekels) of silver
(16) for the outfitting of his ships
(17) in *ʿrm*. (This) amount
(18) is their market value. (Pardee, 1975)

On the other hand, personnel lists at Ugarit, though often enigmatic as to their real context and function, are numerous and the text on the recto of this tablet can only be said to fit that broad category: "List of

personnel who have entered the house of the king and who were not inscribed on the list." Then the text continues

(4) *yrmʿl* 3
(5) *ṣry* 2
(6) *ʾirśy* 3
(7) *yʿḏrd* 3
(8) *ʾayaḫ* 2
(9) *bn.ʾaylt* 1

In this case, as in many others, we do not know what the number associated with each personal name designates: amounts received, amounts paid out, or the number of underlings for whom the person named is responsible.

If we accept that the rental/guarantee text just mentioned is only the first of its kind to be discovered at Ugarit, can we also say that the presence on one tablet of a contract and of a list of personal names is itself a feature of local procedure? The appearance of these two types of text, both often quite laconic (contracts and lists), far and away the most frequently attested in Ugaritic and Akkadian, as well as in most other corpora of texts since the invention of writing, may well have been without an intention of association. Nevertheless, it illustrates one of the difficulties that the historian of Ugarit meets with when trying to distinguish among his sources those that originated within the administration and economy of the state as opposed to those that represent private enterprise. How indeed is it possible to decide whether the individuals mentioned on the recto of the tablet have anything to do with the ships mentioned on the verso as having been rented by the king of Byblos to the king of Ugarit? Are they passengers whose names were omitted from the original manifest or "royal" sailors ("… have entered the house of the king") inscribed on a supplementary list? The figures would in these cases designate respectively the fare or the salary. Or are the texts unrelated and heterogeneous, one registering contributions from persons well known at the Ugaritic court or perhaps subsidies paid out to them, the other a document of international administration?

One can say, fortunately, that the great majority of the texts recorded are homogeneous and that the difficulties we meet in endeavoring to interpret them are principally owing to the lacunary state of many of the tablets, or, when they are complete, to the laconic formulation by which they are generally characterized. We will distinguish here between those which can, on the one hand, be grouped under the general heading of "lists" and, on the other, as "official acts" or "business documents." There are examples of each of these two major groups in several of the languages used at Ugarit, but principally in Akkadian and Ugaritic.

1. Lists. a. Personal Names. (1) Undefined. The purpose of lists with no defining element largely escapes us, as would a page torn at random from a modern register or extracted from the middle of a file. There are usually twenty or more names and the patronym is usually present but may be missing (e.g., *PRU* II 69). *PRU* V 22 contains about twenty-five names, all beginning with the sign (ʾi), the first example of a list organized by alphabetic principles (compare the list of realia and personal names in *CTA* 112). The *raison d'être* of such texts is enigmatic unless a tablet bears a heading which may be understood as applying to everything that follows.

(2) Definition by Family Terms. Generally speaking, the Ugaritians seem to have considered the patronym the most important element to be stated when identifying a person, for it is usually given and may indeed function as the only identifier (*CTA* 105), both masculine (*bn* PN "son of PN") and feminine (*bt* X "daughter of X"). Long lists, such as *CTA* 102, rarely omit the patronym.

There are a few examples of matronymic identification, probably to be explained as owing to the maternal line being the better known (see *PRU* III, p. 180). The rare examples of fratonymy (*CTA* 82 I 5 *ršpʾab ʾaḫ ʾubn; PRU* V 118: 10 *lbw ʾuḫ pdm*) and sororonymy (*PRU* III, p. 85: 4–5 *e-we-en-ni-na aḫi šar-mi-la*) probably designate individuals who have been adopted into brotherhood, such as the cases of Artiteshub adopted by Ilinergal (*PRU* III, p. 75) and Yadduaddu by Lady Inuya (*Ugaritica* V 81).

Elsewhere, some or all of the names in a list are followed by a list of their dependents, such as heirs (*w nḫlh* "and his heir"). The heirs of the heirs may in turn be indicated (*w nḫlhm* "and their heirs"); indeed,

"his heir" and "their heirs" may be indicated one right after the other for no apparent reason (*CTA* 113 II 10, 22; 116: 3). There are also formulae of the type "PN and his companion" (*PRU* V 83: PN *w r*ʿ*h*); "PN_1 and his pupil" (*PRU* II 48: PN *w lmdh*); "PN_1 + X number of persons belonging to him" (RIH 83/25+ [unpublished] PN_1 *tt npš lh*). On these relational terms, see Liverani (1979: 1320–21). Whether the designation of accompaniment be collective (*nḥlh, npš*), plural (*nḥlhm*), or individual (*r*ʿ*h, lmdh*), the names of the persons in question are not indicated. Cases may also be found (RIH 83/17+ [unpublished]) where "household of PN" (*bt* PN) clearly designates families who have received or given the quantities indicated on the tablet.

These lists enrich our knowledge of a very complex local onomastic repertory and the several different alphabetic and syllabic writing systems are an important aid in the reconstruction of the diverse linguistic origins of these names. It may be observed that previously unknown personal names are appearing more and more rarely as new texts come to light and one may conclude that most of the personal names in use at Ugarit during the 14th–13th centuries are now attested—though we cannot be so optimistic about our understanding of the meaning of these names. Considering that the alphabetic writing system was invented in the early 14th century and disappeared with the kingdom of Ugarit in the early 12th century, we may estimate that seven or eight generations passed during the usage of the Ugaritic alphabet. Depending on the method of demographic estimation in use, the number of personal names susceptible of being inscribed in the alphabetic script would be somewhere between 150,000 and 300,000. One may today reasonably entertain the hope that the time is nearing when the administrative documentation from the capital itself and from Ras Ibn Hani and similar dependent towns of the kingdom—virtually all yet to be excavated—will enable us to gain a clearer perception of the socio-geographic distribution of the proper names in use in the kingdom of Ugarit in the period 1380–1180 B.C.

(3) Definition by Toponyms. Alongside the lists of personal names in the narrowest sense of the term, those that omit any definition or that are only defined by the patronymic or other familial term, there are texts in which personal names are grouped according to geographical origin. The geographical definition is indicated by the name of the provincial town, which is to be understood as including the territory under its administrative control. Note first cases where geographical definition is added to one of the categories just discussed, e.g., *RIH* 83/5: 19 [unpublished], where the name *grgš* is defined patronymically as "son of *šm*ʿ*nt"* and geographically as "from the town of ʾ*ary"* (cf. *PRU* II 35 B I 21). Documents characterized principally by toponymic definition often bear the heading "list" *(spr)* and the gentilic suffix *-y* is very frequently attached to the geographical term. The list may simply indicate geographical origin (*PRU* II 60 B; *PRU* V 21 *spr* ʾ*ušknym* "list of persons from ʾUshkanu"or a group of persons from the same town who belong to the same profession (*PRU* II 60 A *spr … nskm rqdym* "list … of metal-workers from Riqdu"). But there is also a text in which *rqd* appears in line 1, followed by a list of patronyms, all of which must be Riqdian (*PRU* II 46). The gentilic usually corresponds to a known place name, some of which have been localized, e.g., *gb*ʿ*ly,* modern Gableh in the Gablian plain to the south of Ugarit, or ʾ*ilštm*ʿ, modern Stamo in the same region.

We lack a study of local frequencies of personal names. Such a study would in any case be far from definitive because of the relative rarity of texts linking personal and geographical names. But an example of the sort of linkages that can be proposed is the following: it is plausible that the proper name *ṣdqn* on the seal discovered in 1928 at Minet el-Beida (RS 1.[050] = *KTU* 6.5), chronologically the first attestation of the name in Ugaritic, is to be connected with the patronymic form *bn ṣdqn* which appears in two lists (*PRU* V 16, 17; perhaps also read *ṣdqn* for *ṣdqm,* a Maḫadian mentioned in *PRU* II 41) of citizens of Maḫadu *(m*ʾ*iḫdym),* a port city (cf. *CTA* 84: 1 ʾ*anyt m*ʾ*iḫd[(ym)]* "ships belonging to Maḫad[ians]") that is almost certainly to be located at Minet el-Beida. Another example: the alphabetic writing of the name ʿ*bd*ʿ*nt* is only attested twice, neither time with a geographical designation, but the syllabic form *Abdi-a-na-tu*$_4$ appears in a text dealing with Arruwa (*Ugaritica* V 27), a city in the southern part of the kingdom of Ugarit (Bordreuil 1984). A king of Siyannu, a southern neighbor of Ugarit, bears the same name (*PRU* IV, p. 76) as does a personage named in a confirmation of property rights (*PRU* III, p. 91) that mentions the towns of Mulku, another southern locality in the kingdom of Ugarit (Bordreuil 1989), and Galba, a

city in Siyannu. One may legitimately propose a connection between this name and the southern regions of Ugarit, especially the Gablian plain. In this very fertile area, close to the Alawite mountains, the source of the many streams that cross the plain, it is no surprise to find a predilection for the goddess Anat. Further research even into the data already at hand would surely lead to great progress in this sort of identification.

(4) Definition by Occupational Titles. (a) profession lists without personal names: over thirty professional terms on both sides of a single tablet (*PRU* II 26: e.g., priests, artisans, squires).

(b) a number designating a total of persons who are defined by their profession alone RIH 83/2 [unpublished] contains thirty-three terms designating a profession, generally in the plural, followed by various numbers. The number "one" occurs three times, followed by a professional term in the singular (*mḫṣ* "refiner," *[m]ṣl* "cymbal-player," *kkr* "silo-keeper"). One should assume that the numbers correspond in all cases, as in the Akkadian text *PRU* VI 93, to the number of persons representing various specialties, listed together on this tablet for a reason unstated and undeterminable on the basis of present data. On the other hand, the number 61/2 found in *CTA* 74:17 leads one to analyze this and the other numbers in this text as sums of money or quantities of commodities paid in or out.

(c) personnel identified individually or grouped according to professional categories, as in *PRU* II 32: 1 *spr bldm* "list of replacements" (or "commercial agents"). The logic of these associations sometimes escapes us. For example, the two anonymous "gooseherds" (*ṯn rʿym ʾuzm*) mentioned at the head of the list *PRU* II 140 are followed directly by several "small (shepherds)" *(sġr)* named individually. Occasionally the man in charge of such groups is named: the group of shepherds in *PRU* V 72 is "in the hand of (= under the control of) *ʾiytlm;* in *PRU* II 53 *ʿbdʾil* is said to be "under" *(tḥt)* someone named *ʾilmlk.*

(d) personnel identified individually as being in the service of the palace. Several of the personnel *(bnšm)* mentioned in *PRU* V 14 are said to be under the control of the king, the queen, or the prefect. They may also be categorized according to their place of assignment, such as the "personnel of the king *(bnš mlk)* who are at Tabqa" (*PRU* V 66); other texts (e.g., *PRU* V 76) designate personnel as being in various places. In *PRU* V 71, among "the *mdrġlm* who are not under the control of Talmiyanu" there is a certain *ʾlytlm* who is defined by his patronymic (<*bn*> *śgryn*), then by his place of origin *(ʿary)* and by his place of assignment *(yny).*

(e) persons of the same profession grouped according to their ethnic origin: certain of the personnel *(bnšm)* in *PRU* V 14 are defined by the gentilic suffix as being from Ashdod *(ʿaddy)* or from Maḫadu *(mḫdy).* These names are followed immediately by the patronymic name *bn yyn mdrġl,* whose title does not include the gentilic *-y* and does not express an ethnic origin. Such sequences permit the hypothesis that certain gentilics designated the function itself—a situation similar to that with the "Swiss" guards at the Vatican. How else may one explain *mṣrym,* literally "Egyptians," in RIH 83/2 (unpublished), a list of professions already discussed above, or in *PRU* II 89:7? We may surmise that most of the standard professions practiced at Ugarit are now known (see list in Sznycer 1979: 1423–24), for new lists, such as RIH 83/2, add little to the previously known lists (e.g., *PRU* II 26). One exception is the title "royal guards" (*mrʾu mlk*; compare Akkadian [*mu*]*r-ú šarri* in *PRU* VI 93:2 and the cylinder seal of *rbnkšy mrʾu mlkʾi* in Bordreuil 1986: 292–98). Nonetheless, the precise meaning of some of these terms, such as *ṯnnm, trrm, ʾinšt,* etc., is still unknown (cf. Heltzer 1982, to be used with caution).

b. Place Names. As we have seen above, when place names appear along with a personal name they can provide precious data for the provincial demography of the kingdom of Ugarit. The study of Ugaritic toponymy is, however, still in its infancy. We will realize better the importance of geographical names as we examine below those that appear in royal economic and administrative texts and their contribution to the localization of various agricultural and pastoral activities. We will first discuss how they are grouped together and the conventions regulating the sequences into which they fall, irrespective of the *realia* with which they are associated, so as to extract data for localizing the borders of the kingdom as well as for the localization of several provincial towns.

(1) Districts. We have known for some time that certain texts with obligations to the throne are organized on a regional basis. The damaged text RIH 83/7+ (Bordreuil et al. 1984: 426; Bordreuil 1984: 1–2) records two conscriptions of individuals for the royal *corvée:* on the verso one finds the total of those sent from ǵr (*tgmr ḫrd ǵr* "total of the *ḫuradu-troops* of Gõuru"and on the recto a list of several towns, known from other texts to belong to " " ʾAraru of the towns" (*PRU* II 173:2–3 *ʾarr d qrht*)—i.e., a district—as well as what each of these towns sent *(lʾik).* The *ḫuradu-assessment* for the month named *ʾittbnm* was given as a list of names (*PRU* V 11 and RS 11.830 = *PRU* III, p. 190). The word *ǵuru* means "mountain" and should, therefore, designate the Alawite range to the E, and Araru may denote the southern region of the kingdom of Ugarit, where the town Arruwa (*ar-ru-wa* in syllabic script: *PRU* IV, pp. 72, 77) was located, in all likelihood the eponymous capital of the district. Leaving aside the territory which was in immediate dependence on the city of Ugarit itself, the third provincial district must consist of the northern portion of the kingdom, the region associated with the Gebel al-ʿAqra, Mount Ṣapānu in Ugaritic, a term that is used in several toponym lists to distinguish the northern town of Ijalba *(ḫlb ṣpn)* from its four homonyms in the kingdom (see Astour 1981).

(2) Borders. The existence of administrative districts within the kingdom can today be deduced on the basis of a few laconic allusions gleaned from various texts. But the existence of borders that were relatively precisely fixed and internationally recognized is not only attested but, in one case, that of the northern border with the state of Mukish, known precisely from four of the documents by which the decisions of the Hittite suzerains fixing that border were communicated. These documents (*PRU* IV, pp. 10–17), the initial act by Shupiluliuma addressed to Niqmaddu II and its confirmation by Murshili II to Niqmepa, have, in spite of their damaged state, preserved for us a total of forty-two place names stretching from the Orontes to the Mediterranean. One can follow this list *grosso modo* and situate several of the places with relative precision.

The northern border. The first entries on the list, badly damaged, probably designated localities in the Alawite range: a name such as Birsiḫe (no. 4), perhaps near modern Qalaʿat Burze, is followed immediately by "the waters of Ḫundurashirdblquote (no. 5), probably a designation of a nearby marshy area on the Orontes. A second section begins at Magdala (no. 11, = *mgdly* in *PRU* II 81, followed there by *yknʿm* = Yakunami, no. 19 on the frontier list), traditionally identified with the Bdama upland region, on the watershed between the Nahr el-Kebir and the Orontes, near which the modern Lattakia-Aleppo road passes. It is possible to say on the basis of recent research that the northeastern, northern and northwestern borders of the kingdom of Ugarit followed for all intents and purposes the Nahr el-Kebir basin. This means that, heading north from Magdala/Bdama along the ridges by which the Nahr el-Kebir/Orontes watershed is defined, the border would have followed the northern edge of the Urdu basin, at approximately the 800–meter line. From there it angled slightly southwest, towards Ḫalbi (no. 36, = Ḫalba of Ṣapānu, modern Qassab), leaving the mountain of the gods (Mount Ḫazi in Akkadian and Hittite texts, Ṣapānu in Ugaritic, Mount Cassios in Classical texts, modern Gebel al-ʿAqra) in a sacred (?) extraterritorial area. The last section of the border is the best known: it follows approximately the crest of Mount Nanu (no. 36′, = *nnʾu* in Ugaritic script, Strabo's Anti-Cassius, Thronos according to Stadiasmus) as far as Ḫimuli "in the sea" (no. 42, a small island a few kilometers to the north of modern Ras al-Bassit).

The southern border. The edict of Shupiluliuma had done little more than confirm the pre-existing border between Mukish and Ugarit (and its path through a mountainous zone where no large towns belonging to either country were located) and could hardly constitute a threat to vested interest. The situation in the heavily populated southern region was quite different. That border was established by Murshili II as part of a political *rapprochement* between Siyannu and Carchemish, and this act put an end to what must have been some form of political unity between Ugarit and Siyannu (*PRU* IV, pp. 17, 71–78). This division was operated on a fertile and well-watered region with many villages. Unfortunately, the precise allotment of these villages between the two kingdoms can no longer be ascertained because so many data are missing. Nonetheless, without denying the possibility of foreign enclaves existing within the borders of Ugarit, some of which may still be represented in modern place names (e.g., Suksi = Tell

Soukas, Tell Siano), one can estimate that the southern border followed the course of the short but abundant Nahr es-Sinn, which originated in a spring situated near the shelf that closes off the southern Gabla plain (Bordreuil 1989).

Sequences. The toponyms listed on the complete tablet *PRU* V 73 *(mlk, ›ar, ›ulm, m‹rby, ›uškn)* belong to a single district and may even be situated quite close together, for *PRU* V 33 places them in the district of *›arr*, the southern district of the kingdom, as we have seen. On the other hand, the 39-line tablet *PRU* V 74, also complete, includes these same toponyms but along with other places, some of which belong to the same district, but most of which must be situated in other regions. No single solution allows a division of the tablet according to a regional distribution. One can say, however, that the last five names of the list certainly belong to the northern region, particularly *ykn‹m* (line 37) = Yakunami, no. 19 on the northern frontier list just discussed. *PRU* V 75 is even more confusing, for it mixes personal names with southern place names (*›ulm*, line 3) as well as with northern ones (*ḫlby*, line 25, = no. 36 of the border list); compare *PRU* III, p. 189 (= RS 11.790).

One may hope that some of the many tells in the southern plain will one day reveal their ancient name to a fortunate excavator and thus fill the gaps in our present state of knowledge. But it would be unrealistic to count on such archaeological finds in the northern mountainous areas, for most construction there must have been of wood and will only have left faint traces. Fortunately, the place names by which this border was defined correspond well enough with several modern toponyms to allow for at least approximate localization of some towns and localization by triangulation for others. One must keep in mind, however, that the sequences may vary, depending on differing itineraries taken by the tax collectors and other administrators on whose documents we rely today when we do historical geography.

Thus Mount Nanu, associated in the Hittite texts from Yazilikaya with Mount Ḫazi (= Ṣapānu), which appears in the northern border list as Mount Nanu (No. 36´) and is to be identified with the Anti-Cassius (Bordreuil 1989), permits the identification of Ḫalbi (no. 36) with Ḫalba of Ṣapānu, a town that is probably to be situated on the southern slopes of the Gebel al-‹Aqra, near the springs of modern Qassab, at an altitude of about 900 meters. It is no surprise, then, to find grouped on one list (*PRU* VI 118; see Bordreuil 1989) the names of cattle owners from the villages of Nanu and Ḫalba; nor to learn from another (RIH 84/13; see Bordreuil 1987) that several different persons are ascribed ownership of cattle pastured in Suladu, another border town (no. 40) probably located to the west of Ḫalba and Nanu. If we take these few indications at face value, they imply that the raising of cattle, and probably of sheep and goats as well, was a major industry in the northern mountainous areas.

Along these same lines, the occurrence in several texts of the sequence Shalma (no. 37 on the border list, a name still current in the region), Aḫatu, and Yakunami (no. 19), in Ugaritic script *šlmy, ›aǵt, ykn‹m* (RS 18.479), takes us further to the east, toward the Urdu basin where the waters from several springs on the Gebel al-‹Aqra and the Gebel Kusseir flow into the Nahr el-Kebir. Aḫatu/*›aǵt* is certainly to be situated there. The attribution of several containers of flour "for the life of the weavers" of *›aǵt* (RS 86/2237) allow the conclusion that the shearing of the sheep raised locally, the washing of the wool (facilitated by the abundant sources of water), the spinning, and even the weaving of cloth, could be carried out locally. Without the most recent data, it would have been difficult to imagine such decentralization of the trades, however rational it may now appear." Similarly, is the "estate of the Mulukians" (*CTA* 74: 5) not to be linked to the fertility of the Gabla plain, where the management of irrigation must have contributed, as it did elsewhere, to the creation of municipal institutions?

Finally, one must be aware of the possibility of homonymy in the place names of the kingdom of Ugarit. Though we cannot yet give a complete list nor explain the origins of this homonymy, we can point out several cases: the four Ḫalba's (*ḫlb + ṣpn, ‹prm, krdm* and *gngnt*); one *›ar (y)* in the south (*CTA* 68; *PRU* II 134; *PRU* V 40: 4; 73; 74; RS 16.248 = *PRU* III, p. 48; RS 18.01 = *PRU* IV, p. 230; perhaps RS 17.43 = *PRU* IV, p. 217) and another in the north (*CTA* 69: 3; *PRU* 81; 176; *PRU* V 40: 23); one Shalma on the NW border near Mount Nanu (no. 37) and another in the NE part of the kingdom, in the direction of the Alawite mountains (*PRU* V 58). There is one Mount Ayali on the N border (no. 32) and another, attested only in Ugaritic *(›ayly),* south of Qaasab, near modern ‹Ayn al-Haramyieh (*PRU* V 26 and 118). In the

two latter cases, the distance between the two localities is above 20 km and since we are dealing with small towns, recourse to an explanation by homonymy is more satisfactory than pleading fantasy or distraction on the part of the scribe.

c. Receipts and Disbursements. (1) Deliveries and Taxes/Tribute. We saw above (C.1.b.[1]) that RIH 83/7+ records a list of contributions sent *(lʿik)* by several towns organized geographically in the list. But such precision is rather the exception. *PRU* VI 134 enumerates the lances (?) furnished by several villages. *CTA* 67 apparently enumerates quantities of jars of wine furnished by several towns of the kingdom, with a total, written in Akkadian, of 148 units. On the other hand, we have no way of knowing whether the jars mentioned in *PRU* II 84 (b gt + place name "in the estate of …") were in the process of delivery to the capital, or whether the list represents inventory. RIH 83/5 (Bordreuil et al. 1984: 431) is more explicit: it clearly deals with tax collection in the northern villages (*tgmr ksp dʿly w d* […] "total of the silver which went up […]." The total is stated to be 200 shekels of silver.

(2) Inventory Lists. C. Virolleaud introduced the phrase "états de solde" to refer to a great number of texts consisting of personal names followed by an indication of a quantity or weight. The numbers are sometimes written according to the Mesopotamian system of symbols (*PRU* V 16, 58 [toponyms], 87, 151; RIH 83/8 [unpublished]), sometimes spelled out as Ugaritic words according to the local system. The total *(tgmr)* is sometimes indicated at the end of the list, but one can rarely be sure whether it refers to distributions, perceptions, or payments, except in texts such as *PRU* II 131, where each numerical entry is followed by *šlm* "has paid" (only partial payments everywhere except in line 2); *PRU* V 36 *prs̀ qmḥ d nšlm* "*prs̀*-measure of flour which has been paid for (?)"; and RIH 83/7+, already quoted above, where the numbers correspond to what was sent *(lʾik)* by each town. In some cases the reference is to payments of money, probably for salaries. This is made explicit in *CTA* 113 by a marginal note in Akkadian (X *kaspa ša mariani* "X-amount of money of the Mariyannu"), but such a solution is only a surmise for *PRU* II 28–30. It is clear that the expression "four (jars of) wine for the Mariyannu" *(ʾarbʿ yn l mrynm)* in *PRU* II 89 means that the jars of wine are intended for the Mariyannu. But one does not find a corresponding expression phrased in purely monetary terms ("X-amount of money for Y-professional term"). All examples are of quantities of foodstuffs or of other products intended for a given professional group. We do not even know if such issues of goods consist of periodic payments in kind or of bonuses from an employer.

(3) Regular Distributions. Other texts illustrate periodical distributions (monthly, according to the extant texts) of rations (*ḫpr*). The recipients are sometimes identified: "list of rations for the royal personnel during the month "*iṯṯbnm*" (*PRU* V 11 *spr ḫpr bnš mlk b yrḫ ʾiṯṯbnm*). There are also records of food distributions (*ʾakl*) according to locality: by estates (*gt*, as in *PRU* V 13), or by households (*bt*, as in *PRU* II 99). These consist of legumes (*ʿšdm*—precise variety uncertain), of cereals (*kšmm* "emmer," *ḥṭm* "wheat," *šʿrm* "barley"), as well as wine (*yn*) and vinegar (*ḫmṣ*) measured by jars (*kdm*). Some texts (e.g., *PRU* II 98; V 13) indicate that a certain amount of the grains distributed to each estate should be set aside as seed. That is usually the largest part, with other parts to be used to feed oxen (draft oxen?) and for rations to personnel (*ḫpr bnšm*).

(4) Disbursements. It is difficult to say whether the texts in *PRU* 106–15 are records of extraordinary disbursements (elegant garments, precious stones) or whether they are everyday operations, as in *PRU* II 109 *spr npṣm d yṣʾa* "list of garments which were delivered (literally: went forth)." *PRU* II 107: 5–8 *mlbš ṯrmnm k yṯn w b bt mlk mlbš ytn lhm,* "when the garments of the *trmnm* became old, new garments were given to them in the house of the king (= from the royal palace)," refers to a distribution of clothing for the statues of divinities.

The distribution of raw materials to artisans is another form of disbursement. *CTA* 147 records a disbursement, of eight talents and 1200 (shekels) of bronze, to the metal-workers (*ṯlṯ d yṣʾa … l nskm ṯmn kkrm ʾalp kbd [m]ʾitmkbd*), whereas *PRU* V 51 refers to a large order *(ʾiršt)* from the *yṣḫm* (a professional term of uncertain meaning). Another text (*CTA* 119) records the distribution of small arms (bows and quivers) to persons from various towns in the southern district, though the subtotals are three times given incorrectly. *PRU* II 123 does not indicate for whom were intended the arms and accessories listed there,

but the successive mention of forty bows and one thousand arrows allows the conclusion that the usual consignment of arrows per quiver was twenty-five. *PRU* II 121 records the receipt by the palace (*ʿrb bt mlk* "entered the house of the king") of eight chariots *(mrkbt),* outfitted with harnesses *(ṣmd),* two of which are not equipped with weapons. Of fifty-seven royal personnel *(bnš mlk)* who were under the supervision of (*bd* "in the hand of") someone named *prṯ,* twenty-nine received *šš̈lmt*-cloth and twenty-eight *šʿrt-cloth* (*PRU* II 25). According to *PRU* V 98, certain shepherds *(rʿym)* receive *šʿrt-cloth* while their subordinates *(ṣ̀ġrm)* receive *šš̈lmt*-cloth (cf. *PRU* II 118 and *PRU* V 52).

(5) Gifts. Reference to gifts is by the term *mnḥ* "to offer." Either receipts or disbursements may be so designated, depending on whether the tablet was prepared for the giver (perhaps *CTA* 141) or for the beneficiary. Sometimes there is no indication of origin (e.g., RIH 78/2; Bordreuil and Caquot 1980: 362). The meaning of *ndb* in the heading of RIH 78/19 (ibid., p. 364) is more ambiguous: it could designate sheep that have been "furnished." *PRU* V 107 may also be a list of gifts, though this is not stated explicitly.

d. Inventories and Stocks. (1) Movable property. The most important and valuable movables are the tribute items for the Hittite court (RS 11.732 = *PRU* III, p. 181) and the "trousseau" of the queen of Ugarit Aḫatumilki (RS 16.146 + 161 = *PRU* III, pp. 182–86). Such lists are usually more modest (*PRU* V 102; VI 168; AO 21.088 = Caquot and Masson 1977: 10–15; RIH 83/24 + 84/2 = Bordreuil 1987: 289–90) and more varied (*PRU* VI 155). They can sometimes remind us of the classified section of a newspaper: we learn from *PRU* V 48 that a stock of various metal instruments may be obtained in Atallig—prices and quantities are indicated. The same text adds the information that a family from *mrʾil* has settled in the area of *ḫrbġlm.* The items in a given text are usually, however, more homogeneous: wood (*PRU* VI 113), metals to be worked (*PRU* VI 140), instruments (*PRU* VI 141, 142, 157), vessels (*PRU* VI 147), wine (*PRU* II 91, 92), cereals (*PRU* VI 98–111), oil (*PRU* II 96: production of an olive orchard owned by the queen in the Nahr el-Kebir valley), fowl (*PRU* II 129), ovids-caprids (*PRU* VI 120; RIH 78/19 = Bordreuil and Caquot 1980: 364–65), bovids (*PRU* VI 118, an account of bovids in northern towns; 115, an account of bovids managed by a certain family), equids (*PRU* II 138, 139), or garments (RS 15.76 = *PRU* VI p. 99). In *PRU* V 38 various items are classified by estate: teams of draft animals *(ṣmdm),* or employees *(bnšm)* under the responsibility of an assherd *(rʿy ḫmrm)* or of a gardener *(nġr mdrʿ).* Alongside multi-entry lists of items distributed to several persons, *PRU* V 50 enumerates the private effects of an individual traveler, perhaps a tradesman who, burdened with his scales *(mznm)* and bedding *(mrbd, mškbt),* had to travel armed *(mrḫm)* because of the dangerous roads.

(2) Real Estate. The parcels of land mentioned in these texts are usually "fields," without further qualification. The marginal note on *PRU* V 11 refers to twenty-six employees *(bnš),* with the concluding notation *bʿl šd,* that could mean either "agricultural workers" (literally "workers of the field") or "land owners." The latter meaning is suggested by the occurrence of the same phrase in *PRU* II 39 where it appears to describe masons (*ḥrš bhtm*). It may be preferable to see here artisans who have acquired property rather than part-time workers in both agriculture and construction. *PRU* V 23, where some twenty *bnšm* are said to own oxen, supports this interpretation. Individually owned property was not restricted to the territory of one's own village; thus according to *PRU* V 26 inhabitants of *snr* and *mʾidḫ,* northern towns in the area of modern Ras al-Bassit, owned steep *(ʿqb)* fields in *ʾayly* in the mountainous area to the east of their towns (on *ʾayly,* see above). *PRU* II 79 lists vineyards *(šd krm)* after fields, whereas *PRU* II 81 deals exclusively with vineyards. Salt flats are mentioned in *PRU* V 96 and in RS 19.18 (= *PRU* IV, p. 291). The latter text situates them near Atallig, thus confirming the localization of this town near the sea (cf. *PRU* V 56 *ʾany … d bʾatlg* "boat … that is at Atallig").

2. Official Acts and Commercial Documents. Under this heading are grouped texts relative to the royal administration, whether issued by the palace or addressed to it, as well as those representing private business, finance, and contractual obligations, though the documents are so laconic as often to preclude a decision regarding the origin of the text.

a. Palace Documents. Judging from the extant data, one must conclude that seals inscribed in alphabetic cuneiform were rare (Bordreuil 1986: 292). From one of them, a seal mounted as a signet ring,

imprints have been discovered, one on a tablet (RS 16.270 = *PRU* III, pp. 41–44), the other on a bulla (RIH 83/21). Its inscription reads "seal of ʿAmmiyidtamar, king of Ugarit" (Bordreuil and Pardee 1984). Not only were such seals rare but they were used rarely: official documents dated in the reigns from that of Niqmaddu II until that of his grandson Niqmaddu III, whether recording acts *before* the king or acts *of* the king, are authenticated by means of the dynastic seal (see *Ugaritica* III, pp. 77–78). Tablets of foreign origin will, of course, bear the seal impression of the sender, often the Hittite king.

(1) Documents Issued from the Ugaritic Palace. *Acts before the king.* Following J. Nougayrol (*PRU* III, pp. 27–28), these have been classified as: *gifts* to a spouse (RS 16.263 = *PRU* III, p. 49, Niqmaddu II), to sons (RS 16.143 = *PRU* III, pp. 81–83, Niqmepa), or to other parties (RS 15.146 = *PRU* III, p. 58, Niqmaddu II [?]); *purchases* (RS 15.119 = *PRU* III, pp. 86–87, Niqmepa); *sales* (RS 15.136 = *PRU* III, pp. 121–22, Ammistamru II); *exchanges* (RS 15.70 = *PRU* III, p. 130, Ammistamru II); *division* of familial property (RS 15.90 = *PRU* III, p.~ 54, Niqmaddu II); *adoptions* into sonship (RS 15.92 = *PRU* III, pp. 54–56, Niqmaddu II), or into brotherhood (RS 16.344 = *PRU* III, p. 75, Ariḫalbu); *mutations* from status of earnest money to property (RS 16.131 = *PRU* III, pp. 138–39, Ammistamru II); and *verdicts* (RS 16.205 = *PRU* III, pp. 153–54, Ammistamru II).

Acts of the king: royal *gifts* (*PRU* II 8, 9; RS 15.127 = *PRU* III, p. 132; *PRU* VI 28–31), with (RS 15.109 = *PRU* III, pp. 102–5, Niqmepa; VI 27, Ammistamru II) and without (RS 15.85 = *PRU* III, pp. 52–53, Niqmaddu II) counter-gifts, and with conditions (RS 15.114 = *PRU* III, pp. 112–13, Ammistamru II); *alienation* of property (RS 15.137 = *PRU* III, p. 134, Ammistamru II); *re-attribution* of property located in special zones (*PRU* VI 55, Ammistamru II); *exchanges* of landed property (RS 16.197 = *PRU* III, pp. 150–51, Ammistamru II [?]), of houses (*PRU* III, pp. 164–65, between Ammistamru and a private citizen); *purchase* of land by the queen (*Ugaritica* V 159–61); *manumission* of slaves (RS 16.267 = *PRU* III, p. 110, Ammistamru II); *granting* of franchises (RS 16.238 = *PRU* III, pp. 107–8, Ammistamru II); *confirmation* of gifts (RS 16.249 = *PRU* III, pp. 96–98, Niqmepa), of purchases (RS 16.174 = *PRU* III, p. 63, Niqmaddu II), of property rights (RS 15.88 = *PRU* III, p. 88, Niqmepa); *last wishes* (RS 16.144 = *PRU* III, p. 76, Ariḫalbu).

(2) International Documents. These texts enable us partially to follow the relations between Ugarit and her neighbors from the reign of Niqmaddu II until that of Ammurapi, the last king of Ugarit. RS 17.132 (*PRU* IV, pp. 35–37) is a proposal from the Hittite king Shupiluliuma for an alliance with Niqmaddu against the states of Nuḫashe and Mukish. In exchange for this protection, Ugarit is to pay an annual tribute calculated on the basis of her wealth, adding up to 22,000 shekels-weight of wool cloth, eleven tunics, two gold cups and three silver cups, to be divided among the king, the queen, the crown prince, and the four principal dignitaries of the Hittite court (RS 17.227 = *PRU* IV, pp. 40–44; this text is also known in a Ugaritic version, RS 11.772 = *CTA* 64). With this list of "gifts" one should compare the lists recorded in RS 11.772 and 11.732 (*PRU* IV, pp. 44–48). Ugarit obtained as reward for her loyalty substantial frontier modifications, particularly at the expense of her northern neighbor Mukish. These changes were sanctioned by RS 17.340 (*PRU* IV, pp. 48–52; see above C.1.b.[2]) and confirmed by Murshili II, first for Niqmaddu, then for his successor (RS 17.338, etc. = *PRU* IV, pp. 85–101). Murshili II also intervened with his authority to redefine the southern border of Ugarit after the seccession of Siyannu (RS 17.335 = *PRU* IV, pp. 71–78), a territorial reduction that led the Ugaritic palace to request a reduction of tribute (RS 17.382 = *PRU* IV, pp. 80–83). Finally, we have the record of a proposal from the king of Carchemish, Initeshub, for a military alliance against Nuḫashe (RS 17.334 = *PRU* IV, pp. 54–55).

Several international matters were decided by the Hittite sovereign Tudḫalia IV during the reign of Ammistamru II. For example, it was he who ruled against the sons of the queen of Ugarit, perhaps the reigning king's own brothers, who were removed from the line of succession as a result of palace intrigues the details of which are still unknown to us (RS 17.352, etc. = *PRU* IV, pp. 121–24). Another case was that of Ammistamru's divorce from the daughter of the king of Amurru (RS 17.159, etc. = *PRU* IV, pp. 126–28; RS 1957.1 = Fisher 1971), who was also the daughter of the king of Amurru (as well as the sister of the queen involved in the preceding case?)

On the other hand, it was Inteshub of Carchemish who had to set the damages for destruction that occurred during a frontier incident with Siyannu (RS 17.341 = *PRU* IV, pp. 161–63). He also, logically enough, was responsible for setting up the accord with regard to the civil penalties incurred by a thieving merchant of Hittite origin (RS 17.128 = *PRU* IV, p. 179) and the penalty for murder committed against citizens of Carchemish living in Ugarit or as citizens of Ugarit in Carchemish (RS 17.230 = *PRU* IV, pp. 153–54; an analogous decision by Hattushili III directed to Niqmepa is known from RS 17.229 = *PRU* IV, p. 106; cf. RS 17.146, 18.115 = *PRU* IV, pp. 154–60). In RS 17.158 (= *PRU* IV, pp. 169–74) we find the record of such a sentence being applied, with the stipulation that the royal decision was without recourse. Some of these acts were declared by the king of Ugarit then submitted to arbitration by Initeshub. Two undated documents record judgments by the king of Carchemish, probably Initeshub, in cases of (unjust?) imprisonment during which the detainee died (*PRU* VI 35–36). This same monarch ratified an act of Ammistamru whereby a man convicted of larceny was redeemed and assigned to the royal retinue (RS 17.108 = *PRU* IV, pp. 165–66). According to other texts, the king of Ugarit could be one of the parties in a suit and Initeshub the judge (RS 17.129 = *PRU* IV, pp. 166–67). At the conclusion of a case lost by a Ugaritic citizen, the king of Ugarit paid out to the winning party, by the intermediary of the prefect of Ugarit, the amount of the irrevocable fine set by Initeshub (RS 17.110 = *PRU* IV, pp. 178–79). Initeshub's gift of a building to Ammurapi was certified by an official act from Initeshub (RS 17.68 = *PRU* IV, pp.164). An act from the time of Ammistamru, certified by a long list of witnesses (RS 17.319 = *PRU* IV, pp. 182–84), records the return of certain stolen property to merchants of Ura, who renounce the right to further judicial action against Ugarit in the matter. From the same period is a verdict by Queen Puduḫepa of Hatti rendered in the case of a sunken Ugaritic ship (RS 17.133 = *PRU* IV, pp. 118–19).

The reign of Ibiranu seems not to have got off on the right foot: when he took the throne of Ugarit, he neglected to send greetings and presents to the Hittite sovereign (RS 17.247 = *PRU* IV, p. 191). The king of Carchemish wrote to remind him of his obligations, urging him to send, before the arrival of the Hittite inspector, the contingents of soldiers and chariots that he was required to furnish (RS 17.289 = *PRU* IV, p. 192), as well as logs, specifications for which had already been sent (RS 17.385 = *PRU* IV, p. 194). He was further enjoined to accord treatment in accordance with his rank to a son of the Hittite king who was scheduled to take up residence in Ugarit (RS 17.423 = *PRU* IV, p. 193). The king of Carchemish returned to the territorial question in a text confirming the borders of Ugarit as set out by Armaziti (RS 17.292 = *PRU* IV, p. 188). In yet another text (RS 17.314 = *PRU* IV, p. 189), this same Armaziti dismissed the complaint of a tax-collector against a merchant in the service of the queen of Ugarit, whereas in an international juridical degree witnessed by little merchants from Ura he was himself condemned to pay a fine to the king of Ugarit and to a third party (RS 17.316 = *PRU* IV, p. 190). Finally, we may cite a letter of introduction addressed to the prefect of Ugarit for an agent of a high Hittite official named Ebina'e; included in the letter was a stipulation requiring exemption from taxes (RS 17.78 = *PRU* IV, pp. 196–97).

To the reign of Niqmaddu (III?) may be attributed a document recording the redemption by the king of several persons from the control of a certain Kiliya, king of Zinzaru (RS 18.02 = *PRU* IV, p. 201). Another text (RS 18.20 = *PRU* IV, pp. 202–3) attaches a heavy fine to any attempt on the part of a merchant named Kumyaziti, perhaps from Ura, to appeal a decision in favor of the Ugaritic king rendered by a high official of Carchemish.

From the reign of Ammurapi we know a verdict by Talmiteshub according to which certain goods belonging to the Ugaritic king should be returned to him by Eḫlinikkaly, daughter of the Hittite king (RS 17.226 = *PRU* IV, p. 208). In return (?), the king had to give back to her certain goods that she had brought in as dowry (RS 17.355 = *PRU* IV, pp. 209–10).

(3) International Commerce. The geographical location of the port city of Ugarit, at the end-point of various routes extending into Asia and with Cyprus only a few kilometers away by sea, gave her a natural door onto the Aegean world and dictated that this industrious people should devote itself largely to international, even intercontinental, commerce. Not only do we find the mention of "shipbuilders" (*ḥrš ʾanyt: PRU* II 40) and of "sailors" (*ṣbʾu ʾanyt: CTA* 79: 7), but, as we have seen above, of an actual guaranteed contract for the rental of ships (*PRU* V 106). Despite its fragmentary condition, one can detect

in *PRU* V 56 reference to loading a (foreign?) ship docked in Atallig. Maritime shipping at that time involved cabotage (sailing near the shore and putting in near to shore at night), which more or less automatically entailed stopping at every port. *PRU* V 95 reflects this practice, for it records the following commodities and destinations: 660 jars of oil for an Alashiot (Cypriot), 130 for an Egyptian, 100 for a Rishian, and another quantity (now broken) for an Ashdodite. The text does not state explicitly that these items for customers in various localities made up the cargo of a single trip, but the enumeration does bring to mind the customary cabotage route between Ugarit (the town of *rʾiš* was within the kingdom of Ugarit), Ashdod, Egypt and out into the Mediterranean (to Cyprus?). The activities of foreign merchants were regulated by an edict of Ḫattushili III (RS 17.130 = *PRU* IV, pp. 103–5), stipulating that the merchants from Ura in Cilicia could not reside in Ugarit during the winter. Thus they could not establish permanent residence in Ugarit but, on the other hand, the king of Ugarit was obligated to assure that debts owed to them by Ugaritians were honored, if necessary by surrendering the debtor and his family to the creditor as slaves. Certain monetary payments by Ugaritians from southern localities (*PRU* VI 138) seem to be in connection with the crew of a ship, involving at least ten men. Do these payments represent venture capital for a maritime commercial operation? From RIH 83/22 (Bordreuil et al. 1984: 431–33) we clearly see that commercial activities by Ugaritians (here perhaps men of Reshu) had a broad geographical extension, as far as Carchemish, where an emissary with partial financial backing from the king is depicted as going in order to take care of a problem *(ḥtb)* related to ships. Did these ships belong to the king of Ugarit, as did the *ʾan[y]t mlk* of *PRU* V 57? In a merchant metropolis as cosmopolitan as Ugarit, a table of weights and measures (*Ugaritica* V, pp. 251–57—recovered in a sadly fragmentary condition) as well as polyglot vocabularies (*Ugaritica* V, pp. 230–51) were indispensable for a proper knowledge of the equivalence between different systems, local or regional, for converting from one system to another, and for understanding terminology in another language.

b. Private Documents. (1) Royal Guarantees. There is one mixed document (*PRU* VI 45) that covers three different transactions: first a redemption of real estate, followed by a royal donation of land and of servants. But such a diverse document is exceptional. Most fall into relatively discrete categories. These are, following Nougarol's classification: *gifts* to a wife (RS 8.145 = *Syria* 18 [1937] 246), to a son (emancipation: RS 16.129 = *PRU* III, pp. 32–33), to a daughter (dowry: RS 16.61 = *PRU* III, p. 39), to a daughter-in-law (RS 15.85 = *PRU* III, pp. 52–53); *purchases* of real estate (RS 15.37 = *PRU* III, p. 35); *sales* of real estate (RS 15.182 = *PRU* III, pp. 35–36); *redemption* of goods and real estate ("RS 8.213" = false number for RS 8.146 = *Syria* 18 [1937] 247) or of servants ("RS 8.208" = false number for RS 8.303 = *Syria* 18 [1937] 248 = *PRU* III, p. 110).

(2) Guarantees Before Witnesses. *PRU* VI 40 records the purchase of the paternal domicile by a sibling from his brothers; this was attested by five witnesses. The document was written by a scribe who is named and who is also one of the five witnesses. Elsewhere, three brothers give a quitclaim to a fourth brother (*PRU* VI 50) before eight witnesses—again the scribe was one of the witnesses. The various types of adoption were also effected before witnesses: There were four witnesses (one of whom was the scribe) to *PRU* IV 37. On the other hand, we have adoptions into brotherhood before witnesses (*Ugaritica* V 81) and before the king (RS 16.344 = *PRU* III, p. 75). Texts such as *PRU* V 116 prove that the scribe was not always one of the witnesses.

Witnesses seem to have played an important part in sales on credit (*PRU* V 53, 116). One such transaction is found in two slightly different versions (RIH 83/12 [see Bordreuil et al. 1984: 430–31] and 84/8): the second text may contain a correction of the first. The seller's witnesses (one witness per entry in these texts) is given as usual; then a certain *bʿl mšlm* is added, who may be the buyer's witness (Bordreuil 1987: 295). Other texts (*PRU* II 161; V 46, 79; RIH 84/3 [see Bordreuil 1987: 294]) refer to the *ʿrbn*, the "guarantor" whose presence probably facilitated the launching of a commercial enterprise undertaken by partners in different localities.

(3) Declarations. *Property transfers.* These were expressed as follows: "field *(šd)* of PN_1 is transferred to *(1)* PN_2" (*PRU* V 89). The location of the real estate can be included in the formula of transfer (e.g., *PRU* V 29). In *PRU* II 104 are references both to individual fields under the management of the *skn*

("prefect") and to a large estate *(gt),* whereas in *CTA* 82 fields are organized according to the professional categories of the owners.

Invoices and debts. PRU II 110 indicates the value of certain tunics and of the jewels with which they were decorated. When the document was prepared these items were either in the process of delivery or already delivered—the document itself is probably an as-yet-unpaid invoice. *PRU* II 109 is a "disbursement" document but the price of the principal item is mentioned, and one may interpret this text as a sort of invoice if one is willing to admit that the price of the other articles is assumed to be known. *PRU* II 131 is, as was observed above (C.1.c.[2]), a summary of partial payments that have already been made. *PRU* V 100 and 101 (the latter of which bears the heading *ḥṯbn*) contain lists of amounts of metals, garments, precious stones, cattle and sheep. The total values in the two texts are, respectively, 250 and 1300 shekels of silver. RS 22.03 (Bordreuil 1981) is a message enumerating several deliveries already made. *CTA* 66 may be termed a *pro forma* invoice: it enumerates the number of days (of work?) that certain northern towns of the kingdom are to render *(tššlmn).* The Ashdodite products listed in *PRU* VI 156 are certainly "for sale" *(ana makāri). PRU* II 143 is apparently unique: it seems to divide up among several persons the proceeds of the sale of a field, ownership of which had previously been divided between two persons in a $^{2}/_{3}$ to $^{1}/_{3}$ ratio. *PRU* VI 116 is an account of sums paid by the inhabitants of Nanu for pasturage rights. RS 31.80 (= *KTU* 4.755) enumerates sums paid by *yrmn* to different persons to be credited to the "house" account *(šlm ʿl bt)*.

According to *PRU* II 132 a woman of Siyannu owed twenty shekels of silver. Such recourse to credit seems to have been relatively common: a group of three Ugaritic tablets from Ras Ibn Hani casts new light on the workings of the credit system. The first of the three, twenty-two lines long (RIH 84/33 [unpublished]), contains a list of debts (X *ksp ʿl* PN "X amount of money upon [= to the debit account of] PN ") owed by several persons hailing from various provincial towns, beginning with those from Ushkanu. The second document (RIH 84/6 [Bordreuil 1987: 295]) repeats in nine lines the same amounts followed by the personal names of the first four lines of RIH 84/33 preceded by the word *ʿm* "with, toward," the preposition used to express a credit amount (cf. *PRU* II 143: *ʿmn*). The third text (RIH 84/4 [Bordreuil 1987: 294]) repeats the end of the list of debtors from RIH 84/33 and adds there more debtor accounts. The three tablets may be organized chronologically as follows. The first is RIH 84/33. It lists the amount of each debt and the identity of the debtors; it is organized according to the debtors' towns of residence. RIH 84/6 came next. It records the first repayments, corresponding to the names at the head of the first text. Some time later, RIH 84/4 was written for the purpose of noting payments in arrears. It omits the names of those who had already made their payment and brings the list up to date by adding debts incurred subsequently.

ʿULA, AL- (PLACE). See DEDAN (PLACE).

ULAI (PLACE) [Heb *ʾûlāy* (אוּלָי)]. The river beside which Daniel received his vision of the two-horned ram and the he-goat (Dan 8:2, 16). It flowed past the N section of ancient Susa, the capital of Elam which later became the winter capital for the Persians. Modern scholars have determined that the Ulai was actually an artificial irrigation canal, starting about twenty miles NW of ancient Susa at the Choaspes River (modern Kerkha), and extending in a southeasterly direction to the Coprates River (modern Abdizful, Waterman 1947: 319). The canal was known as *u-la-a* in Akkadian sources (see Parpola 1970: 366 for references) and Eulaeus by classical authors (Pliny, *HN* vi.27). Ashurbanipal took credit for making its waters red with the blood of his enemies in 640 B.C.

Some have argued that the word translated "river" or "canal" in Dan 8:2, 3 and 6 *(ʾûbal)* is a corruption for the Akkadian loanword *abullu* ("city gate"), known in various forms in Mishnaic Hebrew, Targumic Aramaic, and Syriac (Hartmann and Di Lella *Daniel* AB, 223–24; Ginsberg 1948: 57). The LXX, Syriac and Vg support this reading. Thus, Daniel would have received his vision, not beside the banks of the Ulai, but at "the Ulai Gate" in Susa (contrast RSV with NJB at Dan 8:2). This gate presumably opened onto a road leading to the canal N of the city. The unusual expression *bên ʾûlay* in v 16 has been understood as "between the gate" based on a variant in Theodotion (Hartman and Di Lella *Daniel* AB, 227). Lacocque takes *ʾûlay* in v 2 as a wordplay on its homonym meaning "perhaps" as an expression of hope or prayer. In this way, the name of the river (or gate) was carefully chosen to express the possibility that the exiles may experience a miraculous reversal of their situation (*Daniel* CAT, 157).

BILL T. ARNOLD

ULAM (PERSON) [Heb *ʾûlām* (אוּלָם)]. **1.** The Manassite son of Sheresh, who is mentioned only in 1 Chr 7:16–17. His name is from the Hebrew *ʾûl* and probably meant "first" or "leader" (Noth *IPN*, 231). According to the MT, his brother was Rakem (the LXX omits Rakem from the genealogy), and his son was Bedan. Some form of textual corruption is undoubtedly responsible for the introduction of the latter in v 17 with the phrase, "The sons of Ulam." While an early copyist may have replaced the singular form "son" with the plural "sons" (the Vulgate reads "son"), it is also possible that an earlier form of the genealogy named additional children of Ulam.

2. A Benjaminite tribal leader, whose sons were archers in the military (1 Chr 8:39–40). Ulam was the firstborn son of Eshek, and his two brothers were Jeush and Eliphelet. Ulam's sons and grandsons were numerous—totaling 150 (190, according to a few LXX mss)—and were recognized for their military prowess.

The two verses that treat Ulam and the other sons of Eshek are problematic for several reasons. First, they represent a change of syntax from the earlier forms in the chapter to the form: "the sons of PN: PN and PN " (Braun *1 Chronicles* WBC, 127–28). In addition, the verses are only loosely attached to the rest of the chapter. While Eshek, the father of Ulam, is linked to Azel and called "his brother" in vv 38–39, when Azel and his sons are listed again, along with other Benjaminites, in 9:35–44, the family of Eshek is unmentioned. Therefore, it has been proposed that vv 39–40 may have been a genealogical fragment—perhaps from a military census, as the military vocabulary suggests—that was inserted at the end of chap. 8 (Curtis and Madsen *Chronicles* ICC, 167; Braun WBC, 127–28). Finally, the number of Ulam's sons and grandsons (150) seems a bit high (Rudolph *Chronikbücher* HAT, 82).

Benjaminites appear again as bowmen in 2 Chr 14:7 (—Eng 14:8), where they number 280,000 and constitute a major contingent of Asa's army. While most interpreters believe that this number is far too large, some think that authentic military records lie behind it and suggest that "Judah" and "Benjamin" had come to designate the S army's heavy and light divisions, respectively (Junge 1937: 37–45; Williamson *Chronicles* NCBC, 262–63). Others, however, deny that the verse reflects the conditions of Asa's reign and believe that the author of Chronicles composed it to show how God had blessed Judah (Welten 1973: 79–82).

M. PATRICK GRAHAM

ULCER. See SICKNESS AND DISEASE.

ULLA (PERSON) [Heb *ʿullāʾ* (עֻלָּא)]. While Ulla's three sons are listed in the Asherite genealogy in 1 Chr 7:39, this figure stands detached from the surrounding material. Missing from the Syriac, he is not connected to earlier figures nor does his lineage continue beyond his sons. Scholars have proposed that Ulla is a textually corrupt form of a previous name in the genealogy; suggestions include Shua, Shual, Amal, and Ara. See also Rudolph *Chronikbücher* HAT.

JULIA M. O'BRIEN

ʿUMEIRI, TELL EL- (M.R. 234142). Neither the biblical nor ANE identification for this Transjordanian tell some 10 km S of Amman is yet known for sure. Ibach has suggested it to be the Amorite Heshbon (1978: 209–13; cf. Num 21:21–30) while Redford (1982: 66–70; cf. Judg 11:33) considers it to be biblical Abel-keramim. Geraty (1985: 87) has wondered if it might be one of the towns mentioned in Jer 48:21–25. Its linguistic root can be related to the meaning "to be plentiful, copious, abundant, abound (water); to overflow" (Geraty 1985: n. 6). If so, the name would obviously have reference to the tell's spring, the only natural water source between Amman and Madaba.

The name ʿUmeiri actually applies to three tells roughly 250 m apart, now divided not only by a wadi but also the freeway from Amman to its international airport to the S. These tells lie on a major ancient N -S route at the point where the Madaba Plains join the Ammonite hill country. In fact Tell el-ʿUmeiri

(West) is the first fortifiable hill (with water) on this route N of the plains. The NE tell is the latest in terms of its occupation history: Islamic Period. The SE tell is smaller and earlier in terms of occupation: Hellenistic, Roman, and Byzantine Periods. The W tell is largest, approximately 16 acres in size and higher—ca. 900 m in elevation, some 60 m above the wadi. At its base is the major natural water source. The slopes of the tell incorporate several terraces but rise steeply on all sides except the W where the hill joins a ridge. Considerable evidence of architecture is to be seen on the site, especially on the summit. The summit, though irregular, is fairly flat. It drops off abruptly on all sides along a scarp which has proved to be the line of a defensive wall. Huge quantities of sherds can be found on the surface of the site. These range in date from Chalcolithic through the EB, MB, and LB (especially on the slopes) to Iron Ages I and II (primarily on the summit), and a very few Hellenistic, Roman, and Byzantine.

Andrews University initiated the excavation of Tell el-ʿUmeiri in 1984 both as a successor to the excavation of Tell Hesban and as part of a more comprehensive Madaba Plains Project that has included the excavation of three other sites as well as a regional survey within some 5 km radius of the tell (designed in part to provide understanding of changes over time in the food system of the region). This was the first excavation of the tell though a few explorers and archaeologists had previously visited the region, notably Ibach (1978; 1987), Franken and Abujaber (1979), and Redford (1982). Successive seasons of excavation have taken place in 1987 and 1989.

The excavations at Tell el-ʿUmeiri have taken place in seven Fields and have discovered stratified remains from EB III (ca. 2500 B.C.) to the Early Roman Period (ca. 1st century A.D.).

1. Early Bronze Age. The earliest remains found were on the S and N shelves of the mound and indicate that an EB town covered the complete site. The most extensive of these remains came from the S shelf (Field D) where three broad terraces organized roads and domestic dwellings. The most coherent of these remains came from the middle terrace where a street ca. 1.5 m wide separated two housing units, along one wall of which was a line of stones, perhaps intended to hold fodder for a tethered beast of burden. On the other side of the street three walled spaces produced significant remains with bins and a cobbled hearth suggesting food processing and perhaps animal sheltering. A large storeroom contained the remains of 28 storage vessels of various types, mostly jars. Protected by the debris from the superstructure of the house which fell on top of the jars during its destruction and preserved by the fire that ravaged the building, the vessels still contained carbonized seeds of the foods used by the ancient family that lived there. These included legumes (lentils and garbanzos), fruits (grapes and figs), and grains (wheat and barley). Two jugs may have contained oil. Many of the vessels were the bottoms of jars reused as large bowls; apparently nothing was discarded that had a use.

On the N slope (Field G), a “V”-shaped topographic feature suggested wall lines descending the slope but excavations uncovered no such feature. Instead an unstratified dump seemed to sit on top of EB tumble.

The EB Age was the age of urbanization when people first settled in large groups, many times with massive fortification walls surrounding the settlement. Tell el-ʿUmeiri seems to represent a modest expression of this process. The housing complexes were made up of livingrooms, storerooms, courtyards, and animal shelters. Each complex was a series of structures built around courtyards, unlike the coherent, single-house structures of later periods. It is almost as if, in this early period of urbanization, people had simply moved their farms tightly together. No fortification wall for the town has been found as yet and, because the southernmost materials have been strongly eroded, it would appear that none existed on the S slope. However, the town was apparently well-planned with housing units separated by narrow, straight streets, and built on well organized terraces climbing up the slope of the hill. The finds suggest an orderly, neat, and efficient use of space and resources for a population that was perhaps the largest Tell el-ʿUmeiri ever saw. All subsequent settlements were smaller in size.

2. Middle Bronze Age. The site seems to have been resettled toward the end of the MB Age. The inhabitants abandoned the S shelf and reduced the intensity of occupation on the N slope and E shelf. However, the excavations in Field B, on the W slope of the summit, have probed ca. 1 m into an earthen

rampart containing a few potsherds from MB II. The top layer of the rampart sloped at ca. 30° and was made of beaten earth with a few thin lenses of crushed lime.

3. Late Bronze Age. The first earth layers from the LB were uncovered in 1989 at Tell el-ʿUmeiri, in Field F, on the eastern shelf. Although no architectural remains could be isolated, the layers produced a Cypriot Base Ring sherd and a well-preserved Astarte fertility plaque common to the period.

4. Iron I Period. In 1989 it became clear that the casemate fortification system found previously in Field B on the W side of the summit was of Iron I date. Outside the casemate wall, an earthen rampart almost 2 m thick was constructed immediately on top of the MB rampart. The relationship of the layers in the rampart to the courses in the casemate outer wall, suggests that the rampart was to provide support against the weight of debris building up inside the wall. All three layers of the rampart produced Iron I pottery. At the bottom of the rampart a revetment wall supported the rampart where a dry moat plunged into bedrock ca. 4 m. The rock and clay that was excavated from the dry moat went to lay the first layer of the rampart. The W slope was the most vulnerable to attack and the occupants of the site apparently wanted a strong fortification system—perhaps the first so far found in Palestine that included a casemate wall, a rampart, and a dry moat.

Excavations inside the casemate room and further inside the town revealed a deep destruction layer ca. 2 m thick which marked the end of Iron I in this field. The destruction layer consisted primarily of burned mudbricks and stones, but also included burned wooden roofing beams. The fire was so hot that it turned some of the wall stones to lime. Beneath the destruction debris in the casemate room were smashed storage jars, most of which had collared rims, typical of Iron I throughout Palestine. Several of these large jars contained the same potter's mark on the handles, but none sported precisely the same type of collar.

Over this destruction the remains of an early Iron II storeroom were found. In Fields A and F an ash layer provided the stratigraphic boundary between Iron I and Iron II as well. It would thus seem that the destruction which ended Iron I at Tell el-ʿUmeiri was sitewide. Is it possible that this destruction was caused by the army of King David attacking the Ammonites? Bathsheba's husband, Uriah the Hittite, was killed at the walls of nearby Rabbath-ammon when David conquered that city (2 Sam 11). Could ʿUmeiri, probably one of the Ammonite border towns, have been destroyed during this same campaign? Although the pottery in the casemate room would seem to be somewhat earlier than the early 10th century B.C., when David lived, it is possible that such large storejars lasted for long periods of time.

5. Iron II and Early Persian Periods. Field A (at the W end of the summit) produced extensive remains from at least two phases stretching from the Late Iron II period into the beginning of the Persian Period. Three large buildings dominated the excavated area during the earliest phase. Only two or three rooms of a large building with very thick walls have been found in the S, but the central building has been completely exposed. It consisted of four rooms—three long rooms abutting a broad room, a style typical in W Palestine, but now found more frequently in Transjordan as Iron Age sites are excavated. The third building (on the N) was oriented at a right angle to the four-room house and included a broad room with at least five long rooms abutting it. One of the rooms was formed with a row of pillars. This third house had doorways connecting all the rooms. It appears that at least the first two buildings were basement structures, that is, the walls were built into a large pit dug for the whole structure. No individual foundation trenches were found for any wall and immediately outside the buildings Iron I layers were found. Surfaces were found only in the N building where a typical domestic repertoire of objects, such as grinding tools, was found. However, the thick walls, the basements, and the large size of the two S buildings suggest they were used for non-domestic, administrative activities. Perhaps they should be connected with the royal seal found in this area in 1984.

On a ceramic cone found in the sift from soil near the mound's surface was a seal impression depicting a winged scarab flanked by two standards surmounted by sun discs and crescent moons and the Ammonite letters: *lmlkm-ʾwr ʿbd bʿl-ysʿ* ("belonging to Mikom-ʾur, servant of Baʿal-yashaʿ"The design is typical of the 7th/6th century B.C. (Younker 1985) and the script dates to ca. 600 B.C. (Herr 1985: 172). Both of the personal names in the inscription constitute "firsts" in biblical archaeology. The name of the owner, Milkom-ʾur, is the first known occurrence of the well-known Ammonite divine name Milkom as

one of the elements in an Ammonite proper name. Obviously, the person with this name was a prominent government official, because in these Iron Age seals, the name which follows the one identified as "servant of" is invariably royal. In this inscription, the royal name, too, is a "first": Ba‹al-yasha‹ is the first extra-biblical confirmation of the Ammonite king BAALIS mentioned in Jer 40:14. The slight difference in spelling between Jeremiah and the seal impression can be explained linguistically (Geraty 1985: 100; Herr 1985: 172).

Other important inscriptional finds from the Iron Age include a seal impression of Thutmose III found on an Iron I jar handle (Redford 1990); an early 6th century B.C. seal reading *lsm‹z,* "belonging to Shem‹az" (Geraty, Herr, LaBianca 1988: 250); an early 7th century B.C. scaraboid seal inscribed on both sides with the name of the owner, *l›l›ms bn tmk›l,* "belonging to ›El›amas son of Tamak›el"; and two seal impressions from different jar handles but apparently made by the same seal, reading, *lb›r‹mn,* "belonging to Be›er‹ammon," where it is likely that the national name ‹Ammon was used as the theophoric element.

Other major structures from Iron II were found in Field F on the eastern shelf. Three parallel walls may have made up a small gate structure with a narrow passageway between the eastern two walls. A later phase of structures was built over the walls of Field A, seemingly ignoring the earlier walls completely. Unfortunately, the surfaces that went with these walls have been destroyed by agricultural activities on top of the mound in the Middle Ages, but the pottery associated with them was Early Persian.

6. Early Roman Period. A small plastered pool or ritual bath with steps was excavated at the N edge of Field A. If there were associated structures, these were destroyed in subsequent use of the tell summit. The pool was dated by two Early Roman sherds which were found in the foundation of the structure which otherwise exhibited only Persian pottery.

7. Middle Ages. Because the pool mentioned above is normally subterranean and no associated buildings or pottery of the Roman Period were found anywhere in the immediate region, it appears that the Roman buildings have disappeared and that the present day surface of the mound has been lowered considerably since Roman times. It may be suggested that agricultural activity combined with wind erosion has lowered the top of the tell by as much as a meter. This may account for the large quantities of pottery and objects found in topsoil in Field A—wind erosion removed the soil but left stones, pottery and objects. Farmers removed the stones to the many large rock mounds scattered over the site.

8. Water Source. An important water source for the whole region lies at the base of the tell to the N. The Madaba Plains Project is attempting to date the construction associated with this source in Field E. So far it has been found that earth layers from Iron I were cut by a plaster and cobble installation built during Iron II times. The Iron II remains were, in turn, cut by an Early Roman plastered channel. Then, during Byzantine times, all structures were cut by a deep foundation pit for a tunnel leading to the well house.

LAWRENCE T. GERATY

LARRY G. HERR

UMM AL-BIYARA (M.R. 191970). A steep hill rising above the Nabatean city of Petra. There is clear evidence of an Edomite settlement on the top and Glueck, who first sounded the site in 1933 (1933: 13–14), identified it as biblical SELA‹, the Rock of Edom (Judg 1:36; 2 Kgs 14:7; 2 Chr 25:11–12; Isa

16:1; 42:11; Jer 49:16; Obad 3). Morton (1956: 26–26) sounded the site in 1955 and supported Glueck's conclusions. However, excavations by C.-M. Bennett, who sounded the site in 1960 and conducted two seasons of excavation in 1963 and 1965 (Bennett 1966) have cast doubt on this identification as she found no pottery dating prior to the end of the 8th century B.C. This is not in accord with 2 Kgs 14:7 and 2 Chr 25:11–12 in which Sela‹ is mentioned as an object of attack during the campaign of Amaziah, king of Judah (798–769 B.C.). Starcky (1964) also argued against the identification of Umm al Biyara with Sela‹ on textual grounds, preferring a more northerly location. Bennett (1966: 375) suggested that biblical Sela‹ be identified with a modern site of the same name a few km N of the Edomite capital of BOZRAH. Surface surveys there, however, have also produced no pottery earlier than the late 8th/7th centuries B.C. (Hart 1986). The matter remains unproved but current scholarship follows Starcky and Bennett and places biblical Sela‹ at either modern Sela‹ or at another site as yet unidentified.

Umm al Biyara is located in central Edom inside the Nabatean city of Petra near the modern village of Wadi Musa (El-Ji). It is several km off the presumed course of the Kings' Highway (the major N-S route through Transjordan) which must have passed near TAWILAN. By following the Wadi Musa W, it is possible to reach the Wadi Arabah.

The site is situated on the flat top of an isolated sandstone massif and is virtually inaccessable. A series of steps, cut during the later Nabatean period, has obliterated any evidence of the Iron Age access route but it must have been a difficult trackway. The name Umm al Biyara means in Arabic "Mother of Cisterns" and more than 50 large cisterns supplied water for the community.

Buildings are constructed of the local sandstone which breaks easily into slabs along natural striations. Houses were built on either side of a long N-S wall which ran along the entire area of excavation. Bedrock formed the only floor, and there is little evidence of plaster on either floors or walls. The area was partly destroyed by fire at which point the settlement was abandoned.

Finds indicate a domestic settlement rather than a fortress, despite the strong natural defenses of the site. In many rooms, large caches of loom weights were discovered. Pottery is typically Edomite in shape but, in contrast to other Edomite sites, is unpainted. It is not clear whether the reasons for this are chronological or relate to the nature of the site.

An absolute date is given by a royal seal impression which reads, "lang513 QWS G … King of E …" This is almost certainly Qos Gabr whom we know from Assyrian annals to have been king of Edom around the year 670 B.C. A general 7th century B.C. date for the site is most likely.

In the Nabatean period (4th century B.C. to 2d century A.D.) a temple was built on the edge of the site, a stairway cut into the slope, and various tombs cut in and around the base of the hill. There is no evidence of any subsequent occupation.

STEPHEN HART

UMM EL-JIMAL (39°19´N; 36°22´E). The modern name, Umm el-Jimal, means "Mother of Camels" (or possibly "Mother of Beauty"). The ancient name is not known. H. C. Butler speculatively chose Thantia from the Peutinger Table (Butler 1911: xiv–xvi), but D. Kennedy has argued convincingly that Thugrat el-Jubb, a site farther S on the *via nova Traiana,* is Thantia (Kennedy 1982: 148–52). H. MacAdam has since suggested plausibly that Surattha from Ptolemy's *Geography* was ancient Umm el-Jimal (MacAdam 1986: 17). Thus far there is no epigraphic evidence to support these theories and the ancient name remains uncertain.

A. Location and Topography

Umm el-Jimal is located in the semi-arid region of N Jordan, on the edge of the basalt plain created by prehistoric volcanic eruptions from Jebel Druze, which is fifty km to the north in S Syria. This plain,

called the S Hauran, is made up of deep basalt bedrock covered with a fertile layer of reddish volcanic soil that receives about 100 mm of rainfall per year. This rainfall is barely sufficient for an occasional wheat crop, but with careful collection and storage of the runoff, it is possible to follow the spring wheat harvest with irrigated crops of produce. In the Late Roman, Byzantine, and Umayyad periods, Umm el-Jimal was one of dozens of prosperous rural towns and villages scattered on the plain between Dera'a to the W and Deir el-Kahf to the E.

The great Roman highway, the *via nova* constructed during Trajan's rule, passes Umm el-Jimal 6 km to the W on its way from Bostra to Philadelphia (Amman). Umm el-Jimal itself lay on a side road that left the *via nova* at Qasr el-Ba'ij, and went on to Umm el-Quttein and Deir el-Kahf. This side road was part of a network of secondary roads that connected the S Hauran's towns and villages with major market centers like Bostra and Suweida, and the desert oasis of Azraq.

Umm el-Jimal nestles in a fork created by the joining of two wadis that brine the runoff waters from the lower slopes of the Jebel Druze. The earlier village was located on the W bank of the eastern branch, while the standing town lay on the E bank of the west branch.

B. History of Exploration and Excavation

Umm el-Jimal was "rediscovered" in the middle of the 19th century, and has been the subject of sporadic scholarship ever since. However, the major work done before the present study was the Princeton University Expedition to southern Syria in 1905 and 1909 led by Howard Crosby Butler. As a result, reporting and research on the site must be divided into two phases: "Before Butler" and "After Butler." Butler himself lists the following visitors to the site (Butler 1913: 151): C. Graham (1857), W. H. Waddington (1861–2), M. de Vogue (1861–2), C. Doughty (1875–6), S. Merrill (1876), W. H. Thomson (1877), H. Frauberger (1890), G. R. Lees (1893), G. Schumacher (1894), R. Dussaud and F. Macler (1901), and G. Bell (1905). These visits yielded some descriptive reporting, the sketching of a few buildings, and the recording of some inscriptions. They formed the basis of the more intense work done by Butler and his team of specialists in 1904–5 and 1909.

This intensive survey involved the mapping of the site including its public buildings, churches, reservoirs, monumental tombs, and twenty of the 131 housing complexes. All the visible Greek, Latin, Nabatean, Safaitic, and Arabic inscriptions were collected under the supervision of E. Littmann. The publications of these materials remain an invaluable reference for the site (Butler 1913; Littmann 1913). N. Glueck included Umm el-Jimal in his study of the extent of Nabatean influence in Syria in *Explorations in Eastern Palestine* (Glueck 1951). In 1956 G. U. S. Corbett did a detailed study of the Julianos Church from which he concluded convincingly that Butler's naming and dating of the church in the 4th century is based on a reused funerary inscription and therefore incorrect (Corbett 1957). Since 1972, Bert de Vries has been working on the site, completing Butler's mapping of the town in 1972–3 and directing teams of excavators in 1974, 1977, 1981, and 1984. The results of this work have been the completion of the architectural survey done by Butler and the determination of a more precise architectural and cultural history based on stratigraphic chronology.

C. History of the Site

Umm el-Jimal was occupied for 700 years from the 1st century A.D. to the 8th century, and again early in the 20th century. There were four distinct occupations over this period.

1. 2d–3d Century Village. In the 2d–3d centuries A.D., it was a rural village that received its impetus from late Nabatean sedentarization, but its prosperity from the incorporation of the region into the Roman Empire after the peaceful transformation of the Nabatean heartland of Jordan into the *provincia Arabia* (the Roman Province of Arabia). Thus from Trajan (A.D. 106) to the end of the Severan Dynasty (A.D. 235) the village appears to have had an undisturbed and relatively prosperous rural life, as inferred from the hundreds of tombstone inscriptions in Greek and Nabatean, most of which were reused as corbels and stairway treads in the later, still-standing town. These inscriptions give us the Arabic and Hellenized names of several generations of villagers: "Asad, (son of) 'Akrab, age 30" (in Greek); "Masik, son of Zabud" (in Nabatean).

This relative tranquility ended in the middle of the 3d century, when the village became a victim of the wave of turmoil that ravaged the Roman Mediterranean; a likely hypothesis is that it was ruined during the civil war triggered by Queen Zenobia of Palmyra's rebellion against Rome. After the destruction, the village and its cemeteries provided building materials for the later fortifications and houses. Ruined to foundation levels, the site remains a 300–400 m diameter "moonscape" of rubble 200 m E of the SE corner of the later town.

2. 4th–5th Century Fortifications. The second Umm el-Jimal was a military station on the *limes Arabicus*, the 4th–5th century fortified frontier defensive system created and constructed by the emperors Diocletian and Constantine. Already in the 2d century, the Roman imperial authorities had begun construction of a gate and a wall next to the village, on the site of the standing town. This is known from a dedicatory inscription (recorded by H. C. Butler from the ruins of the "Commodus Gate") commemorating the construction of a defensive wall during the co-regency of Marcus Aurelius and his son Commodus. The construction of the great reservoir and the Praetorium followed. See Fig. UMM.01 (nos. 9 and 2). But after the destruction of the village, Diocletian's imperial reorganization resulted in the construction of a major fortification, the *castellum* (nos. 133–4) on the E side of what later became the town. Now Umm el-Jimal functioned as a stitch in the blanket of total defensive security in which Diocletian had attempted to swaddle his empire. The 4th–5th century consisted of the Commodus Gate, the Praetorium, Reservoir no. 9 and the fort, but without the Barracks, the houses, and the churches.

3. 5th–8th Century Town. This military security may have enabled or forced the civilian resettlement of the site, to set the stage for Umm el-Jimal's third persona, that of a prosperous rural farming and trading town of the 5th to 8th centuries. The transformation from military station to civilian town was gradual, and is typical of the general transformation from imperial to late antique culture that took place in the E Mediterranean in the 4th century. This resulted from the failure of Diocletian's system of massive defenses along the E frontier and the reaction to the debilitating economic oppression such a system required. Ironically, as imperial military security weakened and decentralized, the prosperity of the E frontier increased to reach a peak in the 6th century.

At Umm el-Jimal the Tetrarchic (refers to the type of imperial government inaugurated by Diocletian) *castellum* lost its military function in the early 5th century, and may have been converted into a market place, as inferred from the nature of the artifacts found in the streets between its barracks. At the same time the Barracks (Fig. UMM.01, no. 1) was constructed as a bivouac for the diminished Early Byzantine garrison inside the town walls. The last vestige of paganism, a small Roman temple (Fig. UMM.01, no. 8), dated to the earlier Nabatean era by H. C. Butler, was constructed at this time.

This little temple was soon engulfed in a domestic complex constructed by Christians (no. 49), one of 131 such complexes that were in use in the 6th century. The conversion to Christianity also brought churches of which 15 were constructed in the late 5th and 6th centuries. The Barracks building went through a major remodeling that included the construction of the SE corner tower, a symbol of the localized defense prevalent during the period of the Ghassanid phylarchy (the Arabic tribal rule which Byzantine emperors used to protect the E flank of their empire from the mid-6th century to the Islamic conquest). Thus the town enjoyed its moment of greatest prosperity at the time that centralized imperial controls were at their weakest.

Undoubtedly, the fortunes of Umm el-Jimal were diminishing during the rather catastrophic decades of the late 6th century, when the E suffered the twin ravages of plague and Persian wars. Centralized control returned in somewhat different form after the Muslim conquest under the Umayyad caliphs ruling from Damascus (A.D. 661–750). Occupation at the site was uninterrupted to the end of the Umayyad period. The population continued to occupy at least the central structures (the Praetorium and House XVIII), and at least one church (no. 22) was remodeled in the Umayyad period. The Praetorium was extensively refloored and decorated with frescoed plaster, and appeared to be a prosperous equivalent of contemporary desert castles like Qusair 'Amra. However, Umayyad controls could not stem the tide of depopulation that had begun in the previous century. When the earthquake of A.D. 747 hit, neither

manpower nor economic resources remained with which to rebuild as they had done in more prosperous times.

4. 20th Century Twilight. For more than 1100 years the city lay virtually abandoned and untouched. Though buildings experienced the continuous slow crumbling that non-maintenance causes, as well as occasional earthquake jolts, the durable basalt masonry and the high quality construction enabled a remarkable state of preservation. Thus when the Druze were expanding S from their mountain perch, some of them found Umm el-Jimal an attractive place to remodel. Before 1935 a number of buildings had their walls reconstructed, and corbeled roofs newly laid on arches set in the Roman style. When the Druze left to move S to Azraq and Amman, they abandoned a place that appears even more remarkably preserved than when travelers and explorers like Butler and Bell visited it earlier in this century.

D. Culture

The role that Umm el-Jimal played in recorded historical developments is difficult to determine, because its ancient name is unknown. Without the help of literary sources, the nature of the settlement has to be understood from the ruins themselves.

Umm el-Jimal is no Jerash. The place is plain, without frills. But this has great significance. Whereas Jerash is monumental, a symbol of the glory of Rome, Umm el-Jimal is ordinary, a symbol of the real life of Rome's subjects. Umm el-Jimal gives us a glimpse of local people, Arabs, Nabateans, and Syrians, living ordinary lives. These people were the backbone of the Roman order and economy. They belonged to the frontier tribes who settled at the urging of Nabatean water technology and Roman military order. One could say they benefitted from the security Rome brought; one could also say they suffered under the iron fist of Rome's military might. Their ruined buildings reveal that they coped rather well at times.

Umm el-Jimal's ordinary houses give clues to the habits of their residents. The architecture of these plain houses makes it clear that the residents were chiefly farmers. In most the bottom floors were barns and stables; the enclosed courtyards doubled as living rooms for humans and pens for animals. Outside, the elaborate water collection systems of both the 2d century village and the 6th century town, combined with the terraced fields along the wadis, indicate extensive cultivation. Both the ruins of the village and the standing buildings of the town indicate enough economic surplus from the export of animals and produce to nearby cities to enable the construction of the plain, but sturdy and comfortable houses that characterize the entire region.

These houses were built exclusively of the local steel-grey basalt. The prevalent use of corbeled rather than vaulted or pedimented roofs, with resulting narrow rooms and flat roofs, adds to the solidity and practicality of this no-frills, high quality architecture. The combination of somber color, surprising rows of corbels and excellent preservation give the place its unusual attractiveness today.

The income from agriculture may have been bolstered by caravaneering as well. Places like Umm el-Jimal and Umm el-Quttein are convenient stopovers for goods in transit from Arabia and the Gulf via the Wadi Sirhan and Azraq to Bostra and Damascus. To explain the existence of these places as "Caravan Cities," however, is an exaggeration. The backbone of local economy and sustenance was the agriculture that flourished from the twin benefits of superb water engineering and excellent soil.

Who were these residents? It is tempting to call them Nabateans, because the site has one of the largest numbers of Nabatean inscriptions anywhere. However, indications are that Nabatean was an adopted culture. The villagers who wrote the Nabatean texts used much more Greek, another second language, if poor grammar and spelling are any indication. And practically none of the typically Nabatean pottery was used. The post-3d century town people used no Nabatean at all, only Greek.

The best interpretation is that the earlier village was settled by local Arab tribes under Nabateanizing influence from the nearby capital at Bostra. These villagers probably spoke an Arabic or Aramaic dialect, and super-imposed both Nabatean and Roman cultures on their own desert ways as they became sedentary. The names on their tombstones, though written in Greek, are mostly Arabic/Aramaic in ethnic identity (Sartre 1985: 199–200). After the destruction of the Nabateanized village in the 3d century, the builders of the new town were other regional Arabs who adapted and refined the earlier hydraulic and architectural technology, but had no interest in the Nabatean language and religion.

It is also a misnomer to call the people of this later town Roman or Byzantine. True, the pottery they used was mostly typical of the Roman and Byzantine pottery of the Mediterranean. But the architecture and the way of life is indigenous, with only some Greek and Roman influences. The answer to the question, therefore, is that the people of Umm el-Jimal belonged to local Arabic tribes who settled into rural communities in the context of Nabatean, Roman, Byzantine, and Umayyad political and cultural expansion and control.

BERT DE VRIES

UMMAH (PLACE) [Heb *ʿumâ* (עֻמָּה)]. A town in the tribal allotment of Asher (Josh 19:30). Most scholars consider the name Ummah as an error for Acco, a major town which is absent from Asher's list here, but appears in Asher's list of "Conquest Lacunae" (cities that the respective tribe did not manage to conquer) in Judg 1:31. In certain periods in Hebrew paleography, *mem* and *kap* are easily confused, which would lead to the erroneous *ʿmh* for *ʿkh.* Notice also that LXX ^{C} reads *kai Akko.* If this error is not accepted, then the location of Ummah is unknown.

SIDNIE ANN WHITE

UNCLEAN AND CLEAN. These terms designate negative or positive ritual and moral conditions in persons and sometimes in objects. Uncleanness or impurity is basically defined as that which is a threat to or opposes holiness, and hence must be kept separate from that sphere. On the relationship of purity and impurity to the profane (i.e., nonholy or common) and holy, see HOLINESS. Impurity may arise from natural and necessary conditions, such as bodily discharges, or from sinful situations.

OLD TESTAMENT

In the OT, the concern about purity and impurity preponderates in the Priestly writings (= P; including the Holiness Code, Leviticus 17–26). This corpus presents extremely systematic legislation on this topic. Because P deals with purity so completely and lucidly, this article will mainly describe its legislation. Non-P evidence will be appended in most sections. For comparison of purity ideas in later Jewish and Christian literature and in the ANE, see Milgrom *Leviticus* AB; Neusner 1973; Paschen 1970: 83–200; Wright 1987b.

———

A. Terminology

In P and in the rest of the OT the main Hebrew roots for describing purity and impurity are as follows: (1) for purity: *ṭhr* (verb: *Qal* "be pure," *Pi‹el* "purify; declare clean" ["clear away" Job 37:21], *Pu‹al* "be cleansed, purified," *Hitpa‹el* "purify oneself"; nouns: *ṭōhar, ṭōhŏrâ* "purity, purifying" ["splendor" Ps 89:45]; adj.: *ṭāhôr* "pure"; the adj. is also used of the gold of cultic implements and incense in P to refer to elemental, not ritual, purity [but see Exod 31:8; 39:37; Lev 24:4; cf. Zech 3:5; 2 Chr 13:11]; the root is also used outside of P of stones and gold); for impurity: *ṭm›* (verb: *Qal*, "be/become impure," *Nip‹al* "defile oneself; be impure," *Pi‹el* "defile; declare unclean," *Pu‹al* "be polluted," *Hitpa‹el/Hotpa‹al* "defile oneself, become unclean"; noun: *ṭum›â* "impurity"; adj.: *ṭāmē›* "impure").

Other roots deal with purity (this and the following paragraph list only verb forms and other parts of speech from these roots that deal specifically with the idea of purity): *brr* (verb: *Qal* "purify; clean," *Nip‹al/Hitpa‹el* "purify oneself, be pure," *Pi‹el* "purify," *Hip‹il* "cleanse, polish"; nouns: *bōr* "purity; lye, soap," *bōrît* "lye, soap"; adj.: *bar* "pure, clean"); *zkh* (generally carrying a notion of "be innocent"; verb: *Qal* "be pure; justified," *Pi‹el* "purify," *Hitpa‹el* "purify oneself"); *zkk* (verb: *Qal* "be bright, guiltless," *Hip‹il* "purify, wash"; adj.: *zak* "pure, blameless"); *zqq* (generally of refining metals but the *Pi‹el* verb "purify" is used in Mal 3:3 of people; cf. the *Pu‹al* Ps 12:7); *ḥṭ›* (verb: *Pi‹el* "purify; offer a purification sacrifice," *Hitpa‹el* "purify oneself"; noun: *ḥaṭṭā›t* "purification sacrifice"); *ḥpp* (attested only in Job 33:9; adj.: *ḥap* "pure"); *kpr* (verb: *Pi‹el* "appease, make appeasement; purify"; *Pu‹al* "be expiated, purified," *Hitpa‹el/Nitpa‹el* "be expiated" [BDB, 498]; noun: *kippurîm* "appeasement, expiation"); *lbn* (verb: *Hip‹il* "turn white; purify"); *nqh* (mainly refers to judicial and religious innocence but at points has contacts with the idea of purity, particularly the noun *niqqayôn* "innocence, cleanness"; cf. the adj. *nāqî* "innocent, clean"); *ṣdq* (generally with a judicial or religious significance of being innocent, right, true; as a *Nip‹al* verb in Dan 8:14 with a sense "be purified"); *ṣrp* (of purifying or smelting metals used figuratively; verb: *Qal/Pi‹el* "refine, purify," *Nip‹al* "be refined, purified"; see also *ntk*); *qdš* (generally referring to holiness but the *Pi‹el* and *Hitpa‹el* are sometimes used to mean "purify [by bathing]"; see HOLINESS); *tmm* (once as a *Hip‹il* verb meaning "destroy" impurity; Ezek 22:15). To be considered with the terminology of purification are words or roots dealing with ablutions or related methods of purification: *glḥ* ("shave"; cf. *ta‹ar* "razor"); *dwḥ* ("wash"); *zrq* ("throw; sprinkle"); *kbs* ("launder"); *nzh* ("sprinkle"); *mrq* ("scour"); *neter* ("natron"); *rḥṣ* ("bathe, wash"); *štp* ("overflow; rinse"). Cf. *b‹r* ("burn, consume"); *ṭbl* ("immerse, dip"), *śrp* ("burn").

Other roots dealing with impurity are: *g›l* (II) (verb: *Nip‹al* "be polluted," *Pi‹el/Hip‹il* "pollute," *Hitpa‹el* "defile oneself"; noun: *gō›el* "defilement"); *ḥll* (technically of making something holy profane but often with a notion of defilement [see HOLINESS]; verb: *Nip‹al/Pu‹al* "be profaned, defiled," *Pi‹el/Hip‹il* "profane, defile"); *ḥnp* (verb: Qal "be polluted, profane; be evil," *Hip‹il* "pollute, desecrate"; nouns: *ḥōnep, ḥănuppâ* "impiety"; adj.: *ḥānēp* "impious, wicked"); *niddâ* ("menstrual discharge; impurity"; as "abomination" in Lev 20:21); cf. *ṭnp, ktm, piggûl* (see HOLINESS). To this list could be added roots and words that refer to the notion of abomination (*zimmâ* "wickedness"; *šqṣ/šeqeṣ*

"abomination"; *tʿb/tôʿēbâ* "abomination"; etc.) and those for specific impurities *(zwb* "to flow; have a flux"; *ṣāraʿat* "surface/scale disease"; etc.).

Bordering the terminology of purity/impurity is that of holiness (see HOLINESS) on the one hand, and sin, guilt, and righteousness (see SIN; RIGHTEOUSNESS) on the other. On the terminology, see Paschen (1970); Zatelli (1978; a semiotic approach; cf. Bean 1981); and *TWAT /TDOT* under the foregoing terms.

B. The Impurities

P displays a broad spectrum of impurities, from those lasting one-day which are quite innocuous to those that are extremely severe arising out of sin. These can be divided into two types. One type is permitted impurity. Though any form of this impurity can harm the sacred by contact and stronger forms of this impurity can aerially pollute sanctuary sancta (see below), this type is not disallowed because of its *natural* and *necessary* occurrence. It includes impurities relating to death, sex, disease, and the cult. P discusses this type most frequently. It characteristically has simple methods of rectification (ablutions, sacrifices, time elements, or disposal). The locus of pollution is always the person, and, as indicated above, the sanctuary in severe cases. The other type is prohibited impurity. Though the effect of this impurity may be extremely severe, its effects may be no more severe than those of permitted impurity. This type of impurity grows out of situations which are controllable and are not natural or necessary, such as delaying purification from impurity, polluting specific sancta, sexual transgressions, idolatry, and murder. Punishments, beyond sacrificial requirements, often are necessary for rectification. The locus of uncleanness may be the person, but prescriptions talk more of the pollution of the sanctuary or land. For a distinction between types of purity based on nonbiblical anthropological evidence that has points of resonance with the classification presented here, see Rosen 1973.

1. Permitted Impurity. a. Classes. Leviticus 11–15 and Numbers 19 contain P 's main discussion of permitted impurity, though throughout the corpus other brief references are found. These impurities can be organized into four classes: (a) death related, (b) sexual, (c) disease related, and (d) cultic. Each class is comprised of main impurities (see below) which are capable of generating secondary conditions of impurity in other objects or persons. In some cases, these secondarily impure persons or objects can cause tertiary impurity in other persons and objects. In one case a fourth level impurity is found. Hence, each main impurity, a "father of uncleanness" in rabbinic terminology, can generate a family of lesser impurity (its "offspring"). The number of "fathers of impurity" is quite limited, but with the ability of extended propagation the number of possible impure conditions is quite large.

(1) Death Related. (a) Human Corpse. The most severe of all the permitted impurities is the human corpse, called the "father of the fathers of uncleanness" in later rabbinic tradition (Rashi on *b. Pesaḥ.* 14b, 17a; cf. *m. Kelim* 1:1–4; *Ṭohar.* 1:5). Persons and objects polluted by it are impure for seven days (Num 19:11, 16, 19; 31:19, 24). Pollution occurs when the persons or objects touch the corpse or are merely in the same enclosure with it (19:11, 13, 14, 18). Pollution comes not only from a corpse, but from a human bone, a slain body, or a grave (19:18; 31:19). Corpse-contaminated persons and objects can pollute other persons and objects by touch for a one-day duration (19:22 [*ṭāmēʾ* refers to the corpse-contaminated person]; Lev 22:4–7).

Various restrictions and purification procedures apply to corpse-generated impurities. The corpse itself, whose impurity cannot be rectified, is removed from the area of habitation for burial (Lev 10:4–5).

Two views of restriction appear for corpse-contaminated persons. According to Num 5:2–3 and Num 31:13–24, corpse-polluted persons are to be excluded from the camp. Numbers 19, however, implies that such persons could remain in the area of habitation. The stricter rule in Numbers 5 and 31 is probably to be understood as applying only to the wilderness camp, a type of war camp. War camps have more rigorous purity rules (Deut 33:10–15; 1 Sam 21:4–7). The leniency of Numbers 19 is explained by its being the law that was to apply to settled communities after the conquest. Of course, corpse-contaminated persons and objects were restricted from anything holy, including festal occasions (cf. Num 9:6–14; see below on Lev 21:1–4, 10–12; Num 6:6–12).

Corpse-contaminated persons become pure by being sprinkled on the third and seventh days of their impurity with the water of purgation (*mê niddâ;* 19:9, 12, 13, 18–21; 31:19, 23), a mixture of water and

the ashes of the red cow (19:2–11). On the seventh day, impure persons bathe themselves and launder their clothes and are pure at evening (19:19; 31:24). Corresponding to the ablution for persons is the requirement that objects be passed through fire if they can endure it, or be immersed in water if they cannot (31:19–24; see Wright 1985). Polluted earthenware is broken (an exception to this is made in Num 19:15; see Wright 1987b: 93–113). Ezekiel, whose legislation in chapters 40–48 is closely related to P 's, requires a corpse-contaminated priest to bring a *ḥaṭṭāʾt* (purification) sacrifice (44:25–27; cf. the Nazirite's similar requirement in Num 6:6–12; see below).

Persons and objects polluted by corpse-contaminated persons and things are impure for one day (Num 19:22) and have no restrictions from profane (nonholy) matters. Persons polluted for one day bathe, and objects are washed (these ablutions are implied from the larger context). All these become pure at evening. See HEIFER, RED; WATER FOR IMPURITY.

Outside of P a similar picture obtains. One who is corpse-contaminated can pollute objects (specifically foods, Hag 2:13). Corpses after a battle pollute and need to be buried (Ezek 39:12–14; called a purification of the land). Graves pollute (cf. Isa 65:4). In this regard, the OT generally shows the concern to bury outside of towns, presumably because of the concern of corpse contamination. An exception appears in the case of Judahite kings who were generally buried inside the City of David or Jerusalem (1 Kgs 2:10; 11:43; 14:31; 15:8; etc.; see Wright 1987b: 115–28). Corpses desecrate sanctuaries (Ezek 9:7; 43:7–9) and cities (Jer 19:11–13). The food of mourners was considered unclean (Hos 9:4; cf. Deut 26:14). See Wright 1987b: 169–72, 196–200.

(b) Animal Carcasses. Typically related to the impurity of the human corpse is that of the animal carcasses. Leviticus 11, the main source in P for this subject, is hard to understand and betrays a complex historical development. As it presently stands the chapter seems to distinguish between a large group of animals which cause pollution when *eaten* and a more limited group within this larger class that cause pollution when merely *touched* or *carried.* Those that pollute by ingestion are: all land animals that do not have a split hoof and do not chew the cud, or those with these characteristics that have not been properly killed (cf. vv 2–8, 24–45); water animals that do not have fins and scales (vv 9–12); and certain listed birds and certain flying insects (vv 13–23). Only *some* of these animals appear to pollute by simple contact: the camel, hyrax, hare, and pig of vv 2–8; large land animals such as the horse and bear implied by the criteria of vv 24–28; only eight types of small land animals (*šeraṣîm:* reptiles and rodents; see CRAWLING AND CREEPING THINGS) in vv 29–38; and improperly killed large land animals that are potentially edible in vv 39–40. In sum, all large land animals and only eight types of small land animals pollute by touch; other small land animals and sea and air animals do not. See Wright 1987b: 200–06.

The chapter has a further complexity of *prohibiting* ingestion or contact with some of these animals. Almost all the animals described above as being able to pollute by ingestion are prohibited to the diet (Lev 11:2–4, 8, 9, 11, 13, 20, 21, 41, 42). A prohibition of touching, however, is found only in the case of the carcasses of the camel, hyrax, hare, and pig (v 8; cf. vv 4–7; vv 41–45 and 20:25 appear to refer to eating, not touching). That eating and, in some cases, touching are prohibited shows that animal impurities do not fall completely under the category of permitted impurities. The method of contracting pollution from other classes of impurities helps solve this anomaly. Other impurities arise by means of *external* contact (apart from self-generated impurity of the fathers of pollution). Only with animal carcasses does impurity come from both external contact and internal consumption. The reason for the prohibition of eating appears to be the dietary laws' particular purpose to serve as a sign of Israel's holiness—its separateness from the nations (11:44–45; 20:25–27; a holiness rationale for food prohibitions appears at the earliest level of Israelite legislation, Exod 22:30; and is perpetuated in Deut 14:21). Other purity rules are oriented more toward the inner workings of the cult and the Israelite people; the concern for purity lies in its effect upon the sphere of the holy. Impurity in these other cases is allowed if handled correctly. The dietary laws, however, though they fit in the system of cultic purity, have the additional symbolic significance of manifesting Israel's relationship to God vis-à-vis other nations. Avoiding ingestion of certain animals is a sign of Israel's commitment to its covenant with God. Hence, eating impure animals is prohibited. It is possible that the care to observe the covenant led to the

prohibition of touching the large land animals in Lev 11:4–8, a "fence" to insure observance (compare the echo of this in Gen 2:17; 3:3). In the end, it should be observed that the text never prescribes any punishment for transgressing these prohibitions.

The extent of animals prohibited to the diet must be defined more precisely. Israelites, of course, may eat any of the animals that are pure according to Leviticus 11. But while most polluting meat is prohibited, eating carcasses of clean animals that have been improperly killed is presumably allowed (vv 39–40). Compare Leviticus 17 which after establishing a mood of prohibiting items from the diet (i.e., animal blood, vv 10–14) only gives purification procedures for eating the carrion of pure animals, not prohibitions against it (vv 15–16). Thus appears a marginal class of meat which, though able to pollute by ingestion, is not prohibited (cf. 7:24). But if a lay Israelite may eat such meat, a priest, because he is holy, may not (22:8; cf. Ezek 44:31). For a similar distinction in prescription for lay Israelites versus priests, see below on corpse contamination of priests.

Touching, carrying, or eating carcasses of large land animals and the eight small land animals causes a one-day impurity. Of note is the difference in pollution caused by *touching* one of these animals versus *carrying* them. A person who only touches one of these carcasses needs only bathing, while the person who carries part or all of the carcass needs laundering also (Lev 11:24–25, 27–28, 39–40). vv 39–40 equates the effect of eating with carrying. Polluted objects are washed. Polluted persons and objects require no restriction from the profane sphere. Leviticus 11 does not say anything about the pollution effect and purification requirements when an animal is eaten except in the case of an improperly killed animal in vv 39–40. Presumably the procedures would be the same as those in these verses. On animal impurities in P see also Lev 5:2; 7:21; 27:11, 27; Num 18:15.

Outside P, the food prohibitions in Deut 14:3–21 parallel closely P's rules in Leviticus 11 (on the relationship, see Moran 1966; Milgrom *Leviticus*). Other short legal passages are Exod 13:13; 22:30; 34:20. Some passages reflect the idea that holy persons are to not to eat impure foods: Samson's mother while carrying her son who would be a Nazirite (Judg 13:4, 7, 14; she is not expressly called holy); Ezekiel, a priest (Ezek 4:14). This last passage manifests the theme of exiled Israelites eating unclean food in foreign lands (v 13; cf. Hos 9:3–4; Daniel 1; on the impurity of foreign lands and foreigners, see Josh 22:19; Amos 7:17; Ezra 6:21). The J (Yahwist) flood tradition has Noah bringing seven pairs of clean animals versus one pair of unclean animals (Gen 7:2; 8:20). The P tradition, in contrast, requires only one pair of each type of animal (6:19–20; 7:15–16; 7:8–9 is a mixture of the traditions). For the abhorrence of impure animals in an idolatrous context, see Ezek 8:10.

(2) Sexual. For the discussion of these impurities, see DISCHARGE. Listed here are the five fathers of impurity in this class and biblical references in and outside of P: a seminal emission (Lev 15:16–18; cf. Exod 19:10–11, 14–15; Deut 23:10–15; 1 Sam 21:4–7); menstruation (Lev 15:19–24; 18:19; 20:18; cf. Gen 31:35; 2 Sam 11:4; Isa 30:22; Ezek 7:19; 22:10; 36:17; Lam 1:17; Ezra 9:11); a lochial discharge after birth (Lev 12; cf. Job 14:1, 4); an abnormal sexual discharge in a male (Lev 15:2–15; 22:4–6; Num 5:2–3; cf. 2 Sam 3:29); an abnormal menstrual discharge (Lev 15:25–30).

(3) Diseases. For the discussion of the impurity under this category, see LEPROSY. The impurity of this class, leaving aside the pathological conditions of abnormal sexual discharges of the foregoing class, is that of *ṣāraʿat,* commonly but erroneously translated "leprosy." The term actually includes a number of skin lesions in humans (e.g., psoriasis, etc.) and certain fungal growths in houses and in fabrics (cloth and leather). Five fathers of impurity belong to this class: humans diagnosed as having *ṣāraʿat* (Lev 13:1–46; 14:1–32; 22:4; Num 5:2–3; cf. Exod 4:6–7; Num 12:10–15; Deut 24:8; 2 Sam 3:29; 2 Kgs 5; 7:3–10; 15:5 = 2 Chr 26:16–21; perhaps Job 2:7–13; 18:13); humans suspected of having *ṣāraʿat* (Lev 13:1–46); a person purifying from *ṣāraʿat* (14:8–10); houses (Lev 14:33–53); fabrics (cloth and leather; Lev 13:47–59).

(4) Cultic Impurities. These impurities are those that arise in cultic rites or situations that have the goal of rectifying prohibited and other permitted impurities. While these are not natural as is the case with the foregoing impurities, they are necessary in order to rectify other, noncultic impurities. The cases here reveal a paradox: something or someone that is pure, even holy, which is used or serves as an officiant to

remove impurity becomes impure, sometimes to the extent of being able to pollute other persons and things.

(a) The *ḥaṭṭāʾt* Sacrifice. The *ḥaṭṭāʾt* (purification offering) purifies various sancta (altars and sanctuary rooms) from impurity (Exod 29:36; Lev 8:15; cf. Ezek 43:20–23; 45:18). The pollution it removes derives from either the more serious permitted impurities (lochial and abnormal sexual discharges, Lev 12:6–8; 15:14–15, 29–30; *ṣāraʿat* in persons, 14:19, 31; corpse contamination of a priest in Ezekiel, 44:27), or from sinful situations (the mismanagement of permitted impurities, inadvertent corpse contamination of a Nazirite, and inadvertent and intentional sins; on these see below). The sacrifice is also used in dedicating the burnt offering altar (see below). These impure conditions or sins pollute the sancta from a distance; impure persons or transgressors need not be in the sanctuary precincts to cause the pollution. Depending on the type of the *ḥaṭṭāʾt* (see below), purification may be achieved by placing its blood on the horns of the burnt-offering altar (Exod 29:12; Lev 4:25, 30, 34; 8:15; 9:9; 16:18–19; for a bird see 5:9), placing it on the horns of the incense altar (Exod 30:10; Lev 4:7, 18), sprinkling it on the *kappōret* and in the adytum (16:14, 15), or sprinkling it in the shrine (4:6, 17; cf. placement on the door posts in Ezek 45:19). The particular locale of the sanctuary that is polluted (indicated by where the blood is used) depends on the character of the impurity or sin. Severe permitted impurities and inadvertent sins committed by individuals (cf. Lev 4:22–35) pollute only the outer altar. Sins by the community or by the high priest pollute the incense altar and shrine (the outer room of the tabernacle) (4:2–21). Intentional sins (*pešāʿîm;* 16:16) and presumably other unrectified sins and impurities pollute the adytum (the most holy place). In this graded scheme, it is noteworthy that serious permitted impurities affect only the outer altar.

There are two types of *ḥaṭṭāʾt* sacrifices. The types are determined by the use made of the blood or the party for whom the offering is made. The one type is that whose blood is used only at the outer altar and whose meat is eaten by priests (Lev 4:22–35; 6:20–23; 10:16–18). It is not clear if this type pollutes. Certain procedures surrounding it suggest some pollution exists: blood must be washed out of a garment, metal vessels in which it is cooked need to be scoured, and earthenware cookery needs to be broken (Lev 6:20–21). That the priest may eat of it suggests that it is virtually pure. It is doubtful if the priests' eating is an act of purification—the removal or disposal of an impurity (cf. Lev 10:17). The other type is that whose blood is used in the shrine or adytum of the sanctuary, or which was offered for the priests' benefit (Exod 29:10–14; Lev 4:2–12, 13–21; 6:23; 8:14–17; 9:8–11; 10:18; 16:27). This type is not eaten. The carcass is disposed of by burning outside the camp in a pure place (Exod 29:14; Lev 4:11–12, 21; 6:23; 8:17; 9:11; 16:27). This type pollutes persons and, by deduction, objects for one day (cf. Lev 16:27–28).

Lev 6:20 hints that the blood of the *ḥaṭṭāʾt* is impure. If so, pouring out the blood remaining after the initial blood applications and sprinklings at the base of the altar could be considered an act of disposal (Exod 29:12; Lev 4:7, 18, 25, 30, 34; 5:9; 8:15; 9:9).

Persons polluted by the *ḥaṭṭāʾt* bathe and launder; objects are washed. On the *ḥaṭṭāʾt* in general, see Milgrom 1983b: 67–95; Wright: 1987b: 129–59; 219; cf. Janowski 1982: 183–276.

(b) The Scapegoat. In the yearly Day of Atonement ritual, the people contribute a goat to carry sins to the wilderness (Lev 16:8, 10, 21–22). Aaron confesses over it "all of the transgressions of the Israelites and their crimes including all their sins." The goat is then taken to the wilderness (vv 21–22). The one dispatching the animal becomes unclean, implicitly for one day, and needs laundering and bathing (v 26). The scapegoat as a carrier of evil is never reclaimed but let loose in the wilderness (but cf. *m. Yoma* 6:5–6). See Wright 1987b: 15–31, 217–18; AZAZEL.

(c) The Red Cow, Its Ashes, and the Water of Purgation. To remove corpse contamination a special ash and water mixture is sprinkled on a polluted person (see on corpse contamination, above). The ash is made by burning a red cow with scarlet, hyssop, and cedar wood outside the camp in view of the sanctuary (Num 19:2–10). Both the ash made in this rite and the water mixture in which it is used pollute. The priest officiating in the ash making ritual, the one who burns the cow, and the one who gathers the resulting ash become impure. Their impurity lasts one day and they need to bathe and launder (Num 19:7, 8, 10; bathing for the case of the last verse is deduced). When the ash is used to purify a corpse-contaminated person, a pure person is to sprinkle the water mixture (v 18). This person, paradoxically,

becomes impure and needs to bathe (deduced) and launder (v 21). A person who merely touches the water needs only bathing (the ablution is deduced; v 21). By deduction, objects would become impure too by contacting the water or ashes. The ashes, because they are impure, are stored outside camp (v 9). See Wright 1987b: 215–17; Milgrom 1983b: 85–95.

(d) *Ṣāraʿat* Bird and Bird Blood. To help purify a person or house that have recovered from *ṣāraʿat,* a priest sprinkles a mixture of water and bird blood on the patient by means of a live bird, hyssop, scarlet material, and cedar wood. The live bird is let loose toward the area outside of the habitation (Lev 14:2–7, 49–53). That the dispatched bird and blood-water mixture cause pollution is surmised from the analogous case of the scapegoat. The pollution would be similar to that case. See Wright 1987b: 75–86, 214–15.

b. General Purification and Dedication Rites. P contains several purification rites that do not rectify a particular impurity but which serve to establish the purity of persons or objects so that they may perform or be employed in cultic service. These can be considered under the class of permitted impurities.

(1) Purification of the Levites. The levites, chosen to serve in the place of the Israelite firstborn to perform the labor of the sanctuary and assist the priests, are purified by shaving, laundering, and being sprinkled with "water of purification" (*mê ḥaṭṭāʾt;* Num 8:6–7, 15, 21; probably not the same as the *mê niddâ* for corpse contamination). This ablution, with accompanying sacrifices, establishes the levites' purity (but not holiness) so they may assume their responsibility.

(2) Purification of the Altar. As part of the temple consecration rites, the burnt-offering altar is purified with *ḥaṭṭāʾt* sacrifices (Exod 29:36; Lev 8:15; cf. 16:10–14; Ezek 43:20–27). Here the purification is part of a larger process of sanctification. See HOLINESS.

(3) Priestly Ablutions. Aaron and his sons are washed before they are dressed in their priestly clothing and consecrated (Exod 29:4; 40:12; Lev 8:6). This purification is similar in purpose to that of the levites and the altar. Before priests can serve on a daily basis in the sanctuary, they need to wash their hands and feet (Exod 30:18–21; 40:30–32; cf. 2 Chr 4:6). Ablution for purification is otherwise a full body washing; hence this limited washing is unique. The high priest on the Day of Atonement is to bathe entirely ("his flesh") at the beginning of the rite before putting on special linen clothing (Lev 16:4) and after the *ḥaṭṭāʾt* blood manipulation and dispatch of the scapegoat when he changes out of the special clothing (v 24). The initial washing is like the priests' preparatory hand and feet washings. That the whole body must be washed probably has to do with the intensive rite that follows in which the priest enters the most sacred room of the sanctuary (vv 12–15). The latter ablution seems to mark the priest's exit from the intensive portion of the ritual (a desanctification rite) to the regular sacrificial rites that follow (vv 24–25).

2. Prohibited Impurity. This type of impurity arises from the mismanagement of permitted impurities or other moral breaches. On the classification of these impurities into two categories, see below on purification procedures for prohibited impurities. The discussion here takes the examples in P case by case with non-P examples appended where applicable. With permitted impurities pollution affected persons, and in more severe cases, the sanctuary. Here the loci of impurity expand to include the land as well.

a. Delaying Purification. Delay of purification from permitted impurities exacerbates the effect of an impurity. This is considered sinful and is consequently penalized. Those who contract pollution from impure objects, animal carcasses, or from human impurities including a corpse, and find out about it or remember it after the period prescribed for purification has passed need to bring a *ḥaṭṭāʾt* sacrifice, presumably in addition to their required ablutions (Lev 5:2–3; cf. vv 1–13). The requirement for a *ḥaṭṭāʾt* shows the sanctuary has been polluted. Corpse-contaminated persons who do not purify pollute the sanctuary and will suffer *kārēt* "cutting-off" (premature death or extinction of progeny; Num 19:13, 20; see Wold 1978). The verses in Numbers 19 are talking of conscious avoidance of purification while those in Leviticus 5 are talking of an inadvertent lapse. Hence, attitude determines the type of penalty assessed. See also Lev 17:15–16; cf. 15:31.

b. A Corpse-Contaminated Nazirite. A Nazirite is not to come in contact with the dead (Num 6:6–7). The reason for this is that he, particularly his head, is holy (vv 5, 8, 11, cf. 7). Accidentally contacting the dead is a sin (v 11). On the eighth day, after the passage of seven days during which he presumably

purifies as any other corpse-contaminated person (vv 9–10), he brings two birds for a *ḥaṭṭāʾt* (purgation offering), and *ʿōlâ* (burnt offering), and a ram for an *ʾāšām* (reparation offering; vv 10–12). The purgation-offering bird, perhaps aided by the burnt-offering bird, cleanses the sanctuary sancta. The reparation offering appears to rectify the sacrilege that occurred when the Nazirite's head was desecrated (Milgrom 1976: 66–70). The shaving of the head does not seem to be purificatory, but rather to remove a desecrated sanctum (v 9; cf. v 18). Since v 9 says that the contact was sudden *(bepetaʿ pitʾōm),* hence unexpected and accidental, it can be presumed that a more strict penalty such as *kārēt* "cutting-off" would apply if a Nazirite intentionally contacted a corpse.

c. Corpse Contamination and Priests. Regular priests are not to contact any corpses except those of their near relatives (Lev 21:1–4). A high priest is prohibited from contact with any corpse, like the Nazirite (vv 10–11; cf. Lev 10:1–7). Though P lists restrictions, it does not mention what penalties apply should priests become impure nor does it hint at the issue of intentionality (the rectification procedure in Ezek 44:25–27 applies to legitimate priestly corpse pollution).

The cases of corpse contamination regarding the Nazirite and priests reveal again an important notion in Priestly law: the higher the holiness of a person, the more the restrictions from impurity. Israelites may become impure by any corpse; regular priests may become impure only by corpses of close relatives; the high priest and Nazirite are not to become impure by any corpse. Recall from the discussion on animal carcasses, above, that while Israelites could eat the improperly killed carcasses of pure animals, priests could not (Lev 22:8).

P gives stricter rules for priests only in the cases of corpses and carrion of pure animals. Limitation of stricter rules to these two cases makes sense in P's system. These rules represent two modes of contracting pollution: ingestion for the animal carcasses and external contact for corpses. This difference in the manner of pollution indicates that the two prohibitions are to be explained apart from one another. The significance of the eating prohibition has already been treated in the section on animal carcasses, above. Eating, as opposed to touching, is the main focus of proscription because of the significance of the diet as a sign denoting Israel as a holy people. The prohibition about corpses is explained in relation to impurities that cause pollution by external contact. A priest is not to contact corpses because they are the most severe external pollutant, bringing an impurity lasting seven days. All other externally contracted impurities last for only one day (one exception is impurity contracted through intercourse with a menstruant, but this is prohibited to all in the Holiness Code; see below). A priest is apparently allowed to contact the lesser impurities as long as he does not pollute what is sacred (22:2–9). Indeed, though a priest is prohibited from eating the carcasses of improperly killed pure animals, he apparently is not prohibited from touching these as well as other animal carcasses (v 5). Other impurities that are as severe as a corpse, or more severe, are self-generated (*ṣāraʿat* and an abnormal sexual discharge). These cannot be prohibited because of their nature.

d. Sins and the Day of Atonement. Both inadvertent and intentional sins pollute the sanctuary as is clear from the requirement of a *ḥaṭṭāʾt* sacrifice (Lev 4:1–5:13; 16:3–20; Num 15:22–31). While the offerings of offenders purify impurity from unintentional sins throughout the year, extensive *ḥaṭṭāʾt* rites efface impurity from deliberate sins (and certainly that from any other unremedied sin or impurity) on the annual Day of Atonement. The *ḥaṭṭāʾt* rites together with the dispatch of the scapegoat, alleviate the effect of the people's sin and thus in a sense purify the people themselves (Lev 16:30). Deliberate sins of which offenders repent appear to become equivalent to inadvertent sins. Sacrificial expiation at the time of admission and confession would rectify these (5:1, 5–13; Num 5:6–8; see Milgrom 1976: 108–21; 1983a: 249, 252). On other aspects of the *ḥaṭṭāʾt,* see above on cultic impurities and below on purification procedures.

The majority of passages outside of P that mention purity or impurity deal with that connected with righteousness or sin (for pollution from sexual sins, idolatry, homicide, and polluting the sacred in particular, see the sections below). The loci suffering pollution or which are pure are the people (2 Sam 22:27 [= Ps 18:27]; 22:25; Isa 64:4–11; Jer 33:4–9; Ezek 14:11; 20:38, 43; 22:2–14; 24:11–13; 36:25–32; 37:23; 39:23–24; Hos 5:3; 6:10; Mic 2:10; 6:11; Ps 51:4, 6, 9, 12; 119:9; Prov 16:2; 20:11; 21:8; Job 8:6;

15:14–15; 25:4–5; 33:9; Lam 1:8–9; Neh 13:30; cf. the various phrases: a clean heart: Jer 4:14; Ps 24:4; 51:12; 73:1, 13; Prov 20:9; 22:11; clean hands or washing hands: Gen 20:5; 2 Sam 22:21; Ps 18:21, 25; 24:4; 26:6; 73:13; Job 17:9; 22:30 [cf. Deut 21:6]; unclean lips: Isa 6:5; cf. pure speech in Zeph 3:9; Job 33:3; Sirach 40:21; see other examples, below, on the rectification of impurity); the land (Gen 3:17; Isa 24:5–7; Jer 12:4; Ezek 22:24; Ezra 9:11); and the sanctuary (2 Chr 36:14; the sin here is probably idolatry). Cf. also Hab 1:13; Zech 3:5; Job 4:17; 16:17.

Punishment for sinful impurity is often exile or other destruction (Isa 64:4–11; Ezek 20:38; 22:2–14, 24, 31; 24:11–13; 39:23–24; Mic 2:10; cf. Ezra 9:11). This punishment serves as a means of rectification and purification. Another consequence may be agricultural failure (Gen 3:17; Isa 24:5–7; Jer 12:4; see on homicide, below). The people's repentance and their restoration from exile may be discussed in terms of purification (Jer 33:4–9; Ezek 20:43–44; 36:25–32). Finally, Ezekiel has temple purification rites similar to those of the Day of Atonement (45:18–20). See DAY OF ATONEMENT.

e. Sexual Transgressions. According to Leviticus 18, sexual sins pollute persons (vv 20, 23, 24, 30) and the land (vv 25, 27, 28). Polluting the land results in expulsion from it (vv 25, 28) and *kārēt* "cutting-off" for the people (v 29). The sins that cause this pollution are incest (vv 6–18), adultery (v 20), homosexuality (v 22), and bestiality (v 23). Overlapping with permitted impurities is the case of intercourse with a menstruant (v 19; also 20:18; cf. 15:24). This sexual relationship is forbidden with a penalty of *kārēt* attached. In addition to Leviticus 18, the pericope about the suspected adulteress designates an actual adulteress as impure (Num 5:13, 14, 19, 20, 27, 28, 29). Calling those involved in improper sexual relationships impure is a way of calling the persons sinful.

Outside P, sexual transgressions pollute persons and the land. A man who commits adultery with a woman (Ezek 18:6, 11, 15; 33:26), rapes her (Gen 34:5, 13, 27), or has an incestuous relationship with her (Ezek 22:11) defiles her. A woman who is divorced from a first husband and marries a second cannot, after divorce from the second man or after his death, remarry the first. She is impure. Should she marry him, the land would be defiled (Deut 24:1–4; cf. Jer 3:1–10).

f. Idolatrous Impurities. Offering a child to Molech (an idolatrous god) pollutes the sanctuary (Lev 20:2–5; God's name is also desecrated; cf. 18:21). The offender is to be put to death by stoning. God will also apply the *kārēt* "cutting-off" penalty to the person. Consulting the dead, an idolatrous act, also defiles a person (19:31).

Non-P literature is replete with the idea of the pollution of idolatry, idolatrous implements, or general apostasy. Idolatrous implements are considered impure (Isa 30:22; Ezek 7:19–21). The idols or their worship pollutes the devotees (Josh 22:17; Jer 2:23; Ezek 20:7, 18, 26, 31; 22:3–4; 23:7, 13–14, 17, 30; 36:25, 29, 33; 37:23; Ps 106:36–40; cf. Gen 35:2; Hos 5:3–4; 6:10), the sanctuary (Jer 7:30; 32:34; Ezek 5:11; 23:37–39; 2 Chr 36:14), and the land (Jer 2:7–9; Ezek 36:17–18; cf. Jer 13:27 of Jerusalem). Child sacrifice, which often is an accompaniment of idolatry, is a cause of pollution (Ezek 20:26, 31; 23:37–39; Ps 106:37–38). Deuteronomy places idolatrous implements under *ḥērem* ("extreme dedication") status which means that as the Israelites conquer Canaan they are to destroy the implements (7:5, 25). One who misappropriates idolatrous materials falls under *ḥērem* status (Deut 7:25–26; cf. Josh 6:18; 7:12; 1 Kgs 20:42). One under this status is liable to death (Lev 27:29; Deut 13:13–19—Eng 13:12–18; Joshua 7). One who sacrifices to other gods also falls under *ḥērem* status (Exod 22:19). Kings and Chronicles talk of reforming Judahite kings removing idolatrous installations in the temple and Jerusalem and disposing of them in the Kidron valley (Asa: 1 Kgs 15:13 = 2 Chr 15:16; Hezekiah: 29:5, 15–16, 18; 30:14; Manasseh: 33:15 [the Kidron is not specified here]; Josiah: 2 Kgs 23:4, 6, 12; cf. 2 Chr 34:3–5, 8). Idolatrous materials are also disposed of by burying (Gen 35:4) and burning (Exod 32:20; Deut 7:5, 25; 9:21; 13:17; 2 Kgs 10:26; 23:15; 1 Chr 14:12). In Deut 9:21 Moses discards the dust of the golden calf into a stream running down the mountain (cf. Deut 21:1–9). Terming idols and their worship impure grows out of the perception of their threat to Israelite religion and to God's holiness. See Feldman 1977: 45–47; Wright 1987b: 279–90; see also Zech 13:2.

g. Homicide. This impurity is distinct from that of corpse contamination. Corpse contamination arises from the *state* of the corpse itself; homicide pollution arises from an illicit *act* of killing. Only those

deserving of capital punishment (e.g., under a *mišpat māwet,* Deut 19:6; Jer 26:16) and enemies in war not under agreements of protection (Josh 2:19; 2 Sam 21:1–10; 1 Kgs 2:5) may be killed without the result of homicide pollution. But any corpse, including any that results from homicide, pollutes persons and objects for seven days as described above (cf. Num 31:13–24).

In P, homicide brings pollution on the land whether the killing was intentional or unintentional (Num 35:33–34). The death of the murderer removes the pollution (vv 12, 16–21, 31; cf. Gen 9:5–6). In the case of manslaughter, the slayer must reside in a city of refuge until the death of the high priest. The priest's death apparently purges the pollution (Num 35:12, 15, 22–25, 28, 32). If the manslayer leaves the refuge city and the victim's avenger kills him before the death of the high priest, the pollution would appear to be alleviated (vv 26–27). P may have considered the sojourn of a manslayer in a refuge city as effectively negating the pollution, as long as he stayed there (cf. vv 32–33). Persons are also the locus of bloodguilt. This is described as the blood (*dām*) of a victim being on the killer (cf. v 27; see below).

Evidence from other parts of the Bible complements what is found in P. Illicit killing brings pollution on the land and on people (Deut 22:8 uniquely mentions bloodguilt on a house or household). When child sacrifice in idolatry is viewed as murder, then the sanctuary as a locus of homicide pollution can be added (see above). The land may suffer agricultural failure as a result of homicide. The land will not produce well for Cain because of Abel's murder (Gen 4:10–12; 2 Sam 21:1–14; Hos 4:2–3; Ps 106:38). Deut 21:1–9 prescribes a rite for removing to a remote locale pollution caused by a murder in which the culprit is not known, apparently to prevent agricultural failure (vv 8–9 also indicate that pollution lies on the community). See HEIFER. Other passages that deal with land pollution or possibly so include Deut 32:43; 2 Sam 1:21–22; Isa 26:21; Ezek 9:9; 36:17–18. Though not a case of murder, the pollution that an exposed body hanging overnight causes is comparable (Deut 21:23). In regard to persons as a locus of pollution, those guilty of murder, and even their family and descendants, may suffer physical, economic, and social decline and other oppression (Judg 9:22–57; 2 Sam 3:29; 16:7–8; 1 Kgs 2:31–33; Prov 28:17; cf. Jer 22:3–5).

As in P, execution of the offender (cf. Exod 21:12–21, 28–32; Deut 19:1–13; 2 Sam 3:27; 1 Kgs 2:28–34) or of his family or descendents (cf. 2 Sam 21:1–14) rectifies the bloodguilt. The rite in Deut 21:1–9 is a temporary measure for allaying the effects of blood pollution until the murderer is found. Asylum at an altar according to earlier legislation (Exod 21:13–14; cf. 1 Kgs 2:28–29) or in refuge cities according to later legislation (Deut 4:41–43; 19:1–13; Josh 20:1–9) is available.

The terminology for homicide pollution is discrete from that of other impurities. The usual terminology for purity or impurity is found infrequently (the few examples include: Deut 21:8 *kpr*; 32:43 *kpr*; Isa 59:3 *gʾl;* Ps 106:38 *hnp*; Lam 4:13–15 *gʾl, tmʾ* [perhaps menstrual imagery is mixed here], and P's Num 35:33–34 *tmʾ, hnp, kpr*). Bloodguilt or blood pollution is usually described with *dām* (lit. "blood") which is said to be on a person (Deut 19:10; Josh 2:19; Judg 9:24, 2 Sam 3:28–29; 16:7, 8; 1 Kgs 2:5, 33; Jer 2:34; 26:15; 51:35; Ezek 23:45; 35:6; Joel 4:21—Eng 3:21; Jonah 1:14; Prov 28:17) or on cities and the land (2 Kgs 24:4; Ezek 9:9; 24:6–9 [mixed imagery]; Hos 6:8). This *dām* needs to be removed and returned to the true culprit (2 Sam 16:18; 1 Kgs 2:31–33). See Wright 1987a; PUNISHMENTS AND CRIMES; DEATH.

h. Polluting the Sacred. Many cases in the previous sections reveal the concern to keep what is unclean from polluting what is sacred. Examples in P include removing corpses from the sanctuary area, keeping certain impurities from sacred persons, cleansing the sanctuary with *ḥaṭṭāʾt* sacrifices, and requirements of excluding severely impure persons from the habitation (cf. Num 5:2–3). In addition, P lists general prohibitions about bringing what is impure into contact with what is holy. Priests, priestly households, and Israelites are not to contaminate sacrificial meat and other offerings (Lev 7:19–21; 22:3–7; Num 18:11, 13). If they do, they are liable to the *kārēt* "cutting-off" penalty. A parturient during her second stage of impurity is not to make any contact with sancta or go to the sanctuary (Lev 12:4). People impure from corpse contamination are to defer celebration of the passover, a sacred occasion with offerings, to the second month (Num 9:6–13). It was one of the duties of the priests to teach the distinctions between

pure and impure and the holy and the profane so that improper contact of the spheres would be avoided (Lev 10:10; cf. 11:47; Ezek 22:26; 44:23).

The non-P literature has many attestations of this notion. Impurity is not to contact offerings (Deut 12:15, 22; 15:22; 1 Sam 21:4–7; Hag 2:14; Mal 1:11; cf. Deut 26:14). Sacrificial feasts and cultic gatherings require the purity of both priestly and lay participants (1 Sam 16:5; 20:26; Joel 2:16; Ezra 6:20–21; Neh 12:30, 45; 2 Chr 5:11; 29:34; 30:3, 15, 17–20, 24; 35:6; cf. Gen 35:1–5; Job 1:5; for God's eschatological "sacrifices," cf. Isa 13:3; Zeph 1:7; for pagan worship, cf. Isa 66:17). Cultic implements and persons contacting them must be pure (Isa 52:11; 66:20; 1 Chr 15:12, 14). Pollution must be kept apart from sanctuaries (Neh 13:9; 2 Chr 23:19 [cf. v 6]; 2 Chr 29:5, 15; cf. 1 Kgs 11:15; 1 Chr 23:28). Foreign incursion into the sacred precinct defiles it (Ps 79:1). With the intent to insure the purity of the temple, Ezekiel condemns the preexilic practice of burying the corpses of kings too close to the sanctuary (43:7–9; cf. the effect of corpses in 9:7). This burial, plus other abominations of the people, are said to pollute God's name. Hence there appears another sanctum which must be protected from pollution (the root *ḥll* is used to describe the desecration of God's name with essentially the same meaning, see HOLINESS). Besides the temple, holy persons such as priests are to maintain purity (Ezek 4:14; 44:31; cf. Judg 13:4, 7, 14). Sacred occasions, such as the Sabbath, were protected from profanation (Neh 13:19, 22; see HOLINESS). Theophanic experiences in which God's power is miraculously manifested require purity: the revelation at Sinai (Exod 19:10–15, 22), the coming of the quail (Num 11:18), the crossing of the Jordan (Josh 3:5), the determination of Achan's guilt (Josh 7:13). Those with seminal emissions must remain outside war camp, where God's presence is found, until they are pure (Deut 23:11–15). Only the pure (i.e., repentant and righteous) can pass over the way from captivity (Isa 35:8). Jerusalem, the redeemed holy city, will not have those uncircumcised or unclean come to her (Isa 52:1). Josiah used impurity to defile illicit cult installations (2 Kgs 23:8, 10, 13, 16).

C. Other Excretions, Blemishes, Foods, and Mixtures

Certain bodily excretions and abnormalities, as well as certain foods and mixtures of substances, are not strictly impure though abhorrence or prohibitions may be attached to them. These should not be confused with the impurities discussed in the foregoing.

P does not discuss urine, excrement, sweat, and saliva and thus presumably they are not impure in its system. Only the spittle of one with an abnormal sexual discharge is polluting, but this is because the person is impure (Lev 15:8). Other sources display an abhorrence of these excretions (excrement and urine: Deut 23:13–15; Ezek 4:12–14; cf. 1 Kgs 14:10; 2 Kgs 18:27; Isa 4:4; 28:8; 36:12; Prov 30:12; cf. Isa 30:22 with the emendation of *BHS*; perspiration: Ezek 44:18; saliva: cf. 1 Sam 21:14; Isa 50:6; Job 30:10; [17:6?]). Of these, excrement comes closest to being described as impure. There is no indication that blood, pus, hair, fingernails, body odors, or body oils were considered impure or particularly abhorred. See DISCHARGE.

Priests with bodily blemishes or defects are restricted from performing sacrifices, but are not impure (Lev 21:16–23). That such priests may eat the most holy offerings shows this is so (vv 22). Not only must one be pure to eat these offerings, but one must be pure to enter the sanctuary court where these offerings had to be eaten (Lev 6:9, 19; 7:6; 10:12–13, 17; 24:9; cf. Ezek 42:13–14; 46:19–20). Similar to a blemished priest is a blemished animal. As the former cannot officiate at the altar (Lev 21:23), so the latter cannot be sacrificed at the altar (22:17–25; a slight defect is allowed for a freewill offering, v 23; cf. Mal 1:7–8). Moreover, as blemished priests are pure, so blemished animals are pure. This means that such animals are not prohibited from the Israelite diet. Apart from P, Deut 23:2, which says one with crushed testicles or a severed phallus cannot enter the "congregation of the Lord" does not refer to natural bodily blemishes or to the specific issue of cultic access and thus cannot be used to prove blemishes exclude one from the sanctuary. 2 Sam 5:8, however, does represent a tradition where the blind and lame were excluded from the temple. But note that the basis for the custom is David's hatred of such persons, not impurity.

Finally, blood (Gen 9:4; Lev 3:17; 7:26–27; 17:10–14; 19:26; Deut 12:16, 23–25; 15:23; 1 Sam 14:32–34; Ezek 33:25), fat (Lev 3:17; 7:22–25), the thigh muscle (Gen 32:33), produce of trees in their first

three years (Lev 19:23–25), cooking a kid in its mother's milk (Exod 23:19; 34:26; Deut 14:21), and mixtures (of seeds, fabrics, or animals; Lev 19:19; Deut 22:9–11) are not prohibited on the basis of impurity. Rather, the basis of prohibiting some of these is their holy nature (see HOLINESS).

D. Purification and Rectification Procedures

1. Permitted Impurities. In P, rectification of permitted impurities is achieved by four methods: ablutions, sacrifices, the passage of time, and disposal. The first two methods are exclusive of the fourth. Impurities that are not rectified by disposal have at least the elements of ablutions and the passage of a period of time. Only some of these latter impurities require sacrifices.

a. Ablutions. This category includes true ablutions such as bathing of persons and washing of objects but also the related cleansings of laundering clothes, sprinkling water and water mixtures, shaving, and passing through fire. Bathing for humans (complete washing of the body) and washing for objects is a basic element in all purification rites for permitted impurities in P. Where such prescriptions are not given, they are to be assumed (see Wright 1987b: 185 n. 38, 212). A person who makes a more severe form of contact (e.g., carrying versus touching; see above on animal carcasses) or who suffers an impurity that lasts longer than one day requires laundering as well (Lev 11:24–25, 27–28, 39–40; 14:46–47; Num 19:21). Apart from these cleansings, shaving (Lev 14:8, 9; Num 8:7), sprinkling of water or water mixtures (Lev 14:7, 51; Num 8:7; 19:13, 18, 19, 20, 21) may be required. The fire purification in Num 31:21–23 is equivalent to washing (see above, on corpses). Washing of hands and feet is required of priests prior to their cultic service (see on general purification rites, above). Outside of P, bathing (Deut 23:12; indicated by *qdš* in Exod 19:10, 14, 22; Num 11:18; Josh 3:5; 7:13; 1 Sam 16:5; 2 Sam 11:4 [cf. v 2]; Isa 13:3; 66:17 [pagan worship]; Joel 2:16; Zeph 1:7; Job 1:5; 1 Chr 15:12, 14; 2 Chr 5:11; 29:5, 15, 34; 30:3, 15, 17, 24; 35:6; the bathing in 2 Kgs 5:10, 12, 13 is healing not purification) and hand washing (Deut 21:6) are found.

b. Sacrifices. In addition to ablutions, more serious permitted personal impurities in P require a *ḥaṭṭāʾt* (purgation offering), and sometimes other sacrifices. These include a person healed from *ṣāraʿat* "scale disease" (a female lamb or a bird for a *ḥaṭṭāʾt;* a male lamb or a bird for an *ʿōlâ* [burnt offering], a male lamb for an *ʾāšām* [reparation offering], and a *minḥâ* [cereal offering], Lev 14:10–32), persons with abnormal genital discharges (two birds, one for a *ḥaṭṭāʾt,* and the other for an *ʿōlâ,* 15:14–15, 29–30), a puerperal woman (a bird for a *ḥaṭṭāʾt,* and a male lamb or bird for an *ʿōlâ,* 12:6–8). To be compared here is Ezekiel's requirement that a corpse-contaminated priest bring a *ḥaṭṭāʾt* (Ezek 44:27).

The function of the *ḥaṭṭāʾt* sacrifice has already been discussed (see above on cultic impurities). The requirement of a *ḥaṭṭāʾt* is not to purify the impurity of a person's body, but to purify its *external* effects on the sancta. The blood is never applied to a person; the sacrifice is only done on the person's behalf. The statements saying that a person is pure that occur in the text after prescriptions for bringing a *ḥaṭṭāʾt* (Lev 12:7, 8; 14:20; lacking in 14:32; 15:15, 30) appear to mean that all the effects stemming from the person's impurity have been terminated, not that the offering has purified the persons themselves. The case of a person purifying from *ṣāraʿat* does not qualify this observation. This person brings a different offering, an *ʾāšām.* Uniquely, its blood is applied to the right ear, thumb, and toe of the person. Though it may be argued that this blood rite purifies the person, it is better seen as simply a rite of transition symbolizing the passage of the person from a state of restriction and exclusion to a state of full reintegration into social and religious life (cf. a similar use of sacrificial blood in Exod 29:20 and Lev 8:23–24 which is not for purification). In other words, the healed person has already achieved bodily purity before sacrifices are brought.

Aside from the significance of the blood application, the larger reason for bringing the *ʾāšām* in this case is not immediately clear. A strong argument has been made that, since this type of sacrifice is generally brought for sacrilege against the sancta, there is a suspicion that the person committed sacrilege and was afflicted with *ṣāraʿat* as a punishment (cf. 2 Chr 26:16–19). An *ʾāšām* is necessary to rectify this suspected trespass against the sancta (Milgrom 1976: 80–82). If this explanation is correct, the issue of sacrilege and the *ʾāšām* should be discussed under the category of prohibited impurities (the impurity of *ṣāraʿat* itself, however, would remain in the arena of permitted impurities). Yet, that human *ṣāraʿat* is the

most severe among all the purifiable permitted impurities and that only this permitted impurity requires an *ʾāšām* whose blood is used in an exceptional way suggest that the sacrifice may be required to alleviate the effects of this particular impurity, which are not necessarily sinful, arising *after* the onset of the disease.

Another issue is how sacrifices other than the *ḥaṭṭāʾt,* purgation offering, fit into the purification scheme. The effect of these sacrifices in the context of purification and elsewhere is described by the verb *kipper.* The verb has the meaning of "to make appeasement, propitiation" (with the *ʿōlâ,* burnt offering: Lev 1:4; 16:24; cf. 9:7; 12:8; 14:20, 31; 15:15, 30; Num 6:11; 8:12; the *ʾāšām,* reparation offering: Lev 5:16, 18, 26; 7:7; 14:21; 19:22; Num 5:8; the *minḥâ,* cereal offering: Lev 5:13 [a version of the *ḥaṭṭāʾt*]; cf. Ezek 45:15, 17; the *minḥâ* may have also been a substitute for an *ʿōlâ*). Even with the *ḥaṭṭāʾt* where the verb in some instances can be construed as "to purify," the notion of appeasement is present (Lev 4:20, 26, 31, 35; 5:6, 10; 16:6, 11, 16, 17, 18, 20, 27, 30, 32, 33, 34, etc.). The underlying notion is that the effects of sins and impurities have estranged God, so sacrifice is made to rectify these effects and thus reconcile God with those who have sinned or have become severely impure. For the *ḥaṭṭāʾt* the appeasement comes through purification of the sancta with unique blood rites and the burning of portions of the animal on the altar; for the other animal offerings it comes through the throwing of blood on the sides of the altar and (including the *minḥâ*) burning portions on the altar. Purification rites with accompanying appeasement offerings are found in other societies of the ancient Near East (see Wright 1987b: passim).

To be mentioned with sacrifices is the red cow rite (Num 19:2–10). It is a called a *ḥaṭṭāʾt* (vv 9, 17), but as such it is unique. Similar to the red cow and *ḥaṭṭāʾt* rites in general structure and function, though not a sacrifice, is the bird ritual for a person or house recovered from *ṣāraʿat* (Lev 14:4–7, 49–53).

c. Passage of Time. For purification the passage of a certain period of time is necessary. All impurities last at least one day, until the evening following contraction of the impurity. The one-day impurities, too numerous to list, include, for example, pollution arising from a seminal emission, touching an animal carcass, touching a menstruant, and touching a corpse-contaminated person or object. The next longest period of impurity is seven days. Included here are menstruation (Lev 15:19) and corpse contamination (see above). After proper ablutions, these impurities dissipate on the evening of the seventh day. Those who recover from *ṣāraʿat* and abnormal sexual discharges pass through a seven day period as well, but they also bring offerings on the eighth day (Lev 14:8; 15:13, 28). Presumably their personal pollution ends on the evening of the seventh day and all that is necessary on the eighth is the bringing of sacrifices; the people do not need to wait until the evening of the eighth day. To be compared to seven day impurities are the week long quarantine periods for suspected *ṣāraʿat* spots in persons, fabrics, and houses (Lev 13:4, 5, 21, 26, 31, 33, 50, 54; 14:38). The parturient has the longest fixed period of impurity (Leviticus 12). It consists of two stages: a severe stage like that of menstruation which can pollute the profane and a less severe stage which is not a threat to the profane. For a male child the first period lasts seven days and the second, thirty-three, totaling forty. For a female child the periods are doubled (14 + 66 = 80). The parturient brings sacrifices after her impurity, probably on the forty-first or eighty-first day (but see DISCHARGE). The length of fixed periods of impurity that persist more than one day are common biblical numbers or their multiples (7, 14, 40, 80). Other impurities last indefinitely or would if not destroyed. Included here are irreclaimable impurities (the human corpse, animal carcasses, semen, the water of purgation, red cow ashes, the scapegoat, *ḥaṭṭāʾt* carcasses and blood, the bird and blood used in the *ṣāraʿat* purification rite, *ṣāraʿat* infected fabrics and building materials) and diseases in humans (an abnormal sexual discharge, *ṣāraʿat* in persons; plus the furniture of these persons).

Outside of P, the impurity of a seminal emission lasts only one day, expiring at evening (Deut 23:10–12). Encounters with the holy demand advanced purification, by one day (Num 11:8; Josh 3:5; 7:13; cf. Gen 35:1–7; Job 1:5) or two days (Exod 19:10–15).

d. Disposal. Permitted impurities in P that cannot be purified are disposed of or made innocuous in some way: burying corpses outside the habitation (see above); burning *ḥaṭṭāʾt* carcasses (outside the habitation in a pure place; see above) and *ṣāraʿat* infected fabrics (Lev 13:52, 55, 56, 57); sending the

scapegoat and the live bird of the *ṣāraʿat* rite away from the habitation (see above); dumping *ṣāraʿat* infected building materials outside the camp in an impure place (14:40, 41, 45); pouring out *ḥaṭṭāʾt* blood at the base of the outer altar (see above); washing semen out of clothing (15:17); breaking impure earthenware (6:21; 11:32–33; 15:12; Num 19:15). Presumably other incorrigible impurities whose disposal is not prescribed were treated similarly (animal carcasses, leftover water of purgation, and blood and carcass of the slaughtered bird in the *ṣāraʿat* purification rite). Note that the ashes of the red cow, though not disposed of, are stored outside the habitation (Num 19:9).

2. Prohibited Impurities. Though in P prohibited impurities cover a wide heterogeneous field, two categories can be discerned based on rectification procedures and attitude. One is where an offender's life is not at stake and the person can be reintegrated eventually into the religious community through various purification rites. The sins in this category are unintentional: an inadvertent delay of purification, a Nazirite's or priest's unintentional pollution from prohibited corpses, an inadvertent sin, and unintentional homicide. Also included here is impurity remaining from deliberate sins of which a person has repented. The other category is where the person's life is forfeit and where purgation of the temple by the community is necessary. Sins in this category are deliberate, unconfessed transgressions: deliberately delaying purification, a Nazirite's or priest's intentional pollution from prohibited corpses, wanton sins, polluting sancta, sexual irregularities, sacrifice to Molech, and murder.

Rectification of impurities of the unintentional class is achieved by: (a) following purification procedures for permitted impurities when the sinful impurity is of the same type and (b) offering required sacrifices (usually just a *ḥaṭṭāʾt* "purgation offering"; a corpse-contaminated Nazirite brings an *ʿōlâ* "burnt offering" and *ʾāšām* "reparation offering" as well; see above). The case of a manslayer is rectified differently. The killer remains in a refuge city until the high priest dies (see the section on homicide, above). No sacrifice or bodily purification is required. The requirements of purification for sins excluding unintentional homicide are essentially the same as those of serious permitted impurities that require sacrifice. This overlap reveals the blurred line that actually divides permitted and prohibited impurities.

Rectification of impurities of the deliberate class is achieved by (a) the execution of the culprit (for murder and Molech worship) or (b) the divine penalty of *kārēt* "cutting-off" (explicitly for Molech worship, sexual sins, delay in purification, and polluting sancta), and (c) purifying the sanctuary on the Day of Atonement and the dispatch of the scapegoat (for all deliberate sins). For sexual sins expulsion from the land is listed in addition to *kārēt.* See the discussion of specific cases, above.

In literature outside P the picture is less systematic and usually only deliberate sins receive attention. Various punishments, such as exile, agricultural failure, or individual tragedies (see the discussion of prohibited impurities) achieve rectification. Specific methods of purification or punishment are found. As in P, homicide requires the death of the killer if intentional or asylum if accidental (Exod 21:12–21; Deut 19:1–7). Disposal of impurities is found: disposing of, burning, or burying idols (see above) and removing blood pollution to an innocuous locale in Deut 21:1–9. Literary images of disposal are found in Mic 5:5–11 and Mic 7:19. Ablution occurs as a literary figure of repentance and purification: bathing (e.g., Isa 1:16; 4:4; Jer 4:14; Zech 13:1; Ps 51:4, 9; cf. Ezek 16:9); washing with soaps (Jer 2:22; Mal 3:2); hand washing (Ps 26:6; 73:13; Job 9:30; cf. 31:7); sprinkling (Ezek 36:25; Ps 51:9); fire (Isa 6:6–7; Ezek 24:3–12). Related to purification by fire is the image of refining people and purifying them as metals (Isa 1:25; 48:10–11; Jer 6:29–30; 9:6; Ezek 22:20–21; 24:11–12; Zech 13:9; Mal 3:2–3; Ps 17:3; 66:10–12; Dan 11:35; 12:10; used of the purity of God's word in Ps 12:7; 18:31 = 2 Sam 22:31; Ps 119:140; Prov 30:5; cf. Ps 19:9, 10 [see the *BHS*]; Prov 15:26).

E. The Rationale and Theology of Impurity

The previous discussion has presented several points relating to the nature, function, and theology of impurity. Several other points deserve special discussion.

1. Strengths and Places of Impurity. In P's system, impurity is not transmitted from a "father of impurity" to other persons and objects, and from them to still others, and so on, ad infinitum. Rather, the chain is usually only two or three generations long (including the "father"). Only in the case of sexual intercourse with a menstruant (or, deductively, with a woman in the first stage of impurity after childbirth

or a woman with an abnormal sexual flow) is there a chain four generations long. Though impurities at the head and in the middle of pollution chains have various lengths and purification procedures, those at the end of such chains have a common character: they last only one day and have simple purification requirements (bathing or washing; sometimes laundering for persons). For a graphic description and thorough discussion of the chains of impurity, see Wright 1987b: 179–228.

An analysis of the chains of uncleanness reveals two different types of impurities: communicable, those that can pollute other profane (i.e., nonholy) persons and objects; and noncommunicable, those that cannot pollute the profane. These two impurities are treated differently in their relation to the nonholy sphere. While noncommunicable impurities suffer no restriction in regard to the profane, communicable impurities if not excluded from the area of human habitation are at least restricted in it (cf. Lev 13:45–46; Num 5:2–3; and see above on disposal). Correlating this data about the exclusion and restriction of communicable impurities with data concerning places the biblical text qualifies as "holy," "pure," and "impure" (holy: Exod 29:31; Lev 6:9, 19, 20; 7:6; 10:13, 17; 14:13; 16:24; 24:9; pure: 4:11–12; 6:4; 10:14; impure: 14:40, 41, 45) reveals what conception P has about the qualities of various locales in a town or camp with a sanctuary in its midst. See Fig. UNC.01. Any type of impurity is to be excluded from the sanctuary area which is to be kept holy. Communicable impurities are to be excluded from or restricted in the area of human habitation around the sanctuary. Noncommunicable impurities are tolerated in the habitation since they are short-lived and do not perpetuate themselves. Thus there is a descending tripartite gradation of the qualities of holiness, purity, and impurity: holiness prevails in the sanctuary area; general, but not complete, purity within the habitation; and unrestricted severe impurity outside the habitation. Though the area of human habitation seems to be rather full of impurity, the impurity is actually minimal. With communicable impurities restricted in the habitation, the populace would be minimally exposed to pollution from these sources. Noncommunicable impurities last only one day and would terminate at evening when proper procedures are followed. Furthermore, the purity of the habitation is enforced by sanctions against prolonging noncommunicable impurities (e.g., Lev 5:2–13; 17:15–16) and requirements to destroy items such as earthenware that have noncommunicable but incorrigible impurities. See Wright 1987b: 231–247.

This model of impurity exclusion can be compared to the garden and sin story in Genesis 2–3. The garden is much like a sanctuary since God's presence is there (see Wenham 1986). When the woman and man eat from the forbidden tree, they are expelled from the garden, much as one with impurity would be excluded from the sanctuary or one with a serious communicable impurity would be excluded from the habitation. The analogy, however, goes deeper than just the notion of exclusion. It can be argued that eating from the forbidden tree represents a person's (or persons') growing-up. Before eating the woman and man are like children: without wisdom or knowledge, sexually immature, unashamed of nakedness, immortal (i.e., as children who are not entirely cognizant of their mortality), and not responsible for or aware of sin. After eating the couple becomes wise and knowledgeable, sexually mature (in the J story only after the eating does the subject of reproduction come up, 3:16, and naming the woman Eve "life," the "mother of all the living" occur, v 20), ashamed of their nakedness, mortal, and sinful. This suggests that the latent reason for the pair's expulsion from the garden is their acquisition of a mature, mortal, human nature. The sources of permitted impurity in P have a similar character. They arise from distinctly human conditions which parallel the traits acquired by the man and woman: death, disease, and sexual processes. Animal and cultic impurities do not invalidate the analogy. The former is parallel to corpse impurity and the latter exists only as a response to the other types. Hence, from a structural point of view, the garden story and P's purity laws reflect similar ideas: the mortal condition is incompatible with God's holiness. When mortal characteristics become excessive, they must be excluded from the divine realm.

2. Nondemonic Character of Impurity. The foregoing indicates that impurity is human centered. It arises mainly out of persons' bodily conditions and sins and is otherwise largely under their responsibility (note only dead animals—inanimate objects which persons must manipulate—pollute; live animals with wills of their own do not). The focus on humanity as the cause of impurity draws attention to another aspect of biblical impurity: its lack of a demonic character. This is exceptional in the ancient Near Eastern

milieu where most other religions consider demonic presence to accompany corpses and certain bodily discharges and diseases or consider demons as the source of evils and impurities. The Bible's monotheistic ideal rejects any demonic impurity. The closest connection of impurity with the demonic is the figure Azazel as the goal to which impurity is sent on the Day of Atonement (Lev 16:8, 10, 26). This figure, however, seems to be virtually impotent and insignificant. See AZAZEL. Outside of P, see Zech 5:5–11.

3. Rationale for Impurities. The issue that most interests scholars is the rationale for pollution: why certain conditions are considered impure and how the impurities function in the religious community. Some reasons are not entirely satisfactory: (a) phenomena or conditions are labelled impure because they cause disease; (b) phenomena or conditions of other cultures are called impure to prevent idolatry and assimilation; (c) things that stink, that are displeasing to the sight, or animals with abhorrent characteristics are labelled impure; (d) animals that compete with humans ecologically or economically are called impure to keep them from being raised (e.g., the pig competes with man for the same food); (e) phenomena or conditions are called impure because they are beset with or caused by demons; (f) phenomena or conditions are called impure because they are sinful; (g) the laws have symbolic moral significance (e.g., the cow's cud chewing signifies remembering God and reviewing what one has learned to better remember it). Though some of the foregoing rationales can be brought into play for explaining how a few individual phenomena came to be perceived as impure historically (see [a]–[d]), many cannot explain the complete system of impurity in P as it presently stands. For critiques of most of these views see Kornfeld 1965; Chan 1985; Milgrom *Leviticus*; Wenham 1981; and Wright 1989.

Other interpretations, though not without difficulties, offer more fruitful avenues for understanding impurity in P: (h) G. Wenham (1983) and J. Milgrom (*Leviticus*) have argued that impurities are connected with death (cf. Kornfeld 1965; Paschen 1970: 55–64; Feldman 1977: 35–41; and see Meigs 1978). For Milgrom, the system is symbolic and reminds the people to cleave to life and reject death. (i) Milgrom (1983b: 104–118; 1989; *Leviticus* on Leviticus 11; see Wright 1989) finds an additional, ethical significance in the dietary rules. The limitation of meats in the diet teach that animal life is to be held in reverence. (j) The most productive insights have come from anthropologists, especially M. Douglas. The list of contributors to the anthropological study of purity is long and explanations have been diverse (for a sample see the rationales for sexual discharges listed in DISCHARGE, and see, e.g., Bean 1981; Meigs 1978; Rosen 1973). Only Douglas's three main contributions can be summarized here. (1) She defines purity as normality and wholeness. (2) This judgement of purity derives not from objective physical reality, but from the cultural understanding of a particular society. Purity rules are symbols—a language—which express and reflect larger social concerns. The rules work in concert with other structures of thought to deliver and support a common message. (3) The body is a locus where purity concerns are manifested. It is a symbol for—a microcosm of—the larger social body. Concerns about things entering and exiting the body reflect concerns about the boundaries of society. Many of Douglas's observations have been developed from or applied to the biblical evidence. Since she is not a biblical scholar, however, her (and other anthropologists') conclusions must be cautiously used. Nevertheless, her observations have been of benefit to biblical scholars. An example of this is Wenham's (1981) and particularly Milgrom's refinement of ideas in her essay, "Deciphering a Meal (1975: 249–75), which structurally analyzes the social significance of biblical food laws. These studies offer a basis for developing a clearer understanding of the purity and holiness laws in P.

A tripartite correlation can be made between the divine-human sphere and the animals that members of this sphere use in meal situations. See Fig. UNC.02 (a). God's sacrificial "diet" consists of pure domestic animals (bovines, sheep, goats, and birds of the pigeon class); Israel's diet consists (ideally) of the same pure domestic animals plus pure game animals; the diet of foreign nations consists of all animals, pure and impure. One of Douglas' main points is that individual parts of such structural divisions are given significance by the other members; any one member of the division implicitly calls the others and their meaning to mind. Hence, when Israelites seek out and eat proper meat, they reinforce, emphasize, and perhaps consciously recall the supremacy of God as well as their distinction from other nations. The food

laws, then, help define the boundaries of the social group. Milgrom adds to the correlation of persons and foods a spatial aspect (Fig. UNC.02 (a)): God's habitation is the sanctuary, Israel's is the land of Canaan, the nations live outside the land. Thus, not only what one eats, but where one resides reflects and defines the larger social and theological issues of the community. The threefold structure of the sanctuary camp seen in Fig. UNC.01 may also be correlated with the divisions of persons and foods as an alternative spatial division. This structure echoes on a small scale the larger spatial division of sanctuary, land, and foreign land. This is particularly so in the context of the wilderness camp where everything outside the habitation is foreign land.

Symbols within symbols can also be discerned. The element of sacrifice in the threefold classification of different foods can be subdivided itself and correlated with a subclassification of divine and human beings. See Fig. UNC.02 (b). God receives burnt offerings and fat pieces of other offerings on the altar; priests receive portions of the most holy sacrifices and portions from the Israelites' *šĕlāmîm* (well-being?) offerings; Israelites receive other portions of their *šelāmîm* offerings. In contrast to the larger correlation of foods and peoples in Fig. UNC.02 (a) that shows how food laws may define the external boundaries of the group, this correlation suggests that the sacrificial food laws serve to reinforce and clarify the positions or roles of different subgroups within the group. Nevertheless, the distribution of sacrificial portions, being part of the food laws in general, would structurally reinforce group definition vis-à-vis other nations. Theologically, it would again emphasize Israel's relationship to God.

Another symbol within a symbol is found in the spatial models (either in Figs. UNC.01 or UNC.02 (a)). This division correlates a subdivision of the sanctuary area with different subgroups of Israelites who are allowed access to the various areas in the sanctuary. See Fig. UNC.02 (c). Admittedly, the correlation is not as neatly tripartite as the foregoing, but it is still instructive. The high priest, the holiest person according to P, is the only one who may enter the most holy place (adytum). This he may do only once during the year on the Day of Atonement. The high priest also has the responsibility of performing the regular service in the shrine (the outer room of the tent), though it is possible the regular priests could do this or assist (cf. Exod 27:21; Lev 16:17; Num 4:5–20; see Haran 1978: 205–29). The regular priests, who are holy, and the levites and pure Israelites, who are not holy, served or worshipped in the court (some have argued that the court was divided into a back- and forecourt, and that the Israelites and levites were restricted to the latter; Haran 1978: 184–87; Milgrom 1971: 17–18). As in the case of the rules about who may eat portions of various sacrifices (Fig. UNC.02 (b)) the rules regarding access to places in the sanctuary area encode and reinforce the social distinctions between different classes within the group. This model can be added to that in Fig. UNC.01 to show theologically that the further one moves toward the center of a sanctuary habitation and the sanctuary itself, the more godlike (i.e., holy and pure) the person's character must be.

Finally one other symbol within a symbol may be observed. See Fig. UNC.02 (d). On a microscopic level, the body is subject to impurity. Unclean foods entering it and certain discharges and diseases pollute it. On a macroscopic level, human bodies have their place in the larger spatial models adduced above. On this level, impure human bodies threaten the larger communal and religious body. Just as impure foods are not to be taken into the body, an impure body, depending on the strength of its impurity, is not to be taken into or be given free reign in the community's habitation or be taken into the holy place. Just as the body serves as a symbol reflecting the society's concerns about the group and its boundaries, so the camp structure and its impurities represent on a larger scale these social concerns.

This analysis shows how interwoven purity concerns are with issues of space and holiness and demonstrates the structural redundancy or synonymy in the symbolic system in different areas and at different levels.

NEW TESTAMENT

Just as the cultic determination of unclean and clean in the OT is seen as the absolute will of God as revealed in the Torah, so in NT times the concept of unclean and clean is regarded as the absolute binding inheritance from early Judaism. The question of unclean and clean in the NT is principally a question of the authority of the Mosaic law. However, since the authority of the Mosaic law is a matter of debate in the NT, the laws of ritual cleanness are also a point of controversy. The question of unclean and clean, however, must not in every case be seen in light of the debate concerning the Mosaic law.

A. The Community at Qumran
B. The Proclamation of Jesus
C. The Synoptic Gospels
D. Paul and the Pauline Tradition
E. Hebrews
F. The Gospel of John

G. Cult and Ritual in the NT
H. The Early Church

A. The Community at Qumran

The determination of unclean and clean plays an important role in Judaism of the NT due to its groundedness in the OT. This is especially evident in the writings of Qumran because of their great emphasis on purity. The members of the community are set apart because of their purity. One must grasp the self-understanding of the community in terms of unclean and clean. Clean are the men of the community ("purity of those who have pledged themselves to holiness"), unclean are those who trespass the words of God (1QS 5:13f.), those who do not join the community (1QSa 2:3–5; 1QH 6:20f.). The ethical and the cultic aspects of purity are interwoven for the community at Qumran. For example: the cultic aspect comes to expression in the water of purification (1QS 3:4–6). The ethical aspect comes to expression in the context of the cult; the wicked priest defiles the sanctuary with his personal wealth (1QpHab 8:3–13). More difficult is the interpretation of CD 12:1–2 where a man is not to lie with a woman in "the city of the sanctuary" lest they defile the city of the sanctuary with their uncleanness.

It would be very one sided to see the determination of unclean and clean only in terms of the OT and surrounding Judaism. The NT must be understood as a Hellenistic writing, therefore one must not overlook the Greek conception of unclean and clean, both philosophical and religious (Pl. *Phd.* 113d).

B. The Proclamation of Jesus

The most significant words of Jesus concerning the question of unclean and clean are found in Mark 7:15. The authenticity of this saying is still a matter of debate among scholars. Despite scholarly debate, evidence speaks for the authenticity of these words of Jesus (Kümmel 1978; Hübner 1975–76). In this saying the cultic regulations of Leviticus are abrogated in principle and reinterpreted, for nothing that goes into a person from without can make that person unclean, not even the foods that are declared unclean in the Torah. It is only that which comes out of an evil heart that makes one unclean. If one maintains the authenticity of this logion, then it is difficult to suppose that this saying was so radically formulated without consideration of consequences as far as food is concerned. Here the differentiation between unclean and clean is implicitly abolished. The concept of unclean and clean is transposed from the cultic to the ethical level. It must be said, however, that the differentiation between cultic and ethical is a modern conceptualization drawn upon to aid interpretation.

Jesus' disregard for the laws concerning unclean and clean foods is carried over to his treatment of persons. When Jesus sits at table with tax collectors and sinners (Mark 2:15–17; Luke 15:1–2), he provokingly rejects the boundary between what is unclean and what is clean.

Given Jesus' radically new understanding of reality and his conduct resulting therefrom, it is no wonder that many of his opponents regarded him as one possessed by an unclean spirit (Mark 3:30; K. Hübner 1985).

The transformation of the concept of cleanness from the cultic to the ethical level comes to clearest expression in Matt 5:8. Here cleanness of heart entails the direction of the entire existence of a person toward goodness of being, which in the last analysis is entirely a gift of God. Perhaps, having before him Psalm 24 or Ps 51:12, this concept is one familiar to the evangelist. Jesus' teaching on purity of heart is later reflected upon in 1 Tim 1:5; 2 Tim 2:22; 1 Pet 1:22 and Acts 15:9.

C. The Synoptic Gospels

As a further answer to the question of the Pharisees and Scribes in Mark the logion Mark 7:15 follows the corban-saying (Mark 7:9–13) in the redaction of Mark 7. Here the authority of the Torah is not directly put into question, but rather a Pharisaic halakah. It is therefore doubtful that the writer of Mark understood this logion as radically as Jewish himself did (Käsemann 1970: 207). Käsemann further contends that:

> Whoever contests that uncleanness envades a person from without runs up against the presuppositions and words of the Torah and the authority of Moses himself. Moreover, he runs up against the presupposition of the entire cultic character of antiquity with its sacrificial and propitiatory practices.

Since the concept of *nomos* "law" does not occur in Mark, and the debate concerning the law is never actually thematized, the question remains as to the extent to which the gentile readers of Mark, ca. A.D. 70, held Jesus' critique of the law as central, either because of his critical stance or because of its actual content. The appended inauthentic Hellenistic catalog of vices (Mark 7:21–22) demonstrates with its summary in v 23 that the evangelist is primarily interested in how uncleanness is the evil that emerges from the hearts of evil persons.

In the redaction of Mark 7:21–22, Matthew inserts (Matt 15:1–20) the sense of Mark 7:15. The radical stance, however, is toned down in Matt 15:11. Against the backdrop of the rabbinic discussion of that time, Matthew emphasizes that which makes the hands and foods unclean is not in every case that which makes the person unclean. Matthew 15:11 remains on the level of halakah as embodied in the question of v 2 (which is eventually answered in v 20). With this Matthew leaves Leviticus 11 unscathed, true to his intention to leave the authority of the Torah intact wherever possible (Hübner 1986: 176–82).

Contrary to some scholarly opinion, Luke did find Mark 7 in his Markan *Vorlage*. However, he purposely omitted it because his conception of the life of Jesus, which originates "according to the law of Moses" (Luke 2:22, 27, 39), recognizes no abrogation of the law. This happens partially in the "age of the church" (Conzelmann 1977) which is reported in the book of Acts. Luke thereby transposes the nullification of the cultic dietary laws to the period after Pentecost (Acts 10–11). Peter, who according to Luke knows nothing of Mark 7:15 and after Pentecost still refuses to eat the heaven sent "common and unclean" food, must himself be instructed: What God declares as clean must not be regarded as unclean (Acts 10:14–16, 11:9). The abrogation of the cultic dietary laws follows the partial abrogation of the law in the "age of the church," or is also the case with the abrogation of circumcision for gentile Christians (Hübner 1986: 189–91).

The remaining references pertaining to the question of unclean and clean, as far as the teaching of Jesus is concerned, do not provide a unified picture. The tradition histories of Luke 11:37–41, 44 and Matt 23:25–28 are problematic and hardly admit a solution. The tenor of this saying is that it is not enough to practice cultic purity while ignoring ethical purity. Therefore, cultic and ethical cleanness are not seen as opposites but as a requisite combination. The polemic against the Pharisees that comes to expression here is to be traced back to the evangelists, perhaps even to Q, but is not to be traced back to the historical Jesus (Hübner 1986: 185–89).

The OT language of purification (Leviticus 13) emerges in Mark 1:40–45 (= Matt 8:1–4; Luke 5:12–16) as it does in Luke 4:27: Matt 10:8; Matt 11:5 (= Luke 7:22). Jesus himself most likely already drew on Leviticus 13, however, this manner of conceptualizing does relativizes Jesus' saying in Mark 7:15. Furthermore, it must not be concluded from Luke 7:14 that Jesus disregarded the laws of impurity from contact with the dead, nor is it to be concluded from Mark 5:25–34 (= Matt 9:20–22; Luke 8:43–48) that Jesus ignored the OT conception of impurity from sexual contact. However, the rejection of these purity laws would comport well with Jesus' comparatively revolutionary religious intent. In the Synoptic Gospels all nineteen occurrences of uncleanness *(akathartos)* occur as "unclean spirit" (or its plural), as well as two of the five references in Acts (Acts 16:13, 18:2).

D. Paul and the Pauline Tradition

In Rom 14:14, 20 Paul states that nothing is in itself unclean, rather all is clean (cf. Titus 1:15). Here there is a close connection to the saying in Mark 7:15, though it cannot be determined whether or not Paul knew this saying. The attempt to derive Mark 7:15 from Romans 14 or Paul's conceptual milieu is fascinating, for the question does not arise why early Christianity was shaken by disputes over the law though fundamentals of the law were nullified by Jesus in Mark 7:15 (Räisänen 1986: 216). Galatians 1:13–14 is to be weighed in this argument: Paul persecuted the early congregations as a zealot for the ancestral tradition, that is, as a zealot for the law. It must be understood that the Christians, in their early years of existence, were persecuted as Jewish transgressors of the law. Since these Jewish Christians were for the first time coming into contact with gentiles, one must here think of the levitical dietary laws.

On the whole, Paul's disputes with the congregations were concerning the question of cultic purity. In Galatians 2:11–16 Paul demonstrates how he stood in the face of certain Jewish Christians from

Jerusalem. For the followers of James, though they may not be called Judaizers in the strict sense of the word, table fellowship between Jewish Christians and, one may suppose, unclean gentile Christians was sacrilege. Paul permits the members of the Corinthian Church to eat meat which is unclean and has been offered to idols, as long as it does not bother the conscience of those who are weak in faith (1 Corinthians 8, cf. Romans 14–15). In these disputes concerning that which is clean and that which is unclean one can see how difficult it was for Jewish and gentile Christians to grow together into one Church.

Romans 13:8–10 gives the impression that the commandment to love one's neighbor (Lev 19:18) incorporates every commandment in the Torah (including the unnamed cultic commandments in v 9 "… and any other commandment …"). In Rom 14:14, 20 on the other hand, the cultic laws of purity are nullified without direct reference to the law. One does not find a conceptual balance in Romans but a lack of reflection on the part of Paul which he probably would have redressed had he addressed himself again to the question of the law after Romans.

In the letters of Paul it is evident that words with the root *kathar-* hardly play a role (2 Cor 7:1 is part of a non-Pauline interpolation, 2 Cor 6:14–7:1). With the exception of Rom 14:20 one encounters only *akatharsia* "uncleanness" (Rom 1:24, 6:19; 2 Cor 12:21; Gal 5:19; 1 Thess 2:3, 4:7; deutero-Pauline: Eph 4:19, 5:3; Col 3:5) *akathartos* "unclean" (1 Cor 7:14), and *koinos* "common" (Rom 14:14; deutero-Pauline: Eph 5:5 cf. 2 Cor 6:17). Typical for the language of Paul's ethic is the multiple parataxis *akatharsia* "impurity, immortality" and *porneia* "fornication" which suggests synonymity (2 Cor 12:21, Gal 5:19) and the opposing of *akatharsia* and *hagiasmios* "uncleanness and holiness" in 1 Thess 4:7, the latter understood as moral sanctification (see also Rom 6:19).

The ethical understanding of cleanness also emerges in the post-Pauline writings, for example in the exhortation for the deacons to hold the faith with a clear conscience in 1 Tim 3:9 (cf. also 2 Tim 1:3). This ethical understanding is especially prominent in Jas 1:27: a pure and undefiled conscience consists of the care of widows and orphans, and in keeping oneself unstained from the "world" (see also Jas 4:8). In the Pauline tradition one finds the concept of cleanness used soteriologically (Eph 5:26, Titus 2:14). This usage, however, is not found in the writings of Paul. In the context of baptism, cleansing is understood as redemption (Eph 5:26), whereupon *katharizein* "to cleanse" and *hagiazein* "to sanctify" coverage in terms of their meaning (see also Heb 1:3; 2 Pet 1:9; 1 John 1:7, 9).

E. Hebrews

In the epistle to the Hebrews there is a unique line of argumentation in which Pauline thinking undergoes a specific modification. The word *katharizein* "to cleanse" is found primarily in Hebrews 9 and 10, within the section of Hebrews 7–10 in which the writer of Hebrews reflects upon the law. After a break in the train of thought in Heb 10:1 the law is taken positively, it is and always has been God's law and is a shadow of things to come. In Heb 7:18, however, the law is castigated for its weakness. In the context of the "dialectic" the writer of Hebrews advances in 9:12–14 an argument from lesser to greater cause for the eternal redemption that Jesus effected through his blood, although it is actually an argument by contrast: if indeed the blood of rams and bulls sanctifies by the purification of the flesh, then even more so will the blood of Christ cleanse our conscience from dead works (see also Heb 9:22–28, 10:2). Thus, the OT cultic cleanness was brought to its fulfillment in a certain sense, but in reality it was negated along with cultic thinking per se.

F. The Gospel of John

In the gospel of John, cleanness is also understood soteriologically, though rarely in a sacramental sense, despite the reference "the one who has bathed" in John 13:10. Baptism is not part of the theological message of chap. 13. According to John 15:3 it is through the words of Jesus that the disciples are clean.

G. Cult and Ritual in the NT

The foregoing presents fairly a well-unified picture: cleanness is no longer understood as cultic/ritual in the NT, rather as ethical/soteriological, and soteriological/sacramental. Therefore, over against the OT and ancient thought (the Greek enlightenment should also be considered here), a radically new understanding of reality for the relation of God to humanity is gained.

There emerges an opposing force in the NT that appears quite pragmatic and harmless, though in the Patristic period (see below) has a disasterous effect and renews reactionary thinking in the categories of uncleanness and cleanness once overcome by Jesus and NT reflection.

Consistent with his intention to portray the life of Jesus as conforming to the law from the beginning, Luke (Luke 2:22) speaks of the purification of the mother of Jesus, who was made unclean through the birth of a child, in accordance with Lev 12:1–8, though incorrectly. The partial lifting of the law effects, in turn, the definitive abrogation of the dietary laws (Acts 10). Yet this abrogation is relativized by the apostolic decree in Acts 15:19–21 (the cultic text tradition, not the ethical one, is original; cf. Kümmel 1965, and Conzelmann *Die Apostelgeschichte* HNT, 92 *porneia* "fornication" must not be taken in terms of Leviticus 17 as Waitz 1936; cf. Hübner 1986: 48, n. 31). The Apostolic Decree maintains a minimum cultic standard which in v 21 is not pragmatically grounded but is grounded in the authority of Moses (see also Acts 15:28–29; 21:25). In principle the gentile Christians are ritually set apart from the rest of the world. Cultic and ritual thinking contrary to the proclamation of Jesus and the writings of Paul along with the understanding of reality is alive once again. It is the broadest consensus among exegetes that the Apostolic Decree was not decided at the council on the gentile mission (Gal 2:11–21); rather, this assignation was made first by Luke or perhaps by his tradition (cf. 1 Corinthians 8).

H. The Early Church

The more the Church recognized the OT as genuine and authoritative, the more its levitical laws of purity became part of the tide of its theological and ecclesial reception. Dorothea Wendebourg (1984) has shown how, against the phenomenon of the cultic purity laws as set forth in Luke-Acts (now a special hermeneutical problem) the laws of purity determine the praxis and biblical interpretation of the early Church and how they once again negate an essential and specific characteristic of the NT; the aforementioned new understanding of reality. There were attempts to retain the theological meaning of the laws of purity and, at the same time, to practice the freedom from them: allegory (cleanness and uncleanness really denote religious/moral qualities) and typology (cultic cleanness is to be understood as a prefigurement of the death of Christ or of baptism). In the Apostolic Fathers one can see how little cleanness is understood in a ritual sense, for they often speak of a "clean heart" or a "clean conscience" (*Ep. Barn.* 1; *2 Clem.; Shepherd of Hermas*, esp. *Shep. Herm.* 23:5 [see further Kraft 1963]). The ethical accent is clear in the injunction to make oneself clean (*Shep. Herm.* 56:6). Of the writings of the Apostolic Fathers, the *Epistle of Barnabas* should be noted. In *Ep. Barn.* 10:2 the levitical commandments concerning food are so interpreted that even Moses appears to have understood them allegorically: "This is, then, not a commandment of God that they should not eat [these things] much more did Moses speak in the spirit." So Barnabas, for example, interpreted the prohibition of partaking of flesh of swine as a prohibition of developing close contact with persons who are similar to swine (*Ep. Barn.* 10:3).

Clement of Alexandria (d. ca. 215) and Methodius of Olympus (d. ca. 311) see the cleansing that takes place through baptism as the reason why ritual defilement through sexual intercourse or unclean foods cannot occur (*strom.* 3, 12.82.6; Meth. *arbitr.* 12.6—he bases his argument in 7.6 on the sayings of Jesus and on Paul). However, on the way to the adoption of the Stoic axiom that sexuality is only justified for the purpose of procreation, precisely for sexuality levitical purity regulations gradually became authoritative. In his Montanist phase, Tertullian, upon the prompting of Lev 19:2, declares prayer and sexual activity mutually exclusive (*On Exhortation to Chastity* 10.2–4, 7.1–2 advances Lev 21:14 as an argument to which a priest, for his purity's sake, may not marry a woman who has already been married). Origen, upon the prompting of Leviticus 12, grounds infant baptism on the impurity of reproduction and birth (*In Lev.* 8:3ff; cf. Wendebourg 1984: 158–60).

To a certain extent, the praxis of the church corresponds to the theoretical ruminations of the theologians. The so-called Apostolic decree shows forth its effect over time:

> In the early imperial Church, at the latest, the range of foods forbidden to the decent person expanded beyond blood and foods containing blood. Over the centuries this range came to include all possible sorts of animals found here and there to be repulsive and eventually resembled the list offered by the

OT. There developed a system of punishment and purification rituals for people and things which had come into contact with certain animals (Wendebourg 1984: 161).

Regarding sexuality, there is a shift in perspective, as far as the relationship between worship and sexuality is concerned. Despite many regulations which abide in the spirit of the NT, it eventually becomes a matter "of prescriptions, in no way inferior to those in the OT" (Wendebourg 1984: 162). Above all in Alexandria, sexual processes, because of their supposed impurity, were increasingly regarded as a barrier to the receiving of the sacraments. Besides Origen, Bishop Dionysius (2d century) and Bishop Timothy (4th century) should be named: for the sake of cultic purity they forbade conjugal intercourse on weekends and baptism during menstruation (see Wendebourg 1984: 166). Although the thought of the cultic impurity of sexual life is not explicitly stated, no one may understand canon 33 of the Spanish Council of Elvira (ca. 306) without such a background (Wendebourg 1984: 167). This council, among other things, placed rigorous restrictions on the sexual life of all priests, deacons, and other clerics. This disposition gained acceptance in the Western churches but not in the Eastern churches, where an attempt to accept such measures at the council of Nicea foundered on the objection of Bisop Paphnutiur (Socr. *h.e.* 1.11). The Eastern church recognizes only celibacy of bishops and monks.

UNDERWORLD. See DEAD, ABODE OF THE; HADES, HELL; DESCENT TO THE UNDERWORLD.

UNFORGIVABLE SIN. The concept of the unforgivable sin is based on Jesus' words in Mark 3:28–29 (= Matt 12:31; Luke 12:10), "Truly I say to you, all sins will be forgiven the sons of men, and whatever blasphemies they utter; but whoever blasphemes against the Holy Spirit never has forgiveness but is guilty of an eternal sin." The NT has two other passages which also seem to refer to an unforgivable sin. One is Heb 6:4–6, "For it is impossible to restore again to repentance those who … commit apostasy, since they crucify the Son of God on their own account and hold him up to contempt." The other is found in 1 John 5:16: "If anyone sees his brother committing what is not a mortal sin, he will ask, and God will give him life for those whose sin is not mortal. There is sin that is mortal; I do not say that one is to pray

for that." Before any general conclusions about the nature of the unforgivable sin can be drawn, all of these passages need to be examined in their unique contexts.

The references to the unforgivable sin in Mark and Matthew occur as part of the ongoing confrontations between Jesus and the scribes and Pharisees. In this particular confrontation, the question at issue is the source of the power manifested in Jesus' ministry. The scribes and Pharisees have accused Jesus of casting out demons by the power of Satan, not the power of God (Mark 3:22–30 [= Matt 12:24–32]). Jesus answers the scribes' and Pharisees' accusations by first pointing out the absurdity of the assumption that Satan would undermine his own authority. He then warns the scribes and Pharisees that they are not only guilty of refusing to acknowledge the spirit of God, but are also manifesting their own spiritual perversity. Those who are so spiritually perverse as to call Jesus' healing ministry evil, are in danger of completely rejecting the spirit of God and with it any possibility of forgiveness. Such persons place themselves out of reach of God's forgiveness, not because God's forgiveness is limited, but because they would refuse it as evil.

The reference to the unforgivable sin in Luke 12:10 (= Matt 12:31) is found as part of Jesus teaching on persecution: "He who denies me before men will be denied before the angels of God. And every one who speaks a word against the Son of man will be forgiven; but he who blasphemes against the Holy Spirit will not be forgiven." In this context, the unforgivable sin is most often understood as apostasy, the denial of Christ by one who has previously acknowledged and followed him. However, this statement makes a clear distinction between blaspheming against the Son of Man and blaspheming against the Holy Spirit. The former sin, blaspheming against the Son of Man, will be forgiven and it is this sin which seems to be a reference to apostasy. For this reason, some see the sin of blasphemy against the Holy Spirit as a rejection of the Holy Spirit as it is manifested in the disciples and the Church. The type of hostility toward the Holy Spirit which results in the persecution of Christians as evildoers, is the same type of spiritual perversity which sees Satan as the source of Jesus' healing power. This hostility cannot be forgiven, because it rejects the Holy Spirit which is the agent of God's forgiveness.

Hebrews 6:4–6 contains a clear reference to the sin of apostasy, the denial of Christ by one who has been a professing Christian: "It is impossible to restore again to repentance those who … commit apostasy, since they crucify the Son of God on their own account and hold him up to contempt." But is the apostasy referred to here an unforgivable sin? The author of Hebrews probably has a definite pastoral situation in mind. At the end of the 1st century, Jewish-Christians were under considerable pressure to denounce Christ and return to Judaism. This passage is a warning about the seriousness of such a choice. Here apostasy does not refer to denying Christ under persecution, but to a deliberate rejection of Christ in favor of the Law or some other means of salvation. Those who did this would clearly have cut themselves off from the forgiveness which God offers in Christ. The clue to identifying this type of apostasy is the complete absence of repentance for the sin of rejecting Christ.

The somewhat obscure reference to the "sin which is mortal" in 1 John 5:16 also seems to refer to a sin for which there is no forgiveness. This sin results in death (the meaning of "mortal sin") rather than life. Since 1 John 5:13 declares that those "who believe in the name of the Son of God … have eternal life," it is probable that this "sin which is mortal" involves the rejection of the Son of God and results in spiritual death. On the basis of this passage alone, it is difficult to say exactly what this "sin which is mortal" might be.

The NT acknowledges the possibility that one can be so closed to the spirit of God that one is incapable of receiving God's forgiveness. But this possibility is never seen as limiting God's willingness to forgive in any way. Blasphemy against the Holy Spirit is never equated with any particular sin; even the sin of denying Christ will be forgiven. The only thing which could possibly result in an unforgivable sin is a person's refusal to receive God's forgiveness. This refusal might take several forms. One would be the type of spiritual perversity which would reject God's forgiveness because it would see that forgiveness as an evil rather than a good. Another would be a deliberate turning away from the forgiveness offered in Christ by one who had already experienced that forgiveness. But even these forms of refusal would have to be permanent to be unforgivable. The NT consistently confronts its readers with God's willingness to

forgive those who turn to him in repentance and are willing to accept the forgiveness offered in Christ. The unforgivable sin is only mentioned as a possibility. God's forgiveness in Christ is a permanent offer.
JANET MEYER EVERTS

UNITY/UNITY OF HUMANITY. Unity is the totality of that which is diverse and varied. It is a oneness which does not obliterate what is distinctive about its members. "Unity does not mean uniformity, but solidarity, the tension-filled interconnection between those who differ among themselves" (Käsemann 1968: 56). The language field can somewhat be defined. The word *heis* ("one") appears 337 times in the NT; frequently it simply means "one" or "someone" without any theological significance. At other times it is of extreme theological importance. Other terms are less frequent but more often of theological significance; *henotēs* occurs in Eph 4:3, 13, and in Ignatius ten times; *henōsis* does not appear in the NT but is used eight times by Ignatius.

In the NT unity is of particular concern at two points: the unity of humanity and the unity of the Church. The unity of humanity is a concept which was widely extant in the ancient, particularly Hellenistic, world. For Paul it was an organizing principle of his anthropology and represented in part his response to the anthropology of his contemporaries.

The unity of the church was a burning issue for Paul, the gospel of John, and to a lesser degree the Synoptics. The older view of scholarship that an initial study within the Church was threatened only by the rise of later heresy was successfully challenged by Bauer in 1934 (Bauer 1971). From the beginning, in fact, the Church was confronted with both doctrinal and sociological disunity.

———

A. Unity Outside the NT

Outside the NT there are four major arguments for the unity of humanity. The first was the concept of one God. From the 4th–3d centuries B.C.E. on interest in monotheistic belief increased in the West, as national boundaries were destroyed by Alexander. Syncretism ensued, giving impetus to general monotheistic thought; the one divinity was supranational, no matter how many names were used in its praise (Plutarch, *De Is. et Os.* 377F–378A; *De E apud Delphos* 393B–C; Apuleius, *Met.* 11:2, e.g.).

Monotheism in antiquity was represented above all by the Jews. Israel first conceived Yahweh as the only God for Israel and then eventually as the only God of the whole world (Exod 20:3; Deut 6:4; Jer 2:11, 5:7; Isa 45:5, 46:9–10). In Jewish Greek literature monotheism was taken for granted (*Sib Or.* 3:11, 15–16, 571, 718; Philo *Op* 61.172, *Spec. Leg.* I.12.67). In rabbinic Judaism the unity of God was *the* central concept; a Jew, in fact, was defined as one who professed the unity of God (*Esth. Rab.* 6:2). Unity was expressed most clearly and profoundly in the *shema* (Deut 6:4–9). The one God of the rabbis also had a relationship with all people (*Sipre* Deut. art. 31), having created them in God's image (*ʾAbot* 3:18; *b. Nid.* 31a).

The second major argument for the unity of humanity was the recognition of one universal human nature. In the Greek experience such self-identification became necessary when the Greeks encountered the barbarians. Were these beings people or not? The resulting struggle of thought led to the first philosophical theories of humanity's unity, propounded by the Sophists. They assented to the Athenian ideal of the equality of citizens but rejected written laws in favor of nature *(physis).* Thus for Protagoras, "Of all things the measure is man, of the things that are that they are, and of the things that are not, that they are not." (80 B 1 = DK II, p. 263, lines 3–5; cf. Pl. *Prt.* 333D; *Tht.* 167C) Hippias built on the law-nature dichotomy: "I think of you all as kinsmen and family members and fellow-citizens by nature, not by law" (*Prt.* 337C–D). His concern was with *anthrōpos,* with humanity as humanity. Antiphon argued that humanity was free from the constraints of law (87 B 44A = DK II, p. 346, col. 1, line 1-p. 349, col. 4,

line 22), including distinguishing the noble-born from the low-born and separating barbarians from Greeks (87 B 44B = DK II, p. 352, col. 1, line 35-p. 353, col. 2, line 35). The medical authors also argued for a common human nature based on their observations as wandering physicians. Differences between nations arise through variations in climate and geography, not in human nature (*De aere* chap. 16). People have, therefore, the same nature *(De natura hominis),* a fact which in part leads to the Hippocratic Oath, in which all patients without regard to sexual and social differences are the objects of the physician's medical care (*Jusjurandum,* lines 24–28).

Objections to these concepts of a unified humanity were raised. Socrates concentrated on humanity as "soul" *(psychē),* the primary component of which was the *logos,* or "reason." His emphasis on reason divided humanity into wise and foolish. For Plato the human being was a temporary union of soul and body, with the soul clearly being the dominant and eternal factor (*Phdr.* 246C). Souls varied, and their differences provided another way of distinguishing people (*Resp.* 439C–441B). For Aristotle the divine element in humanity was expressed in the fact that human beings have *nous,* "mind," together with the fact that they alone have *logos* and therefore the ability to reason and speak. Yet at the same time Aristotle maintained distinctions between people, arguing for natural divisions between ruler and ruled, men and women, slaves and free (*Pol.* 1253b33, 1254a9–13, 1254b19–1255a2, 1260a8–24, 1269b5–1270b7; *Gen. An.* 767b8–10). Much of the Greek tradition could be summarized in the thanksgiving variously attributed to Thales, Socrates, and Plato that "I was born a human being and not a beast, next, a man and not a woman, thirdly, a Greek and not a barbarian" (Diog. Laert 1.33; Lactant. *Div. Inst.* 3.19).

In Stoicism reason was felt to be common to all people. Whether or not a person utilized that reason he or she still retained it, a fact which was a strong component in the Stoic drive for equality and for involvement by the wise person in the world's affairs (Marcus Aurelius *Med.* 4.4). At the same time the emphasis on reason led to division between the wise and the foolish (von Arnim 1964: 1.216–29, p. 52, line 25-p. 55, line 3; 3.544–684, p. 164, line 3-p. 171, line 19; Cic. *Acad.* 2.44.136; Epict. *Diss.* 1.3.3–4; 2.8–10).

Movement toward the idea of humanity's unity was greatly affected by the influence of Rome, as the Roman Empire provided a successor to the political world unity sought by Alexander. The history of Polybius was the earliest document of Greco-Roman times to view humanity as a unity; the Romans had mastered all the *oikoumenē,* "inhabited world." Cicero (1st century B.C.E.) sought consciously to put into practice the ideals commonly associated with Alexander and the Stoic Panaetius, especially the ideal of a unified humanity in society (*Off.* 3.6.31; 3.17.69). Beginning with reason, Cicero posited therefrom a kinship of people which resulted in *humanitas,* "humanity" or "urbanity" (*Leg.* 1.7.22–23; *Tusc.* 5.13.38–39; *Orat.* 2.53.212, 3.15.58; *Fin.* 5.19.54). All people have the same common, divine origin and thus are one (*Leg.* 1.8.24–25; 1.10.28–30, 32).

Among the representatives of the later Stoa, the brotherhood and equality of humanity were assumed. Five major arguments can be isolated: all people are equally amenable to moral instruction (Sen. *Ben.* 3.18.2; *Ep.* 31.11, 44.2, 66.3); all are children of God (Epict. *Diss.* 1.13.3–4; Dio 7.138, 12.27; Marcus Aurelius *Med.* 2.13, 3.4.4, 4.3.2,); all have sinned (Sen. *Clem.* 1.6.3,4; *Ira* 2.7.1–2.9.4, 3.26.4; *Ben.* 1.10.3); all are equally ruled by fate and death (Epict. *Diss.* 1.27.9; Sen. *Ep.* 91.16, 123.16); and all are citizens of the same great kingdom, frequently expressed through use of the image of the body (Sen. *Ep.* 95.51–53; *Ben.* 4.18.2–4; Epic. *Diss.* 2.5.24–26, 2.10.3–5; Marcus Aurelius *Med.* 2.1; 8.34; 7.13; 11.8). A practical result of such thought was the conclusion that slave and free person were equal (Sen. *Ben.* 3.22.1; Philo, influenced by Stoicism, in *Spec. Leg.* II.16.69). On the whole, the Stoics did not extend the practical results of their position to women, in contrast to the earliest Christian churches.

The OT had a unified concept of anthropology. That is, the human being was to be viewed wholistically and not divided into constituent parts. It is also to be noted that the word *adam,* "man/humanity," refers not to a single individual, but to the collective. Therefore, Genesis 1–2 do not limit to Israel the creation of a special relationship with God. Created humanity is a unity. Hellenistic Judaism, on the other hand, had a strongly dualistic anthropology, as is seen in Philo, who is dominated by body-soul dualism (*Migr* 2.9–12; *Gig* 3.12–15; *Leg. All* III.22.69). At the same time Philo exhibited a vibrant anthropological

universalism which included active care for others (*Dec* 10.41–43; *Virt* 25.131; *Spec. Leg* I.38.210–11). Yet neither he nor the rabbinic tradition extended that care in the direction of equality for women, although Philo did adopt the Stoic view of slavery.

On the question of the unity of Jew and gentile, there are opposing tendencies. On the one hand, the particularism of Israel had deep roots in the Hebrew experience. Yahweh had chosen Israel as God's special people (Deut 7:6–11, 10:12–22, 14:2, 26:18–19, 28:1; Exod 6:6–8). The people of Israel were to remain pure and holy, but the gentile nations were defiled and unclean. Separation from the gentiles was especially emphasized in postexilic writers (2 Chr 28:1–4; Ezra 6:19–22). On the other hand, there were strong universalistic elements which built on indications throughout the Hebrew Bible of a universalistic concern for all people (Gen 12:3; Deut 4:5–6; 1 Kgs 8:41–44; Isa 2:2–4, 18:7, 25:6–8, 42:6–7, 45:18–25, 49:6, 55:4–5, 56:1–8; Zech 2:11–12, 8:20–23; Ruth; Jonah). Even the humanitarian legislation regarding the resident alien or sojourner encouraged a positive attitude toward non-Israelites (Exod 22:21–22; Deut 14:28–29, 24:14–18, 26:12–13, 27:19; Lev 24:22). Hellenistic Jewish authors universalized the Jewish religion even more by presenting it in Greek dress, which provided the bridge for Judaism to become a proselytizing religion. Partnership instructive are *Pseudo-Eupolemus, Artapanus,* Sirach, *Aristobulus, Eupolemus,* the *Sibylline Oracles,* the *Testaments of the Twelve Patriarchs,* the *Letter of Aristeas, Joseph and Asenath,* the Wisdom of Solomon, Philo, and Josephus. In this process, Abraham became an extremely important figure, since he was both gentile and Jew and the first proselyte (*Ps-Eup.* in Eus. *P.E.* 9.17; Philo *Migr*; Virt 39.212-19).

The particularistic-universalistic dichotomy is also found throughout rabbinic literature and is epitomized in the different approaches of Hillel and Shammai in the famous story about the reception of a convert (*b.Šabb.* 31a). Among those more positively oriented toward proselytizing the figure of Abraham as proselyte and missionary was quite important (*b. Sukk.* 49; *Mek.* Nez. 18:9–36; *Gen. Rab.* 30:8, 39:14, 46:2, 48:2–9, 54:6, 84:4). Yet Abraham was also pre-eminently for the rabbis one who fulfilled the law (*m. Qidd.* 4:14; *Cant. Rab.* 8; *Midr.* Ps. 116:10), and the rabbis introduced this prayer into the synagogue liturgy: "R. Judah says: Three blessings one must say daily: Blessed (art thou), who did not make me a gentile; Blessed (art thou), who did not make me a woman; Blessed (art thou), who did not make me a boor" (*t. Ber.* 7:18).

In Judaism one of the most important ways that the unity of humanity was affirmed was by the use of the figure of Adam. In his very name Adam comprehended all geographical areas and thus implicitly all people (*Sib. Or.* 3:24–26; *2 En.* 30:13–15). He was the ancestor of all of humanity (Philo *Op* 47.136). In rabbinic Judaism that concept was expressed by Adam's huge body, which filled the entire world (*Gen. Rab.* 8:1) and which was composed of dust from all parts of the world (*b. Sanh.* 38ab; cf. *Pirqe R. El.* 11 [6b], where the four basic colors of humanity are found in Adam). In his pre-fall body were to be found all of his descendants (*Exod. Rab.* 40:3). At other times Adam as the prototype was stressed as a way to talk about a unified humanity (*b. Sanh.* 38a; *m. Sanh.* 4:5). Negatively, his sin affected all (*2 Bar.* 48:42, 56:5–8; *4 Ezra* 7:116–19; *Gen. Rab.* 19:6; *Sipre* Deut. 323 [138b]).

A third argument for the unity of humanity was the unity effected by the bonds of society, particularly that of law. For Plato the chief bond was *dikaiosynē,* "justice," which meant to fulfill one's role within society (*Resp.* 372A, 433A). In both of his ethical treatises Aristotle closely related justice and love (*philia,* the love of friends; *Eth. Nic.* bks. 8 and 9 [1155a–1172a] and *Eth. Eud.* bk. 7 [1234b–1246a]). Love was viewed as a primary bond between people, proceeding originally from parental love and extending as a common bond from the family until it embraced one's relationship with all people (*Eth. Nic.* 1155a17–32), thus creating from disparate elements a harmonious, reciprocal fellowship *(koinōnia)* which united those who were part of it (*Eth. Nic.* 1159b31, 1160a8–13; *Pol.* 1251a1–7).

Of most significance for the Stoics was the conception of a universal law which united all people. For them the nature of humanity, with its *logos,* was intimately bound with that of the world law and world reason, the *logos orthos* ("right reason"; Diog. Laert. 7.88; Cic. *Leg.* 1.7.23). The law was a powerful unifying force, binding together God and humanity (cf. *SVF* 2.1129, p. 327, lines 21–28). That law, moreover, was one law (Cic. *Leg.* 1.15.42; *Rep.* 3.22.33; Epict. *Diss.* 1.11.12–13, 1.22.4), which was also

viewed as a natural law (Chrysippus, *SVF* 2.599, p. 184, lines 31–32; Diog. Laert. 7.128; Cic. *Leg.* 2.5.13, *Nat.D.* 1.14.36). Because the law was natural it was also universal and had clear implications for the fellowship of all people (Cic. *Off.* 3.6.27–28). Related is the idea of a law of nations, *ius gentium,* which is above civil law (Cic. *Off.* 3.5.23, 3.17.69).

In the OT society originated from the activity of God in electing the people of Israel. God thus initiated a covenant (*bĕrît*), which resulted in a legitimate order (Exod 19:5). The Law (Torah), then, was the positive response of the people to a delivering God and that God's call to obedience. In the postexilic period the Law assumed an ever more central role, so that the necessity of obedience to that Law became the basis of the community's life. In Hellenistic Judaism the Law of the OT covenant became a universal law potentially applicable to all people (*Sib. Or.* 3:755–59). In Philo the Jewish Law was also identified as the law of nature (*Sacr* 39.131; *Op* 19.61; *Vita Mos* II.3.13–14, 2.8.48). Abraham was the test case, for he followed the unwritten law of nature (*Migr* 23.127–28, *Abr* 1.4–6, 3.16, 46.275–76). Another way that Jewish authors expressed the concept of one law was by means of the Noachian laws, which were the laws given before the Mosaic law and which were considered binding on all people (*Jub.* 7:20; *b. Sanh.* 56a; *b. ʿAbod. Zar* 64b; *t. ʿAbod. Zar* 8:4; *Gen. Rab.* 16:6, 34:8; *Deut. Rab.* 2:25; *Cant. Rab.* 1:16).

The fourth major argument for a unified humanity was the notion of one world, or cosmological cosmopolitanism, in which the world/*kosmos* was viewed as one vast city/*polis* which included all people. Crucial was the ideology which grew up around Alexander the Great. A first element in that ideology was his positive treatment of barbarians, based on their virtue, as well as his adoption of barbarian customs and dress (Strab. 1.4.9; Plutarch, *De Alex. fort.* 329B, *Alex.* 27.4–5, 45.1–3; Arrian 1.23.8; Diodorus Siculus 17.7.4–5). A second element was the understanding in antiquity that he sought to unify the races and thus the world (Arrian 4.19.5, 7.4.4–8, 7.8.1–12.4; Curtius 10.3.10–14; Plutarch, *De Alex. fort.* 327E–332A, *Alex.* 27.3–6). Once this image of Alexander was formulated, it itself became a factor in the further development of the conception of humanity's unity. In addition there were the practical results of his career, the most lasting of which were the economic and cultural unification of the Greco-Oriental world. His empire implied the existence of one world.

In rejecting the supreme importance of the city-state, the Cynics used cosmopolitanism as a specific tool of protest against society, which for them represented the negative influence of law over against their positive concept of nature. Thus the goal became to live according to nature (Diog. Laert. 6.71). In rejecting the city Diogenes scornfully called himself a cosmopolitan, "a citizen of the world" (Diog. Laert. 6.63) whose commonwealth was "as wide as the universe" (6.72; for Crates see 6.85, 93, 98). Stoic cosmopolitanism was more positive and more society-oriented. For them the world/*kosmos* was itself a unified organic being (Diog. Laert. 7.87, 142–43; *SVF* 2.527, p. 168, lines 11–14). The world was further conceived as being one vast city (*SVF* 2.645, p. 194, lines 16–17 and 2.528, p. 169, lines 26–29; Dio Chrys. *Or.* 36.29–30; Philo *Jos* 6.29).

The Middle Stoa and Later Stoa, led by figures like Panaetius, sought to effect cosmopolitan ideals in the government of Rome, and Cicero held out to Roman governors the ideals of *humanitas.* Citizenship in the commonwealth of the *kosmos* was universal, as all people contained reason (Cic. *Leg.* 1.7.23, 1.23.61; *Fin.* 3.19.64; Sen. *Ot.* 4.1, *De Ira* 2.31.7, *Ep.* 28.4, *Vita* 20.5; Epict. *Diss.* 1.9.1–6, 10.2–3; Dio Chrys. *Or.* 36.35–38; Marcus Aurelius, *Med.* 3.11.2, 4.3.2, 4.4, 6.44, 10.15, 12.36). The Stoic ideal of the cosmopolis was made concrete in Rome (Ael. Aristid. *Or.* 26.36). The world of the NT was thus a militarily united world in which much thought and propaganda were devoted to supporting that unity.

Within Judaism cosmological cosmopolitanism is to be found in Philo. The first aspect of his cosmopolitanism was negative: Abraham at the command of God became homeless (*Abr* 14.67, 18.86; *Virt* 39.218, *Gig* 13.61), as did in general the people of God (*Gig* 13.61). Yet Philo's cosmopolitanism also had positive content, as Abraham found a "truly vibrant and living commonwealth" in true belief (*Virt* 39.219), a home which was open to all (*Virt* 33.175, *Spec Leg* I.9.51, *Vita Mos* I.28.157). Philo viewed the world as a *megalopolis,* with one polity, one law, and one nature (*Jos* 6.29), founded on the basic Jewish confession that God is one (*Op* 61.171). (For more detail on unity outside the NT, see Taylor 1981.)

B. Unity in Paul

For Paul humanity was united, first of all, in its opposition to God (Rom 1:18–3:23a). Neither those with the Law nor those without it are safe from God's wrath (2:12). The gentiles are not at a disadvantage, for they have the unwritten law (2:14–16), which brings them quite close to natural law. Yet Paul did not use law as a positive bond. For Paul law united negatively in binding all people under sin (3:20). All are under sin (3:9) and all have fallen short of the glory of God (3:23a).

A second aspect of the negative unity of humanity is unity in death. Death for Paul was the result of sin (Rom 7:9–13; cf. 1:32 and 7:5; 1 Cor 15:56). The connection between sin and death is made very explicit in Rom 6:20–23. In v 23 Paul equated death with the punishment of the sins of the individual; similar is Rom 5:12d, where Paul, having stated the universality of sin and death in mythological language, concluded by saying that sin and its result, death, have occurred because all people have sinned. While similar to Stoicism's emphasis on the universality of death, Paul's conception was not fatalistic. Rather, death came by sinning, so that it was viewed as the result of the sin which had broken humanity's relationship with God.

Related to the first two aspects is the third: unity in the *kosmos,* "world." For Paul the unredeemed person was bound up with existence in the "world." The world tries in its wisdom to know God on its own terms, but it fails (1 Cor 1:20–21). The note of judgment on the world is expressed when Paul speaks of "this world" (1 Cor 3:19; 5:10; 7:31, 33–34), but it is also evident when he speaks only of "the world" (1 Cor 11:32; 2 Cor 7:10; Phil 2:15) or of "this aeon" (Rom 12:2; 1 Cor 1:20, 2:6 and 8, 3:18; 2 Cor 4:4).

A final negative argument for the unity of humanity was unity in Adam. In Rom 5:12–21 Paul developed the thesis that sin entered the world through the "one man," the *heis anthrōpos,* Adam. He avoided further mythological speculation, however, such as one finds in Gnosticism, and instead of locating the origin of sin outside the human being, localized that origin firmly in Adam himself. Through that sin death enters, but death is appropriated by the individual as he/she participates in the sinful realm by sinning (5:12d). The emphasis on the one man/humanity provided a new argument: there is one humanity which is already implicated in the one sin of the one man Adam. The unifying figure of Adam is also used in 1 Cor 15:21–22 where the weight is on the connection of Adam and death.

The only divine intervention that could effect the unity of humanity in any lasting way Paul found in the life, death, and resurrection of Jesus, through whom humanity was positively to be unified into one. The universal significance of the cross and the (potential) unity of all humanity in that salvific event can be seen in the Adam-Christ typology. In Rom 5:14 Adam is the type of the one to come in his universality and effect on all people. Just as Adam is universal, so is Christ. Just as Adam's sin included all, so does the sacrifice of Christ. Jesus Christ is "the one man" over against the one man Adam (5:15, 17–19). Each stands as the head of humanity; each comprehends in himself all people. Similar thought is developed in 1 Cor 15:20–28, 42–49, where once more the two men and their opposite effects are juxtaposed. Whereas through the one man death came, through the other man the elimination of that effect has come about by the resurrection of the dead. The second man (Christ) thereby reverses the negative direction initiated by the first. That view is particularly clear in 15:45, when Christ is identified as "the last Adam," i.e., the Adam of the end, the one to set right the negative effects of the first Adam. All people bear the image, or form, of the man of dust, Adam, in whom all of humanity is united. The believer, however, will be able to shatter that image by participation in another image, that of the man of heaven (vv 45–46).

The final goal for Paul was therefore the unity of humanity. As elsewhere, the oneness of God is foundational to humanity's oneness (Rom 3:28–30; 1 Cor 8:4–6; Gal 3:20; cf. Eph 4:6). It is the same one God who has been revealed to all (Rom 1:18–32) and that same one God has acted through the one man Jesus. The unity of humanity is in fact the goal of the whole redemptive process. For Paul, however, it is foolish to speak of any positive unity of humanity apart from the eschaton. Thus the concept of the unity of humanity is ultimately a future concept to be realized only at the resurrection (Pannenberg 1972b; 1972c). On the last day the believers who are alive will be changed and the dead in Christ will be resurrected (1 Cor 15:51–55; 1 Thess 4:13–18). For Paul that existence will be somatic (1 Cor 15:35–44, 2 Cor 5:1–5), which is an indication that Paul viewed the future, resurrected existence as human existence

and not an absorption into the divine. The result of resurrection is that the unity of humanity in death will be destroyed, just as justification destroyed the unity of humanity in sin. Death is the last enemy but it will be overcome by resurrection (1 Cor 15:26, 54–57).

Paul and the tradition which followed him used various symbols to illustrate the final goal of the unity of humanity. "New creation/creature" is found in Gal 6:14–15 and 2 Cor 5:17–18. The former passage likely has a baptismal reference and refers to the restoration of the believer to the true human reality to which God calls all people. The believer is a new creature who stands apart from the divisions of the old age. The second passage points especially to the present-tense experience of that new creaturehood which will be fully realized in resurrection. A second symbol used by Paul is that of the image of God which refers in the first place to Christ (2 Cor 4:4; cf. Col 1:15). No person since the fall has that image and it is only Christ who can give it back. The "image of God," therefore, can be viewed as the destiny of all who believe in Christ; i.e., this symbol can be understood as a statement by Paul of the positive unity of humanity possible in Christ. While Paul can write of a conforming to the image which begins at baptism (Rom 8:29, 2 Cor 3:18; Col 3:10), the concept is future-oriented (1 Cor 15:49), even if the process does begin in the present. A third symbol is utilized in the deutero-Pauline tradition. Whereas Paul in the undisputed letters stops short of designating believers as a new humanity, Ephesians does just that in 2:14–16. Christ makes one new humanity by eliminating the distinctions of law which have resulted in the two humanities (Jew-Greek) who are at enmity with each other (Gal 3:28, Col 1:21–22). The reference is clearly a corporate one. The new humanity is created "in himself," i.e., in Christ, and that new humanity is further identified with the "one body" (of Christ) in v 16. Related is the thought expressed in 4:13–16 of a perfect humanity toward which the ministry of the church enables Christians to develop. The concept is further developed in Col 3:9–11 and Eph 4:22–24, where Christians are directed to put off the old humanity and put on the new humanity, in distinction from Paul in whom the new existence is a covering of the old (2 Cor 5:4). There is also in the deutero-Paulines a unity even beyond the unity of humanity. God has "a plan for the fulness of time, to unite all things in him [Christ], things in heaven and things on earth" (Eph 1:10). All history—both human and cosmic—will ultimately be united in Christ (cf. 1:22–23; Col 1:15–20; 1 Cor 15:28). In Col 1:15–20 Christ is once more viewed as the agent of unity, although his work is understood in terms of creation as well as redemption. Thus he is the first-born of all creation, in whom and through whom and for whom all things were created. He is also the goal of creation. In addition, it is in Christ that the creation holds together (v 17).

Paul rejected other ways to unity besides the unity offered in Christ. One way to unity that he explicitly rejected was that of the Mosaic law. While Paul could say many positive things about the Law (Rom 7:10, 12; 9:14; 10:5; Gal 3:12b), he viewed the Law as weakened by the flesh and therefore powerless to save (Rom 8:3). Even when the Mosaic law was fulfilled Paul rejected it in favor of Christ (Phil 3:4–9). The Law was until Christ; with his arrival comes faith and the effective end of the Law (Gal 3:19–25; Rom 10:4). Thus no one is justified through works of the Law (Rom 3:20; Gal 3:10–14), and the Christian has in fact died to the Law (Rom 7:4–6; Gal 2:19–20). His approach to law becomes paradigmatic of his approach to other arguments for the unity of humanity: all religious and political striving for unity was put by Paul under the categories of sin and death.

Paul had similar difficulties with cosmological cosmopolitanism. *Kosmos,* as we have seen, was not a particularly positive term for Paul. On the other hand, Paul lived every day of his life with the practical results of Roman imperial political cosmopolitanism. The sheer fact that he thought of humanity in such broad, inclusive terms may be due in part to his contact with Roman political realities. Phil 3:20 does, however, possibly indicate a redefinition of Roman cosmopolitanism. It may be that Paul in effect was saying that the true Rome, the Christian commonwealth *(politeuma),* was not in Italy but in heaven and that the Christians had realized the ancient dream of cosmopolitanism, albeit in an altered form (cf. Phil 1:27, where Paul uses the verb *politeuomai,* "I lead my life, conduct myself as a citizen"). Related is his approach to peace. While there is no explicit confrontation in his letters with Roman *pax* (with the possible exception of 1 Thess 5:3), his redefinition of peace did in fact end any thought, within 1st-century Christian circles, at least, of imperial, governmental peace as a way to unite humanity. Peace in

the NT is above all the eschatological salvation of the whole person, and so peace is the normal state of the new creation (1 Cor 14:33; cf. Rom 15:33; 16:20; 2 Cor 13:11; Phil 4:9; 1 Thess 5:23). The God of peace gives peace, and the apostle expresses his wish that peace would be granted to his listeners when he repeatedly gives his standard epistolary greeting in the words, "grace to you and peace" (Rom 1:7; 1 Cor 1:3; 2 Cor 1:2; Gal 1:3; Phil 1:2; 1 Thess 1:1; Phlm 3; also Eph 1:2 and Col 1:12). The Christological basis of that peace is stated in Rom 5:1 (cf. Col 1:19–20 and Eph 2:14–17). Peace is the result of having been justified, of having been included in the Christ act. Peace for Paul is therefore not a human achievement nor the gift of the state.

Another argument for unity rejected by Paul was that of human wisdom or reason (1 Cor 1:17–31). Paul preaches the gospel "not in eloquent wisdom" but by means of the cross of Christ (v 17), thus setting wisdom and cross in opposition to each other. Indeed, the cross is folly to outsiders (v 18), but God has "made foolish the wisdom of the world" (v 20). Paul could write positively of wisdom, but by it he meant Christ, "the power of God and the wisdom of God" (v 24). Thus wisdom as a worldly concept is rejected; only divine wisdom has unifying power, which is in part illustrated by the reversal of the type of wise-foolish distinction preached by the Stoics and others (vv 26–29).

While the unity of humanity is for Paul an eschatological concept, there are present positive results which can be grouped under unity in baptism and unity in the body. The classical passage on unity in baptism is Gal 3:26–29. The identification of the Galatians as the "sons of God" (v 26) extends to gentiles a concept usually applied to Jews only; v 27 explains how it is that gentiles are the sons of God: by baptism. Further, the act of being baptized and the act of putting on Christ are identified. Putting on Christ "describes the Christian's incorporation into the 'body of Christ' as an act of 'clothing,' whereby Christ is understood as the garment" (Betz *Galatians* Hermeneia, 187). The result of putting on Christ is unity with him, or being "in Christ Jesus" (v 28). The negative result of that unity is stated first, as Paul utilizes the major divisions existing between people: "there is neither Jew nor Greek, there is neither slave nor free, there is not male and female." The divisions which had separated humanity are now considered overcome in Christ.

The elimination of the Jew-Greek distinction was one of the chief issues in both Galatians and Romans (Romans 1–3, especially 2:25–29; 10:12; Gal 5:6; 6:15; cf. 1 Cor 7:19; Phil 3:3) and was rooted in Paul's concept of apostleship, as he understood himself as a Jewish apostle in mission to gentile people (Gal 1:15; Rom 1:1–5, 14, 16; 11:13). He thus sought to unite two worlds in a way not unlike the unification goals attributed to Alexander by trying to include the gentiles in a new social and eschatological reality. A primary symbolic gesture of the elimination of this division was the monetary collection taken by Paul among his predominantly gentile-Christian congregations for the Jewish-Christian poor in Jerusalem. The symbolic unity to be expressed by the offering is indicated by his choice of the word *koinōnia,* "fellowship" as a term referring to the offering (Rom 15:26; 2 Cor 8:4 and 9:13). Paul also expressed the unity of Jew-Greek by means of the figure of Abraham, who was justified prior to the law and therefore served as the prototype of the Christian believer who is justified by grace through faith (Gal 3:6–18; Rom 4:1–25; 9:6–13; on his redefinition of Israel see Gal 6:15–16; Phil 3:3; Rom 2:25–29). At the same time the difficulty of effecting that unity is indicated by the Jerusalem conference and the misunderstandings which resulted from it (Acts 15; Galatians 2; Achtemeier 1987). The social and legal distinction between slave and free likewise for Paul existed no more (1 Cor 7:20–23). The third pair is more difficult to interpret. Elsewhere Paul does not speak in favor of the elimination of all distinctions between the sexes; rather, he seeks to eliminate the value judgments which are assigned to the male-female division (contra *TDNT* 2:440–41). Thus in the Pauline churches women lead worship (1 Cor 11:5, within an admittedly convoluted passage) and serve as deacon, missionary leader, and apostle (Rom 16:1–7). Paul concludes Gal 3:28 with the positive result: "you are all one in Christ Jesus." The "one" may refer to one *anthrōpos;* one body; or (simply) unity or oneness. All three options argue for a unity of humanity which transcends human limitations and the value judgments placed on the distinctions between people. Nor is that unity available only in the future; it is proleptically present now in the Church. Baptism, besides being the rite of initiation, is the act by which the unity of humanity is constituted (cf. 1 Cor 12:13; Col 2:11–15; 3:11).

The identification of the believer with the Christ event is more clearly stated in Rom 6:1–11. In v 5 the positive unity of humanity expected at the resurrection is rooted in the two past historical events of Christ's death and the believer's own death in baptism. Moreover, the new life is corporate in nature: "*We* have been united." The unity is a unity in the first place with Christ, but it is also a unity with other believers. That unification, within the context of a baptismal reminder, is also evident in Eph 2:11–22 and in 4:3–6, where "the unity of the Spirit" is a unity *(henotēs)* created by the Spirit, which in the Pauline tradition is normatively given at baptism (v 5). Just as the Spirit is one (v 4), so are the Christians to be one (body).

The second major way in Paul that one can identify the present positive results of the unity of humanity is in the unity of the Church, for the Church is the beginning of the new humanity (Pannenberg 1972a: 154). The context within which Paul worked out that Church unity, however, was one of division (1 Cor 1:10–17, e.g.; the Jew-gentile conflicts throughout his ministry; the opponents in 2 Corinthians and elsewhere). Paul responded in part by reminding his readers of the unifying cross of Jesus (1 Cor 1:18–25). Above all, he recalled to his readers the concept of the body of which they were a part. Paul argued that the body was not to be devalued since it belongs to the Lord (1 Cor 6:13, 20). Devaluation of the body could also affect one's understanding of the body in the Lord's Supper, and so Paul argued that from the one loaf of the Eucharist the many are constituted into one body (10:14–17; note the uses of *koinōnia* in v 16). Thus one body (v 17) indicates the horizontal somatic unity of believers in the Lord's Supper. Behind the unity of the believers is, of course, the one Lord and his one, crucified-resurrected body (v 16). It is by participation in that body by means of the Lord's Supper that the Church is constituted as body. The Lord's Supper both creates the unity of humanity in the body of Christ and is the most obvious manifestation of it. For that reason the social divisions evident at the Lord's Supper were especially abhorrent for Paul (1 Cor 11:27–34a; Theissen 1982). Thus the one unable to discern the body (of the Church) brings judgment upon him/herself (v 29). In response to the situation, Paul reminded the Corinthians of the community-constituting nature of the Supper by quoting the words of institution (vv 23–26). At the same time, he pointed to the anticipatory nature of the meal as it looks forward to the messianic banquet with the exalted Jesus (v 28). The Lord's Supper, therefore, is of great importance as a symbol of the future: the Church, which represents the future community of the new humanity, does its task of representation precisely in the Supper. The Supper is the paradigm of the unity of humanity.

The unity of the Church is further indicated by Paul's use in 1 Corinthians 12 of the body and its gifts. It is the same Spirit, the same Lord, and the same God who are the source of all gifts (vv 4–6). The unity of the body is found in baptism by the one Spirit which is given to all baptized Christians. In Rom 12:3–6 Paul again uses the analogy of the body, although he emphasizes more the unity which comes from incorporation into Christ (cf. Rom 6:1–11). In Ephesians the Church is once more called Christ's body (1:23, cf. 2:16; 5:31–32) which is to be built up by the ministry of the Church's leaders (4:12) as it functions as a unified body with every part working properly (4:16). Moreover, the goal of the Church's ministry is unity (*henōtes,* v 13), particularly the unity of faith (on the figure of the apostle Paul as a unifying factor in the post-Pauline period see DeBoer 1980; Collins 1975). That is, the unity of the Church is part of the Church's essence. What is also clear in Ephesians 4 is that the activity of being built up is ongoing, not complete; each part is needed for the proper functioning of the body, yet the growth of the whole entity is what is emphasized. The basis of the growth is love (cf. Col 3:12–15).

All people, however, do not believe. For Paul they therefore do not take part in the positive unity in Christ. Thus, whereas originally humanity was bound together in unity in Adam/sin, a unity which was broken by the Christ event, in the present age humanity is not only not united but is even more fundamentally divided than before the Christ event into those who believe and those who do not. So in Paul humanity is divided into the spiritual and the unspiritual (1 Cor 2:14–3:4); those inside the Church and those outside it (1 Cor 5:9–13); the flesh-walkers and the Spirit-walkers (1 Cor 8:4–9); those of the Spirit and promise and those of the flesh (Gal 3:3; 4:21–31; 5:16–26; 6:8); the seeing and the unseeing (2 Cor 4:3–14); the believers and the unbelievers (2 Cor 6:14–18); the righteous and the sinners (Rom 5:19); those of the Spirit and those of the written code (2 Cor 3:6); those of the Spirit and those of the law

(Romans 7, Galatians 3–4); and above all, those in Christ and those in Adam (Rom 5:12–19; 1 Cor 15:20–28, 42–49). Another way in which Paul expressed division among people was by the designation of Christians as a third race. So in 1 Cor 1:22–24 he seems to write of three groups: Jews, Greeks, and those who are called from both the Jews and the Greeks, namely, the Christians. The Christians appear as the new, third audience (1 Cor 10:32). In time this incipient concept was developed by others, so that Christians were called a third race (*Kerygma Petrou,* in Clem. *Str.* 6.5.39–41; *Diogn.* 1; *Apologia Aristidis* 2.1; 16; 17; Tert. *Ad Nat.* 1.8, *Scor.* 10; Clem. *Strom.* 3.10.10).

In sum, Paul was neither unique in posing the problem of the unity of humanity nor naive in the solution he proposed. Constantly in dialogue with a secular and religious world which had tried many proposals for unity, Paul determined that only the universality of Christ's cross could effect that long-desired goal.

C. Unity in the Gospels

In the Synoptic Gospels unity/oneness/unity-of-humanity is not developed as independent theological motifs. Certainly one can identify a commitment to one God (Mark 12:29, 32), although it tends to remain implicit. At the same time there is a dualistic strain, as the world is not unambiguously under the reign of God but is the battleground between God and Satan, as is seen in the career of Jesus from temptation to cross (Matt 4:1–11 [= Mark 1:12–13; Luke 4:1–13]; Luke 22:3, 23:35 [= Matt 27:41–42; Mark 15:31–32]). The conflict is seen also in the parables of Jesus. So, e.g., the sower sows the seed, but the birds devour it (Mark 4:3–4 [= Matt 13:3–4; Luke 8:51]), which is understood in the allegorical interpretation to be Satan (v 15 [= Matt 13:19; Luke 8:12]). In response, Jesus calls into being a new unified people, symbolized in the disciples. The unity of the new, eschatological people is revealed in the common table, which reaches a highpoint but is by no means limited to the Last Supper. The Synoptics are also concerned, in their own way, to express the unity of humanity. So in Mark there is a clear geographical pattern of movement, in which Jesus crosses the lake in such a way as symbolically to unite Jew (on the west) and gentile (on the east; 4:35–41; 5:21; 8:13). Jew and gentile are also united in the one loaf (6:30–44, 8:1–9, 8:14–21). At the same time, male and female are carefully balanced so that what happens to a male happens also to a female (1:21–26 and 1:29–31; 5:21–24a, 35–43 and 9:14–29). In Luke there is emphasis on the poor, with special attention being given to women (Elizabeth and Mary in chap. 1; 10:38–42) and to the non-Jew (10:30–37). In the second volume of Luke–Acts there is, of course, a universal mission to all people, symbolized by the reversal of the Tower of Babel at Pentecost (chap. 2), together with a brief statement about unity in a primal figure (17:26). In Matthew the Magi represent the gentile world's coming to the universal messiah (2:1–12). Yet, again somewhat parallel to Paul, the fulness of that potential unity will be realized only when the eschatological kingdom of God has fully arrived (Matt 6:10 [=Luke 11:21).

Oneness is the key to proper interpretation of the gospel of John. The key to unity in John is christological unity, specifically the unity of the Son with the Father. Jesus is the one shepherd, the one who is the exclusive shepherd of God's people (10:16). In 10:30 the christological oneness is stated most clearly: "I and the Father are one." Still, the Father and the Son are distinct even within their unity (10:38). The final major passage dealing with christological oneness is 17:11, 21–23. Even here, though, John does not work out a clearly delineated statement on the relationship of the Father and the Son, although it is obvious that they are united in such a way that it is impossible to have one without the other. It is also obvious that "the relationship of the Father to the Son and of the Son to the Father is the prototype of true solidarity" (Käsemann 1968: 69).

A second aspect of unity in John is that salvation is being one with the heavenly reality. So in 11:52 the death of Jesus is not only for Israel but for the purpose of gathering into one the scattered children of God. The distinctions between people are thus relativized, as we have seen also in Paul. Yet the goal of oneness is still to be realized rather than being an already fully present reality (17:11). The agent of that salvation is the one human being, *heis anthrōpos,* Jesus (11:50; 18:14). A final major aspect of unity in John is ecclesiological unity, which is seen already in 10:16, where John includes the "one flock, one shepherd" formula. The one flock is a future goal: either, with the majority of commentators, of Jew and gentile (cf. 12:20–23), or with Appold, of present and future believers (Appold 1976: 264). In either case, the oneness

of the flock is based on the oneness of the shepherd. In 11:52 the believers are to be gathered into one, regardless of where they are. The high priestly prayer of Jesus in chap. 17 expresses the hope of the Johannine Jesus for the future oneness of the church, again based on the model of the oneness of Father and Son (vv 11, 21–23). While one could argue that the prayer contains an implicit directive to Jesus' followers, it is in fact a prayer to God for God to bring about unity. To the extent that the earthly Church is in unity with the Father and the Son, to that extent it reflects the unity toward which it is moving and being called. The line of development is thus from the unity of Father and Son, to that of Son/Revealer and believer, to that of believers with each other. Similar ideas predominate in 1 John, where believers abide in the Son and in the Father (2:24) and where fellowship *(koinōnia)* between believers is based on fellowship with the Father and the Son (1:3, 6–7).

At the same time that unity is a major theme in John, so too is dualism, which is more clearly present here than elsewhere in the NT. People must be saved from the world and that salvation is made possible through the Revealer from heaven who speaks the word to which the elect will respond. Thus reality is divided into light-darkness (1:5, 9), law-grace (1:17), spirit-flesh (3:6, 6:63), life-condemnation (3:14–21), truth-falsehood (8:44), free-slave (8:34–35), and believer-unbeliever (passim). In the later portion of the Johannine tradition called Revelation, the battle between God and the forces of evil is primary.

D. Ignatius of Antioch

The trajectories of Church unity arising from Paul and John are further developed outside the NT in Ignatius, in whom unity is of the greatest significance. Negatively, sin for Ignatius was basically division (*Philad.* 2.1). It was that lack of unity which made humanity so vulnerable to the forces of evil. Unity, then, was the supreme gift (*Magn.* 1.2; 15). It is through Jesus Christ that unity is obtained; it is only unity with and in him that produces true harmony among people. Thus unity is possible only within the Church and is in fact promised by God (*Trall.* 11.2). It is for that reason that Ignatius so strenuously urged unity with and obedience to the bishop: "Be united with the bishop and with those who preside, for an example and lesson of imperishability" (*Magn.* 6.2; cf. *Ign. Eph.* 4; *Philad.* 3.2). Or, in Johannine terms, "As, then, the Lord did nothing apart from the Father, either by himself or through the apostles, since he was united with him, so you must do nothing apart from the bishop and the presbyters" (*Magn.* 7.1; cf. *Philad.* 7.2, *Eph.* 5.1–2, *Mag.* 13.1–2, *Tr.* 7.2). It is the bishop who guarantees the true unity of the Church (*Smyrn.* 8.2), becoming virtually identified with Christ as the guarantor of unity (*Trall.* 2.1, *Eph.* 6.1, *Smyrn.* 9.1). So, too, the ministry of Ignatius has been devoted to unity (*Philad.* 8.1). Finally, as in Paul but developed even further, the Eucharist is the sacrament of unity. There is one flesh of Christ and one Eucharist. Therefore, the Church, too, is to be one (*Eph.* 20.2; *Philad.* 3–4; *Smyrn.* 1.2, 7.1).

UNIVERSE. See COSMOGONY, COSMOLOGY.

UNKNOWN GOD, INSCRIPTION TO THE. According to Acts 17:22–31, Paul addressed a group of Epicurean and Stoic philosophers when he was at Athens. He based his speech, the so-called "Areopagus Speech," on an altar inscription that read: "To an unknown god" (17:23). As of yet, no epigraphic evidence has been found that corresponds to Paul's alleged inscription, i.e., an altar inscription to an unknown god. Moreover, there is no literary evidence, apart from Acts and related Christian texts, that conclusively answers the question whether or not there ever was an altar *(bōmos)* with such an inscription.

Hugo Hepding published in 1910 a mutilated inscription that probably derives from the 2d century and was discovered in the precinct of Demeter in Pergamum. He argued that the inscription should most plausibly be restored to read:

theois agn[ōstois] To unk[nown] Gods
Kapit[on] Capito[n]
dądoucho[s] torch-beare[r].

It is just as probable, however, that the inscription read: *theois hag[iōtatois]:* "To [the] most holy Gods" (Deissmann 1972: 288–91; Haenchen *Acts* MeyerK, 521 n. 2). This evidence is too uncertain to answer our question conclusively.

However, the literary evidence does attest to altars addressed to "unknown *gods*" (PWSup 1: 28–30). In his *Description of Greece,* which was written in the latter-half of the 2d century, Pausanias (I.1.4) says that near the harbor of Phalerum stood a sanctuary of Demeter, temples of Athena Sciras and Zeus, "and altars of the gods named Unknown *(bōmoi de theōn te onomazomenōn agnōstōn).*" Similarly, he reports (V.14.8) that at Olympia, near the great ash-altar dedicated to Zeus, there was "an altar of Unknown Gods *(Agnōstōn theōn bōmos).*" Philostratus (ca. 170–245 C.E.), in his *Life of Apollonius of Tyana* (VI.3.5), attests to the proverbial piety of Athens when he says it is a place "where altars are set up in honor even of unknown gods" *(hou kai agnōstōn daimonōn bōmoi hidruntai).* Diogenes Laertius (ca. 200–250 C.E.) reports that "nameless altars" *(bōmous anōnymous)*—altars reflecting uncertainty to which particular local deity they should be dedicated, or altars dedicated to gods whose names were forgotten—could be found in different parts of Athens *(Lives of Philosophers* 1.110).

Strabo (ca. 64 B.C.E.–21 C.E.) reports (*Geog.* 3.16) that among the Celtiberians sacrifices were made to a "nameless god" *(anōnymǭ tini theǭ).* A nameless deity is, however, not necessarily equivalent to an unknown deity; only sheer speculation can equate this Celtiberian deity with Athens. Also speculative is the ingenious thesis that the Athenian altar in question was really dedicated to Yahweh, god of the Jews, who was unknown by name (Gärtner 1955: 242–47).

In sum, this evidence argues for the existence of altars "to unknown gods" near Phalerum, at Olympia, and in Athens, but it offers no support for altars dedicated "to *an* unknown god" or "to *the* unknown god." In other words, all the evidence agrees *against* our inscription by speaking either of deity in the plural or of a "nameless" rather than an "unknown" god. The evidence indicates that the usual form for an altar inscription in Greek was with the deity's name in the genitive case ("… *of* the" deity). The dative, singular form of the inscription in Acts 17:23 ("… *to* the" deity), therefore, is unusual. Inscriptions in the

latter form are more frequent in the 2d century and seem to indicate a change in fashion (Lake and Cadbury 1933: 242) (examples: Isidore of Pelusiam's letter to Hero [*PG* 78, col. 1128]; Pseudo-Lucian's *The Patriot* 9; and Pseudo-Athanasius' *On the Temple of Athens* [*PG* 28, col. 1428]).

How then should we interpret Paul's reference in Acts 17:23? On the one hand, it is *possible* that a dative, singular inscription existed and is yet to be discovered (if it survived). On the other hand, it is *probable* that there never was such an inscription. The latter probability is implied by Jerome (ca. 340–420 C.E.), who states that the Athenian inscription was in the plural, and read: "To the Gods of Asia and Europe and Africa, to unknown and strange gods *(diis ignotis et peregrinis),*" and that Paul *changed* the inscription, evidently to suit his purposes (*Commentary on Titus* I.12). Similarly, other Christian writers, who certainly know Acts, appear to be aware of the Athenians' concern with "unknown *gods*" (example: Tertullian [ca. 160–240 C.E.] in *To the Nations,* II. 9, and *Against Marcion,* I. 9; Augustine [354–430 C.E.], in *The City of God,* 6.3).

It is interesting to note that Euthalius, a 4th century Christian grammarian, knows the same inscription mentioned by Jerome, but renders its last phrase ("to unknown and strange gods") in the *singular* rather than the plural (*PG* 85, col. 692), obviously an assimilation to the text in Acts. This accommodation is, according to Lake (1933: 243), further reflected in the Christian authors Oecumenius (*PG* 118, cols. 237–38) and Theophylact (*PG* 115, cols. 745–48, 997–1000).

Thus, Jerome, Tertullian, and the alteration of Euthalius lend support to the evidence presented thus far that there were altars in Athens raised to unknown gods. They differ from Pausanias and Philostratus in that they have the name of the deity in the dative, rather than the genitive case.

The question concerning the origin of "unknown gods" is usually explained by resorting to several ancient traditions (Lake and Cadbury 1933: 240–246; Gärtner 1955: 244–45). Diogenes Laertius recounts a tradition concerning Epimenides (ca. 600 B.C.E.), a Cretan wise-man and wonder-worker who purified the city of Athens from a pestilence. "He [Epimenides] took sheep, some black and others white, and brought them to the Areopagus; and there he let them go whither they pleased, instructing those who followed them to mark the spot where each sheep lay down and [to] offer a sacrifice *to the local divinity (tǭ prosēkonti theǭ).* And thus, it is said, the plague was stayed. Hence even to this day altars may be found in different parts of Attica *with no name inscribed upon them (bōmous anōnymous),* which are memorials of this atonement" (LCL, 1.110). This was a widespread and ancient tradition: Aristotle (384–322 B.C.E.) probably refers to it (*Athenian Constitution* I) and Plutarch (ca. 46/48–120/125 C.E.) knows it (*Solon* 12). It connects the existence of "nameless altars" with deities who were unknown beyond their local region(s) and who were perceived to have acted favorably toward Athens. It should be noted that the phrase *tǭ prosēkonti theǭ* ("to the god in that place"), in the dative singular, does present the possibility that other inscriptions in this form existed prior to the 2d century when they apparently became common (Strabo 3.16). This, however, is moot (Lake and Cadbury 1933: 242).

Herodotus (ca. 480–425 B.C.E.) recounts another legend that concerns a crisis in Athens and relates the origin of the Pan-cult there. He says that Pheidippides, the Marathon runner, was accosted by Pan and told to say to the Athenians: " 'Why is it that you take no thought of me, that am your friend, and ere now have oft been serviceable to you, and will be so again?' […] they [the Athenians] founded a temple *(hiron)* under the Acropolis, and for that message sought the god's favor with yearly sacrifices and torch-races" (LCL, 6.105). In this way the Athenians overcame their ignorance of Pan. This account of the Attic Pan-cult is also a widespread tradition. For example, it is recounted in Pausanias (1.28.4; 8.54.6) where Pheidippides' name is spelled Philippides. It is also found in Christian writings, where, due both to confusion and apologetic interests, it is variously altered and appended to support the reading in Acts. For example, the Pan-temple is identified with the altar "to an unknown god" (see Isidore of Pelusiam, Isho'dad Bar Salibi, and Bar Hebraeus in Lake and Cadbury 1933: 244–45; Dibelius 1956: 39–41; Gärtner 1955: 244–45).

The Attic Pan-cult tradition alludes to another, and probably the principal, reason for raising altars to unknown deities: the fear of neglecting to pay homage to some unknown god or goddess and thus either failing to procure the deity's benefits, or incurring his or her wrath. St. John Chrysostom (ca. 354–407

C.E.) provides a similar explanation (*PG*. 60, cols. 268–69). According to Minucius Felix (fl. ca. 200–240 C.E.) the same anxiety was felt by the Romans, who also dedicated altars to unknown gods and spirits of the dead (*Octavius* 6.2). See also *CIL* X 1552 (Grant 1986: 29–42, 178–181).

The meaning of the phrase *agnōstos theos* is difficult; it occurs nowhere in the OT and is found in the NT only in Acts 17:23. Eduard Norden, whose research remains fundamental for any discussion of this issue, proposed that it be understood in connection with gnosticism (1913: 56–83). Despite the fact that the theme of "the unknown god" is vital to gnosticism (Rudolph 1983: 58, 61–65, 67), Norden's theory is hardly likely because the gnostic idea of a deity beyond rationality has no connection with the Areopagus speech. Similarly, the phrase should not be defined on the basis of philosophical discussions which properly belong to a later period when the knowledge of god's existence and nature was the subject of debate (*TDNT* 1:119–21; Conzelmann *Acts* Hermeneia, 141). The meaning of the alleged inscription, as it is reported in Acts, is to be discovered in the speaker's conception of the God "in [whom] we live and move and have our being," who is worshipped by, but unknown to, the Athenians. This is the God Paul will proclaim to them.

Did such an altar inscription ever exist? The evidence simply does not permit a conclusive answer. The fact that (a) there is a lack of both epigraphic and literary material which exactly corroborates Acts 17:23; that (b) the literary support refers to altars, especially at Athens, dedicated "to unknown *gods*" (plural); and that the later evidence supporting the alleged inscription "to the unknown god" appears to have been assimilated to it—combines to make the existence of such an inscription improbable. Norden's suggestion (1913: 31–56) that the Areopagus speech is a literary creation is correct (Hommel 1955: 147–78; Grant 1986: 49–51), but his postulation (1913: 46) that Luke was literarily dependent on Philostratus is both doubtful and unnecessary. But given the apparently widespread knowledge of the traditions about Athenian unknown gods, it is not unlikely that the author of Acts was aware of them. Hence, the statement of Jerome that the plural "gods" was changed to "god" to suit the missionary preaching of Paul, whether done by Paul himself (as Jerome states) or by the author of the speech, still remains the best explanation of the inscription: 'To an unknown god.' See further *RGG* 1: 176 and *EncRel* 1: 135–38.

UNLEAVENED BREAD AND PASSOVER, FEASTS OF. "Passover" is the name of the sacrifice that is slaughtered on the 14th day of Nisan and eaten toward evening, at the end of the day or soon after sunset marking the beginning of the 15th day of Nisan. Scripture presents the Passover as the key element of a rite commemorating the Exodus from Egypt and the bounty of divine redemption. "Unleavened Bread" is the name of an originally distinct 7-day festival which began on sunset of the 15th day of Nisan. Scripture combines the Passover sacrifice with the feast of Unleavened Bread, and in post-biblical times the two festivals were fully integrated as a single holiday.

A. Introduction and Terminology

1. Terms. The Hebrew Bible uses three terms in connection with Passover and the Feast of Unleavened Bread: *pesaḥ, ḥag,* and *maṣṣōt.* The term *pesaḥ* denotes the Passover offering and more generally the feast centering on that sacrifice, which was eaten at night (the "Passover Meal") and which comprised a holiday in its own right, "Passover" or the "Festival of the Passover Offering"; this term appears beside another technical term for a festival, *ḥag,* only in Exod 34:25. The word *pesaḥ* has been connected with a Hebrew verb meaning "protect" (Isa 31:5) or "limp" or "skip" (2 Sam 4:4; 1 Kgs 18:21, 26) as well as with roots in other languages such as the Akkadian *paššaḫu,* "make soft, supple, soothe, placate," "the Egyptian masculine article followed by *sḫ*ꜣ, the 'commemoration,' " or ꜣ*sḫ (poseḫ),* the "harvest," *śḥ,* "the blow," or the Arabic *fsḥ,* "separate" (Segal 1963: 96–101; Sarna 1986: 86–87). The word *maṣṣōt,* appearing with or without the word *ḥag,* denotes either unleavened bread or "the Feast of Unleavened Bread." The Hebrew Bible employs the terms *pesaḥ* and *maṣṣōt* to refer to two celebrations—Scripture assumes they are combined—which mark the exodus from Egypt. These festivals became not only powerful symbols of hope and redemption but also central religious experiences in the life of Israel and of people who identified with biblical Israel. In postbiblical times, when the two festivals were fully intertwined, the terms were used interchangeably.

2. Stages. Six critical stages in the history of the festivals fall within the purview of this article: (1) the prehistory of the festivals of *pesaḥ* and *maṣṣōt;* (2) the biblical joining of the two festivals; (3) the transformation of the festivals into aspects of a pilgrimage holiday; (4) later biblical trends enhancing the character of the festivals as national celebrations; (5) NT and early Christian developments; (6) early rabbinic transformations adapting the holiday to the loss of the Passover offering. Contrasting phases 5–6 with 1–4 helps illuminate the character of the first four. In turn, noting the diverse features of both the holidays and the models of religious piety found in the biblical sources enables us to recognize their adaptations in the later Christian and rabbinic reworkings of the rites.

B. Origins and Prehistory

1. Prehistory of the Festivals in Scripture. Although scholars agree that the *pesaḥ* and *maṣṣōt* festivals were distinct originally, scholars differ in their analysis of the festivals' prehistory and the processes behind the combination and historicization of the festivals. Since all the primary evidence comes from the Bible, we can best assess the theories by analyzing the scriptural text. Hence, after briefly sketching the early history of the festivals, we will critically review the biblical evidence and then outline how that evidence has been employed in different theories to depict the prehistory of the festivals.

2. Linking Two Distinct Festivals. The Holiday of the Passover Offering (broadly drawing on the perception of Exodus 12–13) consisted of the preparation of a one-year-old sheep or goat on the 10th day of the month of Nisan (usually April in the Julian calendar), its slaughter or sacrifice on the 14th day of the month, and its consumption in family gatherings on the night of a full moon ushering in the 15th day (the time of the vernal equinox). The animal was eaten along with a vegetable (the "bitter herb") and a grain (the "unleavened bread"), and this constituted the rite of a sacrificial meal. Diverse scholars such as Beer and Pedersen have concurred in seeing the origins of this sacred meal in the practices of pastoral or nomadic conditions of life, in particular, as emphasized by Rost, a spring rite to ensure the successful movement of the group and the flock to summer pasture. Some suggest that such an offering would have lent itself to reinterpretation in terms of the Exodus experience because its apotropaic function would have been seen as appropriate for protecting the Israelites on the night before the Exodus, an approach lucidly developed by Loewenstamm (1972: 80–94, v–vii; cf. Haran 1978: 320–21).

This sacred meal was apparently followed by yet another festival. During the seven-day Feast of Unleavened Bread, starting on the night of the 15th day of Nisan, Israelites were to avoid leaven and eat only unleavened bread, *maṣṣōt.* Many of the above scholars, as well as Welhausen and especially Benzinger, suggest that this second holiday seems to originate in settled communities that celebrated a spring agricultural festival centering on the barley harvest (associated with the Feast of Unleavened Bread in Leviticus 23). This festival probably took hold only after the Israelites had themselves settled in Canaan.

Since the two festivals—the Passover and the Feast of Unleavened Bread—may have originated in different kinds of societies, they may represent alternative models of what each society viewed as most life sustaining: the flock or the harvest. The experiences and hopes of both groups would have been given new meaning in terms of the Exodus experience as a celebration of God's liberation of Israel. Some writers have treated the reference to the calendar in Exod 12:1–2 (perhaps tied to a calendrical reform) as evidence that earlier celebrations had been adapted (see Childs *Exodus* OTL, 197; Sarna 1986: 81–85).

It may be that two spring festivals were transformed because, it was believed, God took the Israelites out of Egypt in the spring (*AncIsr*, 492–93). The fact that unleavened bread was to be eaten along with the Passover sacrifice also facilitated the joining of the two festivals. The precise reconstruction of how this occurred will depend upon one's picture of the history of Israelite religion and the priority one gives to different biblical sources.

C. The Biblical Record

Biblical passages mentioning these festivals include: Exodus 12–13; Exod 23:15 and 34:18, parts of the two cultic calendars; Lev 23:4–8; Num 9:1–15; 28:16–25; and 33:3; Deut 16:1–8; Josh 5:10–15; 2 Kgs 23:10–14; Ezek 45:21; Ezra 6:19–22; 2 Chr 30:1–27; 35:1–9. De Vaux (*AncIsr*, 484–93), Segal (1963), as well as the standard handbooks and encyclopedias such as the *TWAT* (4: 1074–82) review these sources and the secondary literature. Bokser (1984: 14–19), with extensive bibliography, reviews the material as part of an analysis of the central role of the Passover offering. We turn first to Exodus 12–13, the most extensive of the sources.

1. Exodus 12–13. Exodus 12–13 presents the fullest scriptural account of the two celebrations and the one most permeated with the Bible's theological message. This passage presents the two festivals combined, and attributes to these festivals numerous interpretations with which they had become associated; the passage offers insight into how later Israelites understood the rituals. In Exodus 12–13 the festival material is redacted as part of the narration of the tenth plague in Egypt; the text describes a divine oracle to Moses, his report to the people, the actions of the Israelites, and guidelines about how the rite should be remembered in subsequent years. Source critics, pointing to different terminology and interests in these chapters, divide the text into its component Priestly (P), J, Deuteronomistic, and E sources (see Driver *Exodus* CBSC, 87; *AncIsr*, 185–86; Childs *Exodus* OTL, 184; Haran 1978: 317, 323–27). Source critics uniformly differentiate the strands that narrate the Egyptian experience from those materials that prescribe the future celebration. But, as Childs (*Exodus* OTL, 204) observes, the accounts are so intertwined that the narrator appears to have shaped the story with the later use of this experience in

mind (e.g., Exod 12:14, 24), specifically how the original experience would later be simulated as a remembrance and memorial (see also Greenberg 1974: 57–83).

After bringing a one-year-old sheep or goat as a Passover sacrifice, Israelite lay persons were to slaughter it on the fourteenth day of Nisan; meeting in fraternity groups at night they were to eat it broiled whole, with bitter herbs and unleavened bread; and as they ate they were to be dressed for the road with girded loins, sandals on the feet, and staffs in hand as if in haste, for it is a "Passover offering [*pesaḥ*] to the LORD." (Since the last three features are not mentioned in vv 21–27, perhaps they are included as a result of the later ritual simulation of the event.) Scholars aptly recognize that the bitter herbs made up the vegetable associated with a meal and that unleavened bread comprised the standard grain offered with other sacrifices to God (Lev 2:11; 6:10; Exod 23:18). One scholar accounts for the absence of leavening by suggesting that sacrifices which are offered to God in general involve objects in "their least altered state," closest to the manner in which God made them (Greenberg 1974: 66); however, another scholar sees in the absence of leaven a symbolism, only articulated in later sources, based on the notion that leaven is emblematic of corruption and spoiling (Sarna 1986: 86; see *TDOT* 4: 487–93). The Passover lamb, however, is the main object; as in a standard sacrificial meal, the other foods are simply condiments served with the sacrificial meat (Tabory 1981b). By putting some of the animal's blood on the doorposts, the Israelites provided a sign that the Destroyer or angel of death should "skip over," i.e., *pass over* (or "protect"), the Israelite homes and afflict only the Egyptians (vv 13, 23).

By using the comment in Exod 12:14 that this date should be an annually celebrated memorial and by turning then to the dates of the Festival of Unleavened Bread, Scripture bonds the two festivals temporally. In further stating that the injunction to eat unleavened bread and to avoid all leaven lasts seven days (vv 15–20), it begins this period on the 14th day in the evening *(bāʿereb),* i.e., on the evening of the 15th day, the time for eating the Passover sacrifice. It calls that day a holy convocation (v 16) and explains that it is associated with the Exodus because God took the Israelite hosts out of Egypt, though at this point it does not indicate how the eating of *maṣṣōt* supports that association. Besides enjoying the eating of *maṣṣōt* for seven days, it proscribes leaven in any Israelite home.

Moses' repetition of the divine oracle (vv 21–27) is placed in the context of a response to a child's inquiry regarding the prescribed protocol for the festival. This literary structuring serves to highlight the significance of the festival: "You shall say, 'It is the Passover sacrifice to the LORD, because He passed over the houses of the Israelites in Egypt when He smote the Egyptians, but saved our houses' " (Exod 12:26–27). By assuming that the sacrifice and placing of the blood elicit this question, Scripture presents the act of divine service, not simply the day, to be the memorial. In the narrative, vv 33–34 emphasize that the Egyptians urged the Israelites to leave in haste, causing the people to take their dough before it was leavened; they carried "their kneading bowls wrapped in their cloaks upon their shoulders." The theme of haste reappears in v 39, where it is stated that the Israelites made unleavened cakes because they could not delay in leaving Egypt and were without other provisions (see also Num 33:3). Oddly, this event fulfilled a longstanding promise and had been anticipated by God for generations (vv 40–42). Here the text's multifaceted perspective on the same event clearly emerges. Moreover, this act of finding an inherent significance in the use of unleavened bread, and the attempt to explain why this particular festival appropriately celebrates the Exodus, complements both the incidental use of unleavened bread with the Passover sacrifice and the coincidence that both holidays start simultaneously.

In stating who in the future will be eligible to partake in the paschal sacrifice, Exod 12:43–50 indicates how participation in the rite determines who was considered part of the Israelite community. The text treats those who bring the Passover offering as priests in the cult: they are not to take the meat outside the group or to break the animal's bone (features that complement the earlier prescription to bring and slaughter the offering and not leave any of it over till morning [v 10]). These features, together with the sacrifice's essential role in protecting the Israelites have led Loewenstamm (1972: 80–94) and others (see Bokser 1984: 115 n. 2) to consider the sacrifice as an apotropaic device warding off danger. Scholars who define magic as an act that forces the divine to do something emphasize that the blood is a sign to God, who in turn willingly protects Israel (Sarna 1986: 92–93). Other definitions of apotropaic and "magical"

acts do not necessarily make such a distinction (see *EncRel* 9: 81–89). Either way, the sacrifice came to represent God's saving act. Through the annual bringing of a lamb on the fourteenth day of Nisan and eating it in kinship groups, the Israelites celebrated the fact of liberation; they did not simply imitate the Israelites in Egypt who would have anxiously awaited redemption.

Expanding on how to remember and internalize the experience of the Exodus, chapter 13 speaks of the eating of unleavened bread and emphasizes the need to avoid seeing leaven for seven days (v 7). The text also speaks of the dedication or redemption of firstborn humans and animals to mark the slaying of the firstborn Egyptians as part of the tenth plague (vv 1–16, though the account in Exodus 12 treats the Israelites as a whole and not the first born [Childs *Exodus* OTL, 191]). The passage brings out this ideological message in the form of pedagogic instructions to a child. Moreover, to fit its wider redactional context, the section closes with language that recalls the plague narrative, highlighting that God demonstrated the divine strength before the Egyptians and the Egyptian gods.

Except for the pilgrimage aspect of the holiday, Exodus 12–13 provides all the other essential features that became associated with the two festivals during the biblical period. To be sure, Haran (1978: 317–48), for one, believes the portrayal of the family observance in Exodus 12 derives from an anachronistic "optical illusion" caused by the linking of the Passover offering with the Exodus. Even though it had been a pilgrimage festival, *ḥag* (Exod 12:14), and had been celebrated in temple cities, it was dissociated from that cultic context. Hence, although we cannot determine exactly when each of the features emerged, when we confront the many repetitions, inconsistencies, alternative formulations, and divergent redactional uses of the material—which may point to different sources—we can discern that rites have been combined, have attracted diverse interpretations, and been made part of the wider plague and exodus narrative. By turning now to other biblical accounts, which are considerably shorter, we find confirmation that at one point or another certain features were perceived and presumably observed differently.

2. Other Pentateuchal References. a. Exod 23:10–19 and 34:18–26. Two cultic calendars listing three pilgrimage festivals are found in these passages. They treat the Feast of Unleavened Bread as a seven-day spring pilgrimage when people, bearing gifts, are to celebrate "before the LORD." Since the passages do not directly mention the Feast of the Passover Offering, they usually are seen as evidence of the distinct nature of the two festivals and indicate the original agricultural background of the unleavened bread festival. As Childs (*Exodus* OTL, 484) notes, the historical meaning ascribed to these days as the time when Israel "went out of Egypt" (23:15; 34:18) has been seen as an added gloss, and some other association originally lay behind leaving the bread unleavened. Thus, for example, one scholar suggests that the "bread made from the first produce of the new crop is to be eaten in its original state, untouched by leaven" (Noth *Exodus* OTL, 191). But Haran (1978: 327–41), following a rendering earlier offered by *Targum Onqelos* and others such as Luzzatto (1965: 363), finds mention of the paschal offering in two similarly worded rules later in the pericope (Exod 23:18 and 34:25). The first parts of the texts in Exodus 23 and 34 proscribe offering a sacrifice in conjunction with leavened bread or leaven. Most readings understand this to refer to the grain offering accompanying animal sacrifices in general, but the approach advanced by Haran treats it as a reference to the Passover. The second halves of the passages proscribe delaying the burning of fat parts of the festival offerings; Exod 23:18 does not specify which sacrifice, though Haran takes it to be the Passover offering, while Exodus 34:25, on the other hand, speaks of "the sacrifice, *zebaḥ*, of the (pilgrim) festival of Passover, *ḥag happāsaḥ."* The latter comprises the only biblical instance in which *pesaḥ* is called a *ḥag*. It is usually taken as a later gloss but Haran argues that it represents a conflation of two early variations, "the sacrifice of my festival" and "the sacrifice of the Passover" (cf. Noth *Exodus* OTL, 264–65 and Childs *Exodus* OTL, 482–86, 604–15).

b. Lev 23:4–8, Ezek 45:21–24, and Ezra 6:19–22. These passages testify to the distinct nature of the two festivals. In a list of holidays, they mention the Passover offering on the fourteenth of the month and then, separately, the seven-day Feast of Unleavened Bread. Lev 23:9–14, emphasizing the agricultural origins of the latter festival, deals with bringing the first sheaf of the harvest to the priest. Along with the day's special sacrifice, the sheaf is to be elevated (or waved) before the LORD. This all happens during the holiday and from then on the people are permitted to make use of new produce. The festival's

association with the ensuring of continued divine bounty has thus remained, and we can understand how some Israelites could conceive of the divine redemptive acts in Egypt as paradigmatic of ongoing divine assistance.

c. Num 28:16–25. In the course of listing sacrifices for holidays, Num 28:16–25 distinctly juxtaposes the two festivals, one on the 14th and one on the 15th days of the month. The emphasis on the date, as in Exodus 12, enables the text to mention both festivals. Several texts attest one or the other festival. The cultic calendars in Exodus 23 and 34 mention the Festival of Unleavened Bread. Num 9:1–15 treats the unusual need for a "second Passover" for those who cannot observe the first because they were in a state of impurity or on a journey. In what is portrayed as a special oracular ruling, Moses is shown telling such people to bring a paschal offering one month later "in accordance with all its rules and rites" and to eat it with unleavened bread and bitter herbs. Num 9:13 states that failure to participate in the *pesaḥ* causes dire results, perhaps because, as Fishbane (1985: 99, 103) suggests, the text assumes that this omission would somehow disfranchise people from their ethnic status, a notion that expands on Exod 12:43–50.

3. Centralization of the Cult. Deut 16:1–8 constitutes another key section adapting the earlier heritage to the centralization of the cult. While scholars agree that this text matches Exodus 12–13 in combining the two festivals, they differ in assessing how to employ this section in reconstructing the holiday due to, among other things, differences in their dating of D and disagreement over whether or not D may be drawing on earlier sources (a possibility which Ginsberg [1982] develops).

By locating the Passover rite in the sanctuary that "God will choose," Deut 16:1–8 changes the celebration from an exclusively domestic rite to part of a national gathering—though families might celebrate individually in that central location. Note that Deut 16:3–4 interpolates into an account of the Passover offering the ban on leavened bread and the requirement to eat unleavened bread. A rationale tying this to the Exodus experience is provided: the *maṣṣōt* are bread of distress. In being emblematic of the haste to leave Egypt the bread serves as a reminder of the day of the Exodus. The subtle connection may also account for the specification that the offering be slaughtered "in the evening, at sundown, the time of the day when you departed from Egypt" (v 6), which echoes the statement in v 1 that the Exodus took place at night. Hence, to an even greater degree than in Exodus 12, the Passover has become the meal ushering in the Festival of Unleavened Bread.

Scholars have pointed to several changes in details of the rite, which may have considerably influenced the nature of the festival's experience. In allowing Israelites to return to their home on the morrow of the offering, the holiday differs from the other two pilgrimage festivals (the Festival of Weeks and the Festival of Tabernacles) which, occurring at the end of harvest times, emphasize joy. The festival's blessing, therefore, depends not on its agricultural dimension but on its historical connection to the Exodus (Greenberg 1984: 161–63). Accordingly, if there had been a pilgrimage dimension *(ḥag)* to the Festival of Unleavened Bread, in particular on the 7th day as suggested by Exod 13:6, it now was to be observed on the 1st day (Ginsberg 1982: 57), something suggested by other sources (Exod 12:14; Lev 23:6; Num 28:17). One will agree that the festival has undergone a shift if one believes, with Haran (1978: 296–316), for example, that the holiday previously had a pilgrimage dimension.

Deuteronomy is even clearer in making the holiday and the sacrifice, now called a *zebaḥ*, similar to communal sacrifices that were to be offered up at the central sanctuary. In the first place, by not playing up the apotropaic aspects of rituals, the text deletes the smearing of blood on the doorposts and the ban on breaking the bone, thereby placing emphasis on the commemorative nature of the rite. Secondly, the text recasts Exodus's regulations of the types of animals and manner of offering (boiling instead of roasting; sheep or cattle instead of lambs and goats, i.e., no cattle), and does not specify that it be one-year-old males (von Rad *Deuteronomy* OTL, 110–13; Weinfeld 1972: 216–17; Ginsberg 1982: 42–48, 55–58, 61, 78; Fishbane 1985: 135–38).

The pentateuchal references, therefore, support the notion that originally two distinct holidays existed. Our analysis reveals how the festivals could be simply juxtaposed, linked, or combined either as a domestic rite or as part of a pilgrimage festival. Since diverse social contexts would color the experiences of the participants, Deuteronomy would, in particular, highlight the national character of the holiday, a

holiday when individuals on pilgrimage would have their identity as part of a national group reinforced (Bokser 1984: 81–83). Likewise, participating at a central shrine rather than a local altar would heighten the experience of the sacred, increasing the sense that participation in the *pesaḥ* meal brings people closer to the divine (*KRI*, 176).

4. From Joshua to Chronicles. Depending on their reconstruction of the festival, scholars have employed the remaining biblical passages as evidence in the history of the rites and as examples of how the pentateuchal traditions were interpreted, blended, or harmonized. Josh 5:10–15 describe the first Passover on the W side of the Jordan River, on the 14th day of the month at night, after which the Israelites ate unleavened bread and parched grain and experienced the cessation of the manna. This attests to the *pesaḥ's* association with bounteousness of the land. Fishbane (1985: 145–51) has suggested that this section reflects Lev 23:10–14.

2 Kgs 23:21–24 depict Josiah's reform of the cult, a reinstatement of the Passover offering in Jerusalem, which had not been performed, or rather not performed properly, for generations. Ezek 45:21, juxtaposing the two festivals, prophesies how the Temple will be purified, the Passover sacrifice offered on the 14th day of the month, and the seven-day Festival of Unleavened Bread observed. A similar distinct juxtaposition of the festivals is evident in Ezra 6:19–22, which highlights the inherently national celebratory character of the holiday. The Festival of the Passover Offering occurs on the 14th day of the first month, followed by the seven-day Festival of Unleavened Bread as part of a national celebration at the dedication of the reconstructed Temple. Thus the evidence indicates that even after the festivals had been linked, they remained distinct.

Especially notable are the accounts of 2 Chr 30:1–27 (Hezekiah's one-month delayed Passover) and 35:1–19 (Josiah's Passover) which portray a celebration centralized in Jerusalem. They further blend and preserve diverse earlier pentateuchal traditions, though chapter 30 presents the several innovations as actions necessitated by "lay impurity" while chapter 35 normalizes the changes (Fishbane 1985: 135–38, 154–59). The texts emphasize great rejoicing and the role of Levites and other experts in singing praises to God, and specify that the eating of the Passover sacrifice took place in kinship groups. Chap. 30 alternates in referring to the Festival of the Passover Sacrifice (vv 1–12, 15–20) and to the Festival of Unleavened Bread (vv 13, 21–27), perhaps to indicate that each holiday retained its distinct nature. On the other hand, chap. 35 focuses chiefly on the great Festival of the Passover Offering; only half a verse mentions that the people also observed the seven-day Festival of Unleavened Bread (v 17). The importance of these chapters lies primarily in the festival's later biblical history. Passover, as it took on the dimension of a national holiday celebrated in Jerusalem, became associated with joyous festivity and praises to God. Despite the depiction of the Levites performing the sacrifice in chap. 35, they distributed the dead animals to local clan heads who apportioned them to the family groupings. Moreover, whatever such accounts may reflect historically, be it only the practices of the community or the thinking of the postexilic writer, they do attest a national pilgrimage festival of *pesaḥ* and *maṣṣōt* (cf. Haran 1978: 289–90). Hence, although cultic functionaries took a greater role, lay involvement remained and continued to reinforce the significance of the offering for every Israelite as a reminder of the Exodus experience.

5. Elephantine Texts. The only extra-biblical evidence earlier than the 2d century B.C.E. comes from the Jewish military colony in Elephantine Egypt, whose temple was destroyed in 411 B.C.E. One papyrus letter dated to the year 419 B.C.E. (Cowley, no. 21) apparently refers to our two festivals, one following the other, the first on the 14th day of the month and the second from the 15th to the 21st days of the month, though the key terms (the names of the festivals) have to be reconstructed from a lacuna. It likewise speaks of "being pure and taking heed" and of avoiding drink (beer?) and leaven for seven days and of sealing up leaven in one's chambers. Further, two inscribed Aramaic potsherds (Ostraca Berlin P 10679; Sayne 1911) briefly mention Passover *(pasḥa)*, though it is unclear if the meaning is to "perform" something on Passover or (as is more likely) to "offer" the Passover sacrifice (see Sukenik and Kutsher 1942: 55–56). A third potsherd (Sachau, pl. 63.1, vol. 1, pp. 233–34), which may refer to Passover, mentions when a person must stop eating bread before the holiday. In thus mentioning Passover and in reminding the soldiers of its regulations, these sources attest the existence of the two festivals and their

association with one another. Depending on the meaning of their verbs, they might suggest that a sacrifice was to be offered in this Egyptian Jewish temple and thus that Josiah's restrictions did not have effect or force in that locale (Porten 1968: 128–33, 279–82, 311–14). On the other hand, the reference to purity may suggest that the adoption of priestly temple behavior would heighten the participants' experience of the sacred. Overall, the efforts on the part of the postexilic communities to follow the biblical injunctions indicate that some actual practice underlay the biblical material.

D. Theories of Origins

The foregoing analysis explains why scholars believe that Passover and the Festival of Unleavened Bread were originally separate and initially may not have celebrated the Exodus from Egypt. Segal (1963: 78–188), Childs (*Exodus* OTL, 184–95), and Sarna (1986: 85–89) provide lucid summaries of the diverse explanations of the holidays' possible original significance and their historicization. Let us briefly contrast some of these theories to highlight the range of interpretations.

According to Wellhausen (*WPHI*, 87–108, 351–52), at the time of the Deuteronomic centralization of the cult (here represented by Deuteronomy 16), the holiday of *maṣṣōt* (previously an agricultural festival as presented in Exodus 23) was combined with Passover (previously the offering of the firstlings of the cattle), and in the process historicized as part of the commemoration. This process would have been completed by the postexilic priestly writers (represented in Leviticus 23 and in parts of Exodus 12–13), who also returned the holiday of *maṣṣōt* to its family context.

Variations on this idea will be found among those who differ on the dating of the pentateuchal sources. Some believe the association with the Exodus occurred earlier, and some maintain that elements of both holidays had been combined in ancient times and tied to a place of pilgrimage. Among those developing this approach in different ways, we find Kraus (1958), who points to the depiction of the Passover at Gilgal in Josh 5:10–12 as proof of a celebration at a central cult place, Segal (1963: esp. 187), who sees in the rite a New Year Festival in which "the Israelites went out in military array from the city to the desert," and Haran (1978) who believes the *pesaḥ* had always been connected to a temple site. (Cf., however, *CMHE*, 103–5, 123.) Hence they believe that D restores *pesaḥ* to its original character, which had been disrupted by the development of the family setting. Likewise, Josiah would not be innovating but rather reviving the joint centralized celebration.

For some scholars extra-biblical rites, in particular those of ANE holidays, are the clue to the Passover's prehistory. Rost (1943, see Childs *Exodus* OTL, 189) suggests that Passover was originally connected to a semi-nomadic festival taking place during migration and designed to protect the nomads and their flock throughout the annual spring migration from the desert to arable land. Many have adopted this approach because it nicely fits the situation of Passover, even providing an analogue to the apotropaic use of blood to protect the Israelites from the destroyer (see e.g., *AncIsr*, 488–90). Obviously, however, as Haran (1978: 320–21) remarks, any details about the nomadic background can only be speculative.

The complexity of the historical problems is highlighted by scholars such as J. Pedersen who investigate the impact of the cult on the history of the traditions. He sees Exodus 1–15 "as a cultic legend which had historicized in a story the various elements which constituted the original ceremony. Thus the victory over Pharaoh reflected the victory of order over the primordial dragon of chaos, which was followed by the mythical battle with the sea" (see Childs *Exodus* OTL, 190; Pedersen 1934; Ringgren 1966: 34–35; 186–88).

Whereas scholars are somewhat divided over the prehistory of the Passover holiday, there is greater agreement regarding the origin of the *maṣṣōt* holiday in an agricultural festival initiating the barley harvest. This festival is discernible in Exod 23:14–15, 34:18, 23, Lev 23:10–15, and Deut 16:9 (cf. Segal 1963: 108–13); and, like the *pesaḥ* festival, the holiday of *maṣṣōt* became historicized. At one point it may have been connected with a pilgrimage, as indicated by Exod 13:4, 23:15 (where it is called a *ḥag*), and 34:18 (Segal 1963: 63–64; Ginsberg 1982: 57). Some see this also in the comment in 1 Kgs 9:25 that Solomon brought certain sacrifices three times a year—sacrifices that 2 Chr 8:12–13 defines as the three festivals. Whatever the original state of the holidays, the Passover offering and the eating of unleavened

bread became festivals within ancient biblical Israel because they were historicized and served to simulate, commemorate, or remember the Exodus.

E. Postbiblical References

Due to our inability to map out the social background of the Second Temple sources, assessing the significance of this literature's references to religious institutions in general and to our two festivals in particular is difficult. With regard to the holidays under consideration here, the fact that diverse works repeat certain themes suggests that those features of the celebration had become part of a common Jewish heritage or experience. Likewise, rationales for particular details suggest that different circles of Jews reflected on the meaning of the rites and sought to enrich the celebration.

1. 2d Century B.C.E. Writers. Several works of the 2d -century B.C.E. mention the Festival of Unleavened Bread in the course of a more extensive treatment of the Passover sacrifice, thus appearing to take the former almost for granted.

Jubilees chap. 49 omits the bitter herbs and refers to unleavened bread only as part of the Festival of Unleavened Bread; the main theme is the rite of the Passover offering at the central sanctuary, and the text emphasizes the slaughter of the sacrifice and the people's joy as they eat, drink wine (here required for the first time), and praise God. *Jubilees* 49 focuses on the exact times for the slaughtering and for the eating of the offering, emphasizing how the eating of the sacrifice took place in Egypt at the time of the plague of the Egyptian firstborn. Expanding on remarks in Exodus 12 regarding the protective aspect of the offering, *Jubilees* states that those who observe the Passover will be free from plague in the coming year. It thus applies the message of Passover to the people's future in terms other than those of national independence (see Loewenstamm 1972: 88). In this connection, the text provides a rationale for the ban on breaking the animal's bone, "because no bone of the children of Israel will be broken" (49:13). The Passover was to function until the end of the fiftieth Jubilee, the Jubilee of Jubilees, when complete redemption was expected. As we shall see, certain details have parallels in the Temple Scroll (see Segal 1963: 231–37; Wacholder 1985; and especially Bokser 1984: 19–20).

The Festival of Unleavened Bread does receive separate attention in the book of *Jubilees* in a section that highlights the distinctive nature of the festival. As part of the effort to show that the festivals were tied to earliest Israelite history, memorializing events in the lives of the patriarchs, *Jub.* 17:15, 18:3, and 19 portray the binding of Isaac as the basis for the Festival of Unleavened Bread. *Jubilees* states that Abraham initiated a seven-day festival starting on the 15th day of the seventh month, i.e., Nisan, commemorating the seven days in which he "went and returned in peace," and which is to be observed "with festival joy" (18:18–19) (see Schürer *HJP²* 3/1: 310).

The epic Greek writer and non-Palestinian Jewish poet Ezekiel (*OTP* 2:814–16, lines 152–92), vividly describes the preparations of the night before the Exodus. In his reiteration and expansion of Exodus 12–13, Ezekiel mentions the time in the evening to slaughter and eat the offering, and he notes the accompanying preparations: girded loins, sandaled feet, staff in hand, and blood on the doorposts. These procedures are to provide a release from evils and death. Ezekiel, as Jacobson (1983) suggests, includes two sets of instructions for the future: eating the unleavened bread for seven days in memory of the seven-day journey from Egypt to the Sea of Reeds where the Israelites attained final liberation; and the offering of firstborn animals to recall God's deliverance of the Israelite firstborn in Egypt. Hence, like *Jubilees,* Ezekiel exhibits an interest in demonstrating the connection between the rite and what happened during the Exodus (see also Bokser 1984: 20; Schürer *HJP²* 3/1: 563–65).

The focus on the Passover offering (without mention of the Festival of Unleavened Bread) is further attested in the fragments of the Jewish Greek philosophical work by Aristobulus. *Fragment* 1 treats the astronomical characteristics of the date for the Passover offering. Drawing on the fact that the sun and moon are then passing through an equinoctial sign and hence in opposed positions, he implies that the festival has cosmic significance (see *OTP,* 831, 834, 837).

2. Temple-Centered Non-Jerusalemite Communities. In addition to the 5th-century B.C.E. evidence from Elephantine, which attests the efforts to observe the ban on unleavened bread and which possibly

alludes to the Passover offering, the Samaritan and Qumran communities supply information concerning the two festivals.

The Samaritans, who have offered the Passover sacrifice since Second Temple times, attest the ongoing importance of the Passover sacrifice. Although the history of their religious practices is difficult to trace, the existing practices follow the procedures detailed in Exodus 12, but with adaptation to Deuteronomic centralization, which the community believes refers to Mount Gerizim. They slaughter the animal in the evening, and while the meat roasts, the people gird their loins, put on heavy shoes, and take up staffs. At midnight family groups eat the meat while making sure not to break any bones, and then burn the leftover meat and bones before morning. Notably, during the slaughter of the animal and afterward, the Samaritans engage in prayer and praise of God. They also observe a seven-day period of eating unleavened bread. With great pageantry the sacrificial nature of the Passover night ritual for a Second Temple group is demonstrated (see Bokser 1984: 21).

In the scrolls found at Qumran—the third community that is known to have provided alternatives to the Jerusalem Temple—there are fragments of biblical texts and references to biblical verses relating to the festivals (see Fitzmyer 1975: 152–70); however, no apocryphal and sectarian texts treating the festivals of Passover or Unleavened Bread are preserved at Qumran. In one set of prayers for festivals (4Q509), the modern editor of the fragments (Baillet 1982:105–6) suggests that the festival of Passover would have been mentioned in what is now a lacuna, and a calendric fragment from Cave 4 *(Book of Priestly Courses)* does list Passover among the annual festival (see Talmon 1958: 168–76; Schürer *HJP²* 3/1: 460–61, 466–67).

Collections of animal bones, buried without any flesh attached and either charred or uncharred, have been uncovered at Qumran, and conceivably might be remnants of a paschal sacrifice (see the discussion in de Vaux 1973: 14–16 and nn. 2–3). But since no altar has been discovered and since the Qumran literature indicates that at that time the group believed no sacrifices could be offered, the sacrificial identification has not received wide acceptance. At most, scholars agree that the bones are the remains of meals. If the Passover interpretation were correct, we would have evidence that the community considered the Passover sacrifice so special that it brought this offering although it did not offer other sacrifices (see Schiffman 1979: 46–49; Bokser 1984: 21).

On the other hand, the *Temple Scroll* (found at Qumran but possibly written by someone outside the community) directly mentions the Passover sacrifice (17:6–9) and the Feast of Unleavened Bread (17:10–16). The former reference draws especially on Lev 23:4, Num 9:2–5, and Deut 16:1–7. Some of the specific details of the rules—the appointed time for preparing and offering the sacrifice, its application to all Israelites older than 20 years (the age of mustering, full maturity, and, for Qumran, for full membership in the sect; see Schiffman 1983: 55–60, 63–65), and its consumption at night in the courtyards of the sanctuary—accord with *Jubilees* 49 and may reflect exegesis of ambiguous biblical terms or programmatic conceptions of the cult (see Schiffman 1985b: 224–26). Thus the mention of the courtyards probably follows an idealized picture of the Temple that included the whole city, as Schiffman (1985a: 315–18) suggests. Separating this rite from the adjoining Festival of Unleavened Bread, 11QTemple 17:9 paraphrases the rule of Deut 16:7 to arise early in the morning and to return to one's tent. The second pericope, 11QTemple 17:10–16, drawing also on Lev 23:7 and Num 28:26–31, speaks of a seven-day Festival of Unleavened Bread starting on the 15th day of the month. It specifies the sacrifices for each day and the ban on work on the first and last holy days. But the text does not mention the festivals' ideological historical basis in the Exodus redemption experience, which is not surprising once we consider that the scroll is oriented toward the future redemption, the messianic age, providing guidelines for how, in the interim, one may serve God in a state of perfection (see Yadin 1977, 1: 79–81; 1984, 1: 96–99; Bokser 1984: 21–22, 116; and Maier 1985: 78–79).

3. Wisdom of Solomon, Philo, Josephus, Pseudo-Philo. The Wisdom of Solomon (written ca. 37–41 C.E.), as part of its attempt to demonstrate that godliness will be blessed and ungodliness, especially idolatry, will be cursed, portrays how divine wisdom and justice were at work during the Exodus. Chap. 18, in particular, points out the strikingly antithetical details associated with the death of the Egyptian

firstborn and the protection and glorification of the Israelites in Egypt. God provided punishment to one and reward to the other. Again, the account of the Exodus is taken up not for its own sake but as a medium for the author's own interests, here, the reward of godliness (see Winston *Wisdom of Solomon* AB, 313–29; Bokser 1984: 22; and Schürer *HJP²* 3/1: 568–73). Of particular note, Wis 18:9 mentions the offering of the sacrifice and, apparently on the basis of the later custom, the praising of God.

Philo and Josephus contain numerous references to the two festivals. They closely follow the biblical record except where they speak of the celebratory nature of Passover as a national thanksgiving for the deliverance from Egypt. They describe the multitude of participants who came on pilgrimage to Jerusalem, the great number of sacrifices eaten in fraternity groups, and the singing of the Levites accompanied by musical instruments (see Bokser 1984: 24–25).

Philo, in particular, seeks to convey his own views as he describes the festivals. Writing as if the Passover sacrifice had been offered from the start in appreciation for the "great migration from Egypt," Philo associates the celebration with the act of bringing the sacrifice: "So exceedingly joyful were they that in their vast enthusiasm and impatient eagerness, they sacrificed without waiting for their priest. This practice, which on that occasion was the result of a spontaneous and instinctive emotion, was sanctioned by the law once in every year to remind them of their duty of thanksgiving." He further describes the sacrificial meal as a spiritual "banquet" *(symposia)* taking place in houses with the "semblance and dignity of a temple." Following the trend we have already seen, he mentions that the Israelites are to offer prayers and hymns, though in accord undoubtedly with his emphasis on the spiritual dimension of the meals and religious life, he does not mention wine (*Spec Leg* II.27). After treating this "crossing-feast," he turns to the Feast of Unleavened Bread and offers extensive interpretations of its meaning, quite distinct from that of the Passover offering (*Spec Leg* II.28). In these and other accounts of the two festivals he finds in these rites and their details the higher purpose of perfecting the soul and of being in accord with the cosmic and natural order (see also *Quest Ex* I:1–23; *Leg All* III.52; *Sacr* 16–17; and *On Mating with the Preliminary Studies* 28).

His explanatory comment on the second Passover Numbers 9 reflects the assumption that even for Philo, the great spiritualizer of the Bible, no celebration would take place without the sacrifice (*Vita Mos* II.41–43; see Bokser 1984: 22–24, 116). The bringing and preparation of the offering led up to the experience of the sacrifice, which culminated in the sacrificial meal. Since this festival was synchronized with the Exodus events and the divine salvific act, and being designed to simulate the experience of the Israelites during their last night in Egypt, it comprised the main and presumably most widely known memorial or celebration for the Exodus. Philo, moreover, aptly depicts the pilgrims' probable experience during such a festival in the capital city, including the respite and release from normal life; the openness to an emotional high, to joy, and to a sense of holiness in honoring God; and even the friendships and positive feelings that would have been engendered and would have reinforced the pilgrims' sense of celebrating a national holiday together (*Spec Leg* I.12; see Bokser 1984: 80–83).

Josephus frequently mentions Passover but adds little that is not found in the other sources. He links the festivals of Passover and Unleavened Bread and sees them as a thanksgiving for the deliverance from Egypt. In *Antiquities,* he paraphrases the accounts in Exodus and Leviticus as well as the celebrations of the returnees from Ezra 6 and of Hezekiah and Josiah. He speaks of eating the sacrifice in fraternities, the multitude of participants who came on pilgrimages to Jerusalem, and the great number of sacrifices. He further mentions the singing by the Levites and their use of musical instruments (cf. 2 Chronicles 30 and 35). In *Jewish War* and the parallel sections in *Antiquities,* Josephus depicts the several 1st century C.E. instances of the celebration and the huge number of pilgrims, many of whom came from abroad. He emphasizes, like Wisdom and Philo, the joy the participants experienced, and discovers the structural basis of the holiday in the Passover offering (see *JW* 6.9.3; cf. Feldman's index in LCL 9 of Josephus's writings, s.v. "Passover," for a full list of passages; cf. also Bokser 1984: 24–25, 105–6, 117).

Josephus and Philo vividly indicate that the pilgrimage shaped the experience of the celebration, thus filling in what scholars such as Haran (1978: 289–316) reconstruct from allusions in the Bible. The significance of these observations is enhanced by considering the anthropological work of Turner (1969;

1974: 166–230), which Bokser (1984: 80–84) employed in his treatment of the rite of the Passover offering.

The *Biblical Antiquities* attributed to Philo ("Pseudo-Philo") further indicate how the two holidays were identified and perceived as the pilgrimage festival par excellence. Chap. 13:4 adapts Lev 23:4–8, but in focusing on the presentation of loaves to God, skips Passover and mentions only the Festival of Unleavened Bread. Chaps. 48:3 and 50:2 define yearly pilgrimages mentioned in Judg 21:19 and 1 Sam 1:3 as the Passover (see Feldman 1971: cxxx).

4. Summary. Postbiblical evidence underscores the relation between the two festivals and supports a critical reading of Scripture. The Passover, even though juxtaposed and combined with the Festival of Unleavened Bread in Scripture, retained its distinctive dimension and apparently overshadowed the latter holiday as a community celebration. As Bokser (1984) has argued, while we cannot deny that some Israelites or Jews who could not offer the paschal lamb may have assumed that they could still participate in the festival and that conceivably some of those who did not travel to Jerusalem might have wanted to gather without the sacrifice, we have no evidence apart from an ambiguous and indecisive papyrus from the 5th-century Elephantine community that such a gathering took place prior to the Second Temple's destruction. If it had, it would not have been perceived as the primary means of marking the evening and *by definition would not have been part of the Festival of the Passover Offering.* These Jews could, of course, still observe the seven-day Festival of Unleavened Bread by avoiding leaven; on their own they might gather to usher in the holiday with a special meal, instruct a child on the meaning of the event, offer praises to God, and drink wine. But all those who had once gone on pilgrimage would have realized that they were missing the national celebration. Building on the insights offered by Turner (1974) we can understand how the heightened experience of departing from home and normal social structures and going on pilgrimage amidst throngs of pilgrims would cause people to abandon their usual approach to the world and open themselves to new experiences, in this case a communal experience of the sacred.

F. NT and Early Christian Developments

The NT refers to the two festivals, in particular the Passover rite, in narrating the LAST SUPPER (Mark 14:1–51; Matt 26:1–46; Luke 22:1–53; John 11:55, 12:1, 13:1–38) and in interpreting Jesus as a paschal lamb (the references and voluminous literature are discussed by Windisch *TDNT* 2:902–6; Jeremias *TDNT* 5:896–904; Bokser 1984: 25–28). Moreover, the NT treats Passover as part of the Festival of Unleavened Bread (Mark 14:2, 12) or even uses the latter term to refer to the former festival (Luke 22:1, 7; Matt 26:17; cf. Acts 12:3–4; John 13:1, 4; 18:28). Mirroring the descriptions in Josephus and other Second Temple sources, the passion narratives along with other passages such as Luke 2:41 mention that Jews would go up to Jerusalem to participate in the Passover Feast among throngs of pilgrims and would eat from the Passover sacrifice in kinship groups. While those descriptions accord with other accounts of ancient Jewish meals as to the dipping of vegetables, the drinking of wine, and the recitation of opening blessings, the texts also reflect the importance of the Passover sacrificial meal and its redemptive associations. Critical NT readers, however, note that the gospels differ in the basic chronology. While the Synoptic Gospels (Mark 14:6, 12–17; Matt 26:17, 19–20; Luke 22:7–9, 13–14) indicate that the last meal Jesus ate with his disciples the night before his crucifixion was a sacrificial meal which the disciples had prepared, John (13:1; 18:28; 19:14, 42) states that it occurred "before the feast of Passover." Despite numerous studies by Jeremias (1966), Lietzmann (1979), and others advocating one or the other date or harmonizing the sources, we are unable to go beyond the literary sources to determine which account is historically "accurate" (Williams 1975). Rather, as argued by Bokser (1984: 25–26; and especially 1987b), we see how Jesus' followers and the early Church understood the Last Supper and interpreted the event to fit the message of Jesus.

As portrayed in the gospels, the meal is not structured to celebrate the Exodus but is reinterpreted in a way that relates to the future of the Jesus movement, that is, Christianity. The bread becomes the salvational body of Christ and the wine his blood—the sign of future redemption; though, as Saldarini (1984: 58) observes, these two symbolizations, which might derive from the liturgical formulae used by the early Christians in their worship after Jesus' death, could be understood in light of sacrifices in general

and not necessarily the Passover offering. The body of a sacrifice served to ensure the sense of relationship with the divinity and its blood, the power of atonement. Recognizing that early Christians did not focus narrowly on the Exodus enables us to appreciate how they made the Last Supper an anticipation of a future salvific experience. The Synoptics concentrate on Jesus in the kingdom of God, on the future judgment, and on the meaning of the passion, that is, on Jesus' death as a permanent sacrifice. Hence Jesus' message is to await the coming event, just as the Israelites, according to Exodus 12 (and as rabbis were to suggest in the Mishnah), were to await their redemption, and, in effect, in the course of the meal to experience part of that redemption. They thus adapted the sacrificial meal to the new message that redemption is at hand.

John, on the other hand, uses the Passover analogy in a way that requires him to place the Last Supper before the Passover meal and Jesus' condemnation on "the day of Preparation of the Passover" (John 19:14). John, in thus portraying Jesus crucified at the time the paschal lambs were being sacrificed at the Temple, depicts Jesus as a Passover offering. This synchronization explains how Jesus died for humanity and, it is claimed, gives his death a more enduring redemptive quality than the regular Passover sacrifice.

John, like the letter to the Hebrews and the letters of Paul, thus saw the crucified Jesus as a sacrifice atoning for the sins of the believers, though he identified it as a paschal offering. Such an interpretation, which occurs as early as 1 Cor 5:7–8, could subtly contrast the literal Passover offering with the ultimate one, namely Jesus. Later writers such as Melito of Sardis (Hall 1979) deftly develop this theme in Passover homilies, in which Jesus becomes the paschal lamb who ensures redemption and salvation. 1 Corinthians 5 also makes use of the figurative antithesis between leaven and unleavened dough: Christ helps cleanse out the old leaven of malice and evil.

G. Early Rabbinic Developments

First and 2d-century rabbinic authorities, as represented in the Mishnah, restructure the Festivals of the Passover Offering and of Unleavened Bread as part of their response to the destruction of the Temple, highlighting the fact that such festivals had been closely tied to the sacrificial cult (see Tabory 1977; 1981a; 1981b; Bokser 1984; 1987a; 1987b).

While some Jews may have been so caught up in their grief over the loss that they could not react, and certain others might have tried to continue the sacrificial meal without the sacrifice by preparing a lamb in imitation of the offering (Bokser 1984: 101–6; 1987a), the approach that was to become dominant in the nascent rabbinic movement permitted Jewish life to continue without the sacrifice at all. These rabbis drew on and elevated the importance of those biblical rites which did not require sacrifices and tried to make other religious rituals independent of the Temple cult. *Mishnah Pesaḥim,* edited ca. 200 C.E., represents the earliest literary remains of such efforts. The text not only focuses on the preparation and details of the Passover sacrifice but defines leaven and unleavened bread, the rules for searching for leaven, and the protocol for a meal ushering in the festival. The account of this meal (chap. 10) implicitly introduces fundamental changes into the rite by reworking the domestic sacrificial version of the Passover observance, as described in Exodus 12, into a non-sacrificial seder. It equates eating unleavened bread and bitter herbs with the sacrifice, teaching that all three comprise the festival's essentials. Because the latter two remain viable irrespective of the existence of the Temple cult, the biblical rite can become independent of the sacrifice. Moreover, by suggesting that Jews outside the Temple before 70 C.E. had a meal without the Passover offering, it creates a pre-70 precedent for the new rite without the sacrifice (*m. Pesaḥ.* 10:3, following the Kaufmann and other mss and attested in *t. Pesaḥ.* 10:9). The Mishnah therefore writes as if the new rituals were the standard pre-70 practice, anachronistically reading back into temple days rituals that had not yet been adopted. Such reworking of history was undoubtedly intended to convince Jews that they should believe that what they were doing pursuant to Mishnaic rules was religiously viable.

Like the early Christians, these rabbis adapted the message of the Exodus to the needs of the community. One text, *m. Pesaḥ.* 10:4, requires Jews to narrate the history of the Israelites culminating in their freedom from Egyptian slavery and to expound a classical biblical text of that history (Deut 26:5) that conveys the notion that Israel continues to enjoy the divine bounty. This activity will enable the

participants to derive new meaning from the scriptural account of redemption from slavery. The rabbis thus made special efforts to lead people to focus on the ongoing promise of redemption. This effort is also reflected in the symbolic explanation for the three key elements (*m. Pesaḥ.* 10:5), which helps overcome the sense of the physical loss of the sacrifice, and forms part of the process that replaced the Passover offering with the unleavened bread as the central element and symbol of the Passover (formerly sacrificial) meal. According to this text, the sacrifice is made because the LORD passed over the houses of the Egyptians, the bitter herbs are eaten because the Egyptians embittered their lives *and the unleavened bread is eaten because the LORD redeemed his people.* This symbolic meaning of the unleavened bread—redemption—leads to the religious consequences of recognizing redemption: giving thanks and praises to God for the miracles which—people are to believe—affected them ("who did for us all these miracles"). Such Psalms, in Second Temple sources (such as 2 Chr 30:21–26; 35:15–18) sung by experts or others over the sacrifice, are recited by individual Jews (see Bokser 1984: 43–45).

In attempting to create the impression that the extra-sacrificial rite continues a pre-70 protocol, the Mishnah only once refers to the current situation without the cult; and it consists of a passing allusion in a liturgical text attributed to R. Akiba and speaks of the future in terms of the continued presence of God who redeems. The postmishnaic authorities (3d to 5th centuries C.E.) considerably expand this issue as part of their overall development of the seder (Bokser 1984: 95–100; 1985; 1988).

Passover has thus undergone a transformation. No longer a pilgrimage holiday celebrating national independence, the festival has taken on a new dimension, reaching back to the pre-Temple perspective projected by Exodus 12, emphasizing the meal as a family gathering independent of any national cult. It further deals with the hope for future redemption by channeling it into the experience of the seder. Making the sacrificial meal into a seder, these rabbis, like the gospel writers, restructure the holiday so as to demonstrate that Judaism could continue after the destruction of the Temple, that the God of Israel still related to Israel, and that Israel could still experience God and find favor in God's eyes. The biblical story of the Exodus, simulated and remembered in the rite of the Passover Offering and in the Festival of Unleavened Bread thus found new life in the Christian and Jewish traditions of late antiquity.

BARUCH M. BOKSER

UNNI (PERSON) [Heb *ʿunnî* (עֻנִּי)]. The name of one or two different persons mentioned in the OT.

1. One of the Levites of second rank appointed to provide music during David's second effort to move the ark to Jerusalem (1 Chr 15:18, 20). For further discussion, see ELIPHELEHU.

2. The Q for the K *ʿunnô* at Neh 12:9; the name of a Levite who returned to Jerusalem with Zerubbabel. See UNNO.
RAYMOND B. DILLARD

UNNO (PERSON) [Heb K *ʿunnô* (עֻנּוֹ); Q *ʿunnî* (עֻנִּי)]. A levitical music director listed among those who returned from exile under the leadership of Zerubbabel and Jeshua (Neh 12:9). This is the only occurrence of Unno, who is absent from other references to his colleague Bakbukiah (cf. 11:17; 12:25). If the correct spelling is Unni (supported by the Qere and some Vg mss), this would be a different individual than the levitical musician mentioned in 1 Chr 15:18, 20, though possibly of some relationship to him.
JOHN KUTSKO

UPHAZ (PLACE) [Heb *ʾûphāz* (אוּפָז)]. A place in the Hebrew Bible noted for its gold (Jer 10:9; Dan 10:5). In a pronouncement against idolatry, Jeremiah describes the making of idols by skilled craftsmen using "hammered silver brought from Tarshish and gold from Uphaz" (10:9 NIV; cf. KJV, RSV, NASB). The context and syntax would indicate Uphaz is a geographical location and a source for gold. The same context occurs in the Daniel passage which describes a vision of a man robed in linen engirdled "with gold of Uphaz" (10:5 RSV, KJV, NASB). In both passages, the English translations are following the MT.

Because the location of Uphaz is unknown, ancient witnesses attempted to resolve this difficulty by an identification with a known place. The Aramaic Targum and the Syriac followed by the NEB and NJB read Ophir for Uphaz in Jeremiah. In Daniel, several Hebrew manuscripts followed by the NEB have the same reading. The reading is not without merit since Ophir is a known source of gold in S Arabia. Furthermore, the letter forms for *"z"* and *"r"* are similar enough in the Hebrew script that a scribal misreading can be responsibly suggested.

Both modern and ancient interpreters of these two passages have attempted to resolve the geographical difficulty by emendation: *mûpaz* in Jeremiah and *paz* in Daniel meaning "refined, pure." Both emendations come from the same Heb root *pzz* "purify, refine" (Gregor 1988: 19; Thompson *Jeremiah* NICOT, 324). This type of alteration, involving the loss or addition of the letter *ʾalep* which is often quiescent in Hebrew, could have arisen during oral transmission of the text. The proposed Hebrew root does describe gold in the OT: 1 Kgs 10:10 (the Peshitta adds "from Ophir") and Cant 5:11. In Daniel, the emendation, "pure gold," occurs in both ancient and modern renderings of the text (*b. Yoma* 45a; Vg; NJB; NIV). However two modern translations combine both the emendation and the proper name: "pure gold of Uphaz" NASB; KJV (Goldingay *Daniel* WBC, 273, 275). In a Yemenite votive inscription from the mid-1st millennium B.C., the word *ʾpz* is in a context where it can only signify a quality of the metal gold (Gregor 1988: 19–22).

DAVID W. BAKER

UPPER GATE (PLACE) [Heb *šaʿar haʿelyôn* (שַׁעַר הָעֶלְיוֹן)*; šaʿar bêt yhwh haʿelyôn* (שַׁעַר בֵּית יהוה הָעֶלְיוֹן)]. A gate of the Temple's inner or upper court that is spoken of as either being N of the Temple (Ezek 9:2; Avi-Yonah, 1954: 241) or as being S of the Temple (2 Kgs 15:35; 2 Chr 23:20 and 27:3). The Upper Gate is first mentioned as an important landmark in the account of Joash's coronation procession (836–798 B.C.E.) as he was marched "down from the house of the Lord, marching through the Upper Gate to the King's house" (2 Chr 23:20), thereby locating it S of the Temple. It may be suggested that the Upper Gate and the Gate of the Guards are the same since one-third of the troops stationed at the gate behind the guards (2 Kgs 11:6) were for securing the palace.

The Upper Gate is next mentioned as being built (or rebuilt) by Jotham (758–743 B.C.E.) and was referred to as the New Gate (at least until the reign of Jehoiakim, 597 B.C.E.). It was noted (2 Chr 27:3) that Jotham—unlike his father who trespassed the sacred precincts of the Temple (2 Chr 26:16–21)—was careful about the sacred Temple precincts and his rebuilding of the Upper Gate may have been in response to his father's unauthorized intrusion into the Temple.

DALE C. LIID

UPSILON. The twentieth letter of the Greek alphabet.

UR (PERSON) [Heb *ʾûr* (אוּר)]. The father of Eliphal who was one of King David's chief military men (1 Chr 11:35). Many names appear in both of the parallel lists of these military elite (1 Chr 11:10–41a = 2 Sam 23:8–39), but in 2 Sam 23:34 the father of Eliphelet (a variant of Eliphal?) is Ahasbai of Maacah, not Ur. If Eliphal is identical to Eliphelet, then there has been some corruption during the transmission of the list, or possibly some additional editing by the Chronicler. Textual variance cannot explain the difference in the names and no place name appears in 1 Chr 11:35; thus one can only speculate about the origin of the name Ur (Williamson *1 & 2 Chronicles* NCBC, 103).

RUSSELL FULLER

UR (PLACE) [Heb *ʾûr* (אוּר)]. A very important Sumerian city that played an active role in the 3d millennium and in the beginning of the 2d millennium B.C. Its modern name is Tell Muqqayyar (30°56′N; 46°08′E). After Babylon, it is without a doubt the best known Mesopotamian site in the Bible because it is mentioned in connection with Abraham. According to Gen 11:31 it is from the city of Ur in Chaldea that Terah and his clan left to go to Haran, a great caravan site located in the belt of the Euphrates in N Syria. The Bible however, says nothing more about this great Sumerian metropolis, which was a real key in Mesopotamian commercial relations with the countries of the Persian Gulf and undoubtedly with the

Indus valley as well. There is, moreover, a certain contradiction in the closeness suggested by the Genesis text between a prodigious urban capital and a nomad clan that one could no doubt compare to, perhaps even identify with, one of the Amorite groups that, circulating in the Near East, often ended up taking power. However, because the Hebrew's credo begins with "A wandering Aramean was my father …" (Deut 26:5)—another Semitic group that played a more and more preponderant role toward the end of the 2d millennium—it is not very easy to make all this different information coincide into a coherent explanation, unless, as is highly likely, they are completely different traditions.

First discovered in 1625 by Pietro della Valle, the ovoid tell which measures 1300 m by about 900 m and rises to a height of 18 m was excavated for the first time by Sir W. K. Loftus in 1849. However, during a sounding done in 1855, J. E. Taylor found an inscribed brick that allowed Sir H. C. Rawlinson to identify the tell with the city of Ur known by the biblical texts. In 1918 Campbell Thompson and then H. R. Hall in 1919 became interested in the site, but it was Sir C. L. Woolley as director of a joint expedition uniting the British Museum and the University of Pennsylvania who led a systematic exploration from 1922 to 1934. No research of any depth has taken place since 1934, but restoration work has been done on the ziggurat.

The excavations have allowed for the delineation of the principal stages of the history of the city. The earliest occupation of the site seems to go back to the middle of the 5th millennium, that is to say, to the middle of the Ubeid period. It is certain that the city was important toward the end of the 4th millennium with the rapid development of urban civilization, but the excavations have scarcely explored the levels from this period. It is in the Early Dynastic (ED) III period (between 2600 and 2500 B.C.) that a fuller picture of the city appears; this is the period of the First Dynasty of Ur and its kings Mesanepada and Aanepada; it is also the period of the famous royal tombs whose occupants Meskalamdug and Puabi, unknown in the king-lists, are probably predecessors to the rulers of the First Dynasty. An eclipse of the city seems to mark the Akkadian period, but it would again play an important role during the Sumerian renaissance under the energetic influence of the sovereigns of the Third Dynasty of Ur, above all under Ur-nammu (2111–2094) and Šulgi (2093–2046). In 2003 B.C. the Ur III state collapsed under internal and external pressures, and the city of Ur fell under the domination of Isin, of Larsa and then of Babylon. Henceforth its role was secondary, but it remained a religious metropolis that Nabonidus, the last Babylonian sovereign (556–539) honored when he privileged the lunar cult in Mesopotamia by constructing a palace for his mother whom he made the grand priestess of the god Sin. It is with the Achaemenids that the city fell into permanent oblivion.

Concerning the city itself, of which it is not certain that it had exactly the same form that is generally recognized today, Woolley really only dug in the area that contained the large secular and religious buildings and two private quarters; numerous soundings over the whole tell have given complementary information, often interesting, but also too punctilious to give us a precise image of the condition of life in a S Mesopotamian city. The houses are of very different size and often have a second story which reflects not only the habits of daily life but also the social organization of the quarter (with the merchant's stalls and the poorest houses situated near the master's houses).

The best known monument is the ziggurat which was constructed by Ur-nammu, the founder of the Third Dynasty. He particularly distinguished himself as a builder of ziggurats in Mesopotamia; he began with his own city, dedicated to the god Nanna (Sin in Akiadian) and regularly maintained the ziggurat until the end of the existence of the Ur III city. This ziggurat (62.5 m by 43 m at the base) was relatively well-preserved and the analysis of the remains allows us to think that it was built out of raw bricks surrounded by a protective skin of baked bricks. It rose probably three stories high, the first was accessible from three monumental staircases. At the summit was found, according to presently accepted opinion, a temple perhaps dedicated to the god Nanna. The ziggurat was built inside an enclosure of more than 100 m long that delimited a space that also contained other cultural buildings; one had access to it through a small courtyard.

Another temple, that of Ningal, furnished an excellent example of complex religious architecture; with two large sanctuaries, a chapel, private apartments, workshops, stores and kitchens, it represents a complex world that is strongly linked to the organization of a palace.

A palace that belongs to the period of the Third Dynasty of Ur has, however, been brought to light and it represents the first example of a pattern that will dominate the Near East for several centuries. At the end of the history of the city, the palace constructed by Nabonidus for his mother furnished an interesting example of civil architecture from the middle of the 1st millennium.

However, the archaeological fame of Ur rests above all on the discovery of several royal tombs. The first group that contained the richest grave goods belongs to the ED III period. Purely by chance some of them have been discovered intact, in particular that of Meskalamdug and the queen Puabi. They are funerary chambers constructed out of stone with corbelled ceilings, located at the bottom of a well entered by a descending corridor from the floor's surface. In the corridors and in the wells, funerary chariots are found with their teams of equids, their drivers and a whole group of servants and musicians that must have accompanied the king in death. Sometimes more than 80 bodies have been found, certainly sacrificed before the funeral. An exceptional collection of precious objects has been found in these tombs: jewelry, golden weapons—helmets, daggers, swords, musical instruments—harps and lyres encrusted with mother-of-pearl, game tables, vases of precious materials and the famous "standard of Ur." All of this attests to the extraordinary riches that one can doubtlessly link with Ur's role in the Persian Gulf trade.

Another group of royal tombs belongs to the time of the Third Dynasty of Ur. They are large vaulted chambers found in the basement of a building constructed out of baked bricks and bitumen. On the surface the building served the funerary cult, but it was in no way linked to the temples. It is thus a building with a very particular nature that has up until now remained unique in the documentation of the Near East.

The excavations of Ur ended in 1934; nevertheless, there remains much to be understood about this important Mesopotamian city.

JEAN-CL. MARGUERON

TRANS. STEPHEN ROSOFF

URARTIAN LANGUAGE. See LANGUAGES (INTRODUCTORY SURVEY).

URARTU (PLACE). See ARARAT (PLACE).

URBANUS (PERSON) [Gk *Ourbanos* (Οὐρβανος)]. Received greetings from Paul in Rom 16:9. He was the only Christian in Rome other than Aquila and Prisca (Rom 16:3) whom Paul expressly called a "co-worker." Urbanus had immigrated to Rome from the east of the Roman Empire where he had done mission work with Paul. He probably was a gentile Christian. See NEREUS. It has often been proposed (e.g., Cranfield, *Romans* ICC, 790) that Urbanus was a (freed) slave. But the epigraphical material indicates that the name was not ordinarily a slave name (see Lampe *StadtrChr*, 150–52). Urbanus was more likely freeborn.

PETER LAMPE

URI (PERSON) [Heb *ʾûrî* (אוּרִי)]. **1.** The father of Bazalel, who was the master craftsman responsible for the building of the utensils for the Tent (Exod 31:2; 1 Chr 2:20; 2 Chr 1:5). Noth believes that Uri is a short form of Uriel *(ʾûrîʾēl)* or Uriah *(ʾûrîyāh)*, "God (Yahweh) is the dispenser of beloved warmth" (*IPN*, 38, 168). The text in 1 Chronicles is part of the genealogy of Judah (2:3–4:23). This list, which names Caleb as Uri's grandfather, juxtaposes the families of Caleb and Ram. Williamson argues that the inclusion of Uri and Bazalel here is a deliberate attempt to bring together the monarchy (David, a descendant of Ram) and the temple (Bazalel, a descendant of Caleb) (*Chronicles* NCBC, 53).

2. The father of Geber, one of the twelve officers responsible for providing food for the royal household (1 Kgs 4:19). There is wide agreement that this text is problematic. Some suggest that the phrase in v 19, *geber ben-ʾūrî* is a variant for *ben geber* in v 13 since both are associated with Gilead. Others raise the possibility that, instead of Gilead, Gad should be read in v 19 (as it is in one edition of LXX) since it does not appear elsewhere. However, Fichtner points out that Gad, along with Sihon, would have been a part of the seventh district, mentioned in v 14 (*1 Könige* BAT, 87). Albright provides a plausible solution. One of the source documents for this list had a damaged right margin as one can see by the several persons listed only as "the son of …," the name on the right margin having been lost. The original v 13 named "[Uri] son of Geber" as the officer in charge of the sixth district. A marginal note at the end of the list confused this information and was subsequently inserted as the present v 19. If this is the case, Judah becomes the twelfth district, making the text clearer (1925: 25–26, 34–35). If Albright is correct, Uri himself was one of the twelve officers in charge of the royal provisions.

3. One of the three gatekeepers among the returned exiles whom Ezra required to divorce his foreign wife (Ezra 10:24). The parallel text of 1 Esdr 9:34 omits Uri completely. For further discussion, see TELEM.

JEFFREY A. FAGER

URIAH (PERSON) [Heb *ʾûrîyâ* (אוּרִיָּה), *ʾûrîyāhû* (אוּרִיָּהוּ)]. The name *ʾryw* occurs in the Sameria ostraca (*TSSI* 1: 10 no. 50:2). The variant *ʾwryw* occurs in seals (Vattioni 1969: 378 no. 184; cf. Puech 1980: 119 n. 5), and another variant, *ʾryhw* is found in the 8th century B.C. Khirbet el-Qom inscription (Hadley 1987: 51). Puech (1980: 125) has found *ʾwryh* on a 2d century A.D. potsherd.

In Ugaritic one finds the enigmatic *bn ʾuryy* (*UT*, 336a no. 351; cf. *PTU*, 53, 103), and in Assyrian texts the name *U-ri-ia-a* appears (Tallqvist 1914: 243b). The name in Hebrew can be translated: "Yahweh is my light/fire" (*IPN*, 168). This name is borne by five (or perhaps six, see #3 below) persons in the OT.

1. The Hittite. (If his name is Hittite, then the ending cannot be the divine name, "Yah"—cf. *HALAT* 25a for different interpretations with bibliography.) McCarter (*2 Samuel* AB, 285) points out that his designation as "the Hittite" does not necessarily make him a foreigner. It may merely mean that an ancestor came from one of the Neo-Hittite states in northern Syria, where Hittite civilization survived the collapse of the empire. He is one of the warriors in David's elite force of the "Thirty" (2 Sam 23:39; 1 Chr 11:41); he is mentioned at the end of the list in 2 Samuel, which draws attention to him, for the reader calls to mind what is associated with his name (Hertzberg *Samuel* OTL, 408). His wife was Bathsheba, daughter of Eliam (2 Sam 11:3) and perhaps granddaughter of Ahithophel (cf. 23:34).

Uriah was serving in the army besieging Rabbah, the Ammonite capital, when David sent for him. The king wanted it to appear that Uriah was the father of the child that was to be born to Bathsheba. David therefore told Uriah who had expressed loyalty to the ark, his commander Joab, and to David, to go to his house and then sent him food from the royal table. Uriah, however, spent the night "at the door of the king's house with all the servants of his lord" (2 Sam 11:9). When David asked him why he did not go into his house, the reply is that "the ark and Israel and Judah dwell in booths; and my lord Joab and the servants of my lord are camping in the open field" (v 11), and that staying in his house would give him comforts they do not possess. David made him drunk, but still he would not go to his house. The king

then gave Uriah a letter for Joab who is ordered to place Uriah in the thick of the battle and allow him to be isolated so that the enemy will kill him. According to vv 16–17 this duly happens, but vv 20–21 show that Uriah is killed by a shot from the wall. Joab then sent a messenger to inform David of the progress of the war, including the death of Uriah.

The narrative prompts some questions. Uriah's refusal to sleep in his house seems to be connected with a taboo which required sexual abstinence of soldiers in the field (cf. 1 Sam 21:6—Eng 21:5). Yet this would not strictly apply to Uriah who in any case does not abstain from alcohol at the royal table. Uriah's drunkenness in fact serves to emphasize his conduct. Uriah sleeping with the king's retainers does, however, recall the ancient ideals of the military monarchy, the direct relationship of loyalty between leader and followers (cf. 2 Sam 18:2; 21:15–17), which must give way to changed circumstances (Stoebe 1986: 394).

Also to be noticed is that Joab informs the messenger in some detail of David's probable reaction to the news he will bring of the death of the soldiers who fell with Uriah. Joab's awareness of the difficulties in dealing with kings discloses a typical concern of wisdom (Fontaine 1986: 64). In the MT David's angry reaction fails to take place, whereas the LXX does mention it (11:22). Stoebe (1986: 391–92) argues that the LXX is here following another tradition which gives the words to be expected of a pious David who is upset by the loss of life. The messenger in the MT cleverly avoids David's angry reaction by at once informing him of Uriah's death (Barthélemy 1982: 261), and the LXX 's fuller account of David's response may be included for the smooth flowing of the narrative (Pisano 1984: 49–54). At the same time the reader notices in the MT an implicit criticism of David and the institution of monarchy: human lives are merely means to attain an end (cf. Stoebe 1986: 392).

The discrepancy between the plan and manner of Uriah's death may be explained by the growth of the tradition (Stoebe 1986: 392–93). At an earlier stage Joab will have wished to direct David's attention away from a failed military maneuver by mentioning Uriah's death. Later, when the emphasis lies more on the David-Uriah-Bathsheba story, the king is made to plan Uriah's death, hence the letter which owes more to literary fiction than to historical fact. Nevertheless, all stages of the tradition include serious criticism of David's highhanded disposal of human lives.

Bathsheba lamented for her dead husband, and then David took her to be his wife (11:26–27). Nathan told David that he had sinned against Yahweh and David accepted the prophetic rebuke (12:1–14; cf. 1 Kgs 15:5bB).

2. A priest; one of two reliable men whom Isaiah chose to witness a prophetic oracle written on a tablet, doubtless because they enjoyed public trust (Isa 8:2). Uriah is probably the high priest (see #3 below) and if Isaiah wanted to put his tablet in the temple precincts would have had to give his leave (Wildberger *Jesaja* BKAT, 315). That such a prominent citizen placed himself at Isaiah's disposal shows to the reader (cf. Kaiser *Isaiah 1–12* OTL, 182) the respect in which the prophet was held.

Isaiah required two witnesses (cf. Deut 17:6) not merely to confirm that he was the author of the inscription or to explain its meaning to the public. More important is that they testify to the date of the writing, the time of the Syro-Ephraimite war. Isaiah is so confident that the oracle (Isa 8:3b–4) will be fulfilled (cf. Deut 18:22) that he announces the despoiling of the kingdoms of Damascus and Samaria at a time when Judah is still free to choose its policy (Wildberger *Jesaja* BKAT, 317).

3. Chief priest in the reign of Ahaz; almost certainly the same as #2 above. Ahaz went to Damascus to meet Tiglath-pileser, king of Assyria and "saw the altar that was at Damascus" (2 Kgs 16:10). This was probably a Syrian altar (McKay 1973: 5–12; Jones *Kings* NCBC, 537–38), and on it Ahaz sealed the vassalage treaty with Tiglath-pileser, sending a sketch and detailed plan of the altar to Uriah who then built a copy (vv 10–16). This would remind the people of their vassal status (McKay 1973: 8, Jones *Kings* NCBC, 538). Uriah is one of several high priests omitted in the list in 1 Chr 6:4–15.

4. Son of Shemaiah of Kiriath-jearim; a prophet who was put to death for preaching against the city and the land (Jer 26:20–23). King Jehoiakim and his officials having heard the message sought his life, and he fled to Egypt. Elnathan was then sent to extradite him (see Thompson *Jeremiah* NICOT, 527). Uriah was

brought to Jerusalem and Jehoiakim had him executed with the sword. The body was thrown into the common graveyard.

The narrative is an appendix to Jeremiah's temple sermon, added to show that Jeremiah's preaching brought him into great danger. Nicholson (1970: 52) maintains that Jeremiah 26 is an "edifying story" composed by the Deuteronomist and so not biographical; it centers "on the theme of Judah's rejection of the word of Yahweh spoken by the prophet Jeremiah and the judgment which this rejection entailed" (1970: 56). The inclusion of the story is clearly related to Jeremiah's predicament, though the Deuteronomist may well have found it in his sources.

5. Father of Meremoth; descendant of Hakkoz (Ezra 8:33; Neh 3:4, 21; 1 Esdr 8:62).

6. One of the men, named without title or paternity and therefore probably laymen, who stood with Ezra at the public reading of the law (Neh 8:4; 1 Esdr 9:43). They were important persons, quite possibly leaders of the community (Myers *Ezra, Nehemiah* AB, 153; Fensham *Ezra and Nehemiah* NICOT, 217).

ROBERT ALTHANN

URIEL (ANGEL) [Lat *Urihel*]. Mentioned in the deuterocanonical apocalyptic text of 2 Esdras (4:1; 5:20; 10:28), where he instructs Ezra concerning evil, commands him to fast, and interprets his vision.

The earliest traditions about Uriel are those found in *1 Enoch* 72–82, the Astronomical Book (no later than the 3d century B.C.E.). There Uriel appears as the leader of the luminaries (72:1) who has command over all the celestial lights (75:3), a function related to his name, which means "God is my light" (VanderKam 1984: 89). In the Astronomical Book Uriel also serves as Enoch's guide and mentor in astronomical knowledge (72:1; 74:2; 75:3–4; 78:10; 79:6; 82:7). In *1 Enoch* 1–36 (the Book of the Watchers) Uriel is one of several angelic guides for Enoch (19:1; 21:5, 9; 27:2; 33:3–4). Although Uriel is listed by some Greek mss as one of the four archangels in *1 Enoch* 9:1, the Aramaic fragments from Qumran Cave 4 give the name Sariel instead. Sariel, not Uriel, is probably also the angel who warns Noah of the impending flood in 10:1 (see Milik 1976: 172–74; VanderKam 1984: 130, n. 74). Uriel does appear among the list of archangels in *1 Enoch* 20:2 as "one of the holy angels who is over the world and Tartarus" (Tartarus being the fiery region where the rebellious angels and stars are imprisoned [21:1–10]). Yadin has suggested that Uriel's dual role may be related to the ambiguity of his name, since *ʾr* might be read as *ʾur,* "fire," or as *ʾor,* "light" (Yadin 1962: 239).

Later writings continue the association of Uriel with revelation of astronomical information (see esp. *2 Enoch* 22–23, where Uriel is to be identified with the angel Vreveil; so Milik 1976: 110–11; VanderKam 1984: 89). He is also the angel who appears to answer the questions of Ezra (*2 Esdras* 4:1; 5:20; 10:28). Early Christian tradition develops his role as guardian of Tartarus (*Sib. Or.* 2.215–35; *Apoc. Pet.*), while in Jewish midrashim he is associated with light and enlightenment (e.g., *Num. Rab.* 2.10, the "one who brings light to Israel").

CAROL A. NEWSOM

URIEL (PERSON) [Heb *ʾûrîʾēl* (אוּרִיאֵל)]. The name of two persons mentioned in the OT.

1. A Levite among the descendants of Kohath, one of the leaders appointed by David to move the ark from the house of Obed-edom to Jerusalem (1 Chr 6:9—Eng6:24; 15:5, 11). Many regard 1 Chr 15:4–10 as a later insertion into Chronicles; however, both Talmon (*IDBSup,* 322) and Williamson (*1 and 2 Chronicles* NCBC) argue that the repetition of the names in 15:11 is a literary device marking an insertion of source material by the original author. The context of 1 Chr 6:9—Eng6:15 appears concerned with tracing the lineage of Samuel the prophet, to whom the Chronicler assigns levitical ancestry (1 Chr 6:13, 18—Eng6:28, 33; cf. 1 Sam 1:1); this reflects the Chronicler's pervasive interest in the prophetic function of the levitical musicians (1 Chr 25:1–8; 2 Chr 20:14; 29:25; 34:30; 35:15).

2. A man from Gibeah, the father of Maacah, wife of Rehoboam and mother of Abijah (2 Chr 13:2). The MT gives her name as Micaiah, though most LXX mss, Syr, 2 Chr 11:20, 15:16, and 1 Kgs 15:2 give her name as Maacah. The identity of Uriel is complicated by issues surrounding the ancestry of Maacah who is described both as the "daughter of Absalom" (1 Kgs 15:2; 2 Chr 11:20) and as the "daughter of Uriel" (2 Chr 13:2). The solution ordinarily adopted for this problem is to identify Maacah as the granddaughter of Absalom. Absalom had a beautiful daughter named Tamar and three sons (2 Sam 14:27). Since the sons do not appear to have survived childhood (2 Sam 18:18), Maacah was probably born to Tamar through a marriage to Uriel of Gibeah.

RAYMOND B. DILLARD

USURY. See INTEREST AND USURY.

UTHAI (PERSON) [Heb *ʿûtay* (עוּתַי)]. A personal name, probably shortened from a longer theophoric name, whose derivation has invited considerable speculation. Aḥituv (*EncMiqr* 6: 112) believes it is an abbreviated form of *ʿătāyâ* (Athaiah). Praetorius (1903: 524) earlier suggested the same and identified this shortened form—calling it *Caritativ*—as having *û* as the final root syllable and an *ay* ending. Noth (*IPN,* 191) believed the assumed root *ʿth* of the longer theophoric name, which he rendered "Yahweh has surpassed himself," derived from the Ar *ʿatā* which he understood as meaning "to exceed above the measure." In addition to seeing the name as a shortened name *(Kurznamen)* along the lines of the Arabic diminutive form *fuʿail* (*IPN,* 40, cf. 36), Noth also included it among those names *(Danknamen)* which give expression of thanks for an event in which the hand of God was perceived to have intervened in human life (*IPN,* 169–70, 191). Brockington (1969: 98–99) suggested the name could be a shortened form of either Athaliah (Noth *IPN,* 191, n. 4 also believed the short name could belong to the formations with *ʿtl*) or Athaiah—"Yahweh has shown himself preeminent"—while Achtemier (*HBD,* 1108) also believes it to be a variant of Athaiah—"pride of Yahweh" or "Yah is my pride." Gehman (*WDB,* 968), who renders the Ar *ʿatā* "to be proud, go beyond bounds," believed the name means "Yahweh has shown himself surpassing." Fallows (1906: 1694) suggested "Jehovah succors," probably from *ʿwš* (= *ʿwt* see KB, 692). Curtis and Madsen (*Chronicles* ICC, 170) concluded that the name's meaning was uncertain and its origin obscure. The name is born by three individuals.

1. The son of Ammihud of the Judahite family of Perez (1 Chr 9:4) among those who dwelt in Jerusalem (v 3) upon returning from exile in Babylon. He is the first named of the "heads" (v 9) of Judahite families (Perez, Shelah and Zerah were three of Judah's five sons, cf. 2:3–4) who were listed (vv 4–9) among those lay Israelites who returned. Braun (*1 Chronicles* WBC, 131) suggests that the basic structure of 1 Chronicles 9 is dependent upon Nehemiah 11 and that the Athaiah in Neh 11:4 and Uthai (LXX Codex Vaticanus *Gōthei,* Alexandrinus *Gōthi;* Lucianic *Outhi*) mentioned here are the same person. Rothstein (*1 Chronikbuch* KAT, 172) and Curtis and Madsen (*Chronicles* ICC, 170) are unable to determine which of these name forms are original. On the other hand Rudolph (*Chronikbücher* HAT, 85) observed the different lineages recorded and concluded that these two names do not refer to the same person.

2. The head of the family of Bigvai (Ezra 8:14, Heb *bigway;* LXX Codex Vaticanus *Bago,* Alexandrinus *Gabouaei*) or Bani (1 Esdr 8:40, LXX Codex Vaticanus *Banai,* Alexandrinus *Bago*) who went up with Ezra from Babylon during King Artaxerxes' reign (Ezra 8:1; 1 Esdr 8:28). The presence of two "sons" in Ezra 8:14—"Uthai (LXX Codex Vaticanus *Outhi,* Alexandrinus *Gabouei*) and Zaccur (Heb Q *wĕzakkûr,* K *wĕzābûd;* LXX Codex Alexandrinus *kai Zaboud*)"—followed by the preposition with a singular suffix "and with him" *(wĕ ʿimmô)* suggests a different reading of the MT. Since LXX Codex Vaticanus of Ezra 8:14 omits the second name and since 1 Esdr 8:40 reads "Uthai the [son] of Istalcurus" (Codex Alexandrinus *Outhi ho tou Istalkourou*) or "Uthai [the son] of Istacalcus" (Codex Vaticanus *Outou Istakalkou*), it has been assumed that only one name preceded the preposition. This is the case throughout the list with the exception of Ezra 8:13 (1 Esdr 8:39) where three "sons" are mentioned. The commonly suggested emendation of the MT is "son of Zaccur/Zabud" *(ben-Z)* instead of "and Zaccur/Zabud" *(wĕz-)* (Batten *Ezra, Nehemiah* ICC, 319; Myers *Ezra-Nehemiah* AB, 67; Williamson *Ezra, Nehemiah* WBC, 108; Blenkinsopp *Ezra-Nehemiah* OTL, 159). Bowman (*IB* 3: 634) and Rudolph (*Esra und Nehemia* HAT, 78) suggest that after the text was corrupted to read two names, the preposition was made to agree by changing it to read "and with them," as in several mss and the Vulgate. Uthai's family, that of Bigvai, is the last of 12 listed in Ezra 8:3b–14 and 1 Esdr 8:30–40 and numbered seventy males in the caravan.

3. The head of a family of temple servants (see NETHINIM) which is listed in 1 Esdr 5:30 and in the LXX Codices Sinaiticus and Alexandrinus (but not Vaticanus) of Neh 7:48 among those exiles returning from Babylon to "Jerusalem and the rest of Judah … with Zerubbabel …" (1 Esdr 8:8). The name in Greek is *Outa* which Bewer (1922: 27) believes to be a "corrupted variant" of *Akoub,* a name appearing in Ezra 2:45 (LXX Codex Alexandrinus) but written as *Akoud* immediately preceding *Outa* in 1 Esdr 5:30 and in LXX^{A} of Neh 7:48 and as *Akoua* in LXX^{s} of Neh 7:48. Discounting this Rudolph (*Esra und Nehemia* HAT, 12) believes the Hebrew names behind *Outa* and *Kētab* (*-ar* LXX^{AS} Neh 7:48) cannot be determined.

RODNEY H. SHEARER

UZ (PLACE) [Heb *ʿûṣ* (עוּץ)]. A country in NW Arabia (Jer 25:20; Job 1:1; Lam 4:21), which various geographical lists in the OT connect with either Aram (Gen 10:23; Gen 22:21; 1 Chr 1:17) or Edom (Gen 36:28; 1 Chr 1:42).

Jer 25:20 places "all the kings of the country of Uz (MT *hāʿûṣ*), and all the kings of the Philistine country" between Egypt (v 19) and Edom (v 21). The passage, which is missing in the LXX, is probably a gloss referring to Edom according to Lam 4:21 ("daughter Edom, that you dwellst in the country of Uz"). Geographically, Jer 25:20 shares the concept of the LXX of Job: Job lived on the border between Idumea and Arabia (42:17b). According to Jer 25:20 and Job 42:17b (LXX), Uz would be located in the S of Palestine, between the Negeb and the Sinai peninsula. This, however, is a geographical speculation of the late Persian or early Hellenistic period. Then, Edom was confined to Idumea W of Wadi ʿArabah. Originally, the country of Uz was situated in NW Arabia, between Dedan (see DEDAN) and Edom.

Job is depicted suffering from Sabean (1:15) and Chaldean (i.e., Neo-Babylonian) raids (1:17). This state of affairs reflects the situation in NW Arabia between 552 and 542 B.C., when the Neo-Babylonians under Nabonidus tried to evict the Sabeans from the incense route and the incense trade (Guillaume 1963: 107; Knauf 1983: 26–28; 1988: 67, n. 4). Prior to Nabonidus, Edom had extended its economical and, perhaps, political control into N Arabia (cf. Jer 49:8 and Ezek 25:13; Lindsay 1976: 34; Weippert *TRE* 9: 292), which explains Lam 4:21 (Edom sitting in the country of Uz) as well as Gen 36:28 and 1 Chr 1:42

(where Uz is listed as a "descendant" of Seir). A tribal name *ʿḏ*, Arabic *ʿAuḏ* (Nöldeke 1886: 184) is attested in an ancient N Arabian inscription which was found N of Dedan (Knauf 1983: 28–29). Hebrew *ʿwṣ* is the regular equivalent of Arabic *ʿ(w)ḏ*, according to the orthographic conventions of the 1st millennium B.C. Among the sedentary, agricultural tribes of NW Arabia (cf. Job 1:3, 14), tribal names and regional names are frequently equivocal.

It is impossible to ascertain whether Uz, "son" of Aram (Gen 10:23; Gen 22:21; 1 Chr 1:17) refers to the same geographical feature or to another tribe or region. In any case, the Aramean connection of Uz together with the derivation of Bozrah from Job's wife (42:17c LXX) induced the location of Uz and of Job's abode at Shaykh Sa'd in S Syria by the Christian and Muslim tradition (Schmitt 1985).

ERNST AXEL KNAUF

ʿUZA, HORVAT (M.R. 165068). A site in the E Negeb (not to be confused with a site of similar name in the plain of Acco).

A. The Site and Its Identification

Horvat ʿUza (Kh. Ghazze) is located in the E Negeb at the E edge of the Arad depression, at the top of the deep Naḥal Kina (Wadi el Keini). The fort dominated the wadi in which was probably an ancient road, which perhaps already existed in prehistoric times, as evidenced by the Neolithic finds recently discovered in the concealed cave in Naḥal Ḥemar in this same area. During the Israelite and later periods, the wadi was the easiest and most convenient access route to the Arabah and Edom. This was probably the biblical "Way of Edom" mentioned in 2 Kings 3:20 (cf. Aharoni *LBHG*, 59).

Horvat ʿUza was first surveyed at the beginning of this century by Musil, who briefly described the site without however dating it to any particular period. Both Alt and Avi-Yonah regarded the site merely as part of the string of forts in the Roman *Limes* of Palestine, ignoring its existence during any other periods. The first thorough survey of Horvat ʿUza was made in 1956 by Y. Aharoni, who published a sketch-plan of the fort as it appeared on the surface, but of the settlement he only mentioned that its remains were located on the wadi slope. According to his description, the site was an Israelite casemate fort with towers and a courtyard, in which was a row of casemate rooms. He also collected a small quantity of sherds dating from the Persian, Hellenistic, and Roman periods in the area of the fort. Aharoni dated the Israelite phases of the fort to the 8th–7th centuries B.C., and claimed that an earlier occupation existed, based on sherds dating from the 10th–9th centuries on the wadi slope. He suggested to identify the site with Ramah of the Negeb, which is mentioned in the list of cities of Simeon (Josh 19:8), as well as in Letter 24 from Arad, in which its commander is ordered to send reinforcements to Ramah of the Negeb. Aharoni argued that Ramah of the Negeb was the first settlement in the area to be exposed to Edomite aggression and hence should be located near Judah's border. Aharoni has suggested that Kinah, which in the list of Negeb cities (Josh 15:21–22) comes after Arad (MT and RSV read "Eder"), should be identified with Horvat Tov, located immediately NE of Arad. However, other scholars (Lemaire, Rainey, Naʾaman) identify Ramah of the Negeb with TEL ʿIRA which is on the highest point in the region and was included in the area of settlement of the tribe of Simeon.

The results of the excavations do not support Aharoni's suggested identifications, since at Horvat ʿUza, no occupation remains earlier than the 7th century B.C. were discovered; the fact that Ramah of the Negeb is connected with the Davidic period as having received Amalakite booty, obliges one to identify it with a site having remains from the 10th century. Evidence of 10th century occupation have recently been discovered at Tell ʿIra, which makes its identification with Ramah of the Negeb more plausible. Recent evidence from both Horvat ʿUza and Horvat Qitmit (Beit-Arieh 1986), indicating Edomite presence at

these two places, permits one to revive the assumption of deep Edomite penetration into the S region of Judah about the time of the Babylonian conquest. Ramah of the Negeb would not, therefore, have to be located on the Judah-Edom border. If this assumption should prove correct, then Horvat ʿUza may be identified with Kinah. The wadi over which Horvat ʿUza stands, wadi el Keini, may preserve the ancient name of Kinah.

B. The Excavations and Their Results

Twenty-two years after Aharoni's original survey at Horvat ʿUza excavations began at the site. Five seasons of excavations (1982–1986) were directed by I. Beit-Arieh and B. Cresson. Excavations concentrated mainly in, and around the area of the fort, but a few squares in the area of the settlement were also opened.

Stratigraphy of the Site

	Stratum Period	General Dates	Remarks
I	Roman	1st and 3d cents. A.D.	
II	Herodian	1st cent. A.D.	Two phases
III	Hellenistic	3d and 2d cents. B.C.	
IV	Israelite II	Second half of 7th cent. B.C. Beginning of the 6th cent. B.C.	Two phases (IV B and IV A)

1. The Israelite Period (Phases B and A). The archaeological data indicate that the fort was constructed during the 7th century B.C. on the standard pattern (with only slight deviations) of a fort with towers, like those at Arad and Kadesh-barnea. The dimensions of this earlier fort are 42 × 51 m (approximately 100 × 120 short cubits). The fort was surrounded by a solid wall 1.5 m thick, strengthened by towers at its four corners and at intervals along its sides.

A series of casemate rooms (ca. 3 m wide) was built along most of the length of the inside of the wall. The courtyard was densely built up with various structures and had intersecting "streets." Three large, adjoining complexes (structure nos. 398, 397, 370) were excavated in the SE half of the courtyard. Although the excavation of two complexes (nos. 397, 398) is incomplete, it is clear that the structures served as workshops for various domestic crafts and industries, implied by the installations like chambers, ovens, stone basins, and pits in which were found upper and lower handmill stones and loom weights. A smaller structure containing a similar assemblage of finds stood near the gate, abutting its pier. From the functions of the structures, it is clear that the activities in the fort were not exclusively military, but included ordinary domestic occupations, despite the fact that there was a civilian settlement nearby.

A structure distinguished by its massiveness and dimensions was partly uncovered in the NW half of the fort (structure no. 437). See Fig. UZA.01. Its plan (only fragmentarily disclosed) consists of a SE wing containing three rectangular rooms and a large open space, apparently an inner courtyard. The dimensions of the SE wing are 17 × 3 m (inner). It included openings both toward the SE (the gate area) and toward the NW (the inner courtyard). The thickness of its wall was 1 m. The SE wing abutted on the inner face of the NE wall of the fort, and its NE room (413) was integrated into the fort's gate. The dimensions of the entire complex, based on the surviving sections of wall, are: 17 × 18 m. (i.e., ca. 1/7 of the area of the fort).

The gate is located between two projecting towers in the NE wall of the fort. In its second phase, at least, the gate was not symmetrical on the pattern of most gates of this type, but had only one SE wing with two rooms. It may be assumed, however, that in its first phase the gateway had the usual two wings, but due to alterations made during its second phase the NW wing was abolished and its second pier, facing inward toward the fort, was incorporated into the wall of the massive structure. However, this suggestion is as yet inadequately tested. Among the debris of fallen bricks and stones covering the gateway passage were charred beams of cedar, probably the remnants of the doors. In the center of the passageway, which was paved with stone slabs, was a well-preserved, sunken drainage channel over 20 m long. The channel was stone-lined and covered with stone slabs. The channel began at the inner pier of the

gate, where apparently it collected the water runoff from the interior of the fort. The channel continued below the sill-stones of the gate to a rock-cut cistern at the top of the wadi slope outside the fort.

A fieldstone platform stood in the courtyard of the fort, near its gateway. It stands independent of other structures, in the center of a small open area (Room 366), at the side of the street. The platform measures 1.5 × 1 m and ca. 1 m high. Three steps in its SW corner lead to its upper level. Beside the platform was a thick layer of ashes mixed with animal bones. The platform's proximity to the gateway suggests that it might have been a *bamah*—one of the "high places of the gates" mentioned in the Bible (2 Kgs 23:8).

a. The Settlement Outside the Fort. The settlement outside the fort extended over an area of approximately 7 dunams (ca. 2 acres). See Fig. UZA.02. Much of its remnants are visible above ground. It was built on the upper part of the steep wadi slope, N of the fort, and extended up to the support wall (revetment) of the gateway. Near the revetment wall, blocks of structural remains, some of very large buildings, stood on artificial terraces. Intersecting these remains were street-like passages of varying width (2–4 m).

One of the blocks of structural remains was excavated and consisted of two structures joined by a long common wall. The outer walls and the common wall of these structures served as support (revetment) walls for the terraces; these walls were built on strong and solid foundations and were especially thick (over 70 cm).

Although few surrounding structures have been excavated, they clearly attest the technical skill and great physical effort invested by the builders. It is necessary not to overlook the complexities connected with building on steeply sloping ground, which therefore implies, that they built the settlement at this particular location for a reason. We have no definitive conclusions of what factors influenced the planners to choose this location for the settlement, though evidently one was the proximity of the gate of the fortress, which allowed the civilian population to find speedy refuge within its protective walls. Apparently, similar topographical-security considerations were operative in the choice of location for the gate of the fort itself.

b. The Ostraca. The most important finds recovered at Horvat ʿUza were the 17 ostraca, of which 16 are Hebrew and one Edomite. Two of the ostraca were found within the settlement's structures, the remainder in scattered places inside the fort. The majority of the ostraca are incomplete. They include lists of people apparently connected with food distribution; lists of names probably connected with military and economic matters; a literary text; and a letter written in Edomite.

The Ahiqam ostracon is a four-line message, which apparently was addressed to the commander of the fort. It reads:

1. *-lm.lʾḥqm.bn.m-m* -lm to Aḥiqam, son of M—m,
2. *ʿmdyhw.bn.zkr.mmlda* ʿAmadyahu son of Zakkur, from Molada,
3. *hošʿyhw.bn.nwy.mrntn* Hoshaʿyahu son of Nawy, from Rinaton,
4. *mky.bn.hṣlyhw.mmqdh* Machi, son of Hiṣilyahu, from Maqeda.

The first and fourth words in the first line are unclear. One possible reading is "Shalom to Ahiqam, son of Menahem." The three men who are listed seem to have been sent to the fortress with a written order to Ahiqam, who probably was the local commander. The men came from various places, all apparently in Judah. The name Rinaton is unknown from any other source.

The ostracon indicates that the military organization of Judah involved transferring people from different areas to protect the borders of the kingdom, probably against the Edomites.

A restored Edomite ostracon measures 9.5 × 11.5 cm. It is inscribed with six lines of text in a large, widely spaced script. Most of the words are separated from one another by a dot. While most of the inscription can be read, a few letters in lines 1, 4, and 6 are either too blurred or too faint to be legible, partly because of surface flaking.

1. *ʾmr.lmlk.ʾmr.lblbl.* (Thus) said Lumalak (or Elimelek): say to Blbl!
2. *hšlm.ʾt. whbrktyk* Are you well? I bless you

3. *lqws.w‹t.tn.›t.h›kl* by Quas. And now give the food (grain

4. *›šr.‹md.›h›mh* that Ahi ma/o …

5. *whrm ‹z›l.‹l mz[bh] (?)* ... And may U[z]iel lift it upon (the alter?) …

6. *[]ḥmr. h›kl* [lest] the food become leavened (?)

The content of this letter indicates that it was written by a high Edomite official who addressed it to the commander of the fort, ordering him to supply (quickly?) a quantity of foodstuff—apparently dough for breadmaking—before it soured. In the opening of the letter, the writer inquires about the health and well-being of *blbl*, the commander of the fort, and invokes the blessing on him of the chief Edomite deity, Qaus.

Although the last three lines are not entirely clear, this cannot detract from the general content of the letter, nor from the implication of its discovery at Horvat ‹Uza, indisputably proving an Edomite presence at this site. It also may indicate that the fort was captured by the Edomites shortly before the Babylonian conquest.

2. Hellenistic Period. After the fort stood in ruins for several centuries it was restored and rebuilt during the Hellenistic period. Its area was reduced by two-thirds of what it had been during the Israelite period. On its W side, the casemate wall was shifted E by ca. 18 m and a new projecting tower was attached to it. The remaining walls were repaired and continued in use. However, the new rooms built against the walls were broader (up to 3.5 m, compared to 2.5 m during the Israelite period).

The settlers of the Hellenistic period evidently cleared the ashes from the burnt-out rooms of the fort before restoring and occupying them. The west-wing structure was also cleared of its ashes, although it remained outside the limits of the fort. Apparently the first intention of the new settlers was to use the entire area of the old Israelite fort, and they therefore cleared all of it, but afterwards changed their plan. The excavations indicate that only the rooms along the walls were used by the new settlers; the courtyard was undeveloped except for a few installations such as the grain-silos excavated in its W part. The Hellenistic finds consist mainly of typical 2d century B.C. sherds, but also include some small objects, including an ostracon, a game-tablet, a bronze seal, and bone implements.

The fort was probably part of the string of fortifications—a sort of Hellenistic *Limes*—which the Seleucid kings erected on the S border of Idumea.

The Hellenistic-period fort continued in use until the first half of the 1st century B.C., as attested by the discovery of a Nabatean coin dating from the time of Haratat I or II; however, no Hasmonean coins have been found so far in the fort.

3. The Roman Fort. The fort of the Roman period coincided in its limits with the Hellenistic-period fort. The rebuilt outer walls of the fort continued along their former alignment, with new rooms built on top of the levelled debris. Along the outer wall in one area were noted two main strata: a Herodian stratum with two sub-phases, and a Middle Roman stratum. During the Middle Roman period, the walls perpendicular to the fort's outer walls were shifted about a meter from their earlier alignment, whereas the walls parallel to the outer wall were on a common alignment in both strata. Unlike the Israelite period, the foundations of the outer wall-rooms were deep (up to 2 m), which gave these rooms a fortified character. Additional fortified structures were discovered along the fort's W side—in its center, at its S corner, and opposite its towers. The rooms of the Hellenistic period had been packed with medium-sized stones, which created a raised platform about 2 m above ground level. A series of steps was uncovered at the corner platform, leading from the courtyard to the upper level. Apparently these stone-filled rooms were designed to strengthen weak areas in the fortifications, while at the same time allowing direct access to the towers.

Enclosures which joined to the E and N sides of the Roman-period fort were evidently part of the fortification system. The area covered by these enclosures was approximately 2 dunams, and their walls were nearly 1 m thick. These walls contained large stones in their courses, and were preserved to a height of 1 m. In the middle of the E wall of the E enclosure, a gate structure was uncovered. It is assumed that these enclosures served as fortified camps for this S border fort on the Roman *Limes* of Palestine.

The dated finds from the Roman fort include Palestine city coins: from Ascalon (i.e., Ashkelon; period of Vespasian), from Gaza (period of Septimus Severus), and from Caesarea (period of Marcus Aurelius).

ITZHAQ BEIT-ARIEH

UZAI (PERSON) [Heb *lʾûzay* (**אוּזַי**)]. The father of Palal, one of those who worked on the wall of Jerusalem following the return from Babylonian exile (Neh 3:25). Brockington (*Ezra, Nehemiah and Esther* Century Bible, 143) says that the name may be shortened from a name like Azaniah, which occurs in 10:9 and means "Yahweh has listened."

MICHAEL L. RUFFIN

UZAL (PERSON) [Heb *ʾûzāl* (**אוּזָל**)]. A son of Joktan and hence the name of a South Arabian tribe or place (Gen 10:27; 1 Chr 1:21). Since the time of Bochartus (1674: 130–34) this biblical name has usually been combined with ʾAzāl which, according to South Arabian tradition, is said to have been a Pre-Islamic name for Ṣanʿā, the capital of Yemen. In fact, ʾAzāl is equated with Ṣanʿā (al-Hamdānī 1979: 193,8), and the name occurs also frequently in poetry, e.g., in a verse of the Pre-Islamic poet ʿAlqama b. Dhī Jadan (al-Hamdānī 1979: 72,8) or in a poem which is attributed to the Himyaritic king Asʿad Tubbaʿ (al-Hamdānī 1979: 56,5). According to a tradition not Shem, the son of Noah, but ʾAzāl, the son of Joktan, is said to have built Ṣanʿā and her castle Ghumdān and to have called the town after his name (ar-Rāzī 1974: 14–15). In the Sabean inscriptions, however, the later capital of Yemen is always referred to under the name *ṣnʿw,* Ṣanʿāw, and never under *ʾzl,* ʾAzāl, although the triliteral root *ʾzl* is attested in proper names, e.g., as epithet of the ancient town Waʿlān in the SE part of Yemen, *wʿln tʾzl,* Waʿlān Taʾzil (YMN 4,2). According to one of the meanings of the Arabic verb *ʾazala,* "to restrain," the cognomen possibly expressed the wish that the fortified place should prevent enemies to enter it; ʾAzāl as place-name could be explained in the same way. Already Glaser (1890: 310) had pointed out that the hitherto accepted view of the identification of Uzal with Ṣanʿā has to be given up. The Jews of Ṣanʿā were probably the first who connected this town with a biblical name and called it ʾAzāl (Glaser 1890: 427). His proposal, however, to look for Uzal in the region of Yathrib/Madīna in the E Ḥijāz (Glaser 1890: 434), does not conform with our present historical knowledge of that region of Arabia.

On the other hand, no notice has yet been taken of the fact that aside from the use of ʾAzāl for Ṣanʿā, the name ʾAzāl occurs two further times as a designation of places in Yemen (see al-Maqḥafī 1988: 26). The one ʾAzāl is a region in the district of ar-Raḍama, some 30 km E of Yarīm; the other ʾAzāl is a region of the Banū ʿAmmār in the district of an-Nādira NE of Ibb on the upper course of the Wadi Banā. Both places are so far unattested in Sabean inscriptions since the areas referred to have not yet been investigated by archaeologists. In the last mentioned region there is the castle *al-ʾAzālī* which is currently in ruins but which was formerly among the famous castles of Yemen. Therefore it cannot be entirely excluded that this ʾAzāl might be the place in which one has to look for Uzal in the table of nations.

In Ezekiel 27, where the partners in the trade with Tyre and the merchandise imported into this commercial town are listed, MT *mĕʾûzzāl* is attested (v 19). This might be interpreted as "spun yarn," if one interprets it as a *Puʿal* participle of the verbal root *ʾzl* (as a variant of *ʿzl,* "to spin"). Several Heb mss, however, offer the reading *mēʾûzāl* (LXX *ex Asēl*), which points to a place-name, "from *ʾÛzāl."* Making a conjecture at the beginning of the verse, which is presupposed by the LXX, the translation of the first half of the verse could read as follows: "and wine from Uzal they exchanged for your wares." Uzal has been identified with *Izalla* mentioned in Akkadian documents, a district NE of Mardin and Nisibin, especially since wine formed a part of the tribute paid to Ashurnasirpal by *Izalla.* By alteration of

three *waws* into *yods*, the first three words of Ezek 27:19 have been interpreted and translated "and casks of wine from *Izalla*" (*mē›îzāl;* see Millard 1962: 201–3). Since iron is mentioned in the second half in the verse, another (though less probable) proposal is that Uzal may be the Heb transliteration of the name *Ušawalaš,* known from Hittite documents as an Anatolian town in the region of modern Konya, where rich deposits of iron-ore exist; the translation of the unaltered MT would then be: "and Dān and Yāwān exchanged for your wares from Uzal iron …" (see Elat 1983: 323–30). In any case *›*ûzāl* in Ezek 27:19 is to be separated from *›ûzāl,* the son of Joktan in the Table of Nations in the book of Genesis.

W. W. MÜLLER

UZZAH (PERSON) [Heb *‹uzzâ* (עֻזָּה), *‹uzzā›* (עֻזָּא)]. Var. UZZA. Five persons carry this name in the OT. Uzzah means "Oh [Yahweh or God, my] Strength," and is a short form related to the names Uzziah/Uzziel, "Yahweh/El (God) is my Strength" (Noth *IPN* 38, 160). It is also parallel to names formed on the Heb root *‹zr:* Ezri, Ezra, Azariah, and Azriel (cf. the interchange of the famous king's names, 2 Kgs 15:7 vs. 15:13). Different *matres lectionis* (Heb consonants used to indicate vowels) for the final *ā* produce the variant Hebrew and English spellings.

1. Son of Abinadab. With his brother, Ahio, Uzzah attended to the new cart which carried the ark of God when David attempted to bring it from Abinadab's house in Baale-judah (Kireath-jearim) to the city of David (1 Sam 6:1–11 [= 1 Chr 13]). At the threshing floor of Nacon (Chidon in 1 Chr 13:9) God smote Uzzah when the oxen stumbled and he reached out to steady the ark (1 Sam 6:6–7 [= 1 Chr 13:9–10]). The place name, Perez-uzzah, recalls this "breach" in Uzzah's family line (McCarter *II Samuel* AB, 161–70) or this "bursting forth" by Yahweh against Uzzah (Hertzberg *Samuel* OTL, 276, with LXX, Vg, Tg and most modern English versions). In view of Uzzah's custodial role with the ark and the interchange attested between the name with Heb roots *‹zz* and *‹zr*, he should perhaps be identified with Eleazar, Abinadab's son consecrated to such service (1 Sam 7:1).

2. Unknown except as the person in whose garden Manasseh and Amon were buried (2 Kgs 21:8, 26).

3. Benjaminite of the family of Ehud (1 Chr 8:7). They were residents of Gibeah of Benjamin, Tel el-Ful (M.R. 173136) 6 miles N of Jerusalem, who were exiled to Manahath (v 6). It is unclear whether his immediate progenitor in the genealogy is (1) Gera "who deported [*heglām*] them" (NIV) or did not deport them (Rudolph *Chronikbücher* HAT, 76), or (2) Gera, known also as Heglam (RSV; cf. LXX, *iglaam*), or (3) a person now unnamed in the list.

4. Head of a family of temple servants *(nětînîm)* posted among the first returnees from exile under Zerubbabel (Ezra 2:49 [= Neh 7:51]). Listed after priests, Levites, singers and gatekeepers, these "temple servants" (literally "ones given" or "assigned") were descendants of state slaves attached to the temple under David as assistants to the Levites (Ezra 8:20; cf. Josh 9:23, 27; Deut 29:10 and Ezek 4:7–9). Uzza, like his sons, probably would have been such a servant. See NETHINIM.

5. Listed among the Merarite clans of Levi as the son of Shimei (1 Chr 6:14—Eng6:29).

DAVID L. THOMPSON

UZZEN-SHEERAH (PLACE) [Heb *›uzzēn še›ĕrâh* (אֻזֵּן שְׁאֵרָה)]. Uzzen-sheerah, "ear" or "corner of Sheerah," is a city that was founded by Sheerah (1 Chr 7:24), daughter of Beriah, descendant of Ephraim. The location of the city is unknown. Uzzen-sheerah is not mentioned elsewhere in the OT. Sheerah is said to be the founder of two other cities, Upper and Lower Beth-horon. They are located in S

Ephraim (Josh 18:13–14) and are traditionally linked to Joshua (Reed in *IDB* 1: 394). Both were the scenes of numerous military conflicts (Josh 10:10–11; 1 Sam 13:18).

Sheerah was a descendant of Ephraim according to 1 Chr 7:20–24. Verses 21b–24 are a fragment that interrupts the Ephraim (Joshua) genealogy. The Chronicler's reasons for putting it here are unclear. The only other listing of the Ephraimite clan in the OT is Num 26:35–36 and it contains no mention of Sheerah.

M. STEPHEN DAVIS

UZZI (PERSON) [Heb *ʿuzzî* (עֻזִּי)]. Short form of Uzziah or Uzziel, " (Yahweh/El) is my strength."

The name is particularly well attested in postexilic texts.

1. Most prominent is Uzzi's mention in several genealogies of the priestly family of Eleazar. Ezra 7:1–5 (cf. 1 Esdr 8:1–2, Gk *Ozias*) purports to give the genealogy of Ezra, tracing backwards 16 generations through Uzzi, Bukki, Abishua, and Phinehas to Eleazar the son of Aaron. The obvious brevity of this list led to its being expanded in 1 Chr 5:29–41—Eng6:1–15, partially by extension backwards to Levi, and partially by repetition of the triad Amariah–Ahitub–Zadok. This longer genealogy gives a satisfactory 12 generations from the Exodus to the building of the Solomonic temple (480 years following Braun *1 Chronicles* WBC, 86) and an equal span from Zadok to the Exile. A shorter extract of this genealogical information is given in 1 Chr 6:35–38—Eng6:50–53. All of the lists are late, and reflect the intention of securing for the Zadokite priesthood an Aaronite ancestry, traced through Aaron's son Eleazar. The latest version of this genealogy is attested in 2 Esdr 1:1–3, where Uzzi (Lat *Ozia*) is listed as the son of Borith. This list duplicates that of Ezra 7:1–5 with the insertion of three additional generations between Amariah and Ahitub.

2. In 1 Chr 7:1–3 Uzzi is listed as the grandson of Issachar. The specific numeration of Issacharites in the postexilic period is limited to the five descendants (Heb "sons") of Uzzi (Izrahiah and his four sons, v 3), suggesting the importance of this family among the returning Issacharites. The military terminology used of this family is probably not original to the list, but was likely influenced by the similar terminology used of Benjamin in the following passage.

3. In 1 Chr 7:6–8 Uzzi is listed as the grandson of Benjamin. However, this list is difficult to correlate with information given in the other genealogies of Benjamin. Though Bela's name is consistent (Gen 46:21; Num 26:38; 1 Chr 8:1–2), little else is common to the tradition. The names of Bela's five sons as given here, including Uzzi, are possibly based upon a postexilic military census, thereby accounting for the military terminology of the text.

4. Uzzi son of Michri was the father of Elah, the latter listed in 1 Chr 9:8 as one of the Benjaminite families living in Jerusalem following the return from exile. 1 Chr 9:7–9 lists four families (fathers' houses) of such Benjaminites, totaling 956, along with their ancestry. The parallel list in Neh 11:7–9 only has the names Sallu and Meshullam in common, though it is possible that the name Hodaviah son of Hassenuah is reflected in Judah son of Hassenuah. Otherwise the lists are at complete variance. Many commentators suggest that the list in 1 Chronicles 9 is dependent upon that in Nehemiah 11.

5. In Neh 11:22 Uzzi is designated as the overseer of the Levites in Jerusalem during the postexilic reconstruction. His family of Asaphites is traced back five generations. That this list is several generations removed from the earlier list of Levites in 11:15–18 is suggested by the reference in v 17 to Mattaniah son of Mica, Uzzi's great-grandfather, who was contemporary with the reconstruction. The presence of Uzzi here therefore reflects later interests in the fully developed temple ritual. These later developments were retrojected into the earliest years of the return in order to enhance their stature.

6. Uzzi appears as the head of one of the 20 priestly families in the second generation of the postexilic community. Neh 12:19 gives his name as the head of the family (father's house) of Jedaiah during the chief priesthood of Joiakim. The author incorrectly presumed that this was also the generation of Ezra and Nehemiah (so v 26).

7. Uzzi is listed by Neh 12:42 as being among those who led in the celebration and dedication of the walls which were rebuilt under the leadership of Nehemiah. Neh 12:42 seems to continue the listing of

priests begun in v 41, in which case Uzzi and his colleagues would be priests. However, the formal parallelism with vv 33–36a suggests otherwise. There the listing of priests is concluded with the reference to trumpets. This list is then followed by one comprised of Levites, who are associated in v 36a with "musical instruments of David." Given the formal parallelism of these two lists, the persons mentioned in v 42 are most likely Levites rather than priests.

ROD R. HUTTON

UZZIA (PERSON) [Heb *ʿūzîyā* (עֻזִּיָּא)]. One of King David's chief military men from Ashtaroth in Bashan (1 Chr 11:44). The name means "My strength is Yah (weh)." Uzzia is one of the sixteen Reubenites from the Transjordan listed in the Chronicler's expansion (1 Chr 11:41b–47) of the parallel lists of David's military elite (1 Chr 11:10–41a = 2 Sam 23:8–39). The location of Ashtaroth supports the Transjordanian origin of these warriors. The addition of the sixteen names in vv 42–47 may have been inspired by 1 Chronicles 12 (Myers, *1 Chronicles* AB, 90), but most scholars believe that these verses were not part of the original list. Williamson (*1 & 2 Chronicles* NCBC, 104) and others (Mazar 1986: 101–102; Rudolf *Chronikbücher* HAT 1st series, 101) have argued that the Chronicler or a later redactor did not fabricate these names.

RUSSELL FULLER

UZZIAH (PERSON) [Heb *ʿuzzîyāhû* (עֻזִּיָּהוּ), *ʿuzzîyâ* (עֻזִּיָּה)]. Var. AZARIAH. Six persons in the Bible bear this name.

1. King of Judah, who succeeded his father Amaziah on the Jerusalem throne (2 Kgs 15:1–2), and was in turn succeeded by his son Jotham. Provisional dates for Uzziah's reign span 783–742 B.C.E. Though the name "Uzziah" surfaces 25 times in the Bible as the name of this successful monarch, his other name, "Azariah" *(ʿăzaryāhû; ʿăzaryāh),* is attested nine times. Biblical tradition remembers Uzziah as one who mended the defenses of Jerusalem, reorganized and reequipped the Judean army, won and capably maintained control over numerous caravan routes to the S, extended Judah's frontiers at the expense of neighboring Philistines and Edomites, and suffered significant personal setback when he was stricken by leprosy toward the end of his rule.

a. The King's Name. The presence or absence of merely one Hebrew consonant (*rēš,* "r") accounts for the two names of the king, making the difference between the two forms far greater in English than in Hebrew. As Honeyman (1948: 20–22) has convincingly noted, extensive textual corruption fails to account for the variants. The answer lies elsewhere. Solely attesting "Uzziah," six chronological references in the prophetic corpus (Isa 1:1; 6:1; 7:1; Hos 1:1; Amos 1:1; Zech 14:5) argue for the plausibility that "Uzziah" was the king's throne name and "Azariah" his personal name. Since the ritual uncleanness of leprosy prevented the king from discharging his regal duties during his autumn years (2 Kgs 15:5; 2 Chr 26:16–23), this might explain why both names were used by the narrator in 2 Kgs 14:21–15:34 ("Azariah" eight times and "Uzziah" four). When Jotham was required to serve as regent in his father's stead, the latter rejoined the ranks of Judah's private citizenry. Accordingly, the throne name was set aside. Nevertheless, subsequent Hebrew tradition sought to establish some uniformity in the king's name. Thus Honeyman (1948: 21) credits the Chronicler with the "alteration of Azariah to Uzziah in every passage in which he is editing the narrative of II Kgs." Moreover, in the Peshitta the name always appears in the Syriac as Uzziah.

b. Historical Context. Though Uzziah's ascension to the throne as a lad of 16 when the people made him king (2 Kgs 14:21; 15:2; 2 Chr 26:1, 3) poses no problem, the twice attested claim that his reign spanned all of 52 years (2 Kgs 15:2; 2 Chr 26:3) has been dismissed by many scholars as excessive. Since the biblical record offers no precise statement that Uzziah ascended the throne of Judah on the day that his father Amaziah died, perhaps popular support ushered Uzziah to the throne at an appreciably earlier

moment. Though mention of Amaziah's death by assassination at Lachish (2 Kgs 14:19; 2 Chr 25:27) prefaces any mention of Uzziah's investiture as king, the historically correct sequence may have been just the opposite. Indeed, Judah's unwarranted declaration of war against its N neighbor Israel, and the humiliation that Judah was forced to endure in the battle that ensued (2 Kgs 14:8–14; 2 Chr 25:17–24) might have provoked some of Judah's disgruntled citizenry to drive Amaziah out of office and to entrust the struggling nation's welfare to his son Uzziah.

A cuneiform fragment with mention of a certain *Az-ri-ya-a-u Ya-u-da-a-a* (*ANET*, 282–283) was once embraced as helpful extrabiblical testimony that in his W campaign waged in 743 B.C.E., Assyria's monarch, Tiglath-pileser III, was momentarily opposed by a coalition headed by Azariah/Uzziah of Judah. But Na›aman (1974: 25–39) has persuasively demonstrated that the fragment presumably attesting Azriau king of Yaudi actually issues from the more recent reign of Sennacherib and alludes to Hezekiah rather than to Azariah. Moreover, whereas the annals of Tiglath-pileser twice refer to Azariah, his country goes unmentioned. Impressed by Na›aman's argument, Donner (1977: 424) concludes that "the Azriau of Tiglath-pileser's annals and Azariah of the Bible should be regarded as two different individuals."

Given the lack of extrabiblical epigraphic data, the proclivity of the Deuteronomic editor of 2 Kings to attribute tenures of excessive length to several of Judah's monarchs who ruled from roughly the mid-9th to the mid-8th century B.C.E., the severely limited coverage accorded Uzziah in 2 Kings, and the theological bias of the Chronicler who does offer a fuller account of his reign, our knowledge about the Uzziah of history is far from ample. Since his son Jotham is associated with Israel's king, Jeroboam II (ca. 786–746), in 1 Chr 5:17, it may be assumed that Uzziah was plagued by leprosy near the year 750. Even so, his impact on affairs of state may have been felt until the time of his death not more than a decade later.

c. Uzziah's Political Posture. Under the leadership of Uzziah of Judah and his slightly older contemporary, Jeroboam II of Israel, the dual kingdoms enjoyed a period of impressive resurgence. Despite the king's historical significance, the author of the 2 Kings narrative limits mention of Uzziah's efforts at statecraft to a single phrase: "He built Elath and restored it to Judah" (14:22a). Even that is ambiguous since "he" could in fact refer to Uzziah's father Amaziah. If the notation is intended to portray the reign of Uzziah, then we may infer that Uzziah was successful in continuing his father's incomplete conquest of Edom. Situated at the head of the Gulf of Aqaba, this Red Sea port would have been reclaimed and refurbished by Judah as a vital commercial outlet. Thus the merchant ships of Judah might once again set sail for Arabia.

After replicating the above-mentioned phrase in its ambiguity (2 Chr 26:2a), the Chronicler, whose knowledge of the monarch has undoubtedly been enriched by the possession of an unknown text, has much more to say. He portrays Uzziah as triumphant in his attempt to subdue the Philistines in the W. He specifically notes that the king dismantled the walls of Gath, Jabneh, and Ashdod (26:6a). Though Uzziah could scarcely press N where Jeroboam II held sway, he found it possible to target areas to the S and W. The text is imprecise, but it seems that Uzziah did not delay in tightening his grip on Philistine regions that fell his way (26:6b). By erecting a system of forts, the king was able to assert control over various caravan routes that passed through the Philistine plain. Moreover, Uzziah seems to have triumphed over Edom-based Meunites as well as Arabs dwelling near Gerar—Myers' reading of "Gerar" for the unknown site of "Gurbaal" mentioned in 26:7 (*II Chronicles* AB, 149) is reasonable. This phase of Uzziah's expansionist endeavors accorded him substantial control over trade routes extending into Arabia. In a summarizing statement, the Chronicler reports that Uzziah's military engagements were of such scope that "his fame spread even to the border of Egypt" (26:8).

Various building and agricultural projects were also set in motion by this ambitious Judean monarch. Whereas the Chronicler is not very lucid in spelling out the specific ways whereby Uzziah undertook to shore up Jerusalem's defenses, he does report that "he made engines, invented by skilful men, to be on the towers and the corners, to shoot arrows and great stones" (26:15). Since catapults and related machinery are unattested in detailed palace reliefs that dramatically depict the Assyrian conquest of various Judean cities of this era, it is unlikely that this is how the Chronicler wishes to be understood. Yadin's

interpretation of this cryptic verse (1963: 326) makes good sense. He argues that the allusion does not concern firing engines, but rather "special structures built on to the towers and battlements to facilitate the firing of arrows and the casting down on the heads of the assault troops 'great stones.' " The presence of such cleverly constructed protecting screens made it possible for defending troops to move from a crouching to a standing position and to control their weapons with both hands.

The Chronicler adds that Uzziah "built towers in the wilderness, and hewed out many cisterns" (26:10). During the 8th century B.C.E., the Negeb was the locus of extensive building activity. Aharoni (1982: 251) credits the erection of the fortresses at Kadesh-barnea and Horvat ʿUza (Ramath-gilead) to Uzziah since the earliest pottery discovered there dates to that century. And he adds that contemporary with these structures are fortress towers above En-gedi and several well developed water installations situated near the N shore of the Dead Sea. Presenting Uzziah as one who "loved the soil" (26:10), the Chronicler implies that this king was strongly committed to agricultural pursuits. National resurgence seems to have manifested itself at many different levels. Finally, Uzziah is remembered for having reorganized and refitted Judah's armed forces. That, too, is historically plausible though the notion that his troops attained a count of 307,500 men is manifestly excessive.

d. Uzziah's Religious Posture. In the 2 Kings narrative, the initial religious assessment of the king is favorable: "he did what was right in the eyes of Yahweh" (15:3). Though Nelson (*Kings* IBC, 221) may be justified in claiming that the writer "refuses to moralize about the king's leprosy," reference to the "high places" that Uzziah tolerated (15:4) is itself a forthright indication that the king's piety knew certain limits. It may further serve to explain why leprosy struck a Judean monarch who otherwise pleased the deity. Due to his uncleanness, Uzziah became unfit to discharge the public regal responsibilities. These became the responsibility of his son Jotham who functioned as regent until his father's death. Though it is typically said in English translations that Uzziah now lived in a "separate house" (15:5), the case for the king's isolation is easily overstated. Since the literal reading of the Hebrew *(bêt haḥopšît)* is "house of freedom," it is important to recognize that whereas the king was now exempt from affairs of state, his freedom of movement was not appreciably curtailed.

In his account of the religious aspects of Uzziah's life, the Chronicler steps to his own beat. During the early years of his reign, Uzziah is said to have had the benefit of the counsel of a certain Zechariah "who instructed him in the fear of God" (2 Chr 26:5), but eventually the king's pride in his own accomplishments led to his undoing (26:16). For having usurped priestly prerogative by invading the Jerusalem temple and burning incense to Yahweh, the king is reprimanded by a contingent of 81 priests who are quick to mobilize. The story reaches its climax when the king's anger is aroused to such a point that he breaks out in leprosy (26:19). Though the historicity of this episode is most dubious, some tension between regal and priestly power might have shown itself during Uzziah's tenure.

On balance, Uzziah was one of Judah's strongest monarchs. If it is regrettable that the narrator in 2 Kings offers such a fleeting glimpse of Uzziah, at least parenthetical allusions to his rule are relatively numerous. Amos and Hosea are presented as Uzziah's contemporaries and Isaiah's temple vision is dated to the year of his death (Amos 1:1; Hos 1:1; Isa 6:1). Finally, an earthquake of overwhelming proportions is also linked with Uzziah's rule (Amos 1:1; Zech 14:5).

J. KENNETH KUNTZ

2. Father of Jonathan, one of King David's overseers in charge of the storehouses in outlying districts, towns, villages, and watchtowers (1 Chr 27:25). The name occurs in a list of David's overseers.

3. Descendant of Kohath, one of Levi's sons, and the immediate son of Uriel (1 Chr 6:22–24).

4. A Judahite whose son, Athaiah, was one of the rulers of Israel chosen by lot to be a resident in Jerusalem after the exiles returned from Babylon (Neh 11:1–4). He is not listed in the genealogy recorded in 1 Chr 9:2–17.

5. One of the priests, a descendant of Harim (cf. 1 Chr 24:8), who returned to Judah following the exile. Because he married a non-Israelite woman, he was one of seventeen priests (along with other Israelites) instructed to divorce his wife as a sign of Israel's repentance, so that purity might be restored to Israel (Ezra 10:21).

6. Key elder (Gk *Ozias*) of Bethulia, the home town of Judith, the heroine of the apocryphal book which bears her name (Jdt 6:15, 16, 21; 7:23, 30; 8:4, 28, 35; 10:6; 13:18; 14:6; 15:4). He seems to have been very prominent in giving leadership to the townspeople, helping them to recognize the action of Judith and its implications.

L. J. PERKINS

UZZIEL (PERSON) [Heb *ʿuzzîʾēl* (עֻזִּיאֵל)]. A popular name particularly in postexilic texts. The name Uzziel, "God is my strength," appears prominently in levitical leadership, but also on occasion it is used in non-levitical contexts.

1. Uzziel was, according to standardized tradition, a grandson of Levi and the fourth son of Kohath (Exod 6:18; Num 3:19; 1 Chr 23:12). His children were Mishael, Elzaphan, and Sithri (Exod 6:22), the first two of whom, according to Lev 10:4, carried the remains of Nadab and Abihu from the camp following their demise. According to 1 Chr 23:20 and 24:24–25, however, Uzziel's sons were Micah and Isshiah; these latter names ought rather to be taken as representative of major guilds during the first temple period, purportedly installed by David in the temple service. The initial importance of the family of Uzziel is attested by the fact that his son Elzaphan is listed as "head of the fathers' houses of the families of the Kohathites" (Num 3:30), and had charge of the ark, table, lampstand, altars, and temple vessels.

The information given in 1 Chronicles 6 is more confused. The material begins with an initial genealogy of the "high priestly" line of Eleazar, the grandson of Amram, Kohath's first son (1 Chr 5:27–41—Eng6:1– 15). Then follows a standard genealogy of the Levites through the third generation, the grandchildren of Levi (6:1–4a—Eng6:16–19a), again listing Uzziel as fourth son of Kohath. Then, however, follows a genealogy of Gershom, Kohath, and Merari (6:4b–15—Eng6:19b–30) which is at considerable variance from the others, due in part to its form as a strictly linear genealogy. It does not mention any of the otherwise familiar four sons of Kohath, and instead traces Kohath's descent through a son Amminadab, otherwise unknown in Kohathite genealogies. Furthermore, it lists in strict linear descent the names of Korah, Assir, Elkanah, and Ebiasaph. These names are generally linked to Kohath's second son, Izhar, but not in strict linear descent. The differences in this genealogy are often explained as due to its peculiar intent. It purports to trace the ancestry of the later temple singers, Asaph, Heman, and Ethan, to the lines of Gershon, Kohath, and Merari respectively. Such intention would explain why each line is pursued through only one son, and why therefore neither Amram, Hebron, nor Uzziel are mentioned as sons of Kohath (some take Amminadab to be a variant of or an error for Izhar).

These genealogies may reflect an earlier situation in which various unrelated guilds held certain prerogatives in the temple. As the temple service grew more elaborate and was formalized, the various guilds began to relate to one another through power structures which eventually were symbolized as familial relationships. These relationships were fluid and unstable, however, representing the shifting power struggles in the administration of the temple. That Uzziel once held a position of considerable prestige is suggested not only by the text of Num 3:30 mentioned above, but also by 1 Chr 15:10. Here the Uzzielites are listed alongside the families of Kohath, Merari, Gershom, Elizaphan, and Hebron as parallel families equal in stature in the temple administration instituted by David (some connect the Jaaziel/Aziel of vv 18 and 20 with this family of Uzziel). Only later did Elizaphan become the son of Uzziel, Uzziel the brother of Hebron, and both the sons of Kohath, demonstrating the flagging of the Uzzielites, probably as a result of the increasing importance of the families of Asaph, Heman, Jeduthun,

and finally Ethan, who replaces Jeduthun. Thus in the listing in 2 Chr 29:12–14 the place of Uzziel and Hebron are taken by Asaph, Heman and Jeduthun (for another listing, cf. Num 27:5).

2. In 1 Chr 25:4 Uzziel is listed as belonging to the "sons of Heman," one of the three guilds of lyrical prophets in the postexilic temple. According to the Chronicler, such guilds were instituted by David, who established 24 courses of 12 singers each. The Chronicler lists the primary functions of the guilds as follows: Asaphites, the royal prophets; Jeduthunites, lyrical prophecy in worship; Hemanites (including Uzziel), temple music. The name Uzziel is given as Azarel in v 18, but this shift from "strength" *(ʿoz)* to "help" *(ʿezer)* in personal names is not unknown (cf. King Uzziah, var. Azariah).

3. 2 Chr 29:14 lists Uzziel as one of the two leaders of the levitical guild of Jeduthun, the lyrical prophets, during the days of Hezekiah. Alongside Shemaiah, Uzziel led the Jeduthunites in their support of Hezekiah's reform movement. The guild of Jeduthun later gave way to that of Ethan in the postexilic temple leadership.

4. In 1 Chr 4:42–43 Uzziel is listed as a leader of the Simeonite family of Ishi who, along with 500 other members of that family, migrated to Mt. Seir (i.e., Edom). There they dispossessed the Amelekites who themselves were refugees from earlier conflicts with Israel. If the migration did in fact take place during the days of Hezekiah, suggested though not demanded by v 41, it raises critical issues concerning the fate of the tribe of Simeon. Though it is generally assumed that Simeon was absorbed by the tribe of Judah, such historical information suggests that some identifiable elements of the tribe may well have persisted in Judah's history.

5. Uzziel is listed in 1 Chr 7:7 as one of the primary families *(bêt ʾābôt)* of the Benjaminites, being the third son of Benjamin's oldest son Bela. Conflicting information is provided by 8:1–40, which provides an extensive genealogy of the Benjaminites. Only Bela, the firstborn of Benjamin, is common to these lists. Otherwise there is little or no agreement. Most assume that such confusion is due to the lateness of the tradition, representing the social configuration of the postexilic community. The fact that such attention is given to Benjamin in these texts is considered to be evidence of the significance with which the Chronicler regarded the family of Benjaminites.

6. Uzziel the son of Harhaiah is reported by Neh 3:8 to have been among those who helped in the rebuilding of the walls under the direction of Nehemiah. That Uzziel and his father are reported to have been goldsmiths may indicate that they directed the efforts of a guild, similar to the more usual involvement of family units in reconstructing the wall.

V

VAIZATHA (PERSON) [Heb *wayzātā*ʾ (וַיְזָתָא)]. One of the ten sons of Haman (Esth 9:9). On problems surrounding this list of names, see ADALIA (PERSON). Vaizatha (*zabouthaion*) perhaps renders the otherwise unattested Old Iranian name **Vahyazzāta* (Hinz 1975: 253), which in turn probably derives from **Vahyaz-dāta-* "given from the best one," a name attested in Aramaic papyri from Egypt (*CAP*, 253, 34—*wyzdt*), Persepolis Elamite texts, and Akkadian (Hinz 1975: 253 s.v. **vahyazdāta;* Kornfeld 1978: 105 s.v. *WYZDT* for references).

PETER BEDFORD

VALENTINIAN EXPOSITION (NHC XI,*2*). This text, whose name is abbreviated as *Val. Exp.* (NHC XI,*2*), and its five liturgical appendices comprise the second of two Valentinian tractates occupying the first half of Codex XI, and written in the first of the two scribal hands responsible for the inscription of that Codex. The language of composition is a rather standard sub-Achmimic dialect of the Coptic language, bearing many resemblances to the compositional language of Codex I (the "Jung Codex"), whose inscriptional hand is often similar to that of Codex XI, and whose contents are for the most part also Valentinian. Although the first tractate of Codex XI bears a subscript title (and evidence of a superscript title as well) "The Interpretation of Knowledge," neither the present tractate nor its five liturgical appendices display any evidence of such titles. Therefore, the present author has named the main tractate (NHC XI,*2*: 22, 1–39, 39) "A Valentinian Exposition (*Val. Exp.*)," and the five appendices as "On the Annointing," "On Baptism A," "On Baptism B," "On the Eucharist A," and "On the Eucharist B," titles which reflect the nature of the content and form of the respective texts. The entire manuscript has suffered extensive damage, necessitating extensive philological reconstruction.

The main tractate, in which the author begins by saying he is about to reveal a mystery, contains a full exposition of the theogony, cosmogony, anthropogony, soteriology, and eschatology characteristic of the Valentinian theology expounded in such patristic sources as: Irenaeus' exposition of the teaching of Ptolomaeus (*Haer.* 1.1.1–8.6), of Valentinus (*Haer.* 1.11.1–12.3), and of Marcus (*Haer.* 1.13.1–21.5); Hippolytus' account of the "monadic" version of Valentinian theology (*Ref.* 6.29.2–36.4); Epiphanius' similar account (*Pan.* 31.5.1–27.16); and Clement of Alexandria's *Excerpts from Theodotus.* As such, *Val. Exp.*, in addition to the *Tripartate Tractate* of Codex 1 (NHC 1,*5*: 51,1–138,25), with which it shares a number of doctrinal affinities, constitutes one of the only two original non-heresiological and complete expositions of Valentinian theology known to modern historians.

The five liturgical supplements seem to be placed in such a way that the reader is to construe *Val. Exp.* as a doctrinal catechism for initiates who are invited to participate in the special annointing, baptism, and Eucharist whose significance has been previously revealed by an exposition the "mystery" contained in *Val. Exp.* itself. Unfortunately, the liturgical supplements are merely prayers which contain little information to advance research into the nature of the Valentinian sacraments.

Bearing in mind the extreme fragmentary state of the text, the basic content of *Val. Exp.*, from the initial theogony to its conclusion, seems to be the following:

(1) The primal being, the high deity called the Father and the Root of the All, is introduced as the Monad residing alone in a state of quiescence; this state of quiescence seems to be interpreted as the potential existence of Silence (who in other sources relating the teaching of Valentinus and Ptolemaus is regarded as his coeval consort). In this way, Silence seems to be identified with the potential existence of the Dyad, namely Monogenes (Mind) and Truth, in the Father's thought. Thus, in terms of the Valentinian school debate concerning whether the first principle was monadic (as contemporary Neopythagorean

Platonism and the Valentinians of Hippolytus [*Ref.* 6.29.2–36.4] held) or dyadic (as the later Plato, most Middle Platonists, Valentinus and Ptolemaeus held, i.e. the One and the Indefinite Dyad), *Val. Exp.* seems to urge the position of the "monadic" school, as does the author of the *Tripartate Tractate* (NHC 1,5: 51,1–138,25).

(2) The Father then brings forth the Son, Monogenes, the Mind and Father of the All, as well as Limit, whose function is to establish a lower bound of the divine realm, the Pleroma of Aeons. Through Monogenes arise the Dyad (probably Silence as the hypostatization of the Father's tranquility, regarded by other Valentians as the Father's original consort) and the Tetrad (probably Truth as the feminine consort of Monogenes himself). In a sense, Monogenes forms the upper limit of the Pleroma (the inner sanctum of which he is "High Priest"), separating the subsequent Aeons from the Father and conveying to him their praise, while Limit forms the lower boundary. This notion is at odds with the teaching of Valentinus and Ptolemaeus that there are two Limits, a higher one separating the Father from all below him, and a lower one, forming the lower bound of the Pleroma, to protect the Aeons from infection with the transgression of the lowest Aeon, Sophia, when she later attempts to produce a creation alone and unaided by any male consort, in imitation of the monadic Father.

(3) Although the account of Sophia's (Lady Wisdom's) activity occurs later in the tractate, at this point, the Aeons request the manifestation of Christ to minister to the errant Sophia by using his four powers: to separate from her the passions resulting from her audacious attempt to imitate the Father, to restore her original aeonic stability, to restore her essence now depleted by her passions, and to provide her female essence with the masculine form without which she had acted, but which was a prerequisite to the productive activity of any Aeon save the Father.

(4) From the unbegotten Tetrad (the Father and Silence; Monogenes and Truth) is projected the begotten Tetrad of Word and Life and thence Man and Church. The former pair produce ten further Aeons, and the latter twelve further Aeons, the lowest of which is Sophia, a total of thirty Aeons.

(5) Sophia now wills to leave her station in the "thirtieth" where she was originally placed with her consort Theletos ("desired") in order to imitate the monadic Father's emanative power, but in express disobedience to the Father's will that nothing "happen in the Pleroma apart from a syzygy" (i.e. a male-female pair). The result is that she falls into various passions and produces only "seeds" that are incomplete and formless, lacking the harmonious union of male form and female substance considered requisite for any normal offspring. In this sense, *Val. Exp.* agrees with those members of the Valentinian school who consider her creative transgression of the Pleromic protocol as the autonomous and intentional act of a generated being who wished to rise above the condition of all the other generated Aeons comprising the Pleroma in which all must function in male-female pairs, and to have the power of the unbegotten Father who alone is able to emit beings without a consort. This interpretation of Sophia's transgression is at variance with that of Valentinus and Ptolemaeus, who tend to see it as merely one expression of the involuntary desire typical of all the Aeons to achieve closer communion with the Father.

(6) The rectification of Sophia's transgression is now further continued by the "Son" (presumably of all the Aeons), Jesus, in whom the whole Pleroma exists "bodily" and who descends through the Limit to the separated Sophia, who has now repented of her transgression. Apparently, even though both the Limit and the Pleromatic Christ possessed the four redemptive powers of confirmation, separation and formation according to form and essence, they are able only to perform these restorative functions upon Sophia herself, but not upon the formless seeds emitted by her, nor are they able to restore her to her original place in the Pleroma. These final acts can be performed by no-one "except her own Son;" (in the original system of Valentinus, Sophia's Son is the Pleromatic Christ himself). Thus Jesus causes her formless seeds to become a creation, separating her passions into the spiritual and fleshly elements of which the lower creation will be comprised, and in addition he introduces from the Pleroma the male angels in preparation for the ultimate redemption of the female seed.

(7) At this point, the lower world is brought into being as the realm of the Demiurge, the Jewish creator God, who creates mankind in his own image and in the likeness of the Aeons above. Immediately strife breaks out between the Demiurge and the angels over the fate of the seed.

(8) The final restoration of all things occurs through the joining together of the male angels with the female seeds into pairs, so as to provide the seeds with a perfect form like those of the Aeonic pairs in the Pleroma. Sophia then receives her consort Jesus, and all together Sophia and the seeds gain readmission to the Pleroma, and the "All" is restored to unity and perfection.

In sum, the significance of *Val. Exp.* is that it is an original Valentinian composition that allows insight into the Valentinian school debates of the 2d century over the monadic versus dyadic nature of the ultimate deity, the redemptive functions of Limit vis-a-vis those of Christ, and the precise nature of Sophia's transgression, whether a blameless longing to praise the Father versus an audacious attempt to exercise the powers of the Father for herself. In general, the position taken by the author of *Val. Exp.* is that of the Western school of thought represented by Irenaeus (*Haer.* 1.2.4), Hippolytus (*Ref.* 6.29.2–32.8), the general drift of the *Tripartite Tractate* and perhaps of Heracleon, as opposed to the views of Valentinus himself and of his disciple Ptolemaeus.

In general, *Val. Exp.* seems to represent a trend toward Neopythagorean Platonic Christian theology, a greater emphasis on the soteriological role of Christ (as opposed to that of Limit), more along the lines of the doctrine of the Catholic Church, and a correspondingly more moralistic interpretation of Sophia's transgression as the culpable and intentional act of an identifiable individual rather than as a less comprehensible tragic split in the divine realm. *Val. Exp.*, then, seems to witness a period in the Valentinian tradition during which initiation had to be prefaced by a careful delineation of doctrine, not so much from that of the Catholic Church, as from competing Valentinian theologies. As such, one would tend to see it as a Western composition produced some time between Irenaeus' work against the gnostics, ca. 180 A.D., and Constantine's edict against heretics of 326 A.D., when Valentinians would have tended to defend their theology as a whole against that of the Catholics, rather than to debate the finer points of their own tradition.

JOHN D. TURNER

VALENTINUS. Valentinus (ca. 100–ca. 175 C.E.), one of the major creative intellectuals of the early Church, is best known for his revision of the classic gnostic myth according to the terms and conceptual categories of emerging orthodoxy. Also influential was the "school" of Valentinian gnosticism, already active during the lifetime of Valentinus, that apparently continued into the late 7th century.

A. Sources

1. Patristic. Due to the success of the intense heresiological polemic against Valentinianism, the vast majority of Valentinus' writings, and those of his followers, are lost. Apart from two complete works (the *Summer Harvest* and possibly the *Gospel of Truth*) discussed below, the writings of Valentinus have come down to us in the form of quotations in the writings of four patristic authors. Each presents us with only brief and fragmentary selections from Valentinus' writings.

Irenaeus of Lyon, our earliest patristic source, writing about 180 C.E., presents a relatively detailed description of a portion of Valentinus' theological system but with the usual heresiological biases. Irenaeus speaks of the emission of the spiritual universe, the creation of the material universe, and the history of humankind (*haer.* 1.11.1). Irenaeus' immediate concern seems to have been the comparison of Valentinus' system with that of the sect called the Gnostics (Layton 1987: 217–27).

Clement of Alexandria, writing about the year 200 C.E., quotes six sections from Valentinus' writings (= frags. C through H in Layton 1987: 229, 234–45) that touch on several issues and include quotes from, apparently, three philosophical treatises (frags. C, E and H), two sermons that allude to the dissolution of death (frag. F) and the presence of moral truths in pagan texts (frag. G), and a metaphorical discussion on Adam's name from a text of an unknown genre (frag. D).

Hippolytus of Rome, writing about 222–235 C.E., summarizes an autobiographical, and possibly visionary account concerning Valentinus (frag. A). He also transmits a complete seven-line poem called the *Summer Harvest* that Rudolph calls a hymn "which conforms to early Christian hymnic style" (1983: 318) and that Layton has described as "a cosmological poem that is visionary and personal in character" (1987: 229–31, 246–49).

Finally, Marcellus of Ancyra (d. ca. 374 C.E.) preserves, instead of a quote, only the title of an otherwise unknown theological work by Valentinus entitled *On the Three Natures.* This text apparently made reference to Valentinus' teaching that the spiritual universe has a tripartite structure (frag. B in Layton 1987: 229, 232–33).

2. Papyrological. With the discovery and publication of the Nag Hammadi Library (Robinson 1988: 1–26) some scholars have argued that the *Gospel of Truth* is quite likely a text written by Valentinus. While the majority of scholars withhold judgment on the precise identification of its author, there is a consensus that the text is at least Valentinian. Aptly described by Layton as "a Christian sermon on the theme of salvation by acquaintance [gnosis] with god," this text is full of allusions to and paraphrases of NT texts and, in a continuation of Paul's theology, focuses on Jesus' crucifixion as the central object of faith (Layton 1987: 250–52). The text may have been designed "to introduce Valentinian soteriological insights to members of the great church" (Attridge and MacRae 1988: 38–39). It discusses the plight and final salvation of those who are ignorant of both the father and their own natures but who, in the process of receiving knowledge (gnosis) of the father through the word (or son who is emitted from the father), reach the desired goal of repose (authentic existence). Two excellent recent translations into English can now be compared (Layton 1987: 253–64; Attridge and MacRae 1988: 40–51).

The original Greek text is apparently no longer extant. Two independent translations into Coptic were found at Nag Hammadi, one (NHC XII,*2*) in the Sahidic dialect is heavily damaged and very fragmentary (Robinson 1973: xiii–xv and pls. 95–100), and the other (NHC I,*3*) in the sub-Achmimic dialect is virtually complete (Robinson 1977: vi–xxxi and pls. 20–47).

B. Theological Influences on Valentinus

The very breadth, depth, and popularity of Valentinus' teaching, as well as its synthetic, eclectic, and speculative nature, all suggest a conceptual base which was informed from diverse sources.

Born in the Egyptian Delta around the year 100 C.E., Valentinus was educated in Alexandria, and possibly influenced by the teaching of the gnostic Basilides (Layton 1987: 417–44) and the Hellenistic Jewish biblical interpretation of Philo Judaeus (Layton 1987: 217–19). Valentinus may also have been exposed to the mystical Thomas tradition that originated in Mesopotamia and was popular in Egypt in Valentinus' time (see the discussion in Layton 1987: 359–409).
